Cosmic Disclosure Season 1

Corey Goode, David Wilcock, et al

The Message for Humankind, Season 1 Episode 1

Cosmic Disclosure; The Message for Humankind, Season 1, Episode 1

14 Jul 2015

DAVID WILCOCK: We are interviewing a truly remarkable man, Corey Goode, age 45, originally from Texas. And you still live in Texas actually. And what he has done here is to come forward as an insider and share with me more information about what's really going on behind the scenes in the so-called secret government and secret military programs and their development and industrialization of our solar system. It's a truly remarkable story, because I've interviewed dozens of insiders over the years with classification sometimes 35 levels above the President of United States. I've withheld about 90% of that information from the public, because A, it could get people killed, B, I didn't want to release things that would then spoil me being able to figure out who the real insiders were. Corey came along, and he not only knew the 90%, he had many other puzzle pieces that I had been looking for. I knew there was something that people weren't telling me, and it all came together. So Corey, welcome to the show. Thank you for being here.

COREY GOODE: Thank you.

DAVID: I understand that what you're about to tell us is so far out that people are going to have a really hard time accepting this, particularly if they don't already have a background in this. So instead of trying to hold them by the hand and take this slowly, let's just dive right in. And if you could really quickly give us an overview of your involvement with what this whole space program subject has been in your life.

GOODE: OK. For me, it started at the age of six years old when I was brought into what is known as the MILAB, some pronounced it MILAB programs. I was identified as an intuitive empath.

DAVID: What does that mean exactly?

GOODE: Intuitive, you have a deep intuition of things that are possibly about to happen.

DAVID: So like psychic ability?

GOODE: Yeah, precognitive abilities. And empathic being you have a strong emotional connection with others around you. You can feel what they're feeling and connect with them emotionally. That was a skill set that was desired. And I was trained, and that was enhanced. And it was enhanced to a point where I was around 12 or 13 years old, me and a few of the people that I was training with being brought into a program to we were what they called IE support for the Earth delegation in a super federation. And this was a federation of a large amount of ET federations that met to discuss the grand experiment.

DAVID: What was this experiment? What were these ETs doing?

GOODE: There was a group of 40 human looking ETs that were pretty much always present, and up to 60 at other times that were present. There were 22 genetic programs that were going on.

DAVID: What does that mean? What's a genetic program?

GOODE: Programs of them mixing their genetics and manipulating our genetics.

DAVID: That was ongoing?

GOODE: Yes, it's ongoing right now. And this is what this was all about. And the earth delegates had been trying to become a part of this for a long time. And they were finally able to get a seat. And as the intuitive empaths, when we were sitting there, we didn't know what was going on. Because a lot of what was going on was

happening in this ancient ET language that's real monotone that we didn't understand. And some of what was going on was going on telepathically. So we were just sitting there, and we were given this device that was a glass smart pad--that's like an iPad--that had access to the ET, basically, database. And we were told to keep our minds occupied by looking through all this material, and this also helped us with our intuitive empath abilities in detecting danger or deception.

DAVID: What kind of stuff were you able to look at on these pads?

GOODE: It was mainly they wanted us looking at the information about these 22 genetic experiments that were going on, but we had access to all types of other information. And depending on each of us--we all had own interests--we would look at all kinds of information. And there's so much information that I looked at, it's almost like looking back at your college days, all the books that you read and all the information you looked at. How much of it do you retain? Like that. There was just so much information.

DAVID: Did you ever have a question that you asked that you couldn't get the answer to, where it just says, I don't know?

GOODE: No. I mean, you were pretty much given the information that was available. You would run across certain things that the human delegation, our group, we're not privy to. But pretty much all of the information was open to us.

DAVID: What did the screen look like? Was it similar to an iPad or?

GOODE: No, it was just--it looked almost like a piece of Plexiglas. Unremarkable if you saw it. If they would have dropped it out of the window, and you found it in a field, you'd pick it up, and you would not know it was anything special. You would put it on your hand, and you would have to activate it with a mental component. And it would pop up in your language. The information, you would access the database through your mind, and it would show what you wanted. It would show text, pictures, video, and the video and pictures were holographic in a way that it came off the screen a little bit. I mean, it didn't totally come out of the screen in holographic ways some people would think. But it had just this 3D depth holographic view to it.

DAVID: And could you still see your hand at that point underneath the glass?

GOODE: No.

DAVID: So it would darken first?

GOODE: Right. Yeah, it would totally go opaque, or black, or whatever before it started to produce images or text.

DAVID: Did they have any buffers or security firewalls--if you ask certain questions, it tells you it's unauthorized or anything like that?

GOODE: Well like I said, very, very seldom did you get a screen that was all blue or something that showed that you couldn't get to. But pretty much everything was open, and we had these same devices on the research vessel that gave us access to our own databases.

DAVID: So this is a prevalent technology once you get out of the space program.

GOODE: Yes, and they have much larger screens that they use for conferences and demonstrations.

DAVID: Well, obviously you encountered so much information on these pads. Was there any information that jumped out at you as being really significant that really shocked you, even from what you had already learned by that point?

GOODE: It was really interesting that there were--the information was presented almost as if--going back to the college analogy--there were 22 term papers competing with each other, and each of these genetic experiment programs were presenting their information in that manner. They were somewhat competing with each other. They weren't all working--they weren't all hand in glove working together.

DAVID: Did this involve these human looking extraterrestrials--

GOODE: Yes.

DAVID: --splicing their DNA with ours, that kind of thing?

GOODE: Yes, and manipulating our DNA. There was also a spiritual component. They are very much involved in a part of the experiment. It's not just them experimenting on us. They're a part of this grand experiment too.

DAVID: Did they have a goal? Why are they doing this? Why do they care?

GOODE: That I do not know. I don't know if they're doing it just because they can, if they're trying to create some sort of super being. But a lot of it didn't--why would they try to mix all of their best genetics together, and then manipulate us and our civilization to keep us down?

DAVID: How long do you think this program has been in action for?

GOODE: Of the 22 different programs, they've been going on for different lengths of time. But the genetic manipulation of what we are has been going back at least

250,000 years.

DAVID: Wow.

GOODE: But these programs, they vary in their length from 5,000 going--they're all different lengths of time.

DAVID: This doesn't sound like something that our secret Earth government or elected government would want these folks to be doing. Could we stop them?

GOODE: I don't think so. I mean, this is something that we've just recently been able to beg to get a seat at their table, to be a part of the discussion.

DAVID: So would these be negative oriented extraterrestrials, or more neutral, not really the benevolent type?

GOODE: It depends on your point of view. It's all amount of--it's perspective. It's hard to say, this group is positive, this group is negative out of all those groups. Because they see what they're doing as a positive thing.

DAVID: You mentioned on your website something called LOC. Could you tell us what that is?

GOODE: The Lunar Operation Command is a facility on the backside of the moon that is a diplomatic neutral facility that all the different space programs have access to and use. There's some people that are stationed there and work there, but it's more of a weigh station. People are coming and going from it all the time to go to their further out into the solar system and beyond to go out to the other stations, other bases to go up to their assigned vessels.

DAVID: Walk us through your actual story arc of how you go from your house and eventually end up on this research vessel out in our solar system, just a brief overview of what that was like.

GOODE: I was transported from my house in the middle of the night by conventional means to Carswell Air Force Base. Underneath Carswell Air Force Base in a secret area of the base there's an elevator that takes you very far down. And many people know about the tram system that runs underneath the United States.

DAVID: I've heard insiders call it sub shuttle.

GOODE: So a shuttle system. It's like a mono rail going through a tube, and it's like a Maglev and also in a vacuum tube. I was transported from there to another location to where I was transported to the LOC through what some call "Stargate" type

technology or portal technology. I ended up at the LOC, or Lunar Operation Command. And I was then put onto this manta looking craft.

DAVID: Like a stingray shape?

GOODE: Yeah, like a stingray or a manta ray looking craft. And with a bunch of other people. And then we were transported from the moon further out into the solar system.

DAVID: So there was some sort of hanger at the Lunar Operations Command.

GOODE: Yes, there's a series of hangers. This was the larger hanger.

DAVID: OK, how big is this manta craft for conventional measurements?

GOODE: About 600 people could fly in it.

DAVID: Wow, so it's pretty large.

GOODE: Yeah, it flew us to our destination.

DAVID: How long were you at the LOC before you boarded the manta craft.

GOODE: It wasn't long at all. There was--that's where I signed papers, even though I was too young to legally sign legal papers. And it was explained to me that I was doing a 20 year commitment. They called it the 20 and back.

DAVID: Did it look like some futuristic set off "Star Trek, Next Generation" when you're in there? What did it look like?

GOODE: Just mainly real narrow halls and regular looking doors, but it was nothing--it didn't have like Star Trek doors that swish, swish closed. It wasn't really super advanced in that way.

DAVID: So if you filmed the inside of it, you could easily convince somebody that it was just a building here.

GOODE: Oh yeah, definitely.

DAVID: What did the hanger look like? Did the hanger look anything special?

GOODE: The hanger looked very much like a Naval facility, like a mixture of a Naval submarine and aircraft hanger facility.

DAVID: Once you got inside the manta, how long were you flying for?

GOODE: Maybe 30, 40 minutes.

DAVID: And what was the next thing that happened?

GOODE: Next thing that happened was that I got to see the research vessel that I was going to be assigned to for the first time.

DAVID: How long were you on this space vessel for?

GOODE: I was assigned to the research vessel for six years.

DAVID: And you said that the whole term of service was 20 years?

GOODE: Yes.

DAVID: Is there a reason why they only kept you on the research vessel for six years?

GOODE: The intuitive empath skill set was needed in other programs, so I was moved through multiple programs for the remainder of the 20 years.

DAVID: Could you give us an example of one of these programs?

GOODE: One example would be the Intruder Intercept And Interrogation program.

DAVID: What defines an intruder?

GOODE: Someone that's coming into the solar system or into the Earth's atmosphere uninvited, or without permission.

DAVID: And you would actually be able to apprehend these folks and ask them questions?

GOODE: There was a team that was a part of that program that would do that. I was present during the interrogation as an intuitive empath.

DAVID: And as you said before, you're trying to detect deception?

GOODE: Right, somewhat. Sometimes when you communicate with these other beings it's called interfacing. Sometimes I was needed to interface, and sometimes I was there just to read them, read their emotions, and to see if they were being truthful, like a human lie detector.

DAVID: And consciousness works enough the same way that you can read extraterrestrials and it works the same as if it's a human more or less?

GOODE: Definitely.

DAVID: So you left the program after the 20 years of service.

GOODE: Other than some follow up work that they had me do, I pretty much ended my tenure.

DAVID: On your website, you've mentioned that there are five factions within the secret space program. Could you quickly delineate for us what those five factions are and just a little bit about what each one is like that makes them different from the others?

GOODE: Sure. I'll start with the oldest, which is Solar Warden. They were started back in the late '70s, '80s, during the SDI, Strategic Defense Initiative--I think is what that stood for--just before and after Reagan. And then we have the ICC, the Interplanetary Corporate Conglomerate, which is corporations all over the world that have representatives in a super corporate board that control the secret space program infrastructure that they have out in space, which is massive. We have Dark Fleet, which is a very secretive fleet that works mainly in the outside of the solar system. We have various Black Ops military secret space programs that we put into one group. And then we have this Global Galactic League Of Nations group that was somewhat of a carrot that was offered to all the other nations to have them maintain this veil of secrecy about what was going on in outer space by giving them a space program and giving them a narrative of there's certain threats, or possible invasions. We need to come together and work together. And at the one facility that I visited a couple times, it looked very much like the TV show "Stargate Atlantis" where you had a real laid back environment, people walking around in jump suits with patches from all different countries of the world. They are almost completely outside of the solar system, as well.

DAVID: You mentioned the term the alliance a lot, and I think there might be some confusion there.

GOODE: There was the Earth Alliance. They have a completely different agenda. Their agenda is to basically create a new financial system and to take down the cabal and a few other things in their agenda. And then there's the Space Alliance, and it's made up of what started off with as mainly the Solar Warden faction and then defectors from the other secret space programs. And these defectors from the other space programs left their programs with their craft, and intelligence, and information and joined the secret space program alliance.

DAVID: What's the sequence of events that led to you becoming a whistle blower and that has led to what we're now seeing with this push towards disclosure?

GOODE: I was contacted by an actual higher density ET group that has now been known as the Blue Avians.

DAVID: And avian means bird?

GOODE: Bird.

DAVID: So what would these folks look like?

GOODE: They're eight feet tall. They look very bird-like. They're blue to indigo in color with feathers. When

DAVID: You say very bird like, though, are you saying they actually are birds with wings?

GOODE: No wings. They have a very human looking torso, arms, hands--

DAVID: So they're hominid.

GOODE: --feet.

DAVID: It's like a bird head on a human body?

GOODE: Yes, but they don't have a long beak like a lot of people are trying to depict on the internet. It's a real soft flexible beak, and when they speak, they do a sign language or motion with one hand. And then they move their mouth around, and they communicate telepathic.

DAVID: So who are these Blue Avians? Where do they come from? Do they have an agenda?

GOODE: The Blue Avians told me that them and the other beings that they are working with come from sixth through ninth density and that--

DAVID: And what is a density?

GOODE: Everything around us is made up of matter, energy. Thought is all made of vibration. And it comes from a different vibration or frequency.

DAVID: So it's like another plane of existence?

GOODE: Right.

DAVID: Is it somewhere else in the galaxy or the universe, or is it around us?

GOODE: It's not in a far, far away planet close to the center of the galaxy or anything like that. It's all around us. It's real close and far away at the same time.

DAVID: And what is their agenda? What are they here for?

GOODE: They've been here for quite some time. They've been observing, but they're here for--we're moving into a part of the galaxy that is a very high energetic part of the galaxy that's going to change the density of our solar system and our local star cluster.

DAVID: Is that something that they've told you, or is that something that in the space program you had tangible evidence of?

GOODE: We had tangible evidence of that in the space program. That's been studied for some time, but that's something they told me as well.

DAVID: OK, and if we go into a different density, what are these Blue Avians telling you will happen to human life as we know it now?

GOODE: That we're going to go through a transformational experience that is going to change us on a consciousness level mainly.

DAVID: What would that look like? Would we become more psychic, more telepathic?

GOODE: Yeah, I mean, there's a lot of theories. I haven't been told that we're going to be able to do this and that. I've heard a lot of different theories. I don't know if it's going to happen to everyone at once or if there's some people that are more spiritually evolved that are going to start showing these signs earlier. I don't have all the answers. I'm not a guru. I really don't have all the answers.

DAVID: So are these Blue Avians looking out for our highest good, or do they have a hidden agenda? How do we know we can trust them?

GOODE: They're definitely of a positive polarity. From what I understand of sixth and higher density beings, they're not agenda oriented as we try to project onto them. For our third, fourth density way of thinking, everything we do is agenda oriented. It's about making money. It's about manipulating people to do or think the way we think. We can't project that onto a higher density being and say that they're going to be behaving or thinking the same way. They are here with these giant spheres to help defuse these large tsunami energy waves that are entering our solar system, and they're defusing this energy to where we don't get too much at one time and to give us more time to prepare.

DAVID: If they didn't use these spheres, what do they say would happen?

GOODE: That a lot of people would go mad, and there'd be a lot of chaos.

DAVID: And when you mention these spheres, what are we looking at? People are not seeing spheres in their telescopes.

GOODE: No. These are also other density, and a lot of people are thinking that these are giant spacecraft. And I'm almost certain after my many travels in these spheres that these are spheres on a giant macro level. These little orbit beings are also these giant spheres.

DAVID: What are the orb beings?

GOODE: They're one of the five beings from the Sphere Alliance that are one of the higher density of the five beings.

DAVID: So you've actually had in person meetings with these Blue Avians?

GOODE: Yes. My name was mentioned as a choice, as a delegate, to be a part of communications between this group, the Secret Space Program Alliance Council, and also to start speaking on their behalf with this old super federation council that I had sat in as an intuitive empath support as a young teenager. I was trying to talk my way out of this delegate position. I'm not a public speaker. I have a weak voice. I was giving all of these excuses why I should not be a delegate. I was giving these excuses after I had been brought to one of these massive spheres that are out in space, and I met this Blue Avian named Raw-Tear-Eir. And as I was trying to talk my way out of being a delegate, he walked up very close to me, put his hand on my forearm, and was communicating to me telepathically that I need to let go of all the negative and quit thinking about the negative. And his hand was very powder soft on my skin. It's was the only time they physically touched me. And then he told me that what was important was the message.

DAVID: What is their message?

GOODE: Their message for humanity is that--and it's the tenant of many religions--we need to become more loving. We need to become forgiving of ourselves and forgiving of others, thus stopping the wheel of karma. We need to focus on becoming more service to others on a daily basis. And we need to focus on raising our vibration and our consciousness.

DAVID: Well you see a lot of people who are aggressive commenters on articles saying that the elite want to steer us into a one world religion. How would we be able to know that this isn't just another PSYOP to try to get us all marching in lockstep

with some new controllers?

GOODE: Well that's what they said, and what I put on my web page is that you don't need to change your faith or your religion. You can use--these beliefs are the tenants of all the major religions. I mean, this is not really anything new. The time is short. It needs to be done. We need to start focusing on--if you're a Christian, if you're a Muslim, if you're a Buddhist, you can remain. That can remain your faith.

DAVID: So they're not trying to pose as the new god?

GOODE: Absolutely not. And one of the things that they have forced into my head is that I need to make sure that this does not become a cult or a religion. And I don't know the history of it, but apparently they've tried this three other times in the past. And each time their messages have been distorted, and humans have used it for control and turned it into cults and religions.

DAVID: Well obviously we've just gotten started here. This is really fascinating information, and I just want to say on a personal level that it validates so many things I've been studying for so many years and done as much as I can to try to put scientific evidence behind. So we got a lot more to talk about. We're just getting started, but I'm really happy that you wanted to do this and come forward. And I honor you for your courage and bravery. I know you got two kids. You gave up a six figure job for this. So this is really a major thing for you to come forward, and I really appreciate it. So thank you Corey.

GOODE: Thank you.

DAVID: All right.

First Encounter
Season 1 Episode 2

Cosmic Disclosure; First Encounter Season 1, Episode 2

14 Jul 2015

DAVID WILCOCK: Well Corey, this has been such a wild adventure. You started talking to me, basically, every day I think--when was it--maybe last October 2014.

COREY GOODE: It was around October, yes.

DAVID: Something like that. And when we first started talking about this, you were just another insider coming forward. And then you eventually decide to release your name, because some people were figuring it out through investigation. And you got pulled into this alliance, which up until then, you really didn't have a whole lot of contact with it. Right? It was a new thing that happened after we started to--after your name came out, you started to release more information.

GOODE: Right. My name was brought to this alliance and by this new group of Blue Avians. They mentioned me by name, that they wanted me to be a liaison between them and other groups. So I was thrust into it.

DAVID: Had these Blue Avians ever spoken to the space program people before?

GOODE: Yes, they were in contact with a person that I call by another name that's similar to his, Lieutenant Colonel Gonzalez.

DAVID: So Gonzalez, had you met him before this new sequence of events happened where your name was requested personally?

GOODE: No.

DAVID: Oh, OK.

GOODE: He was a new introduction to me. He had been in contact with the Blue Avians about the same amount of time I had been.

DAVID: Which was how long?

GOODE: Right a little over four years. He was in contact with them. He brought my name to the rest of the secret space program alliance.

DAVID: They told him your name?

GOODE: They told--

DAVID: And they asked him to tell the alliance that they requested you by name?

GOODE: Yes. And--

DAVID: So you hadn't been up there in a long time, right?

GOODE: Right. I hadn't been a part of that world in a while. And they investigated me. They looked into my background, and a lot of my service record had been redacted. And there were some things that concerned them. They really wanted one of their own guys to be a delegate or liaison between this new group.

DAVID: How is it even possible that a black ops group could redact information out of somebody's security dossier.

GOODE: These are hard coded. It's not supposed to be possible.

DAVID: So that must have freaked him out.

GOODE: Yeah, it's not supposed to be possible. These are hard coded.

DAVID: And I would imagine within their own system there's all kinds of rules and laws and precautions about who gets to be brought up there. And if you've been out of the loop for that long, they're not going to be too happy about bringing you up there, I would think.

GOODE: Right, and I was not someone that they had full confidence in that would toe the line and follow their every order. They wanted someone that they had full control over.

DAVID: Wow, so this name just gets dropped on them. And how did you find out that you were requested? Did you get contacted by Gonzalez, or did somebody else contact you?

GOODE: I was contacted by Gonzalez. I was--I ended up getting picked up in one of the shuttle craft. And I was informed that I had been selected by the Blue Avians, and I had been informed by the Blue Avians that this was going to occur.

DAVID: And how would that take place? What is the typical Blue Avian contact like?

GOODE: They will either appear in my house, or they have the little spheres come and bring me, little orbs.

DAVID: You said they're eight feet tall, so how do they fit into your house?

GOODE: I have a high vaulted ceiling house. They have plenty of room to fit into my house. They've appeared in my house.

DAVID: Do they appear to have gravity weight? Do they bend the floor or something?

GOODE: No, they don't bend the floor.

DAVID: Do they float, or do they appear to be standing on the floor?

GOODE: No, they're standing there just like a normal person would be standing there.

DAVID: And it looks totally solid and real? It doesn't look like a ghost?

GOODE: Right.

DAVID: Wow.

GOODE: Yeah, they look like you could walk up and touch them.

DAVID: How did it feel the first time this happened? Were you shocked?

GOODE: Well, I mean I had been in contact with them for awhile, but it was more of a personal nature.

DAVID: Right, you said four years.

GOODE: For four years.

DAVID: So they had been doing this off and on for four years, just appearing in your house?

GOODE: Right, it wasn't a very regular contact.

DAVID: So Gonzalez gives you the message that they're going to bring you up there, and you said that a shuttle craft came. Could you briefly describe what the shuttle craft is? How does that happen?

GOODE: Yes, there's a small shuttle that fits five people, two crew in the front, an then three seats in the back. It's a triangular shape and goes up into somewhat of a pyramid shape. And the side opens up. You get in. When it would float in the backyard, I'd go into the backyard to get in. When you'd step in, it would dip down and move a little bit.

DAVID: And so it doesn't have landing gear?

GOODE: No. But it would, there were--

DAVID: What was the color?

GOODE: It was the black grayish color that you would see that you associate with the stealth bombers that a lot of people are familiar with. Within a matter of a few

minutes, it would zip up to the LOC.

DAVID: And the LOC again is?

GOODE: The Lunar Operation Command.

DAVID: Had you experienced this before?

GOODE: Not with this. This particular shuttle was new to me. This was--there were some newer technology that I was seeing from when I was in prior.

DAVID: So take us through what happens next. Did you have windows you could see your flight through, or was it all blocked out once you got inside?

GOODE: Well, at times they could make the panels go transparent where you could see out, but usually it was such a short trip there was no need for you to see out.

DAVID: And how long did it take you to get to the moon?

GOODE: Three to four minutes.

DAVID: Wow, so let's take it from there. What happens? You've been invited to be this delegate for Blue Avians. You get brought up to the moon in this shuttle craft. What was going through your mind? What happens next?

GOODE: Well, I didn't--I really didn't know what to expect. I was never really given a lot of intel beforehand. I got dressed real quick. I grabbed the quickest cap I could find off of the rack, which happened to be a hat I got when I went to Houston with my family.

DAVID: This is now while you're still in the house--

GOODE: Yes.

DAVID: --before you got picked up? So you got dressed.

GOODE: And it was when we toured NASA down in Houston, Texas. I had a NASA shirt, a NASA hat we bought as tourists. And I put on the NASA hat. And the night before--I didn't even think about it--my daughter is wanting to paint faces. She likes to paint faces. And she wanted to paint my face, and I knew I had that meeting the next morning up at the LOC. So I was like no, I'm not going to do that. So she was just like, well, can I paint your hand? And so I said, OK. So she painted a green dinosaur, tyrannosaurus rex on my hand, 11-year-old. So I didn't wash it off, and it stayed on all night. And it was pretty dried. And that was still on my hand. I was not looking all dapper and sharp for this first encounter. As I was getting off the craft, there were

other craft. And in this particular time, when I got on the craft, there was another person on the craft that was wide eyed. It was a lady, and she looked like she had just gotten out of bed. And she was like, isn't this exciting? Isn't this wonderful? And she was just ecstatic. And it was just her and myself in the three seater in the back when we went up. And then we just--

DAVID: Are there two pilots in the front? Is that two--

GOODE: Yeah.

DAVID: So two people have to run it.

GOODE: Right. Two people were in the front. And then the three--usually three open seats in the back. And usually it's just me getting in. This one time I was surprised when it opened to see someone else in there. And when we land in the hangar, we disembark. And there are a lot of other people disembarking for this conference that were just kind of average Joe's. And they were all starting to file into a line to go into one area of the VIP area of the Lunar Operation Command. And I was met by Gonzalez who walked me past them to--there was a conference room right next to that. And he walked me right into the very front of the very crowded room and told me to stand. He said, stand right here. And it was almost in the very front of the conference room. So I stood there. I put my thumbs in the front of my jeans feeling very weird, because I could feel all the eyes on me. So then I looked up and started to look around, and I saw all these people in these swivel chairs in a cathedral-like conference room that went very high up. The room could hold around 300 people. And there were people from all over the world. There were people in--politicians in India up there with the cut of the collar.

DAVID: Leader jacket?

GOODE: I guess. And people that looked like they were from that area of the world. There were people in different military type uniforms, different type of Air Force type jumper suits, and just a wide variety of people. And some of them looked like they knew each other. They were clicked off, talking to each other, or murmuring to each other. And I was standing up at the front trying to be inconspicuous as I could being at the very front. I have no idea what I'm doing, why I'm there. And I catch the attention of some of the people in the front. And being gruff military people, they start asking, who the heck are you? I'm cleaning up the language. Who the heck are you? What are you doing here? I said, I was just told to stand here. And one of them said, why are you wearing that ridiculous cover? Referring to the hat I was wearing. They said, take that off. I cleaned it up again. I took my hat off, and just flipped it and spun it onto the floor. Another one asked, why do you have a painting of a reptilian on your hand? And I looked at that, and I tried to wipe it off. But it was too dried. It smeared a little.

And I was really starting to get nervous at that point. I had no idea what was going to happen.

DAVID: You just up there being heckled.

GOODE: I was starting to get heckled, yeah.

DAVID: You were alone on stage?

GOODE: I was alone on stage. No prep. I was just walked there, told to stand there. And then all of a sudden everybody got quiet and just filed to their seats and started looking behind me. And I didn't see a flash, anything strange, but I'd look behind me. And there was standing one of the Blue Avians that I've come to known as Raw-Tear-Eir. And I know one of the other sphere beings that I had never seen before that we've come to now call the golden triangle head just because we've not been given a name or anything. They're not real big on names.

DAVID: There's a golden triangle on the top of their body?

GOODE: It's head was a golden upside down triangle, huge head with huge eyes that were blue. And his shoulders were very thin, about the same width as this head. He was about 10 feet tall, couple feet taller than the Blue Avian. And his arms were extremely long and thin. And his legs were too. No clothing. No sex organs or anything like that. And the skin was brown with a golden sheen, and had three fingers, and it was standing on three toes that were supporting it like this, almost like tripods. And it was there, didn't communicate, nothing. It just stood there. And it just seemed very like it didn't have any bones in its body. Just very weird apparition looking. And then Tear-Eir began to communicate to me telepathically with his hand raised doing good the communication.

DAVID: Were you looking at him, or were you looking at the audience?

GOODE: I was looking at him. I mean, that got my attention, just like it got the attention of the audience.

DAVID: Had they seen anything like this before?

GOODE: No one except for Gonzalez and a very few had seen the Blue Avian. So this was their first encounter with a Blue Avian. And all of them were there knowing that they were going to have--this was going to be. Everyone else knew why they were there. I was the only one that really didn't know what was going on. And that's how--for some reason that's how they work. They throw me into situations with me not knowing what's going on a lot of the time. It's odd, but I've learned to roll with it.

DAVID: Well, I guess nobody's heckling you once they showed up.

GOODE: No. And then at that point, I then was told by Tear-Eir to turn, and introduce, and repeat everything that he said word for word, to make sure I repeated everything word for word, and not to change anything. Everything had to be exactly word for word. So I turned to the audience, and I now I don't remember exactly what all he had me say in the opening. But then he opened it up for questions. And there were a number of questions. A lot of them were technical. They were things that I didn't understand what they were asking. Tear-Eir did. And I didn't understand what I was saying back to them. But there were some interesting questions that I remembered, and when I got home I immediately wrote it down so I'd remember. And I've got a list of those if--

DAVID: Yeah, let's.

GOODE: --you'd be interested.

DAVID: If you have something to read, we'd love to hear it.

GOODE: There was one person that was in uniform, and he asked if the avians were the rumored Ra from the Law of One, which was interesting that they would ask that. And the only response Tear-Eir had me give back was, "I am Raw-Tear-Eir." That was the only answer.

DAVID: Well as you know, in the Law of One, every answer to every question starts with I am Ra. So that's pretty obvious.

GOODE: And so that's--the person looked a little disappointed with the answer, but it was on to the next one. One of the people that looked like they were more from Earth, that looked very important, very dignified asked why they needed so many spheres, why were there 100 spheres in the solar system, and why do these beings need these larger ships? And Raw-Tear-Eir, or I just call him Tear-Eir, had me reply in this manner. "We require no conveyance. There are far more than 100 spheres that are spaced out equidistantly throughout the solar system. They are what you would best describe as devices and are in place to buffer the tsunami of storms of high charged vibrational energies entering your solar system, so they do not affect your star, planets, and native life in an adverse way as your system enters into this part of the galaxy."

DAVID: Wow.

GOODE: Another person asked, "If you are not living in the spheres, where are you going when you dematerialize?" And his answer was, "Many of us adjust back to our reality while others remain in what you refer to as a cloaked status and observe

activities on Earth, and your other colonies, and facilities undetected by those around them." So they're out of phase or cloaked. And the others go back to their reality. They're not hanging out in these spheres. Another person asked, "Why there was an intervention recently after there was a defection of other sacred space program groups with actionable intelligence that could have made a major difference and helped them win major victories?" The response to this was info that the various SSP groups understood, but I didn't at that time. Since, I found out what this was regarding. And his response was, "Since the defections there have been changes in the tactics that have led to two atrocities that were unsettling. The extremely destructive incidents on Mars and Earth that caused the large loss of life of innocence was a disturbing sign that these new tactics were taking the alliance in a direction where collateral damage of this magnitude was considered acceptable."

DAVID: What kind of magnitude?

GOODE: We can get into it later, but on one of the Mars facilities, there were a quarter of a million, I think, people that died.

DAVID: In a military strike that the alliance new defectors conducted?

GOODE: Yes, without permission from the council. They acted on their own.

DAVID: You said they had actionable intelligence?

GOODE: Right, from defectors from other secret space programs.

DAVID: So they couldn't just do a strike like this any time they want?

GOODE: No, it was actionable intelligence that they had a short window if they were going to have an operation. And they chose to act on their own.

DAVID: And Tear-Eir and his associates were very upset about this?

GOODE: Yes. There are a couple of secret space program groups that have been blocked from reentering the solar system since the outer barrier has been erected. And some of the people have been lobbying trying to let some of them back in. And this was one of the people that raised the question that they wanted the galactic league of nations--I've been referring to them as a NATO type SSP group, but that's the first time I had ever heard them referred to as a galactic league of nations--to return. They stated the group would return under any demands that the sphere alliance came up with.

DAVID: How much of the Galactic League Of Nations do you think was outside our solar system when the barrier went up?

GOODE: Almost all of them.

DAVID: These are humans, though?

GOODE: These are humans.

DAVID: From here?

GOODE: Yeah, and they were almost completely based and operating outside of the solar system. So they're almost completely out there and can't come back. And the response--the request was denied. And it was communicated that all of the travel within and without of the solar system will remain suspended for the foreseeable future. And this did not go over well with many, because a lot of the people present were really wanting to petition to allow this one group to be able to come back. Because they saw them more as a neutral group.

DAVID: Do you think with all the intelligent civilizations that the space program people have access to that those civilizations knew that this kind of thing could be done, that a barrier like this could be built around a solar system? Because it seems like it caught them quite by surprise.

GOODE: Everyone was caught by surprise.

DAVID: So this is not a normal thing to happen?

GOODE: I don't think so. One of the few esoteric questions was asked by one of the military people, which was strange to come from a military person. They asked--this is a question. This is something that goes around, so they must have access to some information on the internet. "Is there a soul trap set up for us after we die?"

DAVID: A soul trap?

GOODE: Yeah, a soul trap. And since then Gonzalez said he was referring to a white--there's a soul trap white light that people are talking about when you die. If you go to the white light, you get stuck in some incarnation soul trap or something.

DAVID: Well Art Bell was saying that all the way back in the '90s. Don't go to the light. It's a trap.

GOODE: Right, well that's what this question was referring to. I really didn't know what it was talking about at the time. And the answer came back from Tear-Eir, "The only traps we encounter in life and after are the ones we have set for ourselves. The idea that there is a soul trap at the end of a white light was a PSYOP and a distortion set in place that we can then create with the creative force of our consciousness. This

is the intent of the creation of this distortion." See, this is how they talk. It's very frustrating.

DAVID: Did they ever explain to you why they have to communicate that way?

GOODE: No, they don't. The person--

DAVID: What do they tell you if you try to get more specific?

GOODE: They just continue on with what they were planning on talking about. Sometimes I'll ask a question, and if it's not pertinent or whatever, they just keep on going. The person asking the question do not seem satisfied with the explanation. But that was pretty much the end of it--of the questions I wrote down when I came home. I just wrote down after that most of the questions were of technical and tactical subjects that I had no idea of what they were asking or what I was--the content of what I was repeating back.

DAVID: In general, what do you think the alliance was expecting out of these sphere beings? Are they expecting military support to be able to create full disclosure breakdown of secrecy so that--what were they wanting?

GOODE: In the beginning, I think they were expecting what a lot of people out there are expecting. They were expecting them to come in, and kick butt, and take names. They were expecting them to come in and be saviors, to come in and give them technologies to, offensive technologies, to wipe out the enemy, or to come and take these off world beings off in shackles, and to help come down and take the elite out. But they were disappointed as well. And they were dumbfounded that they expected this to be a fully military--they were military people, military minded. And them coming in with this, what they called a hippie message of love, and forgiveness, and raising your consciousness, just did not compute to these people with the way they think. So a lot of them were very concerned and very taken back.

DAVID: When you say there were a lot of technical questions that you didn't really understand, was the overall gist of it seeming that they were trying to enhance their war footing and have tactical strategy?

GOODE: Yes, it was tactical, and it had to do with offensive capabilities and wanting to use their ability to know future events, all these different temporal kind of questions, things that were far above my head in understanding. Because I didn't know all of the logistics that they had going on behind the scenes. So I didn't have any base of reference of why they were asking the questions.

DAVID: And the Blue Avian said, Tear-Eir said, that there's a tsunami of energy coming into our solar system?

GOODE: And since then, he said that these energy waves are coming in like ebbing and flowing. They're coming in waves, as well as our solar system, our local star cluster, is in the torsion field of the galaxy as we are entering this area of the galaxy, this high energetic area of the galaxy.

DAVID: Did he say anything about what the immediate short term effects of that would be as a--like what would happen to us as a tsunami comes in? How would we notice it?

GOODE: Well, if they were not defusing this energy, there would be a lot of really catastrophic sun activity, and a lot of really bizarre behavior in humans and animals, and really bad weather, earthquakes, all kinds of things that these spheres diffusing. This energy is supposedly alleviating for us.

DAVID: What would be the bizarre behavior? What might we see?

GOODE: Basically like end time madness type of--people just not being able to handle it, handle the energetic change.

DAVID: So the tsunami has an effect on the mind somehow?

GOODE: On the consciousness, people's consciousness. You would be waking up, and instead of your local area hearing of one or two shootings every night, you'd wake up and hear of all kinds of shootings, and riots, and crazy stuff going on, people being reactionary and acting bizarre for no apparent reason.

DAVID: I think most people feel like their thoughts are their own free will, and they don't have any--there's no other influence on how they think and feel other than what's in their own mind.

GOODE: We're all connected. We all have a joint mass consciousness that is affected by the energetic background noise or background energy of the cosmos.

DAVID: What is the effect that will happen as this continues? If they're stopping people from going crazy, then what are we gaining as this energetic change continues?

GOODE: Well we're gaining time right now to raise our consciousness to become--well, their message is to become more loving, more forgiving of yourself and others. And they say that stops the wheel of karma, and that we should focus on becoming service to others on a daily basis, not being so focused on ourselves and our own self needs, but on helping others, not being a doormat to others, but to try to be empathetic and help others, and to daily try to raise our consciousness and our vibration.

DAVID: So they're not trying to pose as the new god. >>COREY GOODE: Absolutely not. And one of the things that they have forced into my head is that I need to make sure that I do not come across as any type of guru, that I need to remain humble, and that I need to make sure that this does not become a cult or a religion. And I don't know the history of it, but apparently they've tried this three other times in the past. And each time, their messages have been distorted, and humans have used it for control, and turned it into cults and religions.

DAVID: Can you give an example of where you stepped out a line, and they spanked you?

GOODE: Well, there's been times when I have lost my temper with haters, and they've told me that during this time of high energy, karma is more immediate. And I suffer some immediate karma, open myself up to attacks. And they'll have a talk with me that I need to practice what I preach, focus on the words that I'm saying, and I need to try better to embody what I'm saying. And become more loving, forgive others, it sounds easy. But that's a very difficult path. It is very.

DAVID: Well, it seems like it's the opposite of what the elite believe.

GOODE: Well, it is. And anyone that's tried to walked that path, you stumble quite a bit. And being human, it's hard to love people that are hating you. And it's hard to forgive people that are spitting in your face. But it's not a easy path. But if you want to raise your consciousness and become a higher vibratory type of person or being, that's the path you gotta take.

DAVID: Did they tell you there's a relationship between consciousness and physical reality?

GOODE: Absolutely.

DAVID: How does that work, according to what they told you personally?

GOODE: Well, it's the same concept that has been used to enslave us.

DAVID: I don't understand.

GOODE: Well, our mass consciousness has been used as a tool against us to keep us enslaved. The powers that be will use media to plant a seed in our mass consciousness, and then later on through mass media, or false flags, or whatever cause an incident to cause us to emotionally give it energy and the masses to, through our mass consciousness, create that situation, and make it happen.

DAVID: So you're saying that's like imagineering?

GOODE: Right.

DAVID: They're actually trying to cultivate this power that we have to manifest outcomes that they might want?

GOODE: Right. The powers that be fully understand the power of our consciousness, and they understand that everything around us--our thoughts, light, energy, matter--are all states, are all vibratory states. And our consciousness is a vibratory state. And our joint consciousness is a very powerful co-creative mechanism that has an effect on all of the other vibratory states around us. And once we learn to harness that, we can change reality, and especially as we're going into this higher vibratory area of the galaxy and where our consciousness is changing, becoming more higher vibratory, we're going to become more of a force to deal with for these elites or any other group that want to try to keep us in a box.

DAVID: You said that 40 different--there's 22 different genetic programs going on. And so we have all this DNA from other intelligent civilizations. What happens with all that mix and match of DNA in us as we go through this change?

GOODE: Well what has occurred from this big hodgepodge in mix is that we have a spectrum, a wider spectrum of emotions than most beings out there. They have the same emotions we do, but because of all the tinkering that's happened with our light bodies and our genetics, it's not just genetics. We have a wide spectrum of emotions, which is a blessing and a curse, because I mean, right now we can control those emotions. And it's affecting--and our consciousness level is not controlled, so we got a mess right now.

DAVID: So if someone has a judgmental look on their face and looks at us like, [SCOFFS]. Because of this genetic mix and this spectrum of emotions you're talking about, does that mean that we are going to actually have a stronger emotional reaction than other intelligent civilizations normally would?

GOODE: Yeah, we have a stronger emotional reaction to just about everything than other societies do, because of our makeup.

DAVID: It seems like that could be a tremendous weakness.

GOODE: It's also a great thing once we learn how to control our consciousness, because emotions are like an activator in our consciousness. They work hand in hand, and that's what helps activate our consciousness. And we can become very powerful co-creative beings and create a wonderful new world once we learn how to--once we're not being manipulated, and once we learn how to manage our emotions and our consciousness.

DAVID: If the sphere being alliance is not allowing what we're calling the good guys, the alliance in the space program, to actually create military strikes, how do they think that anything's ever going to change? Wouldn't the alliance perspective be that they need to attack these negative groups of extraterrestrials that are still here in order to ever change anything?

GOODE: Yes, they have wanted to go the full military route, but negative begets negative. You can't get a positive from a negative. They've been given extraordinary technologies that are defensive in nature, not offensive.

DAVID: It's the alliance, the space alliance?

GOODE: The alliance. The secret space program alliance has been given defensive technologies, but they have been told not to do any more of these strikes that cause large losses of life, not to destroy any more of the infrastructure that is going to be handed over to a post disclosure civilization that will be the foundation for a "Star Trek" type civilization.

DAVID: Well disclosure would be a really key word there.

GOODE: Yes, full disclosure is what they're going for.

DAVID: So these sphere beings are helping us get to disclosure?

GOODE: Right, that is the goal. They want for humanity to free themselves through disclosure and through us rising up and freeing ourselves. And hopefully--and it's going to be messy, because a lot of people are going to be angry. There's going to be some messy parts. But they want us to do it in a way that's going to be a foundation for a whole new era for humanity.

DAVID: Well this is a really fascinating subject, and we are only just getting started. We're going to do a whole series of episodes. Obviously, there are so many questions, and we're just cracking the lid off of this thing. But this is very fascinating, Corey. I applaud you for your courage and your bravery in coming forward and being willing to do this. And I think you're a hero, and we all owe you a debt of gratitude. So thanks for being here, Corey.

GOODE: Thank you.

DAVID: All right.

Lunar Operation Command Season 1, Episode 3

Cosmic Disclosure; Lunar Operation Command Season 1, Episode 3

14 Jul 2015

DW : I'm your host, David Wilcock, and I'm here with Corey Goode. This is a very interesting conversation that we're having regarding the Secret Space Program. I want to emphasize once again that this material is highly controversial, and that you probably have not heard anything like this before unless you've been following what we've been talking about. I do want to make it clear one more time, that I have investigated this subject for many, many years. I've been in contact with insiders for over 20 years and I've spoken to dozens of people with different types of classified clearance. And my conclusion has been that there very much has been an industrialization of our Solar System and beyond, by what you could call the government or the military, depending on how you want to word this. So, Corey, it's good to have you back again. And it seems like, from what you're saying, the LOC, of Lunar Operation Command, is like the focal point for how Earth is then connecting out to the greater space Program and the cosmos in general. So, tell us a little bit more about the LOC. I guess, first of all, what does it look like as you're flying into it?
CG: Well, you can tell it's been built and added onto quite a bit since the '50s, It's built into the craters and into the rocky area to where it blends in somewhat. Some part of it, is built into the rock. Very little of it is above ground.
DW: Oh! Okay.
CG: Most of it, I have not has access to. I have seen a diagram to where it is somewhat of goes into a bell shape further and further down you go and I've only have access to upper levels.
DW: So, even though it's a bell shape, you don't actually see the bell on the surface of the moon.
CG: No. It's like looking down at the top of the bell or the tip of a pyramid. You just see the smaller top or the tip of the iceberg, I guess you would say. The rest is below and spreads out as it goes down.
DW : If there are this many craft going to and from the LOC and you say it's on the dark side of the moon, how could it possibly have been kept secret from us? Couldn't people with their telescopes see all these ships coming and going from the moon?
CG : People do see that. There's actually another base on the back side of the moon that belongs to human beings. It belongs to one of the Secret Space Programs called Dark Fleet, that a lot of people see craft coming from. I can give more of a location of that one. If you're looking at the moon, it's at about 10:00 position. People have filmed and seen flurries and swarms of craft leaving and coming from that area quite a bit... amateur astronomers with video cameras hooked up to their telescopes. This is something that has been seen.
DW : Is there anything on the side of the moon facing us of interest, or is it all being

kept on the back so that it's less apt to be seen in the moon's surface.
CG : Most of it is on the back. There are areas on the front side where craft come out and there are entrances. There are also areas that are, by ET groups, that are covered by a sort of hologram shielding that prevents us to see it. Most of it is on the back side of the Moon for obvious reasons, for those on the planet's surface that are not meant to see the stuff, won't see it.
DW : When was the LOC actually built?
CG : The LOC was built onto an existing NAZI facility that had been built in the latter part of the '30s and '40s.
DW : So, it goes that far back.
CG : That far back. Once the industrial might of the United States became involved, they really started putting a lot into it and built it out like crazy. They started really building in earnest, in the late '50s on it.
DW : Yeah, and I want to get a lot more into the history of the space program in some later episodes. For right now, let me ask you another question. If we had this all the way back in the '50s, then why did we do the Apollo missions? Why did we land on the moon? What was the point?
CG : There are various levels of programs. There are some in NASA, and there's NASA equivalent military programs that are what they think, are the most cutting edge. And they think they are at the top of the totem pole as far as security clearances and "need to know" of what's going on in the solar System.
And these people would literally get into fist fight with you were to challenge them and tell then they weren't. So they're ... I guess the lie has many levels and the people at each level are told they are at the top. And it's not the case, but they believe it, just as everything is completely compartmentalized. In each compartment, everyone think they're doing the most important cutting-edge work and have the broadest knowledge and all other compartments and groups are below them.
DW : I guess if you can make someone feel special then they're going to work harder because they think they're the cream of the crop.
CG : Right, Hubris
DW : Yeah. Do you think, the Apollo missions was a money laundering operation?
CG : Very well could have been part of it, to channel a lot of that money into the Secret Space Program. The people that were running those programs on the lower level really believed in what they were doing and really thought it was cutting-edge and the highest technology we had.
DW : Do you think those employee could have had information withheld from them about how expensive what they were working on actually was?
CG : Oh yeah! They deceived on an intelligence and every... They were deceived on every levels.
DW : So do you think it could be maybe even only 10% as expensive as what they told us it was?
CG : That would be speculation. I would have no way to know, but...
DW : But it definitely could have provided "black cash" to develop out the Space

Program even more.
CG : Yeah. Through all different ways... that drugs, all kinds of way they have of coming up with cash to build out that infrastructure in the beginning.
DW : Do you think that NASA knew anything interesting at all that we didn't know in the mainstream about the moon?
CG : There was a lot that was discovered during the Apollo missions. In the beginning they discovered that it was not a real good idea to slam one of their landing modules into the moon to test the instruments they placed on the moon to check for moon quakes.
The moon is a very strict zone that is like a giant Switzerland. It is a very neutral zone and hitting it with that projectile was a very bad idea. And from what I read, they were warned not to come back.
DW : It's strange that you would say that the moon is this neutral Switzerland type of area because it's right next to the Earth. If it's our moon, shouldn't be our property and we get to have control over the moon?
CG : No.
DW : It doesn't work that way?
CG : No. If you've seen, sort of, the maps of Antarctica, how it's sliced up amongst all the nations. The back of the moon is that way, too. And all these different regions are pretty much owned and inhabited by different ET groups.
DW : Really?
CG : And there are some groups that have bad blood and have warred with each other going back many, many, many thousands of years, but they have installations that are just a couple of kilometers away from each other. And they have been there for many thousands of years, in peace.
DW : There's a lot of moons in our Solar System, so why is the moon right next to Earth so important to these folks?
CG : It's a perfect observation and area to leave, to come to the earth and back for doing their experiments.
DW : So a lot of what we could call extraterrestrials are not very far away and they're coming and going from a place that's actually right nearby.
CG : Exactly.
DW : Does this get back into what you were talking about in our previous episode, about the delegation with this so-called experiment where they were running these 22 different programs?
CG : Right. And all of the different ETs... this includes human-type ETs and the non-human-types, types that do not particularly like each other very much. There is some sort of diplomatic agreement about the moon. There is something very special about the moon being a very diplomatic neutral zone. None of them will violate that.
DW : So you're saying in this Super Federation Conference, where you said there's at least 40 different groups, they're not all in agreement on what they're doing. They all have their own programs or their...
CG : Own agendas.

DW : So these delegations were like a way of them kind of working out their arguments and finding common ground somehow?
CG : Right, not stepping on each other's toes all the time with their different agendas.
DW : How could these groups that have warred with each other in the past possibly be able to tolerate each other's presence on such a small – the moon is only 2,160 miles wide, so how could they tolerate that?
CG : It's something that has been going on for thousands of years. They've set up this diplomatic neutral zone that not even the worst of them will violate. None of them will violate it. It just is not - It's something that I've heard it say - it is not done.
DW : Is there some sort of enforcement, some sort of military that polices it or ...
CG : It doesn't have to be. It just – no one has to enforce it. It just isn't done.
DW : Well, that would imply that in the past, something happened that was so horrible that they learned from their mistakes, I would think.
CG : Right. There's areas on the moon where there's a lot of debris from other battles and things from ancient times.
DW : They didn't clean it up?
CG : No. They left it there as kind of a memorial, or a testament of what happened in the past. And the stuff is still there and it's usually off-limits.
DW : So it might be like the idea of how silly the nuclear arms race is, where you've got two countries fighting over who's got more nukes when even a small percentage of that arsenal would wipe out the whole planet.
CG : Yeah.
DW : So these folks would all wipe out each other out it they want to war because they probably have weapons that are much greater than nukes.
CG : Right. They can destroy entire planets.
DW : WOW. So, the LOC, is that just one small part of all the habitation that's on the moon?
CG : Right.
DW : It's not really a focal point, except maybe for us, for Earth?
CG : Right. It's a focal point for human activity.
DW : So, other ET groups would have their own versions of the LOC for them, which would be like their focal point.
CG : Exactly.
DW : They're not using our LOC as their focal point?
CG : No. No, no, no. I have not seen ETs at the LOC, other than when members of the Sphere Alliance have appeared.
DW : So real quickly, what is it like when you are in the LOC? Do they have apartments that you can go to once you get inside? Is it just wide open conference rooms and little chairs? What happens when you go inside?
CG : Well, until recently I had never been to the VIP area. I had always been to just the area to where they have kind of, not really small apartments, but small little dwellings to where it has two to four bunks. The halls are really narrow. You move over to the VIP area, the halls are wider, there's wood paneling on the walls, like

cherry-wood nice walls – very upscale. It's a dramatic change when you go from one area to the VIP area.
DW : Could you wander around and try to find a restricted area, or do you have military escorts that lead you around. How does that work?
CG : Well, you're allowed certain areas. There are marks, paint lines, on the floor that a different color that lead to different areas.
DW : So, if you were red, then you'd just walk, follow the red line to where it leads to?
CG : Right. And, like I said, I've only been... The top floor is where most of everything takes place. The next two floors were the medical and some other more advanced medical stuff take place. I have never been further down than those. There are some people recently that have been taken on a tour that have gotten to see a lot more than I have.
DW : One of the thing that obviously is the most interesting to folks is the idea of an alliance. So, we covered that briefly, but I'd like to sort of, sketch-out for us in more detail. What is the Alliance? Was it there at the beginning of the Space Program or did it form later on, and what are their goals, that kind of stuff.
CG : The Alliance, it kind of formed slowly over time. The Solar Warden was more of a group that was dated back to the SDI era and a little bit earlier.
DW : Strategic Defense Initiative.
CG : Right.
DW : Star Wars.
CG : Back in the late '70s, '80s, and they were getting upgrades up into the early '90s. But they were pretty much more of the aging fleet.
DW : What was the Solar Warden's original responsibility?
CG : They policed the Solar System from intruders and...
DW : That would be groups that are not part of these 40 that are the Super Federation?
CG : Right. And also somewhat of a space-traffic control, air-traffic control. They took care of that.
DW : Could some ET group just interfere and invade with vastly superior weapons and technology? I mean, how could a group from the '80s be able to police our Solar System against potentially anybody that could try to invade here?
CG : Well, they wouldn't have been able to hold their own with a large invasive force, but most of the groups that passed through were only in maybe one to a handful of vessels. There are so many different groups that pass through our area.
DW : And, I would guess it's sort of like gang warfare, where the 40 ET groups that sort of, claimed this as their turf, with whatever level of technology that they have, they're also going to defend their "home turf" from an invasion.
CG : Right.
DW : So, Solar Warden is not necessarily meeting a tactical force. They've not having a weapons-up fighting stance when you say they are policing the Solar System – or are they?

CG : They would engage small numbers when they had to, but they were not ever a huge force to be reckoned with.
DW : So, most of these unwanted entrances into our Solar System, would be more small groups of ETs or single craft that are trying to be sneaky.
CG : Right.
DW : Trying to slip in?
CG : ... marauder groups that would come in and do "hit and runs", to come and take things and leave.
DW : OK. So, where does the Alliance come into play, now that they are talking about the Solar Warden? You said Solar Warden got started in the late '70s and they got a lot of the Star Wars technology?
CG : Mm-Hm (Yes)
DW : How does this relate to the Alliance exactly?
CG : OK. Well, they were kind of the root group that formed the alliance. Now, they're made up of breakaway or defectors from the other space fleet groups and some of them are from various Black Ops Military Space programs. You have the ICC, the Interplanetary Corporate Conglomerate, which is pretty much the largest. They own pretty much all the infrastructure out in the solar System. You have...
DW : And what corporations?
CG : Just about every aerospace and other than aerospace, it's a huge amount of...
DW : Lockheed, Boeing, McDonnell Douglas, Hughes Aircraft?
CG : Yes. Just, all of the above. And not just American Corporations. And then you have the Dark Fleet. They are a very secretive fleet that has very advanced technology and they are predominantly outside of the Solar System all the time. Then there was this UN-type fleet from just about any country you could think of, and they...
DW : Countries on Earth, you're saying.
CG : Earth countries. And they seem to be a lot more of a laid back, and not really a huge militaristic group. As Solar Warden has started pretty much a Cold War, they started to fly in front of the International Space Station to "accidentally" show their vessels, little things like that in the beginning.
DW : If Solar Warden is going to try to create disclosure, where obviously the other parts of the Space Programs don't want it, couldn't that lead to a shooting war between these factions?
CG : Yes. It was on the brink of that when the Sphere Alliance, the Sphere Being Alliance, went into an active mode and made contact with the Secret Space Program Alliance, which had just started accepting defectors from some of these other groups to where it wasn't just the Solar Warden group anymore. The alliance was made up of defectors from the other programs, as well. So, it's a hodgepodge of defectors from all the space programs that have a common goal of ending the tyranny on Earth of basically the secret Earth Government that controls the "Babylonian money magic slave system" and to bring to Earth the technologies that we have developed that has free-energy, all kind of medical technologies that will heal just about anything you can think of, clean up the environment. Overnight, these technologies would collapse

the financial system and there would be no need for a financial system. And they want to bring this to Earth and to also do a full disclosure of all of the crimes against humanity that all of these elites have been doing over many, many years. That's their goal.
DW : So, when did the Secret Space Program Alliance starts to have these goals in mind and begin to find action on them, to your knowledge?
CG : To my knowledge, they started forming these idea in, probably, the late '90s and were really starting to act on it in the early 2000s, where they were really trying to cause accidental disclosures by flying in front of live (video) feeds, trying to get people to ask questions.
DW : How much contact does the Space Program have with what's here on Earth? Could they tune-in (to) cable television and watch TV and see what's going on with our shows?
CG : Up until a certain time period, there was zero. All communications to Earth were blocked
DW : Really?
CG : Yeah. There was no... After the internet, internet access was blocked. There is internet broadcast throughout the Solar System.
DW : Internet from Earth, or they have their own internet in the Space Program?
CG : They have their own internet and access to The Internet.
DW : Oh! They do?
CG : Mm-Hm. A lot of time, it's read-only.
DW : Read-only?
CG : Yeah.
DW : I would imagine that only the most trusted people would be able to actually upload something to the internet that they could be trusted not to leak the truth.
CG : Right. Back when I was assigned to the research vessel, we had all... Any radio or television broadcasts were blocked. We were not allowed any real-time of close to real-time news.
DW : So, the Alliance is aware to what's happening on Earth? Some people at least in the Alliance know what's going on here.
CG : Right. After they finally got to a point to where they broke away, they opened up information to where those that were in the Alliance now had access to information. And seeing what was going on gave them even more incentive to want to bring this information, this technology to humanity.
DW : What would the average person's life be like if the Alliance's goals are met? On Earth, what would that life be like?
CG : It would be no different than the "Star Trek" era, what you've seen in "Star Trek".
DW : So could people have a portal station that they could go to, where instead of flying through the airplane that you'd be able to take some kind of Stargate-type system to wherever you wanted to travel?
CG : Sure. Yeah. There's replicators. There would be no starvation. Literally, the

deserts could be turned green with desalination of water.
DW : What about all the plastic floating in the ocean, these big giant gyres of waste material?
CG : Matter is easily changed into something else. It's just matter of knowing how, the technology to do so. And we have that technology, it's just not being shared.
DW : Some people might be really freaked-out by the idea of not having money anymore. They're going to say, that's socialism, that's communism. That's going to get us under even more control because nobody will have any money to resist this new thing that they're trying to do.
CG : That's the way we're programmed.
DW : How would you think that, that's not the case?
CG : I mean, if you want money that badly, you can use a replicator and replicate some silver or gold of replicate yourself a $100 bill, if it makes you feel comfortable, and put it in your pocket. There will be absolutely no need for any type of financial give or take.
DW : I would think that, the typical old-school politician mentally would be that if you gave everybody to Earth this kind of stuff, that they would all just want to drink beer and nobody would want to do anything, and they'd just be hanging around and it would kill them. It would ruin their lives.
CG : Well, there's going to be a transitional period where people are going to go probably a little bit nuts for a while with the technology.
DW : I mean when people win the lottery right? It's not good for them.
CG : Right. Well, if everybody wins the lottery at once, everybody has a replicator. Everybody's going to be pushing the button every day and trying all these different meals. Everybody is going to want to go all over the world, and once it's cleared all over the Solar System, and see all these different ruins that are everywhere. I mean there's going to be a lot that's going to be opened up. But first, we're going to have to go through the process of dealing with our past and getting over our past.
DW : Couldn't somebody have a replicator and build a very effective weapon with it and then kill a whole bunch of people?
CG : That's what buffer technology is for.
DW : What's buffer technology?
CG : They've got some of that on temporal drives to keep people from traveling back in time on certain craft that have temporal drives for engines, I guess you would say.
DW : So you can't just 3D print a nuke with a replicator or something like that.
CG : Right.
DW : OK. So there are restrictions. It's not you can make anything
CG : Right.
DW : What does the Alliance want to do as far as all this secrecy and all this occultism that we see in the world today, the weird stuff that is so upsetting and depressing? How do they want to handle that?
CG : They want to shine a light on it. They want to bring the truth, the information, to every human being at once on the planet. Not give certain people the truth, give

everybody the truth. Give everybody access to this technology and information.
DW : So, no more cover-ups at all?
CG : No more cover-ups, no more partial disclosures. Just bring it all, bring it all to humanity.
DW : Yeah, that's really incredible. So that's all the time we have for this episode. We are going to have a lot more to talk about. Obviously, we're just getting started. But again, Corey, thank you for being here. This is really incredible information.
CG : Thank you.
DW : Bye.

Life On The Research Vessel Season 1 Episode 4

Cosmic Disclosure; Life On The Research Vessel Season 1, Episode 4

21 Jul 2015

DW: Alright, welcome to the show. I am your host, David Wilcock, and we have a truly remarkable man here we are speaking to, Corey Goode, who has come forward as an insider, telling us about this remarkable new world of what has been called the Secret Space Program. Corey, the scope of this program might be hard for some people to accept. Granted we went to the moon in 1969. Some people would say, we allegedly went to the moon. But it certainly appears we did, at least do some real thing on the moon, and then we never went back. They put the flag in there. They ran a few missions and oh, we're done. We saw what we need to see. So, I think if you're going to think about people settling outside Earth at all, most people, if they could even imagine that, would say, well, it's probably not that much. What's the real scope of what we're dealing with? When the truth comes out, what are we going to learn?

CG: Well, it's going to be overwhelming. To learn that there is a vast infrastructure throughout the entire Solar System with everything from mining operations in the asteroid belt, and on moons and planets to procure raw materials to industrial complexes that produce technologies and colonies of human beings that work in those industrial complexes, and support this large industrial machine that is throughout our Solar System.

DW: We couldn't build a base inside a gas planet right? Because it gets too hot, and there's too much air pressure?

CG: Yeah, too much pressure.

DW: So if we want to look for these colonies, where would we be looking?

CG: Colonies are basically what we call the area to where families and people live.

DW: Okay

CG: There are also all types of different types of facilities. There are facilities in type inside hollowed-out asteroids that they've mined. There are facilities spread out across Mars, underneath of course, underneath the surface of Mars, and various moons of gas giants, and even our own moon.

DW: Could you try to give us an estimate of how many different facilities or different places that have been built there are, let's say, in our Solar System?

CG: In our Solar System, everything from small security outposts that man 18 to 40 people on Mars alone, to facilities that float around in different Lagrange points throughout the Solar System.

DW: Could you tell us what a Lagrange point is?

CG: They're areas between planets or bodies that have an uninterrupted gravitational, or an equal gravitational pull from all areas to where they can have a kind of geosynchronous, or stationary point to stay. And I really don't have a firm number. There are hundreds of facilities out there.

DW: What would be some of the larger of facilities in term of the staff, the amount of crew they would have?

CG: Well, we talk about colonies, we're talking about some of the larger ones that have upwards of a million people.

DW: Really?

CG: Yeah.

DW: How many do you think there would be of that kind of size of population?

CG: I don't think there's a lot of that have that large of populations, but quite a few that have into the hundreds of thousands.

DW: Does it get colder and harder to live in a place as you get farther away from the sun?

CG: That's where advanced technology comes in.

DW: Okay.

CG: We can produce the living conditions that are comfortable to us anywhere. And, even the Schumann resonance that occurs here on Earth. The Earth puts off a certain vibratory resonance that keeps plants and humans healthy, that Schumann Resonance is piped into spacecraft and facilities, colonies, to help keep the people healthy. And the barometric pressure, the gravity is controlled.

DW: I was just going to ask about the gravity. Obviously, the Earth has a certain mass, and the gravitational acceleration, 10 meters per second squared, is proportional to the Earth's mass. So, with the moons, it's believed by NASA – they talk about this – that you would bounce around.

So, how do they compensate for that if it's smaller?

CG: Well, they have gravity plating just like they do in the vessels, interlocking plating that are in the floors, that have electricity applied to it that creates an electro-gravitational field, that creates artificial gravity.

DW: What are the sizes of the plates? Do they vary?

CG: Well, the plates vary in sizes, because you have different size hallways. But there are plates about this (2-3 inches) thick that interlock like children's building-block toys that interlock or dovetail together.

DW: So, can you just give us a little more information about what would be the major categories? You said one type of a category of a place that would be built, an installation, would be a place where people live. Is that strictly utilitarian like just a whole bunch of rooms where they bunk, or do they have a nice, big atrium with a waterfall? Do they have big common meeting areas of auditoriums?

CG: Usually, when I was on the research vessel, we didn't normally get to visit them. These were owned by the ICC (Interplanetary Corporate Conglomerate). They were a corporate-owned colonies. If they did not access to one of their own people to fix a critical piece of machinery or technology that was damaged, there was usually a specialist aboard our research vessel that has that expertise. And then, on those special occasions, we were allowed to go to the colonies under strict orders to not talk or interact with any of the people at the facilities or the colonies. We were under armed guard. We were not offered tours, not offered a meal. We were escorted straight to the location to where we were to do maintenance and then, escorted straight back to our vessel to leave.

DW: Could you come to Earth whenever you wanted while you were doing this work?

CG: No. When you were doing your "20 and away", you were totally cut-off from Earth, Earth news, everything Earth-related. We didn't get any news any television, any information about what was going on Earth.

DW: Were you allowed to bring books and magazines with you to read?

CG: No. We didn't even have a photo of our family or anything like that. All you had is what was given to you when you reported.

DW: You talked before about these smart-glass pads. Did you get access to those when you were on this research vessel?

CG: When you were on duty, yes.

DW: Okay. Did they know what you did? Was there a surveillance record of whatever you tried to look up with them?

CG: I'm sure there was. On the research vessel, it was a lot more laid back than I hear things are on the military vessels. They always call the scientists "eggheads". They were perfectly fine. A lot of time, I got to spend a lot time looking at the smart-glass pads. There was a lot of down time for me. Everybody had redundancy training. You didn't just have one job. I was trained in doing communications and a few other things. But a lot of the time, I would be in one of the labs, when some of the other work was done, and I would just have hours to spend, looking at the glass-pads.

DW: So, let's talk about recreation for a minute. People, are they more apt to hangout and talk to each other, or are they more apt to fuss around with the glass-pads and be alone and just try to read more interesting things.

CG: You would mainly only have access to the glass-pads when you were on duty.

DW: Oh, when you were on duty.

CG: Right, when you had off time, or you were in the galley or whatever you were going to communicate with other people and hear the scuttlebutt of what is going on.

DW: Did you have certain people that were, like, your close friends?

CG:I was mainly in tight with some of the "eggheads" or scientist because I spent a lot of time with them. And I was assigned to one bunk area that (to which) usually 18 to 24 people were assigned. And I get to know some people but people rotated in and out a lot.

DW: There was a lot of turnover?

CG: UmHmm (yes)

DW: What was the kind of thing that you would talk about with these people? I mean, it's hard for most of us watching the show to imagine what it would be like to live in this world. Does it become ordinary after a while? Does it become boring after a while?

CG: Yeah, it was very boring. We would talk about work. We would talk about what was possibly going-on back on Earth sometimes, speculate about what other people were studying when we were assigned to study certain things, just your normal kind

of chit-chat.

DW: How often did you visit various facilities when you were on this research vessel? You said you were on there for 6 years before.

CG: Like I said. It was a rare occasion. There were three different times that we visited actual colonies, and we visited the industrial complexes several times to do repairs.

DW: That would be more like factory-type facility

CG: Like a factory. And there was one occasion that we actually went to a mining operation that was in the asteroid belt.

DW: What would that look like?

CG: It was really just a three-man operation inside of an asteroid. They were operating mainly robotic and remote-controlled apparatuses.

DW: Only three staff we need to run it?

CG: Three people that would rotate.

DW: What was the size of the actual construction itself? How big was this area that was built?

CG: Well, this was an extremely large asteroid and it grew larger and larger as they were mining it.

DW: How could it grow larger? I don't understand.

CG: The inside space.

DW: The size of the hole.

CG: The size of the inside space of the hole was growing larger and larger and larger. You could see, (that) they started-off digging, and they were making more and more progress into this one large asteroid.

DW: So, if you only visited, you said, three colonies and then other industrial facilities but you were out there for six years, that doesn't sound like the main thing you were doing.

CG: No, it wasn't super exciting. A lot of what we did is we were studying, I guess you would call them exo-extremophiles. I guess modern biology and science are going to have to redefine what life is. Based on what I saw, the life I saw, being studied, there was plasma life, other types of energetic-type of life, that were basically like giant amoebas that were feeding off of the electromagnetic field of Jupiter. They tried to get specimens of those. They were so large, they would get small specimens that would basically die or somewhat putrefy. They weren't able to...

DW: What was it about them that made the space program decide they were actually alive?

CG: Well. They were not just alive, they showed signs of being sentient.

DW: Really?

CG: Yeah. They were self-aware. They had preservation-of-life characteristics. There were a lot of things they did, testing on them, that I guess wouldn't be extremely ethical to figure out...

DW: Well, I think your typical conventional view of biological life as it has to eat, it has to excrete, it has to have locomotion, it has to have respiration ...

CG: Neurology

DW: Right. You're going to have cells, you're going to have biological material ..

CG: Yeah. It's carbon-base life.

DW: So this life doesn't have cellular structure. It is not like the plasma is interconnected by cells.

CG: No. But they behaved like single-cell organisms in the way they reproduced.

DW: They actually reproduce?

CG: Yeah. What is it, Mitosis, where they split?

DW: Right.

CG: And there were also some ocean life under one of the moons of Jupiter under ice that was studied...

DW: Like Europa?

CG: Yeah, that were somewhat like whales or dolphins.

DW: Really?

CG: Yeah. So there's quite a bit out there that the scientific people are studying.

DW: How common would biological life be in our Solar System? Where do you find it?

CG: It's pretty much everywhere if you include on the microscopic level. It's pretty much everywhere. You can even find it free floating in space freeze-dried.

DW: Right. When we get beyond microbial life, do you actually find little guys that can walk around on these moons, like out around the moons of Jupiter? I know you said Europa, which is a watery moon, but what about a dry moon? Would there be a life that could live inside the surface of a dry moon?

CG: There is some life on Mars. There is some small animal life that mainly is burrowing, that digs. There's plant life on Mars that's very... what would you call something that grow in a desert... very robust. There was this one bush that was purple and red, that has huge thorns on it. And it was kind of squatty bush, and it had pointy leaves that were like thorns at the tip that were striped purple and red.

DW: How would you go out to see those bushes? Would you wear a suit of some kind?

CG: Yeah. There was a lightweight suite, not a heavy pressure suit.

DW: Did it have like a glass helmet kind of thing?

CG: Yeah. And a respirator.

DW: So, let's go back to the vessel for a minute. How many people did you bunk with on the vessel?

CG: It ebbed and flowed. There were up to 24 people that could stay in the area that I was assigned. It was anywhere from 18 and 24. It would change.

DW: So, you were contained, and you had to sleep all together in one room. Like the military style?

CG: Yeah. And we had bunks that were into the walls, and we would sit in the bunk. You would sit in your bunk, close your divider and you had a little organizer section

that you could put whatever items you had.

DW: Did they keep you on a 24-hour cycle like on Earth? It's the same kind of measurement of time?

CG: Right

DW: Did they light the ship in any way that would indicate to your body that you're on a cycle?

CG: They tried to keep a circadian cycle going and pipe the Schumann resonance in, to keep everything, what the human body is used to for health reasons.

DW: Did some people work the night shift?

CG: Oh yeah. Constantly, people were on duty.

DW: How are you getting water? Obviously water on Earth, requires a hydrological cycle with clouds and rains. Water's so scarce on Earth now, with California's drought. How do you guys have it, in the middle of space?

CG: Water in not scarce in the Solar System. And when you're on board a vessel like that. Let's just put it this way, everything is recycled.

DW: So the whole ship is designed to recycled everything

CG: It's a very closed system, self-contained closed system. Yeah, everything is recycled.

DW: Do you end having to become vegetarian, or do people that like to eat meat still get a chance to eat something like meat? What are your meals?

CG: The quality of them has changed but, they had replicator that produced a certain range of meals. But they also had hydroponic areas where they grew some fresh foods.

DW: So, could you hit the button for "cheeseburger" on a replicator and get a cheeseburger

CG: No. It wasn't like that. No. You would hit a button and get a pot-roast or something like that.

DW: What were your favorite things the replicator made? Could you give us a list of

what...

CG: I would get the pot-roast a lot and mashed potatoes

DW: Was it a fairly convincing pot roast? Did it actually taste like a pot roast?

CG: It tasted good, yeah.

DW: It came out at the right temperature? Did you then have to heat it once it was made?

CG: No, it came out at a hot temperature.

DW: Could you see the food being formed inside through glass, or was-it dark?

CG: It looks basically like a microware, the size. And you put in a plate, right on the area designed for the –plate, close the door, you push the button of what you want, and it makes a noise, and it appears. And you open it, you pull it out, and there's steaming food.

DW: What kind of noise was it?

CG: Similar to a microwave. When they would replicate something, would call it "printing something".

DW: Really?

CG: Yeah

DW: Was there a name for the device? Did you call it something?

CG: A printer

DW: Really?

CG: Yeah

DW: How did you know what you were going to get? Was there like a digital display that you could choose from a menu that you'd scroll through or something?

CG: If you were to look at a microwave, you have a certain amount a button that you can push...

DW: So there was a pot-roast button?

CG: Yeah. There was a button for different meals.

DW: What about beverages? Could you get like a lemonade or a fruit punch?

CG: Yeah, but you didn't get that through the replicator. There were dispenser for different beverages

DW: Did you grow the vegetables separately from the replicator? Like, you can't print a salad.

CG: Well, there were some vegetables like potatoes and stuff like that, but some of the other greens vegetables they would grow.

DW: Okay. So, if you wanted to have a salad, is the vending of the salad near where the printer is? Do you have a refrigerator where the greens are kept?

CG: That's when you'd go through the galley area, and have certain things that were prepared. You would have times, when things would malfunction, and you would have to have powered eggs and ration foods and stuff like that. They had a galley area where they had people that would serve food slop.

DW: What were you wearing when you worked on this vessel?

CG: Jumpsuits.

DW: So, single piece?

CG: Yeah.

DW: What was the color?

CG: Well, different designations, different colors. Sometimes blue, sometimes white.. It just depended on what area you were working in.

DW: What would the white designate?

CG: White – It wasn't really a designation of a job. If I was working in the lab area with the "eggheads" or whatever, I would wear the white. If I was working in the communication area, I wouldn't wear the white lab jumpsuit.

DW: If you went to the front of the ship and then you walked at a steady pace to the

back, how long would that take if you were to do the whole circuit?

CG: You couldn't walk straight. It was like a maze. Probably take you like 30, 45 minutes of walking all around if you stayed on one level.

DW: Is there a predominant look to the walls when you're inside? What's the predominant color of what you're seeing inside?

CG: Well, a lot of them were just metal. I was told that a lot of these first craft were built by people that built submarines. So it had a lot of the same type of feel and build. And in case there was ever a zero-G environment, there were handles along the wall that you would use to guide yourself.

DW: What was your typical ceiling height inside?

CG: Probably about eight feet.

DW: Did you have multiple decks, like, you could go from one floor to another?

CG: Yeah. There were multiple decks.

DW: Do you remember how many decks?

CG: I mainly stayed within four decks, but I believe there were at least nine decks.

DW: Did they have a specific classification, like a name for each deck?

CG: Yeah. They had designations for each area. There would be "level 1". Then the dash (-), they would call it a tack, like "1 tack A" (1-A), "1 tack B" (1-B).

DW: Were any of these areas color-coded? Like, the walls looked a certain way to let you know you're in a certain place?

CG: Well, something that was popular would be the colored lines on the floor that would lead you. But pretty much, you would know where you were going by the designation of the number on the door.

DW: You had said that the Alliance intends to handover this technology to humanity once we go through disclosure.

CG: Yeah. That's the plan. After there's a full disclosure, and after we go through the process of dealing with the full disclosure information and get past whatever trials that are needed and psychologically deal with the process, then all these technologies

are going to be brought down to humanity to basically change our lives from us being debt-slaves working every day, working eight or nine hours a day to pay rent and watch TV for a few hours, go to sleep, and then repeat every day, to having a totally different type of life.

DW: Who decides who gets to go out into space? Is there going to be some restrictions on who's allowed to go?

CG: I have no idea how that's going to work out. I know that supposedly, it's going to be a Star Trek-type civilization. I know eventually there's going to be tourism to a lot of places in the Solar System. And there's going to be a lot of new career-types for people.

DW: Do you think there are enough ships that a lot of people here could go pretty quickly if they wanted to, once this all opens up?

CG: I believe so. Yeah. I believe there's quite enough craft already created that we could use those for non-military purposes.

DW: Well, this has been really incredible. So again, I want to thank you for being here, and I want to thank you for watching. When you start to get this much specific details... You can tell pretty much when people are lying. They start to hesitate, and their body-language changes. And I've been talking to you for so long about this stuff, and every time I ask you these questions, I learn new things. And I'm convinced that what you are telling us, did happen to you. I think there is extensive evidence to prove that, based on how it correlates with everything else. So again, I consider you a hero for coming forward, and I really want to thank you for your service to humanity in doing this.

CG Thank you.

DW: Thanks

We Are One
Season 1 Episode 5

Cosmic Disclosure; We Are One Season 1, Episode 5

28 Jul 2015

Please note: This episode is free and available for viewing without a subscription at Gaiam TV

DW: Alright! Welcome to our show. I'm David Wilcock and I'm here with the insider's insider, Corey Goode. There's all different levels of classification in this stuff. As you go up the hierarchy, you learn that everybody thinks they know all there is to know, and it's been truly astonishing over the years to see how – I don't want to really put my foot in my mouth here – but how ignorant these guys are when they're being exposed to very cosmic phenomena like stargates and portals and anti-gravity and extraterrestrials that are clearly telepathic and have telekinesis in some cases, that they really don't get the "big picture", the spirituality component, the extraterrestrials visitations that made religions in the world. So, Corey, I've heard about these spheres coming into our Solar System, from several insiders. This is obviously a really grandiose, big deal. Nobody thought anything of this size would exist. What is your understanding of why these sphere beings have come to our Solar System now? What is it that they want? What are they after?

CG: They've been here for quite some time. They've been in a non-operational mode. They've been, I guess sort of, in observation mode, being that they came in apparently the late '80s, and throughout the '90s, and then started picking up their numbers around 2011/2012. There was obviously something coming. Something was starting to happen that made them move into an operational mode. It turns out that the Secret Space Programs and even some programs on Earth and the Black Ops programs had been studying a region of space that we were entering in the galaxy and some – what they had called "super waves" coming toward our solar system that were clouds of energetic particles. And, they knew that it was going to directly affect our solar system and our sun. And indeed, we have seen changes in the sun and changes in all the planets, occurring since at least that time period, if not, probably before. And this has been a slow change in the background-energy of our solar system. These are vibratory energy-waves that are ebbing and flowing into our solar system. These spheres, as it turns out, are equidistantly spread out throughout our Solar System, thousands of them, and they're acting in some sort of a "resonance buffer" that, as these energy-waves are hitting them, they're vibrating and causing the energy to spread out amongst them in a uniform way to where the energy is not harmful toward life on Earth or causes our sun to lash out and have destructive CMEs and that kind of thing.

DW: Did you ever get shown what the matrix of spheres actually looks like?

CG: It wasn't laid out for me , but when I'm on the sphere, and I'm being communicated-with through the sphere-wall, you can see the other spheres, off in the distance, equidistantly spread out, and there's thousands of them.

DW: Do they have a color, or colors?
CG: Well, they appear to be indigo/blue indigo, through the wall of the sphere I'm in. And outside the sphere, you can't see them. They are out of phase. We would probably pass right through them if we send a probe at them.
DW: One other thing that interests me is, if they're equidistantly spaced, you said that there's three sizes, though. There's the moon. There's Neptune, and Jupiter. Is it that the bigger ones are closer to the sun, to absorb more energy, or is there a reason why there's different sizes, if they're all in the same spacing of each other?
CG: I don't know why the size difference is. I know that the larger ones are out close to the gas giants. The largest number of them are the moon-sized ones. Those are the ones that are spread out equidistantly. There are a large number of Neptune, and Jupiter-sized ones that seem to be spaced further out towards the gas giants and out further towards the Oort Cloud. And that could be - this is me speculating – larger, medium, and then getting smaller as you go in. It could be some sort of shielding that's done larger, medium and smaller that has some sort of resonance purpose. But that's me speculating.
DW: Was there any evidence that these sphere-beings had ever even tried to contact our government at any time in our recent history before when they just showed up recently?
CG: Not directly that I know of. I know that they had told me that three other times in history, they had communicated with humans and given a similar message, and given more detailed information to certain people and that they had turned it into religions and cults and totally distorted the information. But I do not know of any time when they have been directly in contact with the government. During the '50s, we were being contacted by a whole array of beings. Some of them were coming to us wanting us to get rid of our nuclear weapons, and delivering a similar "hippie message" that the military people didn't like. They didn't want to get rid of nuclear weapons. They wanted to find, to obtain more technologies that they could turn into weapons.
DW: Could you just double-click on that and get a little more into that message? Who were those people that showed up the 1950 and said this?
CG: Well, they was one group that was reported that were described as appearing similar to "The Greys", and they called them "The Blues", but they were very tall. That's the description that I had of them, and they were described as being very "love and hippie"-like. And they tried to warn us about decisions we were making, groups we were getting involved with, and the dangers of nuclear energy and nuclear weapons and the route we were taking. And we, unceremoniously, sent them on their way.
DW: Is the any similarity between "The Blues" and the "Blue Avians" in terms of their message?
CG: It seems that there's a very close tie-in in their message and their general way of thinking. I wouldn't go as far to speculate that they are one of the two sphere-beings that haven't presented themselves. I have no idea who those other two are, but it wouldn't surprise me if they turned out to be...

DW: What did they claim we would have gained if we gave-up nuclear weapons? Did they want some kind of disclosure?
CG: Yes, they wanted full disclosure. They were prepared to provide peaceful technologies in exchange for us giving-up our militaristic and the way of life that we had at the time, the war. We had just gotten over World War II and we were pushing deeper and deeper into the Cold War. And they saw that as something they wanted to "nip in the bud" and the people that were in control of Earth didn't want to have anything to do with that path. They wanted to have more power and more weapons, more technology. And there were other beings out there that were happy to give them that.
DW: So, these Blue Avians, they have an agenda that involves what exactly? Why do you think they're here?
CG: They have given a message that they are not here to be our saviors. They are not here to come down and arrest or remove all the bad guys. They had a message for us, and the message is basically the same as the tenets of a lot of the basic religions on the planet, basically similar to the golden rules. They stated that we should focus, because of the vibratory changes that our solar system is going through, we should focus on raising our vibration and raising our consciousness.
DW: So you think there's some reason why they chose the avian form, like maybe the feathers and angels, that kind of connection?
CG: I have no idea. I have no idea why they chose the form they did.
DW: Did they tell you that they don't need to be in that form?
CG: Yes. One of the things they stated when they were answering questions, was that they don't need any type of conveyance. They don't need spaceships, they don't need technology. They're a consciousness, higher vibratory, higher density type of being. They can change their location by consciousness, just by thinking it so.
DW: You said that when you had the delegation, the first meeting, where you spoke on their behalf, that they just appeared in the room behind you?
CG: Correct.
DW: Is that a normal thing that intelligent civilizations do?
CG: No, normally there's some sort of technology involved, even if they're using teleportation.
DW: So, obviously we're in a tangled area because they've chosen you as a messenger and clearly you're not an average guy. There's nobody else I know of who's been willing to come forward who's been taken up into space. You've had this happened your whole life. Did they say anything about why you had such an unusual life? Do you have a connection to them that goes from before?
CG: The avian that I was talking to, Raw-Tear-Eir, he informed me that I came from their soul-group and that I was here for a reason, that I had chosen to be here for a reason.
DW: Did he explain what he meant by soul group?
CG: That there were wanderers and starseeds that were here on the earth that are there for a chosen reason, a chosen purpose and there are a whole lot of different definitions

of starseeds and wanderers out there. And in my case, the definition just seemed to be, that at one time, I existed in their plane among them and that unbeknownst to me now, I chose to come here during this lifetime for this purpose. And among the conversations or communications, they said that I needed to make sure that I didn't present myself as any type of guru or to let my ego get overdeveloped and to make it all about the message, and make sure that none of this develop into a religion. We need to focus on the message and focus on expanding our consciousness and raising our vibrations.
DW: Some people watching this might think that you're part of this extraterrestrial elite, that some people on Earth are going to have these higher connections and have these group souls, whereas everybody else is just sort of like another useful eater or sheep.
CG: The number of people that are here right now, that are here for a purpose is an astounding number. I heard that back in the '80s, it was over 60 million or even more. The number of people that are here that are starseeds, that are wanderers that have not awaken to that, is a huge number. I'm not unique.
DW: Do other people who are not starseeds or wanderers still have some soul themselves?
CG: Yeah, everybody has a soul.
DW: Well, most people don't know that.
CG: A lot of people are having visitations or contacts by these orbed beings, this is a process of the awakening that's occurring.
DW: What are some of the other ways these being might be using to awaken people?
CG: Dreams.
DW: What would a dream be that would be, like, an example?
CG: Well, there are a lot of people that are reporting having dreams contact with some of these beings in dreams. They're having dreams of being in classrooms, just dreams of being in classrooms where they may not consciously remember what they've being taught. But they are having memories of being in classrooms with groups of other people. A lot of it's happening through dreams.
DW: How important is the soul in their message?
CG: Well, the soul and the higher self-connection, that's most of who we really are. The conscious waking self, the part of us right now having a conversation is a VERY small part of who we actually are. We are a multi-dimensional being. There is so much going on, on many levels. This is my personal outlook on it from my communications with several beings, is that we have our conscious self, we have our subconscious self, and our higher-self, and then the higher-self goes higher and higher until self drops off the equation. Then you just have the higher, until it returns back to source, and source is where we all came from and fragmented from, and are all still connected to in some way. That's how we are all still ONE.
DW: So, they're here to teach us this "law of one" principle?
CG: I guess you could say that.
DW: How about people seeing 11:11? Could that be – or whatever synchronicity?

CG: Yeah. Definitely. Those synchronicities – I've been seeing those, synchronicities like that for over 30 years. I look up at the clock and see 11:11, see 11:33, 3:33. A lot of that, those synchronizations could be telling you that you're on the right path or that you are on the awakening path. And if you're noticing that, I think that's usually a good sign.
DW: So you said that they explained to you personally that we are all part of some sort of universal mind?
CG: Correct.
DW: Could you get a little bit more into detail? Did they ever give you a visual representation of that? Did they give you thoughts or feelings? How was that information conveyed, and what is the essence of this identity when you say we all come from one source?
CG: Well, they've told me we are all one. We all come from Source.
DW: Did they say what that is?
CG: They did not. But ever since I was a kid, I would say strange things. I would say unusual things for a 5 or 6 year old. I would tell my mom that, did you know I used to be you? You used to be me? I used to be grandpa, and he used to be me? And she would look at me and she'd say, well, that's physically impossible. I would say, no, we're all the same. We've all been each other. And she'd say, well, how can we all be each other at the same time? And I would tell her, time doesn't matter. Only the experience matters. And it would concern her. And my grandfather and I would have conversations about it. He would humor me and we would have long conversations about it, but they were unusual conversations for a kid of my age to have. But there are a lot of children that have that kind of insight that parents quash when they should be definitely listening to it more and encouraging it.
DW: It seems that in a lot of these other attempts that they made to help us, which you say turned into religions or cults, they keep stressing meditation. Is there a relationship? Did they say anything about meditation and this "universal mind"?
CG: Yes, prayer and meditation are what help you raise your vibration and help you raise your consciousness. So you can do it through prayer or through meditation, and meditation is very important. That's something you should probably be doing at least an hour a day.
DW: Did they say that specifically?
CG: No, that's..
DW: That's just your understanding?
CG: Yeah, that's my personal opinion. When I've focused and put an hour a day in of meditation, I've notice a lot more focus and ability to be able to walk this difficult path of being more loving and forgiving and not being reactionary to everything. When we're caught up in this world, this 9 to 5 world where we become very reactionary and triggered by things. And if we put more time into raising our consciousness through prayer and meditation, that helps give us the tools to become more focused on being on service-to-others and loving and forgiving.
DW: Does that meditative practice help co-create the reality that we live in?

CG: Yes, and I think that's been proven many times over in experiments that have been.. experiments that are repeatable. One of the ones that you've mentioned is the experiment where 7,000 to 10,000 people meditated and brought down the crime level.
DW: Yes, by 72% worldwide.
CG: By 72%. And people that meditate or think loving thoughts on a petri dish with a certain type of yeast or something in it and another one where people have hateful thoughts, and then over a certain amount of days, the difference in the two. It's repeatable. It's science. You can't refute that something is happening. Consciousness is affecting physical reality.
DW: Well. That also is mass hysteria, right? If you get a large group of people and a few people start panicking, the panic could spread.
CG: Right. Humanity has a very wide spectrum of emotions, and that is a blessing and a curse. Once we learn to control and focus those emotions and also focus and get more control over our consciousness, we're going to be able to have more access to our co-creative mass-consciousness that we all share and we'll be able to create whatever reality we like. And I know people have heard the concept that everything is vibration – the light, our thoughts, all the physical items around behind us. They may be solid to our perception, but they are all states of vibration. And our consciousness can have an effect on the reality, on actual physical materials. They can have effect on energy, on other people's thoughts and emotions.
DW: We see these comments showing up on the internet where people are saying, Corey Goode is lulling us into a false sense of security. This is a Cabal Psy-Op where they're telling us through this messenger they've chosen who's had all these... they're accusing you of being in secret cults and things. He's just trying to give us a palliative. He's just trying to give us a little lollipop, so telling us we can hum it away. How do you answer these critics who are saying the you're a "pied piper" for the military industrial complex leading us into a false sense of security so they can just swoop right in and take us over?
CG: I do not know many negative forces that are putting out this type of message of love and forgiveness and raising you vibration and becoming more aware of the negative forces to be able to get out from under them. The negative forces don't want you to shine a light on them and become aware of them. They want to hide in obscurity, and I'm definitely not making them happy by shining lights on some of their activities.
DW: People think that they need to tell us the truth so they have to hide out in the open. It's part of their magic.
CG: It is.
DW: Okay.
CG: That's how they use our co-creative consciousness against us right now and they've hidden the science. In science, they realized that if you observe a certain scientific experiment, observing it will change the outcome. And there's been a lot of studies into that, and they've hidden that and they don't talk about it. They don't want

us to know about our co-creative conscious abilities because they use those as a tool against us. So, if by us liberating our consciousness, we are taking away a tool that negative forces use to enslave us. We have the tool to liberate ourselves.
DW: Most people say, though, that if the media always seems to find the most negative thing that anybody has done on Earth and they make a big deal out of it. It's always fear. If it bleeds, it leads. But then the skeptic would say - they're just say doing that because humans are naturally reactive. We naturally want to look for the problem and then try to fix it. Is that the only reason why they're doing that? Why do you think the media focuses on fear so much? Why would this be beneficial to anybody?
CG: Well, it's all about planting a seed in our mass consciousness. And then later on, after they've planted that seed in our consciousness, they do something like a false-flag or put out another movie or do something else that causes us, with our broad spectrum of emotions and our co-creative consciousness, to activate it and to cause it to occur. That's the secret behind their so-called "Black Magic". It is not really their power. It is them using, co-opting our power of co-creative consciousness.
DW: If these Blue Avians weren't coming here and giving this message through a variety of forms, what's the end game for that mass manipulation that you're talking about? Like, what would happen if we weren't getting this help?
CG: It would be a constant status quo.
DW: Are they trying to do a police state or martial law, something like that?
CG: There's always a speculation of a September or an October surprise always on the horizon. There's always a new thing in the "fear-porn" machine. Just over the horizon, there's a big crash. There's something big about to happen...
DW: That's true.
CG: That they keep at the back of our consciousness constantly. It just never ends.
DW: So you're saying that if they can get people even through alternative media and apparently credible alternative media journalists, if they can get people focusing on the negative, you're saying that we have this creative power and that meditation effect where it decreases crime and terrorism would be a positive effect of it. But you're saying that also if we focus on fear, just the power of our mind alone can actually make more negative things happen on Earth?
CG: Yes, this was done by design.
DW: Do you think that Hollywood movies have conditioned so many of the people that learn about the Cabal that they feel like the only solution to something like this Cabal would be a military-type attack, like some sort of big action-movie battle scene?
CG: Yes, and what the Blue Avian message is trying to teach us is that you can't get a positive from negative. You're not going to bomb your way out of this. You're not going to be able to get your way out of this by having riots. The way out of this is through our co-creative conscious abilities and waking up. And we're the billion ants, and they're the very few beetles that are trying to keep us down. Once we wake up and turn our attention to them, they're "done for". As long as they can keep us

scurrying about in our little anthills and not focused on them, they've got us focused away from them.
DW: Well, I think that a lot of people think third-density in the terms that they've also used with you – the Blue Avians have used with you, the third density is all there is. So if you have a third-density problem, you've got to have a third-density solution.
CG: And also we hear of these other beings. Usually you can tell a lot by someone if they accuse you of something, that's usually what they would do if there were in your same situation. So you can learn a lot about a person when they accuse you of something. Well, (the) same goes for these other higher density beings. We're kind of imprinting on them - agendas. People get upset when I say - in our third-density way of thinking; we can't understand the way they think and the way they operate. And some people get very upset, like I'm "putting down" humanity, humanity's intellect, and they just don't get it, that we're just not at the point to where we can fully understand these higher realms, and the way they operate.
DW: Most people who suffer paranoid schizophrenia, there's certain characteristics that would include a Christ complex, where they feel that they are a messianic figure and that they have all the answers for humanity.
CG: I've been getting a lot of emails from them. (laughs)
DW: It seems as if the fact that schizophrenia does cause this to happen, people to feel this way, has led people to think that any notion of any density, like when you say "higher density", that that's completely different – that you're crazy, that you are a schizophrenic, that this guy is making this all up. Boy, is he taking David for a ride. How does a person experience a higher density? How do they know they're not crazy, that they're not schizophrenic, that there's something happening here that's real for them? Or, how was it for you? How did you become convinced that there's something more to our reality?
CG: Well, there's something called, "testing the spirits" as you may call it. In the beginning, they came to me in dreams, as they first do, so not to freak you out. But the experiences, when they first started physically appearing with me, I wanted to make sure that is was a physical experience. And when I found out it was a shared experience with other people and spoke with, who we call Gonzales, who's been in contact with them as much as I have, and they would talk to me about him, and talk to him about me. It was definitely a real experience when they're talking with members of this Secret Space Program Alliance, and they come and pick me up in a physical craft and take me up to a physical location and I'm having conversations with real physical people. So, it's not...I don't channel. Not that there's anything wrong with channeling, but I'm not getting this information from an unseen unheard force that could be some of... the Security Intelligence Agencies have this, which I've seen used, "Mind of God" technology, where they can send in voices in people's heads, download information into people's heads. Even some people that are channeling are actually getting contact from this "Voice of God" technology. So, I'm not saying that all people that channel, but some. But this is something that you do have to be careful and discerning about, and I always encourage people that are listening to the

information that I give to use their own discernment. It's either going to resonate with them or it's not. Either spiritually it's going to resonate, or it's not going to feel right.
DW: If somebody wants to make today a special day in their life, a day that will always be remembered from now on, how could they do to make today that special day that they'll always remember?
CG: Make a little extra time today. Sit, find a quiet area. And even if you don't know how to meditate, meditating is just, almost a form of even daydreaming. Sit there and focus on your mind and focus your mind as long as you can at first on positive, loving thoughts, and on how you can become more positive and more loving to the people around you. And how you can become more service-to-others and more forgiving to yourself and others.
DW: And what will that do?
CG: It will change the world one person at a time, being yourself.
DW: Well, that's great. Well, it's a real honor to be able to get this message out through you. I've been saying the same thing for a long time and it's nice to hear it from somebody else. So, I hope you've been enjoying this. I'm David Wilcock and I'm here with Corey Goode and we have barely even scratched the surface of all the detail of what you know the space programs. We wanted to get into the message early, sort of like dessert first. So if you're interested in a lot more facts, there's a lot more coming up in future episodes, so please stay with us. Thank you.

Sleeping Giants; Season 1 Episode 6

Cosmic Disclosure; Sleeping Giants; Season 1, Episode 6

04 Aug 2015

DW: Alright!, Welcome to our show. I'm David Wilcock and I'm here with Corey Goode. And we're going to get back into the "Alice in Wonderland" weird, cool, amazing space program stuff you've never heard before. And that's why we're doing this show, because Corey, you've come out with so much information that validated what I've heard from others, that nobody else has got. And that's just your background. So, time, for us in this reality, we think of time as being normally pretty stable and unchanging. What do you feel is the contribution of relativity theory and Einstein to that? Did you ever come across any discussion of relativity in the Program?

CG: Well. Yeah. They discussed that there was a part of his equation that was wrong, that...

DW: Oh! They did?

CG: Yeah. That there was part of the equation that you just needed to flip. And that later on some of his work was more right on, but is was suppressed.

DW: Well, Einstein would say that as you go towards the speed of light, the time actually speeds up. So you could be in your ship for like a week, and yet everybody else around you might have gone ahead 1000 yrs.

CG: At his knowledge of our current technology level, that might make sense to them, yeah. When I was in the program, the Secret Space Program, when I would have time to sit and look at the smart-glass pad, there was lots of information that I looked at. And one of them was that there were beings that they found underneath the surface of Earth, underneath...usually underneath mountains, burial mountains...

DW: Really?

CG: Indian burial mounds that were not dead but weren't quite alive. They called them "stasis beings". And it turned out that had used a technology that had been there long prior, from this group they called the "ancient builder race". And this technology allowed them to lay down in either a sarcophagus or on top of a stone-looking bed or alter and it would create a time-bubble, or well, around then to where time on the inside would occur at a slower rate than time on the outside.

So, it didn't put the beings in stasis that a lot of us would think of, as in being frozen.

But it just changed the way they experienced time. And they apparently took some sort of...something that caused them to go to sleep. And they would go to...their experience, they would probably go to sleep for maybe 20 minutes, and 30,000 years or so would pass by.

DW: So you're saying that a 20-minute rest could skip ahead by 30,000 years?

CG: By—in their perspective, that's what it would – it would be taking, like, a 20-minute nap.

DW: I guess most people would find that really hard to believe. But if you have Einstein relativity in your background, right, let's that maybe in the local area you think they could be speeding it up to light-speed somehow, like the vibration, so that you're just skipping ahead through so much time?

CG: This ancient builder technology is so far beyond even what most of these fourth/fifth density ETs that we're dealing with in some of these meeting that we're having, these conference meetings. They're so far beyond them technologically, that some [or] these beings want to get their hands on this technology. It is multi-dimensional technology, some of this technology looks like a slab, but the technology is operating on other dimensions. So it took us quite some time to figure out that some of the stuff was actually technology. It was basically magic to us, even up in the 20th century.

DW: Did anybody ever figure out how to use the technology?

CG: Definitely. Yeah. It has been figured out. And what was very interesting is that in these smart-glass pads, there was this one location that, back in the 1800s even, people were going from certain, I guess some people would call the, Illuminati groups or whatever, elite groups – were going to visit this one area that had – it was like kind of a grotto, underground cave. And it went up about 90 feet. And it was covered... They had coated it in some sort of pitch-black material. And there was an ancient script language that was around on the inside that they had mostly deciphered, and were hand prints, and there were three sarcophagi in kind of a y-shaped on the floor. And in the middle was kind of like a box, but with almost like 4x4 in each side suspending a top and a bottom. And in the middle was, like a blue glowing crystal matrix with a spider web connecting it to the four corners, suspending it. And this is what was creating the temporal well, or the temporal bubble.

DW: It's a glowing crystal?

CG: UmHmm

DW: Did it look like a quartz crystal? Did it have a shape? Did it have facets?

CG: Yes, it had facets. It looked like a quartz crystal

DW: Really? And you said like a spider webs, like little fiber optic cable kind of thing?

CG: Could have been fiber optic, but it look like spider web connected to the top and bottom of it.

DW: And you said there's four posts that are holding the spider web, to then, the crystal?

CG: Correct. And it was suspended down from there.

DW: And they saw this in the 1800s?

CG: Yes.

DW: Back when there's no electric light.

CG: Yeah. Back when they had torches.

DW: That must have been mind-blowing for them at that time.

CG: I would imagine

DW: What's in the sarcophagus?

CG: Wee, they couldn't see it, so they had to build scaffolding up to climb up and look down in. And to look down in, they saw these very tall beings, or very large giant humans with reddish beards. And their skin, because of the pale white, they look kind of gaunt. But that looked – I think it was because of the lighting.

DW: The blue light?

CG: The blue light.

DW: Was there anything else in the sarcophagus besides the beings?

CG: Outside of the sarcophagus, there were jars and stuff that we presume had food or something to drink, or something in them. Their shoulders were like this, like they were kind of squished into the sarcophagus. So I did not see anything in these

sarcophagi.

DW: Do you think they kind of squeezed themselves? Because maybe it wasn't originally built for them.

CG: Right. Right. It was – It did not look like it was originally built for them. But what was interesting was there was a long hallway underground that went to this place that had a lot of ancient Native American art and...

DW: Like petroglyphs?

CG: Petroglyphs. And right at the entrance was kind of a large stone that came out, rounded out before you went this way to go into the grotto. And people had been basically tagging it, writing their name on it. And one of the names, that was on it was Abraham Lincoln. And I think Abraham Lincoln made remarks about giants.

DW: He did a speech at the Niagara Falls and said that giants had stood right before us and had walked on this very land. And he was dead serious about it.

"The eyes of that extinct species of giant, whose bones fill the mounds of America, have gazed on Niagara as our eyes do now." - Abraham Lincoln.
CG: Yeah. He knew for a fact. But the information on this glass, this smart-glass pad, stated that they had finally, to preserve the integrity of the spot, they had to close it down. Because of all the people going through, they were starting to destroy the petroglyphs and... they had to stop all of the elite group that were going there for kind of pilgrimage to see these giants that they had built up in the myth as a part of their religion, as being their gods or something.

DW: Who else besides Lincoln do you think was on the wall?

CG: That's the only name I recognized.

DW: But they would be government-type people and high-level ranking Masons, that kind of people?

CG: Yeah. They would have to be very elite, well-placed people.

DW: The petroglyphs imply that Native Americans had also found this.

CG: Yes, and the burial mounds at the top, it signified that it was a very holy or special place to the Native American.

DW: Can you tell us where this was?

CG: It talked about, it was down at the end of a river. And I'm trying to remember if it was Ohio or Georgia. I think it was Ohio.

DW: Okay. So, these beings kind of scrunched into the coffin, and they're red-headed, white-skinned giants. What do you know about those red-headed, white-skinned giants? Did they only appeared in America, and how recently were they around? What do you know about them from your own experience?

CG: Well, from what I read, they've found these stasis beings all over the place.

DW: All over the planet?

CG: All over, yes, all over the planet. A lot – in some of the areas, some of the beings they found in stasis were of a different ethnic group that had, I guess, found these technologies and learned to use them. But these tall, red-headed, red beard groups were in Europe and South and North America. And apparently, at one time, before the last Ice Age apparently, they had a very large area that they ruled.

DW: Were they extraterrestrials that had come here?

CG: I did not see anything that indicated that they were extraterrestrials, but some groups are very convinced that they are extraterrestrials.

DW: What was their level of tech, the giants, what was their level of technology on Earth?

CG: Some of them seemed to have very advanced metallurgy technology. But there were no real sign of high technology as we would consider technology. But then again, a lot of the stuff that we found that we thought were stones ended up being technology. So. But we didn't see anything that we would recognize as high technology back then that was in the database that I had access to.

DW: Where were they going to get this technology, these stone slabs and stone sarcophagi? How did they procure them?

CG: This technology is littered beneath the earth's surface. And there were a lot of these locations where they found these stasis beings and the technology had failed, and the beings were deceased.

DW: Really? So you say it was littered all over the place, inside the Earth. I guess, if our civilization could be well-preserved, right now you'd probably find lots and lots of smartphones. So you think this is something that everybody used all the time?

CG: Well, yeah. And it was obviously built to last. It was made out of what looked like diorite stone. And it did not – I mean it's lasted for, you know, millions of years, it's very old.

DW: How Many sites are you aware of where stasis beings are still in stasis successfully around the world?

CG: There are – Well, there are dozens in the US and across Europe, going into Asia.

DW: Dozens.

CG: Many dozens. There were some Asian stasis beings..

DW: Really?

CG: ..and there were some ancient, like, eastern Indian-looking.

DW: And these folks would look more like people we'd see now on Earth?

CG: Right.

DW: Okay.

CG: Yeah. From obviously later era that learned how to use this technology.

DW: But you're not going to find the technology on the surface. You're going to have to go into these underground cities?

CG: Right.

DW: Have our people figured out how to switch it on? Do they know to turn on the stone?

CG: Yes. It's operated on a consciousness level, interactive level. And they finally did – once they realized that the stuff was technology, they did learn – start to learn how to turn it on and figure out what it was.

DW: Do you know if it does anything else besides create a time bubble? Does it have other purposes?

CG: I don't know. And the information that I had at that time, It didn't ... They didn't speculate as to why these being were putting themselves into stasis.

DW: Has there ever been any ancient builder race people themselves that they thought were still in stasis after all that time?

CG: No.

DW: Hmm.

CG: They have no idea what happened to them. I've heard myths, speculations, that people have said that they went to a higher density, some that they were killed off, some that they left and will come back some day. There are all kind of, in the programs, there are all kinds of myths about it. But when it comes down to the hard, cold facts, nobody knows.

DW: You mentioned before that when we see one of these underground cities that the ancient builders race created that there are pyramids.

CG: The images I saw – I didn't see this in person. The images I saw, they had some that were in pyramids, flatter pyramids --

DW: Really?

CG: It looked almost as if it was a crystal pyramid.

DW: You could see right through the pyramid?

CG: Yes. And if some people saw it, they would probably think it was made of crystal. But it's made of a high-tech aluminum alloy that's transparent.

DW: How big would those pyramids be?

CG: They were quite a bit smaller than the pyramids of Egypt. And I don't know what purpose they served.

DW: But you said, the stone pyramids actually are made of blocks of stone.

CG: Right.

DW: Whereas I guess with these pyramids, they're all one piece?

CG: Yes. They were all one sheet piece, and there were no seams.

DW: Did it have sort of a mother-of-pearl rainbow shimmer on it, or was it really just clear and sharp?

CG: No. It looks just like crystal.

DW: Wow.

CG: And there are other structures that were I guess rectangular and some of them had sort of (an) A-frame on the top. And then some sort of the square ones, had sort of pyramidal tops to them.

DW: You said that most of the moons – you've said this before – most of the moons in our Solar System, where they could build anything, have it built, right?

CG: Right. There's remnants. And a lot of it's been, like I said, later ET groups have tried to – in the distant past, had tried to wipe away remnants of who they were. And that's how we don't have any idea who they were, because areas to where there was obviously some sort of writing or petroglyphs or something had been wiped clean.

DW: But the technology of these time-bubble-creating slabs, that is consistent not just under the earth but in these other sites that you find in these moons as well?

CG: I have not heard anything about that type of technology found anywhere other than associated with the stasis beings.

DW: Do these ancient-builder-race sites, in the moons, in our Solar System, have these similar transparent aluminum pyramids and that kind of stuff in them?

CG: Other – Yeah, structures made of the same materials.

DW: But, are they pyramids, as well?

CG: There are. But they're mostly – there's a lot of them that are towers that are – there are a lot of them that are like towers, that are and stuff like that are twisted and over, like, there's been some sort of concussion wave of something that – something happened.

DW: In a variety of these locations.

CG: Yeah. They're not really intact like they were below the ground.

DW: Like some sort of massive military strike took place.

CG: Or natural cataclysm, something.

DW: Okay. Wouldn't there be a temptation for people to want to get to these beings

and pull them out of stasis?

CG: Well, the groups that were in charge saw them as some sort of spiritual gods or something like that. So they left them alone. But, when it comes down to it, that's all the knowledge I have about them, is that they were in stasis and nobody knows why, and that some of them have perished, and they're using the ancient-builder technology.

DW: I think you had said to me something about the time-bubble and what happens if you try to go into the time-bubble.

CG: Yes, there was some technology that had time-bubbles around it. There had been people that had tried to enter in and they froze in time. And there were people from other time-frames....that I read about in the smart-glass pad that were also trapped in these time wells. So they're not something you want to go charging into.

DW: What would be the incentive, you think, for these to want to wake up now? What is it that they're expecting is going to happen that's so cool in our time?

CG: Well. This huge vibratory change in our Solar System. This change – supposedly we're changing from – graduating from on density to another. We're in transition. So if this is true and these beings are awakening, and they set their selves to wake up during this time period, I could only speculate that they wanted to be part of that.

DW: How do you explain a machine that has no moving parts? It doesn't – you said it just look like diorite which is black granite.

CG: We couldn't explain it for quite some time. It was, basically, magic, but it has parts that were working on a multi-dimensional level. You know, in our dimension, it just looks like a piece of stone. But it has parts that are drawing energy or maybe even moving or working in other dimensions that we're not fully aware of.

DW: You said that there have not been any of these technologies found anywhere else except inside the earth.

CG: I was talking about the stasis gravity well. There have been other tech – there's been technologies found all over the Solar System.

DW: Are there technologies that could create these time-bubbles that have been found in other places?

CG: The only thing I've read...mentioned about that was found in caves and underground on the earth.

DW: How many different types of beings have been found in stasis? Would that include extraterrestrials that just showed up here and not just people from Earth and giants?

CG: I have just heard about the ones that I've mentioned. I've just read about the ones that I've mentioned.

DW: If this technology is so peculiar, is it something that a lot of other beings have developed? Or is it sort of unusual, even for the average intelligent civilization that's been dealing with our Space Program?

CG: I don't know what other civilizations have developed. I know that they're very interested in this technology. And for a while, they were doing a lot of trade with us...before we knew what it was, to get it from us.

DW: Really?

CG: We've been doing a lot of expeditions to get this. And finally we were like, why do they want these stones. Why do they want these relics so much? And then, after we became sophisticated enough in our way of thinking, and realized that it was a technology, we stopped trading it.

DW: So you say that there's huge amount of these cities that are unexplored. So there's going to still be a lot of more of these left behind when we go in there.

CG: True.

DW: What do you think we could do with a time-changing technology like that? What's the ultimate – if humanity comes into possession of these? What do you think we could end up doing with a technology like that that could be beneficial?

CG: I wouldn't want to speculate. I really don't know.

DW: Are there other ways that we have to manipulate time?

CG: Yeah. We have certain types of spacecraft that use temporal drives in them that they've put buffers on to make sure that people don't travel back and forth in time.

DW: What is a temporal drive?

CG: It is a way of traveling great distances in space/time, without having to deal with traveling through the natural portal system that a lot of other civilizations use, the galactic web.

DW: So you sent me a couple of links to some videos that you claim may actually be stasis beings?

CG: Correct. Yes. These were images – there were two different videos. One was of a stasis being in a chamber that had apparently failed and the stasis being had perished. And the other was of a stasis being still in stasis that was in the process of being revived, I am told.

DW: What are we going to see here, with this first stasis being?

CG: The first one, we're going to see is the one of the failed stasis chamber, and the one where the stasis being had perished.

DW: So, let's check that out now. So, what's up with the gold fish on his chest that's got the Sumerian cuneiform writing on it? Is there a connection to Sumerian somehow?

CG: Yeah, there seems to be going back into the distant past, a steady progression from a root tongue or a root language that was kind of a proto-ancient Sumerian language that has popped in a very few places in modern archeology.

DW: Is it normal for these stasis beings to be buried with gold iconography like this, gold artifacts?

CG: Not all of them, no.

DW: Alright. Now, let's check out the second video.

In this one, it's different because there's no coins over his eyes. He's got a really long beard. So, what are people about to see in this video? Do you think this guy actually is in stasis, or do you think this is another failed one?

CG: This appears, if it is indeed genuine that they're in the process of coming out of stasis, as they're being revived.

DW: So one of the things that struck me about this was the Egyptian, clearly Egyptian female head on that golden plate that's in there. And then, this very strange little statue, of this guy that has two snakes coming up from the sides, almost like something out of Hinduism. So it's like we're seeing different religions being blended in. When you look at the newspaper with the Arabic on it, there's some Sumerian cuneiform on the gold text to that. So, we've got Hindu, Egyptian, and Sumerian all represented in this one guy.

CG: It's not uncommon. And some of the – there have been some cave-type structures that were once inhabited by these tall red-head, red-bearded beings that are very tall that especially inhabited North America a long time ago. And there have been artifacts of crossover civilizations been found.

DW: Wow. That's very significant.

CG: UmHmm (yes)

DW: Well, these videos were quite fascinating and I'm glad that you found them and sent them to me. They had all Russian titles on them, but they're obviously not from Russia. It's Middle Eastern, most likely. Turkey and somewhere, maybe Egypt.

CG: Right. Like I said, these have been found across the world.

DW: Well, this has been a very fascinating subject. I don't think I would want to put myself in stasis, but I understand why, if this big energetic change is coming our way is so amazing to these people, that they would want to do something like that and be ready for the big show. So that's all the time we have for this episode of Cosmic Disclosure I'm your host, David Wilcock. And we're here because you need to know the truth. Thank you for watching.

Mars Colony Inspection Season 1, Episode 7

Cosmic Disclosure; Mars Colony Inspection Season 1, Episode 7

11 Aug 2015

DW: Welcome to Cosmic Disclosure. I am you host David Wilcock and I'm here with Corey Goode the insider's insider, a man whose experiences have truly revolutionized what we know about the UFO phenomenon as a whole, and particularly what we know about a group within the military industrial complex that has colonized space and extensively built out a vast amount of habitation in our solar system for the purposes of industrial growth and trade with a wide variety of extraterrestrial civilizations. So, Corey, welcome to the show.

CG: Thank you.

DW: We've been talking in previous episodes about this very bizarre chain of events that starts to happen when you get pulled back into the space program after years of absence. We've talked about the enigmatic figure Lieutenant Colonel Gonzalez - not his real name. And it appeared that up until this outer barrier showed up that the Cabal didn't really think they were going to be stopped. Would you agree with that?

CG: .They did not feel that anything could stop them. Their allies in the realm of ETs in the Etheric world were too strong. Their gods were at their back, and we were just useless eaters that were throwaways, and there was no stopping them.

DW: Can you tell us what you know about the awakening of the stasis being or beings that seems to have taken place? Why was the Cabal interested in these stasis beings, and what happened when it woke up?

CG: Just like when the spheres started to appear in the solar system, they thought they were the Sumerians gods returning.

DW: They thought these spheres – the stasis beings were?

CG: The spheres beings.

DW: Oh. Yeah.

CG: They also thought that the stasis beings, they had been visiting and worshiping and thought that they were also their gods. And as they started to revive, they were disappointed once again. These beings were waking up and were confused and upset, and from what I'm told, were then sent off with another group that may or may not be

ETs, to rejoin their people, which, I don't know it this is accurate information or not coming from this source.

DW: So if the source is correct, then this was a very major disappointment to the Cabal.

CG: One of many.

DW: They thought one of their gods was going to wake up and basically save their butts from whatever was happening.

CG: Right.

DW: And they did not get what they wanted at all.

CG: Right, and this once more demoralized the Cabal. And one of the strongest Secret Space Programs, the ICC, after the recent meeting with the Draco White Royals, where the Draco White Royals had offered up all of their human followers in exchange for them to be allowed to leave the solar system outside the outer barrier, the ICC was starting to capitulate on a few things. And after a lot of information was released about the Mars slave colonies, that was a major PR headache for the Cabal and the ICC.

DW: This sounds like the Cabal was expecting that they were going to tell the truth at some point. Or is it more they now have to tell the truth, and they're concerned about how it's presented?

CG: Well, at this point, they already know that a large percentage of very high ranking "Cabal" secret Earth Government and secret Earth Government syndicate members, had defected with a lot of information similar to what Snowden had, and they were joining the Alliance, the Secret Space Programs Alliance, and agreeing at some point to testify against them. And pretty much they were seeing and hearing that there was going to be a giant data-dump in the future of all this information about their crimes against humanity. And a strange offer came up from the ICC through a negotiation that they wanted to prove that things were not so bad on Mars as had been claimed through recent reports that I had released and others were beginning to talk about on the Internet, about the "slaves colonies" on Mars, that these people were there on their own free will, that they were happy, and that they were doing important work.

DW: So in a sense, the ICC version of the Cabal is now anticipating multiple whistleblowers that have very high level knowledge that are going to come forward and incriminate them greatly. And because of the importance that they see you as

having, they want you to be given a show that would try to ameliorate your concerns about it and make everybody seem like they're all holding hands and singing "Kumbaya" on Mars.

CG: It wasn't all about me. It was more of a show for the Secret Space Program Alliance council's representatives, being Gonzales and myself.

DW: I guess one of the problems that some people are going to have with this is - if this space program's mission is so important for the Alliance, why would they throw you out here like a canary in the coal mine? Why wouldn't they deploy five different people that all know what you know at once, for example?

CG: I was told – and I've expected before now, more to pop up. And I'm challenging you now out there, those who are out there – start coming forward! There are plenty of people out there that know a lot of what I've been speaking about. And, as I've said in the past, I've watched many in the past that have talked to you, even, walk right up to the line, stop, and about-face, and then disappear out of public. And there a lot of people that know this information or compartmentalized pieces of this information that can come forward, and I believe will be coming forward, with similar information.

DW: Yeah, and actually the first guest that we wanted to have on the show "Disclosure" was Henry Deacon. And I had personally paid for his ticket to fly out here, and then right before he was going to fly out here, right before, he got very severely threatened. And that torched the whole thing. So, part of, perhaps, why more people haven't come forward is just the severity of force and coercion that is used to try to stop this from getting out. Because I've spoken to several other people that know a lot of the same thing that you know, none of them wanted to come forward.

CG: It's time.

DW: So the ICC is not just presenting this for you and your readers on the Internet. They're anticipating that you're like the first pebble of an avalanche that's going to hit them. And they want to do this show for the Alliance as a whole.

CG: Right. And this was in anticipation also of these data dumps. And they're wanting to start putting a spin on the situation.

DW: Just a recap that in case somebody missed that episode, you said the NSA was hacking all the Space Program stuff. They were..

CG: Well, what Snowden has gotten his hands on, the NSA had made one of the cardinal mistakes of putting all their eggs in one basket. And they were overconfident.

And they had all types of information they were using to blackmail politicians and people all over the world. And they had Secret Space Program information all highly encrypted.

Snowden got a hold of that and booked it out of the USA. And the information he had been sending over satellites for some time. He didn't just have a small hard drive in his back pocket when he fled. It was tons, terabytes and terabytes, of info.

DW: I've heard the same thing.

CG: All of that has now been fully decrypted very recently.

DW: As in June 2015, thereabouts?

CG: Yeah, just very recently. So all of that – they are still going through it. It's just recently been decrypted. And then we have all this - tons and tons more other information in these recent hacks that people have heard a little bit about. And so this is the information that the ICC is worried about. And this gets us to why they offered to have sort of like a NATO-type inspection of one of their colonies of "our" choice on Mars to inspect the condition, living conditions, of the colonists.

DW: How many colonies on Mars are you aware of there being?

CG: There are dozens of colonies, facilities, and industrial plants that build technologies. And a lot of these colonies are in the outskirts of these plants. And the people are shuttled to them to work.

DW: Well, I guess it would make sense if you have a whole planet that there would be dozens of facilities on the planet.

CG: And it was one of these types of facilities that we were taken to, to do an inspection of.

DW: So, let's talk through the story, starting with - you're at home. Were you given a call by Gonzales or something to tell you when this was going to happen?

CG: Yes, I was warned that it was going to happen. I didn't anticipate the timing right. I walked into my living room. I hadn't gotten dressed yet. And the little blue orb friend of mine, flew in through my sliding-glass door, patio door, zipped right through the glass and started zipping around.

DW: How big was it at this point?

CG: It's about this size. (2 inch diameter)

DW: And does it look like a golf ball, like a round ball kind of thing?

CG: Mmm-Hmm. (yes) And I knew I wasn't going to be able to walk back into my bedroom, get ready and all that.

So, I basically stand there, I put my hand like this (arms open with palms facing up), and I mentally let it know - I'm ready. And it zips right about 18 inches for my chest, expands. I am now floating in the middle of it. And it's kind of like a weird time/space blur as it, whoosh , takes off.

DW: And what's the sense of duration when that happens? How long are you in it for?

CG: Moments.

DW: It's very rapid.

CG: Very rapid.

DW: You don't experience a sense of movements or stars?

CG: No. There's a sense of movement in the beginning, but all of a sudden, you're at your location. And there's a room that I've become very familiar with at the LOC. It's a very large conference room. Since then, it's been used so often for this type of coming and going of not only myself but a lot of the civilians that have been brought up to do whatever they're doing there. But that's a different subject.

DW: Did the Space Programs ever tell you if they have a way of locking the Cabal out of that area so that it can't be spied-upon? Why would this area be secure?

CG: No. This is a facility that has to be... it is a shared facility that sometimes we don't have access to because the Cabal groups are using it. But the main table has been scooted against the wall for months now to give a larger area of the conference room open.

DW: Just so more people can come in?

CG: Right, because there's been a large number of people in there at one time, like 70 or more people. And so, I appear there. Shortly after I appear, one of the security personnel comes in. And I tell him I need something to wear. He asks me what size am I and he looks me up and down. And he leaves, comes back, brings back a...

usually when I'm not prepared I'm given used-type clothing. And this was very, very crisp.

DW: Has it at least been laundered?

CG: Yeah. It was a very crisp jumpsuit and a brand new pair of boots almost exactly like these, that have the zipper on the side for going through security points where you can pop them off real quick, and then zip them back on with laces on the front that were brand new, had never been worn. But I was just standing there in shorts, t-shirt, and wearing flip-flops. So I was totally unprepared.

DW: So, you get dressed.

CG: So, after I've gotten dressed, I was waiting for a little while. And security personnel came and escorted me to one of the launch bays, or the areas where they keep the shuttle craft. And as I walked out, I saw a semi-circle, a group of people standing, talking. And Gonzales saw me coming and kind of acknowledged me, and I saw the ICC representative standing there. And there were a bunch of the Secret Space Program councilmen standing there, basically kind of wishing a good mission, hoping all of this was a success - political kind of talk.

DW: The ICC chairman, is that an extraterrestrial? Is that a reptilian or something?

CG: No, this was a human being. He was an ICC councilman, like a high up.

DW: So what does he look like? Could you describe him?

CG: Yeah, he had gray hair, grayish-white hair, was not a real stocky guy, was wearing one of those suits that I have described.

DW: Like the Nehru jacket?

CG: Yeah, Nehru, the India, kind of. I don't know why those are so popular, but that seems to have become the thing to wear for the people in power. So we get onto what I've described. They come in different sizes between 40 and 60 feet long – shuttle craft. And they are modular on the inside. I've seen them changed out for all different types of uses, including troop transport, medical. This one was set up obviously for a VIP situation. It had enough seats for all of us. And once we sat in the seats... and I have a very long report online about this. I'm abbreviating it for the show. Gonzales was doing most of the talking. He is an impeccable politician. And I mean, he has all these skills of dealing with these types of people. I really had been out of the loop. I was really listening to see if I was going to get more information than I'd been given. Before I knew it, we had stopped pretty far outside of the Mars orbit. We were

stopped. And when we did, a giant – almost, I would estimate, about 70 inches diagonally, panel came down. It was one of the larger versions of the smart-glass pads. And a three dimensional image of Mars appeared. And all these different icons started appearing to where there were these Mars bases.

DW: How many icons were there?

CG: I don't remember now. There were quite a few, at least a dozen. There were a larger number. We were only seeing one side of Mars at this point.

DW: Were they in the Northern Hemisphere or the Southern Hemisphere?

CG: These were all up in the Northern Hemisphere. But this ICC guy started pointing to the different ones, making recommendations of ones we should visit. And at this time, Gonzales said: "Well, wait a second!" And he didn't touch anything. I guess he had some sort of mental component way activating this new icon down in the Southern Hemisphere. And when he did, the ICC representative immediately, kind of, straightened up and was disturbed. And Gonzales said: "We've chosen this facility." And the ICC representative was obviously a complete politician. He, very quickly on his feet said: "This is not a working facility. It does not have a colony. It's old...", I think he was saying it was like an automated facility. "It's not something you'd be interested in." - playing it down. And Gonzales immediately said: "Well, one of our recent defectors lived on this colony, and we have very fresh and detailed intelligence about this facility. This is the one we want to visit."

DW: I bet that is going to throw him into a panic.

CG: He was concerned. The ICC representative was concerned. And he excused himself to go back into one of the modular rooms. And apparently he had some sort of communication device or a way to communicate. And he said he had to get it cleared. And he appeared a few minutes later and said that it was going to be approved, but it was going to take about an hour to have everything cleared and the airspace cleared and have it all worked out – obviously time for them to clean up the base and make arrangements. So, approximately 50 minutes later, one of the crew said: "We're cleared for landing." and off we go. As we entered the atmosphere, we saw outside the clear panels – pink and lavender, purple discharges around the shielding and we flew real quickly toward the ground, which was exhilarating and then cut real hard and started flying along the surface into what looked like, used to be, part of a river water feature. And there was sort of a cliff wall, kind of like a cliff wall, and out of it came – a cylinder, rose up that...

DW: It was metallic?

CG: Yes. That was basically air traffic control. And then an opening opened up that wasn't visible before in the side of the canyon-type wall. We slowed down and flew inside. As we flew inside, there were bays on each side. And on each side, there were two crafts on either side of a catwalk that I hadn't seen before that were somewhat teardrop shaped and chrome colored. And I believe it was the third bay on the right, we were apparently cleared to land. And there was one of the teardrop shaped vessels, and then kind of a large circular area for us to land, which our craft barely fit on. And we landed.

The ICC representative got out of our craft and jogged – half running, half walking to a security people that met him, went to the security checkpoint, and then came back, running doing this (thumbs up), that everything was okay.

And Gonzales and I had two security personnel, that were IEs assigned to each of us, that were allowed to carry firearms. We disembarked. We headed to the checkpoint. The security at the station told our security: "No weapons past this point."

There was an exchanged between Gonzales and the ICC representative that, this was supposed to be already a part of the deal. The ICC representative went and talked to what was the leader of the facility.

The leader of the facility scowled and did this to motion us through (to come with his hand). And we entered into the base. And there was no one present. And he said that the main hall was being prepared for the presentation. And the rest of the ICC personnel were on their way.

They had been informed of the location and that we were going to be sent first to the industrial complex to see where a certain component was produced. And then, they put us on a train, a small train that was very narrow, and was two people across to where I sat across – we sat across from each other just like this.

And the way we entered in – there were quite a few of the colony's security personnel that were accompanying us. And I had one of my security (people) on each side of me. And across from me were five of the colony's security.

And as we were heading down very quickly – it was about 8km I think I heard them say, to the industrial complex – I was asked where I was from. And I made the mistake of saying "Texas".

Well, I left out before, we were told that as we had landed, before we had entered into the checkpoint, the ICC representative told us "Listen, this particular base is a part of a social experiment that's very important to humanity. Please don't contaminate it! They were told that Earth was inhabitable.." from some sort of catastrophe of

something, and that the only people, human beings, that survived were those on Mars and in the Space Program. So, I had pretty much messed up.

DW: Wow.

CG: Because I was recently sunburned and I had put on aloe and all kinds of stuff. I reeked of Earth, I was told.

DW: Do they all use similar hygiene products?

CG: Yes, they use all the exact same hygiene products. Gonzalez told me later on my deodorant, the lotions I used, the hair gel, everything – I totally smelled alien.

DW: So what happen on this guy's face when you say "Texas", and he thinks that the Earth has been destroyed?

CG: Well, the few in front of me immediately were like (glares)– you know, and they looked at each other. And they immediately started talking amongst themselves. And then my security guy, and the security guy next to him started talking. And the next thing I know, I see Gonzales' poke out and his head crane over and look in my direction, and I didn't even look at him. I just looked past the security guy and watched the blurry wall going by out the window until we stop. And then, we got out to begin the tour of the facility.

DW: What did Gonzales – when he looked at you, --what was the...

CG: I didn't look at him. But he approached me very quickly afterwards, and he said he was thinking how he could salvage the situation. He was going to try to think of Texas being a secret facility or a secret vessel or something like that to try to save the situation.

DW: Do you think they were shown some sort of fake Hollywood style movie?

CG: Who knows? But what I do know is..

DW: That they believed it absolutely

CG: Yes. What I do know is that many of these people, especially during the brain-drain era and a little after, were being brought in, coerced to join these Mars colonies being told that the Earth was about to go through a catastrophe; that they were the best of the best, they were "special", and they were a part of a "continuity of preservation of the human species" program to basically colonize Mars and eventually terraform Mars and restart the human race.

DW: People who are millennials and who've grown up buried in texting and smartphones may not realize how much of a threat people from yours and my generation and then our parents' generation really believed there was to going to be a nuclear war. I mean, it was a very frightening, scary thing.

CG: Oh yeah, I remember. We both were at the age to where "duck and cover",– get under your desk.

DW: As if that's going to do anything.

CG: Right.

DW: So do you think that they may have been told that there had been a nuclear war since there was so much fear that it was going to happen?

CG: I don't know what they were told, if it was a solar event, a war, or a super-volcano. Who knows?

DW: But, what a great way to keep people from wanting to escape, because that's their home. They've got nowhere else to go.

CG: Yes.

DW: Interesting. Did these folks in this particular colony or these other colonies have contact with different extraterrestrial races or were they predominantly by themselves as humans from Earth?

CG: Some of them definitely worked with different ET races and saw different ET races. A lot of these bases were doing commerce with ET races. So I'm assuming so, but I'm not positive.

DW: I know that you didn't live there. But, I'm curious if people had, for example, a sub-shuttle system similar to what they have on Earth, so that they can travel throughout these bases and colonies. Was there like an Internet on Mars that they could all access? Did they have the ability to talk to people in different facilities?

CG: No. I didn't explain the train system very well. It was almost like vitrified rock. And it was rippled like glass.

DW: That is exactly what I've heard from at least 2 other insiders. They have these boring machines that use some kind of nuclear energy, and they drive forward, and they melt the rock. But then they have to stop and create a little ring, because if you just go straight through, then it'll crack, and dirt falls in. They stop it periodically;

make these little rings that reinforce the strength of the tunnel.

CG: It was like ribbed rippled.

DW: Then you go. Okay. Perfect.

CG: And there were cross sections where we went – as we were going along, there were crossing tunnels. And they had connections to other facilities to where they would bring in parts, or whatever else they needed.

DW: Do they have any contact with each other on the planet?

CG: They have limited contact with each other, it appears.

DW: Only high ranking people, not the rank and file staff?

CG: I would say "need to know" kind of situation.

DW: So, they're living a very isolated life. It's not like they have a big social circle.

CG: Very regimented life.

DW: So what happens next?

CG: So we were starting to begin the tour. There was this one colonist that was there that was showing a completed curved component that was a neurological optical interface that was really popular to be used in different craft.

DW: What would that actually do? It's optical and neurological? Does it track the movement of your eye or something?

CG: Well, no, through other technology, you neurologically interface it, and it interfaces other technology and gives some sort of optical display or something. We're really about to get started. The machinery, the robotic automated machinery that builds it, they were talking about the different shapes. Some are curved. Some are straight.

DW: Is this like a helmet that you wear?

CG: No, no. It's like something that goes into a vessel. And we were just starting this when – and the train had left after we had gotten out. And..

DW: This is the industrial part of the tour they said you were going to get.

CG: Right.

DW: Were there a lot of people around?

CG: No. At this time there was just this one colonist that was apparently like a foreman kind of a guy that was there to give us a talk. And the ICC representative kept touching his ear. And he was scowling, looked concerned, and was kind of standing back.

DW: Oh, you're saying it's like an ear piece, not that he was trying to non-verbally signal to the colonist guy.

CG: Like an earwig. They put them in your ear, and you can hear, and you can talk. But it's not easy to see.

DW: Okay, so he's got his own little earwig.

CG: Right, and the facility security team was more and more looking at us, talking amongst themselves. It was obvious that they were chattered amongst themselves.

DW: Because of the Texas thing.

CG: Because of the Texas comment.

DW: And you smell funny, and you looked funny.

CG: And I had a sunburn. I was peeling. Even my scalp was peeling. I'd just had a haircut. I'd been in the sun. And I had put aloe Vera all over myself. And another train arrived. And a whole – like, double the size – a huge amount of security came out and came and disarmed all of their own security team that had accompanied us. And the ICC representative came and told us that we needed to be very careful what we talked about and to remember the agreement.

DW: Were they worried that the guy that you said Texas to was going to frag and shoot you? Is that why, him and his team, were disarmed, because they were worried about some sort of psychological break?

CG: Well, the way they were putting it across to us, was that we had contaminated their social experiment. And then half of the new security group escorted the old security-facility group into the train and left.

And shortly later, the train came back. We got in it and headed back. Because they said that the main hall had been setup and that the ICC representatives had arrived and

were ready for the presentation.

So, we headed back. And, when we arrived back this time, there were people everywhere, where before it was just noticeably empty. And in these places, you use every square foot of space.

So, to have a huge area like that with no one around was unusual. Well, all of a sudden, now there are all of these colonists. And they were obviously wearing their "Sunday's best", some of them wearing all different types of one-pieces, some of them wearing khakis and blues and all different colors, some of them actually wearing two-piece types of clothing.

And they were all doing their work, but they were all trying to make eye contact with us. It was kind of obvious that they had been told that a part of the deal was that we were going to be allowed to bring one family back with us to question about the conditions of the facility.

So they were kind of just hopefully trying to make eye contact with us.

DW: Sort of like going into a dog and cat shelter.

CG: Right.

DW: Wow. So sad.

CG: There were two different parts. We got to do a tour where the people lived and see their small quarters where the people were smiling and looking all happy.

DW: Could you describe one of these quarters just briefly for us? Like, do they have a place where they cook? Do they have a bathroom? Do they have different bedrooms?

CG: They were like jail cells.

DW: Really?

CG: Yeah. Into the walls, they had beds. And they did not prepare their food there. They all went to one central location to eat. And they went to one central location to go to the bathroom, and to bathe and all that, or shared locations for groups.

DW: Wow, did they have a toilet in the room even?

CG: No.

DW: Wow. But there's no bars on the doors? They can come and go if they want to.

CG: Right, but I'm sure..

DW: How big was the hallway?

CG: The hallway was fairly wide. I mean, it was big enough for six people side-by-side.

DW: But, is it just like rooms like this all the way down?

CG: It was, yeah, just rooms like that all the way down.

DW: No window or anything?

CG: No. No windows.

DW: Did they have light, like floor lamps, or ceiling mounting light, or how did it light?

CG: There's a type of sonic lighting that they have.

DW: Sonic lighting

CG: Yeah. It's pretty common. It's, sound waves that produce light.

DW: Where are they?

CG: On the ceiling.

DW: Is it one area of the ceiling or like the whole ceiling just glows?

CG: The panels of the ceiling, the whole ceiling.

DW: Wow. Cool.

CG: And so, Gonzales made a mental note of the, I guess the habitation number or address of one of the places, unbeknownst to me. We also went to what Gonzales referred to as a "dog and pony show" that the ICC put on. What they were calling the main hall or this gathering place looked very much like a place where people were brought in and fed propaganda.

DW: Did you get an intuitive feeling of that?

CG: Yes. It had been set up with chairs around. And there was another one of those very large smart-glass type of screen.

DW: So, it's like an auditorium where a bunch a people could be.

CG: Yes, it was a very large auditorium.

DW: Did they have something like TV in their houses? Was there anything they could watch?

CG: Uh-Uh, not that I saw, not unless it's retractable.

We go in. Some introductions are made. We sit down. And they give a "dog and pony show." They start to show us all these different technologies that they barter, and trade, and sell, basically to ETs.

DW: Is the ICC representative giving you the presentation at this point, or does he have colleagues that are also working with him.

CG: Different colleagues, yeah. Different guys, they're giving presentations. They're very proud of what they're presenting. There were different craft, different components of craft, different just small – they were presenting just a whole lot of different technologies from the micro to the full product.

DW: Was there anything that really jumped out, that surprised you that you didn't know existed or that was really kind of cool, unusual, unexpected?

CG: Well, not really, other than the fact that, there were actual vessels that we were engineering and building that advanced extraterrestrial groups were interested in procuring from us. I mean, we'd come this far in producing advanced technology, that other groups wanted it? One of the things that jump out at me the most was the fact that one of the ICC representatives announced that we were doing trade on a regular basis with nearly 900 ET races.

DW: That's astonishing!

CG: And that was on a regular basis, and that we were occasionally doing trade with far more.

DW: Far more, as in thousands?

CG: Right.

DW: Whew. Did they give any sense of how much of the Galaxy this covers? Is it just a small area?

CG: No, no. I'm not exactly sure where all these groups come from. But considering that just outside of our solar system is a major hub as far as a portal system that travels through the cosmic-web of portal systems – this is like an oasis stop-over. We see a lot of traffic through the area. Most groups don't stop by our Solar System, because it's seen as very messy. With the slavery going on and all that, most of them don't want to deal with this. They stay outside of our Solar System. They do their calculations and whoosh, they go. But the ones that are amoral or don't have a problem with it, come and do trade with the ICC.

DW: By the time you saw this "dog and pony" show, had you already been told that these technologies were all going to be handed to humanity after this big disclosure takes place?

CG: Right, we had already been told that the Secret Space Program Alliance was told to stop any attacks – no longer attack the ICC infrastructure, to stop the violence. They were already having problems swallowing the --"be more loving, be more forgiving, raise your consciousness."

And all of this stuff to them was just totally foreign information. But they were told to stop all the violence. And they did. Especially after they found out that all of this infrastructure after the great disclosure events and people had dealt with certain things on Earth, all this infrastructure was going to be handed over to humanity to be the foundation of a "Star Trek" type of civilization.

DW: Which sounds exactly like what so many ancient cultures and modern channeling traditions all say, is this big epic golden age that we move into. So this is a very interesting practical realization of that.

CG: Right. And the Sphere Being Alliance was saying: "Quit wrecking things. Quit destroying all the infrastructures. You're tearing up stuff that, after all these changes happen, are going to be handed over to the people."

DW: Wow. Was it a surprise to Gonzales or others that were part of his detachment that there were 900 groups that were in, as you said, constant trade with the ICC, or did they already all know that?

CG: I seemed to be the one that was the most surprised. I usually seem to be the one that's most "in the dark" about everything in every situation. I do not get all of the intelligence that all of the SSP alliance members get.

DW: So, in the time we have remaining, there was obviously some very unpleasant stuff that happens to you after this. So, how do we get from you being in this room to where all starts to take place?

CG: Okay. To abbreviate it, after this point, we now are allowed to choose a family to go with us. Gonzales gives the address on the wall of the family that he had chosen. And the intuitive empaths earlier had stated something didn't feel right when we were in the train coming back.

And I felt something was off, but I'm not as in-tune as I used to be. Then once the family had been escorted onto our vessel, once we'd seen the family, the intuitive empaths were whispering to Gonzales.

And he was like: "Mmm-Hmm." And when we got onto the vessel, the door closed, and he said: "You're safe. Everything is going to be okay. You can tell us. We know that there's a member of your family missing."

And it was a husband, a wife, and a son and a daughter. And the father was like: "How could you possibly know that?"

And he said: "These gentlemen have abilities.", and "..just tell us what is going on, and we'll straighten it out."

And then, the family clammed up. And Gonzales got, in his normal way, very ticked-off. And him and his two security personnel left the craft.

DW: So, they must have told the family, you tell them that this is a wonderful place to live and everything is happy, or else your kid "gets it".

CG: And that you want to come back. Because, part of the deal was we were able to offer them a place.

DW: Sanctuary.

CG: Sanctuary. Yeah. So Gonzales left. And, long story short, next thing I know the crew comes out of the crew compartment at the front, saying: "We have security personnel coming in fast, weapons at the ready, what do we do?" And they're asking me.

DW: So you're in this ship that you're about to leave with the family in, Gonzales is trying to get their other kid, and these guys come in running with weapons drawn, and they're basically, like, assaulting your craft, it appears.

CG: They were on their way. They had rounded the way, and they were on their way up the catwalk. And I said: “Is Gonzales with them?” And they said: “He’s nowhere to be seen.” And I said: “Stand down. Open the door.” And they immediately started taking security steps to wipe all the information, intelligence information that would aid the enemy, I guess, out of the craft. So they did that very quickly. And the security team came, disarmed our security.

DW: Where they yelling at you, and did they put your hands behind you back and hurt you?

CG: They escorted us in a very brisk, rough way. But they weren’t trying to break our arms or anything. They escorted us back past the security point. And, as we went in, the ICC representative that had been with us before was in a “yelling match” with the facility leader. And the ICC representative outranked this facility leader by a lot. But this guy was “ticked off”.

DW: The facility leader?

CG: The facility leader was upset. And we were walked to this wall. And there were now doors where there were not doors before. And they opened the doors. And there is a detention facility. And we walk in. And there are all these people in cells. And there are cells with.. they’re almost like cages that you can put your hand in like this, with octagonal kind of holes. And they walked us all the way back. All of them have people in them. And. in the very back is a larger cell with Gonzales and his two people, with his two intuitive empath guards. And they put the rest of us in, including the crew of the craft. And Gonzales said that the facility leader was a tyrant and couldn’t handle being challenged in front of his own people, that things had gotten heated and out of control, and they were detained. And he said things sounded like they were going to go very, very badly.

DW: Meaning you guys were going to be held for a short while and murdered?

CG: It sounded like things were going to go in that manner.

DW: Or tortured first and then murdered?

CG: Who knows? He didn’t elaborate. We were in there for a short time. And the next thing we know, all these blue orbs started appearing in the cell through the walls. Gonzales and I were the only guys who had traveled in this manner.

The other people, the security and the crew, were kind of backing- up a little bit. They were a little bit taken off guard. Gonzales just told them to indicate that you’re ready to travel, and the spheres one-by-one just appeared around us, and we zipped through

the walls and appeared back in the room that I mentioned before with the table slid against the wall - the conference room.

And an intrusion alarm went off, because we weren't expected back in that way. Our craft got left behind. And Gonzales sent the rest of the people to be debriefed, and told me we lost a vessel, but at least we didn't lose any people. And he didn't know whether I was going to go see the Blue Avians after this, or if I was going home, but that he needed to go.

So I took off my boots, took off the jumpsuit, and put on my flip-flops, and the blue sphere came. I indicated I was ready. And I was brought home. And that's basically - end of story. There's a much longer story on my website

DW: People online had asked if the family was able to have been taken with you.

CG: No. We have no intelligence on what happened on that facility to that family. I've had zero information on what occurred.

DW: Some of the attacking comments have been, why do the Blue Avians not care about these slaves? Why are they not saving these slaves? Isn't there going to be something in the future where they will be free?

CG: Yeah. This is a part of a much longer conversation. There is a plan to where when all these people are freed, they're going to be brought to another place to where they can be rehabilitated, and the same thing for a lot of the Secret Space Programs Alliance people. A lot of these people, like I said, are not angels. They're very damaged people. And they're going to be brought to one of our allies who are going to rehabilitate them before they're returned to society.

DW: Well, thank you very much. You're very brave for going through this stuff and not giving up. And thank you for watching. This is "Cosmic Disclosure", I'm your host, David Wilcock. We have much more coming up for you, and we thank you for watching.

Global Galactic League of Nations Season 1 Episode 8

Cosmic Disclosure; Global Galactic League of Nations Season 1, Episode 8

18 Aug 2015

DW: This is Cosmic Disclosure. I'm your host David Wilcock, and I'm here with Corey Goode who has worked for over 20 years in the secret space program, got out in 1987 and now has been pulled back in, in a very interesting way. After coming forward as an insider he has been contacted by an alliance that is claiming that it wants to take the almost supernaturally exciting technology and way of life of the space program, break down the walls of secrecy and bring it back here to Earth. So, Corey, welcome to the show.

CG: Thank you.

DW: We've been talking about the factions of the space program in earlier episodes and we've covered them to varying degrees, but as I was mentally going through our notes I realized that, although we covered it superficially, we never really talked that much about the Global Galactic League of Nations group.

CG: Right. I always referred to them as the NATO-type group.

DW: You were always saying 'NATO-ish', I remember that. So, to open this up a little bit, let's think about this one – we now know that Joseph Stalin was well aware that "Roswell" was, in fact, a crashed "saucer", because that's what it was announced as. And then, all of a sudden, the US government says "oh, it's only a weather balloon.".

CG: Easy mistake! (laughs)

DW: So, I did some episodes for Ancient Aliens, in which part of the research that I went into, was that Stalin hired people to go back through the records, and what they found was - somebody had dug up a weird rocket in Siberia that had Sanskrit written on it and it was all metallic. The rocket, they couldn't get it out of the ground without damaging it, it was in the late 1800's, so they just left it buried, they reburied it. So, after Roswell happened, Stalin apparently dug up this rocket. It was so advanced, they couldn't make any sense out of it. But apparently there was also a chest in there and the chest had all these documents that included really elaborate blueprints and diagrams of spacecraft, how to build them and space stations. Really really "cool" stuff. And it was from that, that the Russians were able to develop, what are called "Cosmospheres", which are spherical flying... ah, you're nodding your head, have you heard of the Cosmospheres?

CG: Yeah, absolutely!

DW: What do you know about those?

CG: Russia, The Soviet Union used that as their way of forcing their way into some of the secret space programs. Of getting involved.

DW: What is a Cosmosphere? How does it work? What does it look like?

CG: They were spheres, metallic spheres that Cosmonauts were flying around in, in outer space. And our spacecraft were seeing them and tracking them back to the Soviet Union. And it was very concerning. And it caused us and them to open more of a dialog.

DW: How large were the Cosmospheres? How many crew could be fit in there?

CG: They had different sizes. They had them for, I believe, 1-3 people, and even larger ones.

DW: Let's take a look now, at a video clip. This is going to be upsetting for some people who are a little older and remember this personally. The Space-Shuttle Challenger blew up in the air. And what you're about to see is a video of a spherical UFO, taken by a cameraman who filmed the challenger blowing-up, and you'll see it right here.

(video plays - see below)

DW: Now, Corey, I don't know if you're familiar with this, but Lieutenant Colonel Tom Bearden (retired), claimed that the sphere was a Russian craft, and that they had attacked the Challenger on take-off. That this was part of this secret war, Cold War stuff going on with advanced technology. They were doing this to try to strike at the United States. Did you ever hear of that incident?

CG: We were already working together with the Russians far before that happened.

DW: Hmmm.

CG: The Cold War was, pretty much, a gimmick.

DW: Like a fundraiser.

CG: Yeah, I guess you could call it that. But, the people on the ground, the lower-level people were very much into it - it was real for them. But, when it came down to

it, the Soviets and the Americans were, very much, allies.

DW: Well apparently it was only recently declassified – somebody posted this as a comment on my site after I wrote about the Manhattan Project, that the United States never was able to enrich anywhere near enough uranium to actually make the atom bomb. And that they got the rest from Nazi Germany.

CG: Mmm-Hmm (nod)

DW: So this kind of stuff makes people go crazy. Because we've grown up fighting these great nemeses and in WWII, even the women were getting involved in making bombs, and the threat of Hitler had captivated the whole world in fear. And you're saying that all this stuff is a big elaborate circus?

CG: One of these days, whenever there is data-dump of the true history of what has happened in our world, people are going to be dumbfounded, and angry.

DW: So, do you think that this is why the Soviets almost immediately had the A-Bomb after the USA had it, even though the USA allegedly had done such a classified project? That they just traded the secrets with each other behind the scenes?

CG: You know, that's all very lower-level ground-level stuff going on. When it came down to it, they were already working together in space because of different perceived extraterrestrial threats and they were working together to keep, as well as they could, which wasn't very.. it was kind of silly to think that we could protect the planet against these super-advanced extraterrestrials, but they were forming an alliance well before the Cold War, in space, to start protecting the Earth.

DW: Do you think that was the basis of Ronald Reagan's infamous speech about an alien threat unifying the world?

CG: Yeah, I guess it could have been. But, like I said, far before that we were already truly allies with a lot of the people that we have supposedly been enemies with.

DW: Let's take a quick look at that clip now of Ronald Reagan.

Reagan: I couldn't help, at one point in our discussions with, privately with General Secretary Gorbachev. When you stop to think that we're all God's children, wherever we may live in the world. I couldn't help but say to him: “Just think how easy his task and mine might be in these meetings that we held, if suddenly there was a threat to this world from some other species from another planet outside in the universe. We'd forget all the little local differences that we have between our countries and we would find out, once and for all, that we really are all human beings here on this Earth

together“
DW: So, you said though, that these Cosmospheres are kind of sneaky and annoying to the Space Program? So, how much collaboration was going on with the Soviet Union?

CG: In the beginning there was very little, but it became apparent, not only to the Soviet Union, but to all of the countries of the world that there were secret space programs going on.

DW: It became apparent at what time?

CG: In the late 50's and early 60's it was becoming very apparent. It was just obvious. And, ... the Soviet Union and all the big powers started working together, but all of the smaller countries, now that they're knowing about it, how are you going to keep them quiet? They wanted to be a part of this “saving the world”. Be a part of this secret space program.

DW: Were there intelligence services for some of these countries that were capturing and interrogating people, perhaps under very strenuous means and obtaining information through unethical practices like that? Is that part of how this was happening?

CG: They were obtaining information in any number of ways, including - We had agreements with all these countries that, any time a UFO crashed in their country, we were allowed to send in our retrieval teams.

DW: How early was that treaty made?

CG: That was going on in the late '40s, the '50s and '60s.

DW: That early? Wow!

CG: Yeah, we were retrieving UFOs that were crashing in all these small countries. So, I mean, they couldn't keep this a big secret. They didn't have to “put the screws” to a person really to find out what was going on. So, what happened was, they formed a secret space program, or a program for, that I called up until recently, the NATO-ish-type group. And it wasn't until I was in one of the Secret Space Program meetings at the LOC, that it was referred to as the Global Galactic League Of Nations. And, that just sounded like a really hinky name to me. You know, the “League of Nations”, you know. But that's what they were being referred to as.

DW: Well that's the precursor to the United Nations, right? This is like post World War I type of stuff - Treaty of Versailles.

CG: And, this group was formed, I guess kind of as a carrot to all these other nations, to keep them quiet and to make them feel involved in protecting the planet. They were told that there were all these different threats to the planet and that they could be involved in the solution. And they were provided bases and technology, but they were based entirely outside of the solar system.

DW: So who, in these countries, were lucky enough to be privy to this little world? Is this, elected officials, people like prime ministers and presidents, and cabinet ministers?

CG: I am not sure who of these countries knew about it. Just about every country you could imagine is involved at some level in this space program.

DW: So, do you think that it may have more to do with high-level intelligence agents in these countries and defense contractors, the military, high-level military personnel – the people who out-last individual administrations and elected officials?

CG: Yes and a lot of scientists.

DW: Hmm.

CG: It seemed like a lot of scientists were involved.

DW: What about bankers and bean counter, number-cruncher types running the financial system?

CG: They seem to have their finger in everything.

DW: So, walk us through, as much as you know about. You said this began in the '50s, '60s. How were these people approached and what do they see? How were they brought off-planet? What did they actually experience? How much did they get to know?

CG: This program was a fairly recent one. It didn't start back in the '50s and '60s. Back then is when they started to find out what was going on.

DW: Okay.

CG: I believe this was something that started probably, at least, in the '80s maybe even '90s. It's fairly recent.

DW: Hmm

CG: And I am not exactly sure of all the specifics of what propaganda they were fed, but I have been to one of their bases and I described briefly in one episode, one of the bases, but we didn't go super in detail about it.

DW: So let's do that now. Did you travel there by a craft or did you travel there by a portal? How was the method of arrival?

CG: Strangely enough, this was the underground tram system that you hear about. This underground tram traveled through a portal, came out on what was a moon around a gas giant in another solar system. And then stopped, and then we disembarked.

DW: It was on rails when it stopped? It was in like, a room?

CG: It came out of the tube and was hovering above a track.

DW: Hmm. Well, my space-program insider Jacob described portaling in a sub-shuttle system and he said that it's so fast that most people don't even bother to sit down because all you do is stand there, hold the pole, sshhht, and then you're out.

CG: See. I've been talking about going through a portal in a train and people have been telling me that I'm the only one that has ever said that....

DW: I heard that back in 2009/2010.

CG: Okay. People have been telling me that it's ridiculous, that no one has ever said this before.

DW: This is one of hundreds of things that I never put online so I can figure out who's who in the zoo.

CG: Okay.

DW: And you just verified it. So..

CG: Okay. So, as we disembarked..

DW: It's hovering how far off the ground?

CG: Off of a track, it's not far, just barely off the..

DW: Just some kind of little gravity system or something..

CG: Like a Maglev kind of..

DW: Okay.

CG: So we get out, and as we get out the first thing you notice - you hear announcements in English.

DW: And you see the Sky? Are you indoors?

CG: No, it's... immediately we are in what is like a cave, like a grotto kind of area.

DW: Okay.

CG: And, we hear announcements in English, just general announcements.

DW: Is this like a tropical moon with lots of lush vegetation, and water and rainfall, or..?

CG: Well, all we could see at this moment was just the cave.

DW : Okay.

CG: And we could see people walking around. Their body language, they're walking in 2.. two together. Maybe groups of 4 – 2 and then 2 behind each other or 3. Very relaxed, they seemed.. it was just very relaxed.

DW: Are they wearing shorts and flip-flops or..?

CG: They were wearing jumpsuits with the flags of their countries on their shoulder and very much like what is depicted in “Stargate Atlantis”.

DW: Hmm. What color were the jumpsuits? Did they have different colors depending on rank or position?

CG: Different colors, but.. blue seems to be a big standard.

DW: What color blue?

CG: I guess the color that the Air Force uses a lot.

DW: Like a light-blue?

CG: It was like a royal-blue.

DW: And you said that they had flags of their country?

CG: They all had all these different flags, from all these different countries.

DW: So what countries did you definitely recognize?

CG: Many of them I didn't recognize, but later, I recognized flags from countries like Estonia, and just countries that... the Ukraine and...

DW: Latvia?

CG: Yeah, stuff like.. you know, flags that I never had seen or would recognize.

DW: Anything from Greece, Morocco, Algeria?

CG: People from those countries were involved, but I can't recall all the flags that were seen. I didn't see thousands of people. I only saw a certain group of people – the group of people that I saw.

DW: Any countries from Africa, like Nigeria, or Chad or Congo or Niger?

CG: There were people that looked to be from Africa, but I wasn't running around peering my head around people's shoulders - that would be too conspicuous, but people were obviously from everywhere. And..

DW: So, South America..

CG: Right.

DW: Most of the “Five Eyes” right? The big western countries - New Zealand, Australia, Canada, they were all represented?

CG: Right, anywhere you can think of.

DW: Wow. And you said they looked happy and relaxed?

CG: Yeah.. It was nothing like..

DW: That doesn't seem normal from what you've been describing.

CG: No, the Mars colonies that we had visited, we were walked around by armed guard. We were told not to make eye-contact, speak to anybody. The people looked very gaunt and very stressed-out and unhappy. These people - 180 degrees difference.

DW: Hmmm.

CG: So as we got off the train platform and were walking towards where the cave had been sealed-off by a giant metal-type wall with an entrance that you'd go through to go to security, we looked to the right – there was a big cave entrance, going out. And it was like sort of a tropical kind of environment. And the different times we had been there, there were moons that were at different places in the sky.

DW: How many moons do you remember seeing at any one time?

CG: Two.

DW: Okay. Were they larger in their apparent diameter than Earth's moon?

CG: Depending on their position, yeah, they looked larger.

DW: Did they have any unusual color or surface features?

CG: Orange, one looked orange. And I really can't remember the other one because we could only just see part of it.

DW: Did either of them have a ring or anything 'funny' like that?

CG: No.

DW: Could you see the gas-giant planet that this was supposedly orbiting?

CG: I never saw.. I didn't see the gas-giant.

DW: Hmm

CG: But I was told it was around a gas-giant. But there was a strangely blue luminescent pool. If you were looking out, straight out of the cave, to the left, there was a strangely blue luminescent pool with a little bit of a waterfall trickling down in it. And..

DW: Like, built into stone? Like natural rocks?

CG: It was all natural, this wasn't man-made. And ..

DW: But the blue, that sounds man-made right? It's has some kind of weird glow?

CG: No, I think this was an actual..for this planet.

DW: Unusual thing, in nature?

CG: Right. And there was kind of steam that just stayed real close to the surface of the water, and there were people out there laughing and talking and having R&R (Rest and Relaxation) getting in the water.

DW: So, this isn't like the “Chronicles of Riddick” where some horrific creature comes up with a tail and “kaahhh”.

CG: No (laughs)

DW: A very safe, happy place?

CG: Right, they were having R&R, having fun, getting in the water..

DW: They have, like, beach-chairs around? And that kind of thing?

CG: No.

DW: Towels, the people..

CG: The people, they had towels and swim-wear, and they were getting in the water, swimming around, getting out..

DW: People having fun in a space-program colony?

CG: Yeah, they were having fun.

DW: (laughs)

CG: And then, to the immediate left was a big wall, where you walked through to go into the actual facility, to where people were going in to do repairs.

DW: What kind of equipment was being repaired?

CG: Certain types of lab-equipment that were involved in testing. It was different each time. It was highly.. specialty equipment that usually the ICC had produced. Either the ICC or the scientists that were assigned to the research vessels were proficient in working on.

DW: What was the “mojo” about this spot? You were told it was outside our solar system?

CG: Right.

DW: So, was there something unique or valuable about it? Was it near other places where other races had lived? Did it have tactical significance?

CG: The “scuttlebutt” (gossip/rumor) was that it was in the Pleiades.

DW: Oh, really?

CG: And a bunch of us didn't believe that. But that is what was said. But for some reason.. “the Pleiades” seemed to be this kind of stamp that was put on everything - “Oh, this came from the Pleiades”, that was “from the Pleiades”..da da da, “Pleiades”, “Pleiades”, “Pleiades”. So, it got to be, oh, “this place is located in the Pleiades” - Oh, okay, that again. So, that's what was told, but who knows where it really was.

DW: Given the fact that there's seven stars in the Pleiades with a fairly bright magnitude, that are all in a relatively short amount of space next to each other..

CG: I'm told it's a larger star-cluster than that.

DW: Yeah, those are the seven, like I said, the seven most apparent magnitude of brightness of two or higher. Are you familiar with whether being on one of these stars in the Pleiades, if it actually is the Pleiades, because the other stars are nearby, would they be larger than stars usually looked to us in our solar system?

CG: When it comes to point-of-view, where you are. If you're, say, you're in the Pleiades, and you're looking at the sky, you have a whole new set of constellations. Nothing looks the same.

DW: Right.

CG: So, your point of reference is totally thrown-off. There's really no way of being able to judge really where you are - even for the “eggheads” without the right equipment. When you arrive somewhere, either if you don't know the address of where you are being sent prior, or you don't have the right equipment that tells you where you are – you don't know where you are.

DW: Well, let me ask you this then, to just kind of, warm this up. You go to a binary star-system, let's say.

CG: Most of them are.

DW: Okay. Do you see two suns, if you're on that planet, in the sky?

CG: It depends on the relationship of the binary star-system. But, yes, you can see a faint star in the distance.

DW: But it's not as big as some of the movies that we've seen would have it? It would still be pretty faint and distant?

CG: Some of them are real close together, but these stars, the closer they are together, the faster they spin around each other, and the more dynamic the system is. The ones that seem to have more life on them are the stars that are a little bit further apart but are dancing in a gravitational dance together.

DW: Let's go back to this base now. When you walked off into this sealed-off grotto, was there anything about it that looked 'cool' or futuristic that would have made these people feel like advanced location, or was it all fairly conventional, other than this weird glowing pool that you saw?

CG: They had much of the newer tools and toys of the ICC. I think they were given a lot of new 'toys', technology to make them very happy.

DW: Hmm.

CG: And they seemed to be doing, just, a lot of research. Tons of research, these people.. its a derogatory statement, but they often referred to the scientists as "eggheads", and they would say "they smelled of egghead", as eggheads. But these people were obviously scientific or engineers. Scientific personnel or engineers for the most part.

DW: Approximately how many personnel did you see walking around while you were there?

CG: Just out, immediately, there were probably 3-4 dozen.

DW: Okay.

CG: And there was not a large security-presence. I did not see a lot of people running around with weapons. It was just very relaxed and laid back. Wherever they were, they felt very secure and the energy, the feeling.. The intuitive empath – the feeling of all the people was - there was no anxiety, there was no agitation, they felt happy, they felt like what they were doing was important, and they just felt.. there was a feeling of happiness and just, relaxation.

DW: Well, we're down to our last 5 minutes, but I want to throw a few quick ones at you, just to round this out. Did you see a hangar that had any type of unusual craft in

it that they could use to fly-around with?

CG: They had a hangar, but we didn't go to the hangar.

DW: Did they have any land vehicles that they would use to venture out from this grotto to the rest of that moon?

CG: Not that I saw. I didn't see any type of tracks. Inside they did have some battery-powered trucks. Small cabbed trucks that were driving around with plastic crates in them, in one area.

DW: Did the moon have an atmosphere?

CG: MmHmm.

DW: It did? Was it breathable?

CG: Obviously. People were out there, outside the entrance of the cave. There was vegetation, people were..

DW: Outside the cave there was vegetation?

CG: Right.

DW: This is not some arid moon, because when we think of a moon we are usually thinking of a big dead orb.

CG: No. Many of the inhabitable spheres that are out there are not planets in the Goldilocks Zone, around those stars. They are moons within a certain density and size that are orbiting a gas-giant, in a certain orbit of a gas-giant that is a certain density and size. And that gas-giant can be any distance from it's sun.

DW: How big would the gas-giant be on one of these moons? What's the scale? Could it be actually something so large that it fills up half the apparent diameter of the sky that you're looking at, at one point? Or is it farther away than that?

CG: I would have to be speculating. I haven't seen, myself.

DW: It would appear that some of Jupiter's moons, if you were on one of those, that Jupiter would be very large from what you could see.

CG: Right.

DW: So that would be a very interesting place to live.

CG: I believe that these inhabitable moons would need to be a little bit larger than some of these moons, and a little bit further away than the orbits of the ones around Jupiter or Saturn, because of the tidal forces they have to deal with, being in so close to Jupiter.

DW: What are “they” told they are doing? What are they preparing for? What is their mission? What is their objective?

CG: They are told that they are coming up with science and technologies that will help the planet Earth in case of, or in preparation of, an outside alien threat. Just like we heard President Reagan talking about. And that President Reagan clip may have been meant for this group.

DW: It sounds like it. So, they are essentially trying to establish a defensive foothold to save Earth from what they perceive as an incoming threat?

CG: I don't know if they are setting up a foothold, but I think that they're working on science and technologies that they fervently believe will help humanity protect the planet Earth.

DW: How much knowledge do you think they have of extraterrestrials? Are they kept in the dark? Are they told similar to the military faction - “You guys are it, and everything else is ancient, but there may be some out there that we don't know about, and we've got to defend ourselves if they show up”. Is it something like that?

CG: From what I've found out since all of this has happened - they have been heavily compartmentalized.

DW: So they really don't know anything about the full spectrum of what is really going on?

CG: They know some of the “spectrum”, but they do not know as much as some of the other programs.

DW: So this is like a little “mushroom patch” for the space program.

CG: Right. Compartmentalization – the lie is different on each level and each compartment. Everyone in each compartment is told: “You are at the top of the totem pole. You are the tip of the spear for the planet. You should be very proud of what you're doing. No one knows more than you. You are very special, very special. You have been cleared to know more than anyone else on the planet.” Everyone in every

compartment is told the same thing, and they believe it.

DW: Well, it seems to me that this is a perfect way to keep the opposition silenced, by giving them some biscuits and saying: “Here, here's your tasty treat, now go leave us alone - off on this moon somewhere else.” Well you've heard it here. This is Cosmic Disclosure – very mind-blowing information. And there's much, much more where this came from. We have 52 episodes, and we may even be doing more past that point. So, every week you're going to be hearing fascinating stuff like this, so please “stay tuned”. I'm your host David Wilcock, and we thank you for watching.

Electric Sun Season 1 Episode 9

Cosmic Disclosure; Electric Sun Season 1, Episode 9

25 Aug 2015

DW: I'm here with Corey Goode, the insider who has come forward with a remarkable story of the military industrial complex colonizing our solar system and beyond and having extensive interactions with a multitude of extraterrestrial beings. And, Corey, welcome back to the show.

CG: Thank you.

DW: Alright, let's just start with a basic question. Throw this at you and see what you do. What is a star?

CG: A star is definitely not what we were being told it is in school – a giant ball of gas on fire out in the middle of space.

DW: Right away, you've just slapped all the skeptics in the face because they say "it's scientifically proven – he's an idiot."

CG: It has not been scientifically proven. It's scientific theory.

DW: Right. We see stuff coming off the sun that would imply it's got hydrogen. There's hydrogen atoms coming off and oxygen and things like that.

CG: Right. When I was assigned to the research vessel there were expeditions to the sun, to where probes were shot into the sun and they would shoot these probes into sun spots.

DW: The first thing would be how do you get a probe into the sun without it burning up?

CG: Energy field around.

DW: So, very high-density energy field that shields it from being burned up.

CG: Right. And also collapsed from the gravitational....What was seen from the telemetry that came back from these probes was amazing. The sun is electric. The people that are talking about the electric plasma model of the universe, they are correct.

DW: But that model usually excludes torsion fields.

CG: Yes it does. There is some stuff that needs to be... some information that needs to be married. Obviously torsion fields are involved and not only the stars, the planets, the galaxy. I was shown that our entire universe is a giant torsion field.

DW: Why did they pick sunspots and not some other place?

CG: The telemetry from the inside of our star, Sol,... (David asks.. is that what they call it, Sol?). That's what it's referred to. There was a core that was very small and they could tell it was made up of magnesium, sodium, I can't remember all the elements.

DW: Mostly metallic?

CG: Yes. And the outer shell was made up of similar materials but it was like a node and a cathode. So it was an electrical.... almost like a light bulb. And the sunspots were going into the center of the sun like vortex filaments streaming into the center of the densest part in the middle of the star.

DW: Like a tornado, and energetic tornado?

CG: Right. Tiny, thin little tornado spirals crisscrossing each other, spinning around, crisscrossing each other and going and meeting down to the small center.

DW: It does make sense because a lot of times when we are looking at sunspots we see actual rings burst out of the sun, tubes of energy. It's called a solar prominence and you have this ring come out and you're saying that's not just on the surface, that those go way down right to the core.

CG: Right to the core and these are also at times depending on the sun's behavior, stargates, that are utilized by different extraterrestrial groups to go in and out of our solar system. And there was a wide open empty area inside the sun. Now, there is a very large area outside, on the inside area. I've described that as molten and on fire. And they found out it was hotter.... It's hotter on the outside of the sun and cooler on the inside.

DW: That is something available to most people the corona, which is actually above the surface, is hotter. And that's considered a scientific mystery. But the electric universe people account for that with the idea that the sun is an electric energy generator.

CG: Yes and the sun, or Sol, is being fed by some sort of waves that are hitting it. And that is what is causing the outside to be so active. And also, it is being fed through what I describe as the cosmic web. Each sun, each star is connected to every

other star, through this cosmic web. And each one is connected through a filament, electromagnetic filament that we were describing that connects each star. So, things can happen in one solar system to one star and there can be feedback through the system, this network that can affect our solar system star.

DW: In my third book, I wrote about a pyramid researcher named Joe Parr. And he has a propeller with little pyramids on the end, that are only an inch long. And he rotates this thing through a series of opposing magnetic. He's got north to north, south to south, north to north. And what happens is, at certain times of the year, where the sun and the belt of Orion and then the Earth crosses to that like it's a gate. And it happened in late December. The pyramid on the end of the propeller would transmute out of physical reality. They'd pop through the walls of the centrifuge and come out like a shot gun blast. And they'd actually embed into the wall and there was no visible exit hole. So he came up with a theory that there was some sort of energy conduit that affects the nature of matter when our earth is crossing this beam between the sun and Orion, which happens once a year in the earth's orbit. So you think it's possible that these plasma beams could do that to matter? Could actually change the face of matter like that?

CG: Absolutely. That also goes back to this hyper-dimensional mathematics model that was handed down to us, that we use to calculate portal travel. With every star and planet and galaxy having a relationship with each other, you have to be able to calculate these things. Because you can have weird little hiccups that can cause weird things, like what you were talking about in that experiment.

DW: Pete Peterson has brought forward mathematics and I met the guy who actually did it. I can't say his name because he doesn't want to come forward, but he basically calculated that the whole universe is Penrose tiled, meaning everything has an intersection of three lines. And if you count on base six, meaning you go one through six and then you go two comma one, two comma two, two comma three, two comma four, two comma five, two comma six, then three comma one, three comma two...like that.. if you calculate in base six, then all of these numbers, like Pi and Phi, they all become integers. They don't have a repeating decimal anymore. Do you think that these hyper dimensional mathematics operators that you were given are, in some way, taking that into account? Is that the kind of stuff that was going on?

CG: It unifies, basically, all of these scientific principles that our mainstream science has problems with. And until our mainstream science drops their theories and begin to embrace the fact that the universe is a plasma electric universe and a torsion universe – both are true – these are the science that Secret Space Program base their technology off of. They are not going to progress any further than we are now, using this eighteen and early nineteenth century technology.

DW: Since we're talking about math, I'm thinking about now, the basis of superstring theory, quantum mechanics, all this stuff that the skeptics are going to try to use to attack us and say, oh well, it's all been proven. Almost all the math that goes into superstring theory was from this Indian mathematician named Srinivasa Ramanujan. He was a genius who re-derived a hundred years' worth of western mathematics on his own with one book and came out with all this stuff that nobody knew what the heck it was, called "modular function". And basically, what he is saying is geometry is the key to these higher dimensions. Now, they're still using all that stuff in superstring. Nothing has supplanted it yet. The important part is that Ramanujan said that the Hindu Goddess Namakkal was teaching him, all this stuff, in a dream. So you think that various benevolent extraterrestrials have been trying to seed this knowledge in our society.

CG: Yes. The higher dimensional beings have been trying to get us to... I was told that our lifetimes are very short. We basically die as spiritual children. We were meant to live much longer and have a much longer of a time to spiritually develop.

DW: When you say I was told, who told you?

CG: I was told this by Raw Tear Ear.

DW: One of the Blue Avians.

CG: Yes. At the time of our death, we are spiritual children. And that's if we live a very long, hearty life. So we need help in these short lifetimes to advance, to get some advancement. And we are receiving help from higher dimensional, our higher density beings to be given information in dreams and in other ways. To help us progress, at the end of what they are calling a major cycle, to where we need to get, to where we need to be, quickly.

DW: Was the term "major cycle" used in your own communication with the Blue Avians?

CG: They called it.. we're at the end of a major cycle.

DW: That's exactly what they called it in the "Law of One". That's something we never discussed before. It's another correlation. Getting back to the science of time, when they sent these probes through the sun, did the probes go somewhere else? Or was it just that they mapped the interior out?

CG: It mapped the interior out. It sent back telemetry until it succumbed to the forces inside the sun. It was basically a little suicide mission for this probe. It was meant to go in, gather data, and send back telemetry, as long as it could.

DW: One of the things that strikes me, is your describing a rocky metallic core, with a cloud around it. It sounds sort of like the description of Jupiter or Saturn, in terms of what we know is in the center. Is there a relationship between a star and a planet based on what you were told?

CG: There's a relationship between a star and every planetoid in existence, an electromagnetic filament relationship. Anything that has a large enough density to twist space-time in a torsion field creates a relationship with a host star. And it creates a filament or an electromagnetic connection to its star. And each planet has a core that is the driving force, depending on how active the core is, of how strong that connection is.

DW: In my original book "Source Field", I described the work of John Martineau, who wrote a really fascinating, ground breaking book called "A little book of coincidence in our solar system". This was crazy, because I had written this whole book and it was at the very last minute and I got this book handed to me, and I had to change the whole book and add a chapter just on this guy. So here's what he has done. He looked at the relationship of the planetary orbits to each other. And he's found that they perfectly described by a series of nested geometries. Most of these correlation – and where talking about Platonic Solids, so we're talking cube, tetrahedron, icosahedrons, which is a twenty sided with equal little triangles, it looks like a disco ball. Dodecahedron, which is pentagonal, twelve pentagonal faces.

CG: These are a lot of the symbols that show up in this hyper-dimensional mathematic models.

DW: They draw the symbols of the platonic?

CG: Yes. There is a few numbers and there is a lot of symbols, a lot of these geometric platonic solids and a lot of other things are symbols that are in this mathematics model.

DW: That totally makes sense. All the modern superstring people are using Ramanujan's model, functions and they're mapping them on platonic geometry, and they're saying these modular functions are decryptions of geometry. So the geometry is already in the hyper dimensional math. It's just that people don't usually know that.

CG: And it's focusing too much on the quantum physics, when really we found out that everything is just vibration – is a vibratory state. And once we really realize that everything around you is a vibratory state and time and matter and space can all be manipulated, once you realize or learn how to do it, learn how to manipulate the vibration, the vibratory state of everything around you, then all of these other sciences that all of the doubters are saying are proof that what I'm saying is wrong, it all fades

away.

DW: This is something that if people are watching our show, there's so much great scientific information in "Wisdom Teachings", that you could spend a whole year of your life just getting into. One of the things I talked about is Dr. Robert Moon who was one of the founding fathers of the atomic bomb, one of the single most important scientists in making it work. In 1987, he discovered that the proton, in the atom, were actually corners of geometry. And he totally maps it out. And I have multiple episodes when we go into all that stuff. And I highly recommend if people are interested in this, that they check it out.

CG: Basically, what I've said and what I've been talking about, Gaiam is that it's more of an online university.

DW: It's a parallel university.

CG: Yes, it's an online university of content. I had no idea that this type of information was already out there until I started looking around.

DW: But the reason why I wanted to bring in Robert Moon is we're kind of getting into the unified geometric model now. So we have Dr. Hans Jenny, this European scientist who vibrates water with sand in it. And you vibrate the sand and you get sacred geometry. What does that tell us? Geometry is vibration. Vibration creates structure. And this geometry, which is in all these dimensions, is the structure of vibration. So it's exactly what you just said.

CG: And he is being totally ignored by mainstream science?

DW: Of course.

CG: This is information that is being suppressed. And this is not just a theory that I'm tossing out here. This is working science that is being used in the Secret Space Program and has been used for a long time. And a lot of this information has been handed down to us by extraterrestrial races that are millions of years ahead of us technologically and have been using these concepts and sciences and mathematical models for eons.

DW: It was almost a hundred years ago that Rutherford shot electrons through gold foil. And some of them stuck. And that was what made him say it must be a particle. Because he's shooting these things through and some of them don't make it through. That's called a Rutherford model of the atom. It's a little solar system and there's little planets whirling a nucleus. Did they laugh at that Rutherford model in the Secret

Space Program? Did they think people were nuts for thinking that particles were solid?

CG: Well, yes. Because we also know that consciousness has an effect on the outcome of every experiment. If you took someone who had a pre-conceived idea that everything is a wave and they start doing these experiments, they're going to have the outcome that everything is a wave.

DW: I think that when we bring in Moon, we've now got a geometric model for the atom, meaning that matter is a vibration. This just solves this right there.

CG: Everything is a vibration, as I said, thought, light, everything around us. They're all different states of vibration. And even our consciousness and especially our mass consciousness can change the nature of the vibration of matter and our reality around us.

DW: One of the things that Secret Space Program Jacob told me that the reason why people used to have to look into a crystal ball or a mirror to see and communicate with spirit is that we believe that spirits don't exist. So they won't be allowed to be seen right in front of us. But we can bend the rules, if we see them in a mirror or in a crystal ball. We can say well, maybe that's a reflection or something like that.

CG: Going back to "there is no spoon". (smiles)

DW: So is it true? Have you also heard in your work what I've heard from other insiders, which is that one of the greatest secrets from us is that reality is a co-creation generated by our consciousness.

CG: Yes. That's one of the largest secrets that they tried to keep from us. And they've tried to suppress. There's been many scientific experiments that has proven this. And they suppressed those. They've suppressed the scientific information about the electric and plasmatic universe, about the nature of space and time. They've suppressed torsion physics. They've gone really heavily to suppress the effects of consciousness on reality. They've worked heavily to suppress.

DW: All the way back in 1936, there's a scientist named Otto Hilgenberg, who had a very compelling model that the earth must be extending and that all the continents fit together if you take out the oceans and then shrink the earth down to fifty to sixty of its current size. There's been many other scientists since Hilgenberg who have come forward with even further details. (There's a video imbedded in the interview that shows how the continents fit together if you shrink it down and remove the oceans. You might be able to view the video if you Google Otto Hilgenberg). What happens if the Earth is expanding? What does that do to our science?

CG: It turns everything on its head. If a planet is expanding from the inside that would go against what mainstream science is saying.

DW: Well, it would mean that matter is being continually generated from nothing, right? The Earth itself is growing, like a living thing.

CG: Right. And of course, the earth is constantly accumulating an extreme amount of cosmic dust and debris all the time, tons and tons and tons a day, that are coming through our atmosphere. This is also adding to the density of the planet.

DW: When we go back and we look at the John Martineau model of the solar system, what we're seeing is that as the planet moves, there's a giant geometry that covers its entire orbital size. And the geometry is moving with the planet as it rotates. So, what you're describing with these stargates forming between the planets is very likely, that these geometries we're talking about have an electric charge. And when you line up the nodes, you're getting a plasma filament.

CG: You stole the words right out of my consciousness. They are called nodes. And the Earth, everyone knows about ley lines and that the earth has an energetic grid.

As the Earth is rotating and depending on its relationship in space to the sun and the behavior of the sun, that depends on each of these where they cross and depending also on the elements of what's underneath, underground. The type of stone, or crystal, metal under mountains or under the ground, creates a node. And that's what they call it – the node. And a stargate will appear along these nodes, either on the surface of the Earth, just below the surface or in the upper atmosphere above in the node regions. And they focus on these node regions to look for where these natural stargates are going to open. And they watch for these also for intruders, extraterrestrials that would appear in our skies. And strangely enough, many of them were appearing along the thirty three and thirty six parallel north. The node system in that area seem to be where they were coming and going quite a bit.

DW: In most of my talks, I cover Ivan T. Sanderson, and he is the source of the Bermuda Triangle scholarship. Charles Berlitz, actually was the one who wrote the book "The Bermuda Triangle", that put that into the public consciousness. But he was only drawing off of Ivan Sanderson's research. Sanderson found ten points around the Earth where all the ships on the sea and all the planes in the sky were disappearing. And they all clustered around the same points. This was published in 1971 and then in 1972, the Russians figured out that if you add the north and south pole you get a icosahedron. It's a perfect, sacred geometry on the Earth. And then the future scholars from there, found that the dodecahedron is also perfectly nested in with it. And when you put those two shapes together, and you draw those lines over the Earth, it tells you where the continents are.

CG: There was a sphere to represent the Earth and they placed these different shapes inside of the sphere to where the points were coming out like 19 degrees here, at different points of the Earth's rotation around the sun and also different times of the sun's cycle. They would use different shapes inside the sphere to represent... (DW: so you're saying that some of the geometry would actually come to a point above the surface of the Earth? And those lines would cross in the sky somewhere?) Right. (DW: and that's where the node was or the portal was?) And that's where the node – the predicted nodes – would be.

DW: Is this the kind of stuff that the German's were using? Getting back to what we talked about before, where there'd be a sphere and then they'd send tanks through or whatever?

CG: No. These were holographic depictions... that were used in a different era.

DW: When we're talking about the geometry of the grid, why do you think planes and ships disappear at these nodes?

CG: They're in the wrong place at the wrong time. When the cosmic web activates a particular node region and they happen to be in that region, when it goes active, and these are natural portals, they're in the wrong place at the wrong time and they've portalled. And they are very bizarre. Depending on where they are in the region of the portal, they could be portalled in time or space. So they could be portalled into a different time on Earth or somewhere else in the Galaxy or beyond.

DW: That actually makes sense to me, because the physics model that other insiders have told me what they called "layered time". We want to see time as this thing that's all stretched out, but if you think about the solar system itself as a geometry, then each geometric ratcheting point is actually all stacked in on itself, like an onion. They're not actually apart in time. The geometry all folds together. It's all nested like multiple tetrahedrons that lock up at certain points.

CG: You see geometry depicted in all parts of these different black ops programs and the secret space program. Geometry is popping up everywhere.

DW: So if the past is in one geometry and our now is in another, and then those two forms lock together, you could have a portal that pops you through all these different layers of geometry that we think of as separate points in time. But they are all actually in the same space. It's not really space, but absolute space.

CG: One of the scientist egg-heads said that figuring out these nodes and the geometry and the cycle of the sun, the sun's eleven year cycle, it's activity, sunspots, flares and our position in our solar system was like having a galactic Rubik's cube

that you're trying to figure out real quickly.

DW: Let me ask you a strange question. As if this isn't really strange!. Are any of those geometries outside or inside, meaning future or past, or are any of those other geometries, real? Besides the one we're already in? Are there other geometries at all? Or is there only one real geometry?

CG: They are all real, and they are all happening at once. Because time is an illusion. There is no beginning, middle and end as we experience time.

DW: But when something happens in our history, we write the history books. It's not like the books are changing as far as we can tell.

CG: This is how we experience time, with our third-density minds. Time is all at once, happening. And it's a hard thing to try to communicate to people that time is not linear, that time is an illusion and that it's our consciousness that is causing time to be experienced in a linear way.

DW: That is a difficult adjustment.

CG: Yes, it's very difficult to try to make people understand...

DW: Well, speaking of time, we are actually out of time in this particular episode. So we actually have to quantize things into a half an hour. So, what's going to happen here, is, in the next episode we're going to get into one of the subjects you have told us you're the most fascinated about in your comments, and that is – the stargate in your brain, the pineal gland, the third-eye. We're going to talk about that, coming up next time here on Cosmic Disclosure, because you need to know. I'm your host David Wilcock, and I thank you for watching.

Awakening the Pineal Gland Season 1, Episode 10

Cosmic Disclosure; Awakening the Pineal Gland Season 1, Episode 10

01 Sep 2015

DW: Welcome to "Cosmic Disclosure." I'm your host, David Wilcock, and I'm here with Corey Goode, an insider who has come forward claiming to be from the secret space program having access to extraordinarily classified information, much of which is completely new to even the most seasoned veterans who have studied UFOs, insider testimony, classified intel, all this kind of stuff. In this episode, we're going to delve into one of the subjects that you have consistently told us, in your comments and by what you've watched on the internet of my videos, is the most fascinating subject for you. I'm talking about the glandula pinealis, or the pineal gland. So Corey, welcome back to the show.
CG: Thank you.
DW: Could you, in your own words, explain for our audience what you heard about the pineal gland. What is it? Does it have a function for us? What is the pineal gland?
CG: When I was in my lab program and I was identified as an intuitive empath, they were giving us injections and sonic treatments right here.
DW: Injections where?
CG: In our shoulders.
DW: Okay.
CG: And our hips. When we were younger, they'd give us injections in our hips. When we got older, they would give them in our shoulder.
DW: That sounds painful.
CG: You get used to it. And then there was just a metal kind of rod that came to a point that they would put right here that would send sonic waves to the pineal gland. And they said it was to enhance--not the empath but the intuitive part of our intuitive empath abilities.
DW: Could you feel a sonic vibration in your skull from it?
CG: Yeah. You felt the sonic waves going in about a good six inches back into your head.
DW: Wow.
CG: Yeah. So it was obviously important to them to stimulate the pineal gland.
DW: Well, in the scholarship that I've put out in "Source Field," there's a whole chapter on the pineal gland. We know it's in the geometric center of the brain. We know it's the size of a pea. It has more blood flow going through it than any other part of the body except the kidneys. And mainstream science says, oh, we don't really know what this thing is. But there are cells inside the pineal gland that actually are the same cells more or less as in the retina of the eye.
CG: Rods and cones?
DW: They're called pinealocytes, but they're the same thing. And they're also wired

into the visual cortex of the brain by the same type of wiring that we have from our eyes. So the ancient traditions literally call it a third eye. And in my videos--and we have this coming up in future episodes of "Wisdom Teachings"--there's pine cones and that kind of iconography showing up in all different world religions.
So do you think that there's something happening inside the pineal gland that these little rods and cones are seeing?
CG: Well, they said it was to help stimulate the second sight and the intuitive abilities, and they stated that they knew that there are ancient earth breakaway groups that they've gotten their hands on who have very large pineal glands.
DW: Oh, really?
CG: And they said that at one time, all of us, our pineal glands used to be quite a bit larger than they are now. And they were trying to stimulate growth and activity in our pineal glands.
DW: Well, that's very interesting, because the insider Jacob told me that the Draco tried to engineer modern humans so that we would not have a pineal gland at all. And they got very mad, because benevolent ETs came in and reinstalled it. Have you ever heard of anything like that?
CG: Mm-mm.
DW: Okay.
CG: I actually heard that it was a part of the grand experiment from these 22 different genetic experiments from these 40 groups. This experiment was not only genetic in nature, but it was also spiritual in nature and that they were trying to enhance us in a spiritual way and that the pineal gland--and something also to do with our light body was something that they were manipulating to try to help us become more spiritual and more developed in that way. Now, they are obviously at odds with this Draco Alliance group.
DW: So that would imply that the Super Federation is not all negative, that they are--
CG: Yeah. Like I said, it's all point of view. They have their agendas and why they're manipulating us the way they're doing.
DW: We've had multiple insiders suggest that when you see the halo around someone in these ancient pictures--or in Buddhist illustrations, it's more like a corona--that that would indicate a pineal gland that's much more active, and that there's some sort of light phenomena. Did you ever see anything like that?
CG: Well, when I was talking just now about our light bodies, the exercises they put us through were to not only activate our pineals, but to expand our light bodies to where they would say that when they got us to the point where they wanted us, we would be sitting in a room and our light bodies would expand past the walls of the room that we were in.
DW: Wow.
CG: So there is obviously a direct connection with the pineal gland and the development and expansion of your light body.
DW: I want to get back to those exercises in a minute, but first I want to bring in another interesting point. I've had at least four different insiders tell me that if our

pineal gland is even partly activated--never mind fully activated--that we could literally fly throughout the cosmos. Do you feel that it is somehow a stargate, like a portable biological stargate built into our body just like hardware that we haven't accessed yet?
CG: Yeah. A lot of beings use the pineal gland and their light body to project their consciousness and their selves to other physical locations and then send that information back through that connection to their physical bodies, and then change the vibration of their physical bodies to match the vibration of the location they're at. And then the body teleports to that location and rejoins the consciousness or what some people are saying are having of out-of-body experiences or projecting their minds--a lot of different terminology for what these more advanced beings are doing.
DW: I'm just curious. Do you think--because this is a speculation I've had--that the halo is actually the mouth of a wormhole and that you get gravitationally pulled up into the mouth when your pineal gland is open? You can fly up into that halo and travel through it?
CG: I think that these depictions of halos and auras that they've shown around people are just people that have really highly developed their light bodies and their pineal glands and developed their selves in a very intuitive, spiritual way, and that's the way that they've been depicted in art. And people that have also developed their light bodies in this way have a second sight and are also able to see other people's light bodies.
DW: Now, in Tibet they actually will have a long, thin, sharp piece of wood or something that they stick through somebody's forehead, and they wound the pineal gland a little bit with it. And that supposedly creates some kind of access. Do you think that they might be doing a more technological form of something like that with this sonic gun that they gave you?
CG: They're trying to find a way to stimulate the pineal gland.
DW: How did it feel when you were getting this treatment? What was your experience?
CG: You would have out-of-body experiences.
DW: Really?
CG: Yeah. You would feel your light body grow. You would feel yourself growing in all directions outside of your body. Sometimes you would feel yourself knocked outside of your body behind yourself.
DW: Wow.
CG: But at the same time, you would feel locally what was going on in your body, the sonic vibration going on into the wet brain matter behind your skull.
DW: Well, I did an episode on "Wisdom Teachings" with Dr. Michael Persinger, who has something he calls the "God helmet." And they've got these very powerful magnetic guns that he can triangulate and aim into certain parts of the brain. He can create extreme panic and fear. He can make you sweat. He can create sexual arousal. And there are certain parts of the brain that he beams it into where people have a god experience.

Now, the skeptics love to bring Persinger in and say that this is proof that there's no greater reality, that these visionary experiences are just a brain firing. But to me, it sounds like what Persinger's doing with the God helmet is similar to what you're saying with sound waves.
CG: Yeah, sounds like it. Electromagnetic waves were also used on us at times.
DW: So do you think that anyone given this kind of a treatment would have an experience like you had, or was it because you were prepared for with your intuitive training?
CG: I think they would have it. They would have some sort of an experience. I at a young age was already having out-of-body experiences and weird experiences. I mean, we would go on long car trips, and I would get bored, and I would project myself outside of the car. And I would project myself out and fly over the signs and over the hills and look back at the car and fly and have an out-of-body experience going on long trips. I was already doing that at a very young age.
DW: My insider Daniel went through this intuitive training for what he called the Psy Corps.
CG: Right.
DW: And it was supposedly derived from the CIA, or so he was told. And I want to kind of go through some of the things that he said they taught him and then see how that compares with your training.
So number one was inverse calisthenics. They had him hang upside down, by his knees or by his ankles, and do sit-ups. And they were told that the more oxygen was in his blood and the more blood flowed through his pineal gland, that if they could strengthen the circulation into the pineal gland in the body in general, that that would enhance his abilities. Did you have anything similar to that?
CG: The closest we had to that, they put us into pressure rooms that were highly pressurized and highly oxygenated. And they would have us do meditation, and they would hook up EEG-type electrodes to our heads. And they had trained us to go to different states, including theta. And they would, on command, tell you to go to a certain state, and they would measure how quickly you could go there at different atmospheric pressures and oxygen levels inside this chamber.
DW: Do you think this was partly intended to help you be able to function in different extraterrestrial environments?
CG: This was all during the same time when--this all had to do with intuitive empath enhancement.
DW: Well here on Gaiam, we have a lot of yoga Tai Chi videos. And people can get into that when they're a subscriber. It's all free. It's included in your basic membership.
I always thought that the inverse calisthenics, these sit-ups upside down and increasing the overall circulation, that if you look at the ancients, they're saying yoga, Tai Chi, it's all about building circulation. It's about flexibility, all that kind of stuff. So do you think that these kinds of exercises will be beneficial to people if they want to develop their intuition?

CG: Yes. And they were also teaching us Tai Chi type stuff.
DW: Really?
CG: And it also had to do with a lot of visualization during the same time, of visualizing spherical energetic balls and making them travel and feeling them travel down different parts of your body and passing them around inside, throughout your body.
DW: Wow.
CG: Yeah. It helps with oxygen and blood flow, but also they were incorporating us using it to move energy throughout our bodies.
DW: Could you explain a little more about what exactly you were supposed to witness? Was there a color to the sphere? Was there a size to it? How many of them were there at once? Was it just one?
CG: Just one.
DW: Did they give you any specifics about what it's supposed to look like?
CG: Of our choosing. They just said, visualize a sphere, an energetic sphere, and take the sphere in your hand and then visualize it passing back and forth from your hand and then travelling all the way through your shoulders to the other hand. You would do that at first, and then you would take it, and it would travel down your spine and back up your spine up through the top of your skull.
And then you would visualize it coming back down to your solar plexus and coming out and catching it in your hands and then circulating it again. It was a visual exercise, a mental and visual exercise, of passing this ball of energy throughout your body and also feeling it.
DW: Could this just be done in a standing position, or were there Tai Chi type of movements that were associated with the movement of the sphere?
CG: You were moving your hands and body and visualizing it as you were doing it. You weren't sitting in a static position as if you were meditating.
DW: Well, there definitely appear to be Tai Chi moves that are associated with a sphere of energy like that. So could the sphere be like this big in certain cases, or is it more small, like about that big?
CG: Yeah. We were visualizing small spheres.
DW: OK. But there was no color, like blue or white or anything like?
CG: Usually like a light bulb, just white.
DW: White light?
CG: Yeah.
DW: How similar is what people see as Tai Chi now? Because most people seem to be doing the same set of movements. Would you say those movements were the same as what you were doing, or were they somehow different?
CG: Very many of them are quite the same.
DW: Oh.
CG: Yeah. And most people that are doing Tai Chi know that they're doing energetic work at the same time. People that have practiced it long enough know that they're doing energetic work.

DW: I've never been able to find it online, but there's a PBS video with Bill Moyers where he's got a Tai Chi master. And the guy's standing there, and people come running towards him. And they're yelling and screaming, and they literally just fly off of this guy. What's going on there? I mean, these people seem to be getting hit with something energetically.
CG: Yeah. Some of these people were demonstrating how they could throw these energy balls and put dents in metal.
DW: Really?
CG: And these people were really developed.
DW: When you say "these people" now--
CG: The people that were teaching us that were really advanced.
DW: Are they space program people? Are they extraterrestrial human types?
CG: No. This was back in the My Lab program. These were the just Black Ops types that were teaching the younger people.
DW: They could dent metal with these spheres that they created?
CG: Yes. Well, with the energy. A sphere did not shoot out, but they were visualizing a sphere, and they would shoot it out. And these people were the ones that believed very much in the "Star Wars" Jedi kind of--the force.
And you wrote a book, "The Source Field." And they harnessed, I guess, what you would call the "dark side" of the source field, or the dark side of the force. And they were very much into really stuff straight out of "Star Wars," like Jedi--I mean, like the Dark Lord Sith kind of magic energy that they pulled from the ether or the universe.
DW: Well, this gets into another thing that Danny was telling me. I'm really interested to hear where you're going to say about this--explosive muscle movements, martial arts, this kind of stuff. Apparently--and there's a Tai Chi guy that Pete Petersen knows, and he's really about this kind of very intense tensing of the hands and the fingers like this.
What Danny was told in this training was that these intense violent muscle movements--something having to do with adrenaline--that adrenaline is like a magic energy conduit, and that you can't get these abilities by just doing smooth, gentle exercise. Push-ups, weightlifting, martial arts--this kind of stuff is essential. Did you ever hear or anything like that yourself?
CG: A lot of these guys that were doing this, I didn't see any sign of adrenaline. They seemed totally at ease, at peace, and docile. It just seemed effortless for them, and there was no [GROANING] kind of a thing going on. It was just real smooth motion kind of a thing. Obviously, they were acting as some sort of antenna pulling energy from the source field, I guess you would call it.
DW: So in Tai Chi, from what little I know of it--and actually, you're making me want to go start these videos right away, interestingly enough, because it's finally making sense to me why you would want to practice this--they seem to always be big on--I've had some martial arts training, so bending your knees, lowering your center of gravity, and they talk about the hara, or the tan tien, this sort of area in your abdomen that you're supposed to feel like there's a string or an energetic cord coming up from

the earth. It's sort of like you're pulling energy out of the Earth. Was that part of the training, to ground in that way with bending your knees?
CG: There was a grounding aspect mentioned of visualizing yourself grounded with the center of the Earth, and also visualizing yourself as an antenna that can pull in and push out energy, this background energy, of the cosmos.
DW: Daniel, in his training, one of the things they also taught him was that it is the Earth that empowers magical work and that the earth has to authorize you to do these things, that your energy when you start to be able to develop these feats of consciousness, you have to work with the earth, and it will authorize the action. Was that something that you encountered in your training?
CG: Well, we were taught a little bit beyond that. It all had to do with the cosmic web. The earth had a relationship with the sun. The sun had a relationship with the local star cluster. The local star cluster had a relationship with the center of the galaxy. The galaxy had a relationship with the local galaxy cluster and so on and so on.
DW: So what are some of the other things that they taught you for the intuitive training?
CG: There were a lot of other types of scenarios that they would put us through, including virtual reality, which often were very disturbing. They would put you, by yourself or you and your team, in a virtual reality scenario. And this was such an immersed virtual reality scenario that you had smells, tastes, feel. You could feel wind.
DW: Did you know once you were in it that you were in a virtual reality?
CG: That was part of the test. You would be put into a very horrific situation sometimes or asked to do very horrific things, put into battle situations with unpleasant type beings that you would have to fight. And you would have to rely more and more on your intuition to win. If you just were relying on martial arts or tactical training, you could never win.
But when you would rely on your intuitive abilities, you were able to win. And then at that point, it was almost like a lucid dream. You would realize you were in a virtual world, and then you would pull yourself out.
DW: This sounds exactly like the movie "Divergent," where you have this girl, who is thrown into a virtual reality, and she's the divergent one. She's the one that learns how to break any virtual reality and get out of it.
CG: Right. Ever since my first two audio interviews hit the internet, I've heard that many times.
DW: Also, the movie "Ender's Game," where there's the child in the space program, and they're teaching these children to fight extraterrestrials and pilot ships. He realizes early along he's getting thrown into virtual reality simulations, that they want him to be as sociopathic as possible.
And so instead of cooperating with these beings that are trying to give him a challenge, he'll like rip its eye out or something. Is this the kind of stuff that those movies seem to be related to what you're experiencing?
CG: Yes. They were not only training us, but they were psychologically profiling us

as well, to see what type of orders we would follow, how far we would go. They wanted to know who were sociopaths, who would follow certain types of orders. There were orders--[SIGHS] Yeah.
DW: Really horrible stuff.
CG: Really horrible stuff that I don't want to talk about on camera. You would see your somewhat friends, but team members, taking part in and you were ordered to take part in, and you would have to make the moral choice or dilemma whether to follow the peer pressure, do what the others were doing, or to not do it.
DW: What were some of the monstrosities that they had you fight, if you can tell us some of that? I don't want you to dredge up a whole lot of nasty memories, but--
CG: They had a very good insight into what you did not like.
DW: Ah. So it was like they deliberately target what you fear most?
CG: They would target your fears. Obviously, I did not like spiders, apparently, so I did battle with very large spiders. I did battle with reptilian type beings.
DW: And there's no way to tell that it's not real when you're in it?
CG: Right. It gets to a point where it's hard to tell what's real and what's not. And once you finally get to a point in your intuitive empath training to where you consistently are able to tell that you're put in a virtual reality setting, then you have somewhat graduated to a new level.
DW: You had mentioned to me in another conversation sometimes it was like professional wrestler types, like big strong men that you'd have to fight.
CG: Mmm-hmm. And you're a kid.
DW: But it's sort of like a bad dream, right? You don't remember getting into it, but once you're in it, it just seems like this is your reality.
CG: You would be in a scenario to where you are being put into the scenario that seemed logical. And then you're in the scenario, and you've got to fight your way out of the scenario or figure your way out of the scenario. And the only way to do so successfully was in an intuitive way.
DW: Could you get a little more specific as to how that would actually play out? Because otherwise, we're just going to have to fill in what we think and not really know what you mean.
CG: Well, if you were fighting another person, you would then instead of relying on the martial arts or the tactical training, you would then lock in on the person's eyes and make a connection with them and then intuitively know what they're going to do before they would do it.
That was one step. And when you were able to start doing that and then situations would happen, you would intuitively know. When you were going to clear a building, you intuitively know if there were 12 rooms to clear, you begin to intuitively know the first five rooms were already clear, and the sixth room was the room where you had to engage.
And then, once you started reaching this point, it started to become easier for you to intuit that you were in virtual reality. And from the very beginning, when you were put in a landing zone or put into the situation, you would immediately know that it

was a virtual reality, and you would pull yourself out.
DW: This is interesting because who is doing the actions in the virtual reality? In other words, if you're psychically detecting how to fight somebody, who is the somebody? Is there a person controlling who you're fighting? Is it a computer program? How does this actually work?
CG: They're pulling information out of our heads and control them. They also had the ability to put multiple people in the same virtual reality scenario to where, at times, these people were really there together. When you were engaging with their mind, you were engaging with their mind and their chair.
DW: When you're fighting something like a tarantula, can there be a human operator controlling the actions of the tarantula, or is it a computer program like an artificial intelligence?
CG: This was just a situation that was playing out in the virtual reality. I don't know if it was artificial intelligence. It was very high-tech, and I know that they were mirroring a lot of information out of your psyche into the virtual reality.
DW: If a technology like this could be done at all, undoubtedly some people are going to start thinking about stuff like "The Matrix" and wonder how much of all of our reality is a simulation or is somehow a virtual, greater compartmentalized part of--
CG: Row, row, row your boat. Life is but a dream.
DW: Do you think that ultimately, if we're looking at the fact that we only remember one lifetime, and then it seems that we have an afterlife and reincarnation that our life here is sort of like a simulation, every time we wake up from sleep that we're jumping back into this hologram?
CG: That's probably a good way to put it. But we're definitely, from what I was told by the Blue Avians, since we're spiritual children still when we die, we're not living long enough to spiritually develop. It's taking us multiple lifetimes to learn the lessons and to spiritually develop to a point to where we can graduate to become higher density beings.
DW: Well, you've heard it here. This is "Cosmic Disclosure." Very mind-blowing information, and there's much, much more where this came from. We have 52 episodes, and we may even be doing more past that point. So every week, you're going to be hearing fascinating stuff like this. So please stay tuned. I'm your host, David Wilcock, and we thank you for watching.

Potential Of Human Consciousness Season 1, Episode 11

Cosmic Disclosure; Potential Of Human Consciousness Season 1, Episode 11

08 Sep 2015

DW: Welcome to Cosmic Disclosure. I'm your host David Wilcock, and we're here with Corey Goode, an insider who has a truly remarkable breadth of information, in a variety of highly classified projects, at the cosmic top-secret level and above, that's 35 levels above the secrecy of the President of the United States. We've been talking about intuitive training, and how the programs that Corey was a part of and other insiders who I've spoken to were a part of, trained you to become more psychic, to have greater powers and capabilities. And, all of this ultimately builds up to the "rainbow body" - a very interesting subject from Tibetan Buddhist meditative practice. So, Corey, welcome back to the show.
CG: Thank you.
DW: So, the Tibetan rainbow body seems to be the core of where all of this discussion is ultimately taking us. I have written about this extensively. For those who don't already know, in case they're new to this, the rainbow body is some sort of transmutation of the physical body at the time of death. And the core of the practice seems be – to stay in a continual state of meditation, and have every thought be a loving thought. Obviously, what you described in the previous episode is very disturbing stuff - the kind of training you said that some of these guys in the program saw themselves as like a "Sith Lord" (from Star Wars).
CG: Yes. They see themselves as masters of the dark side of the force - Sith lords. Very much of that mythos is a part of their belief system.
DW: Without getting too graphic, were they using the most negative things you can do to other people as black magic to enhance these capabilities that they had?
CG: Yes.
DW: So, you were describing people who could actually throw a ball of energy out of their hand and dent metal with it. Is this just like a little ding on the metal? What are we talking about?
CG: No. We're talking like – "majorly" collapsing, pushing in metal doors.
DW: Wow!
CG: If they were to do that to a human being, the human being would not survive it.
DW: When I was talking to Daniel before (one of DW's insiders) he was describing two types of psychic - "TPs" and "TKs". TP is your telepath and TK you're telekinetic. Did they ever break it down like that in the program that you were involved in?
CG: People that had telekinetic abilities were moved into another program.
DW: Daniel was told that TKs were one out of a 1000 people, that they are a lot more rare, but that they could be trained, just like a telepath could be trained. So, did you experience the same thing, that telekinetics could be trained to become more

telekinetic?
CG: Any of these abilities can be enhanced. They can be enhanced through training. They also give people chemical injections that somehow enhance these abilities. So, yes, all of these abilities can be enhanced.
DW: Daniel also said to me that they gave people a scale of psi-ability. And you had the letter "P" and then the number. So, I guess a P0 is like a typical person with no real psychic abilities or aptitude, and this would be telepath or telekinetic. A typical psychic, somebody who we would actually think of as really good would still only be a P4. But in the training that he went through, the people that got to the highest level could be all the way up to P8, P9 or P10. Which, if you are a telekinetic, apparently they would use these people to pinch the carotid artery in somebody's neck, and kill them by a blood choke to the brain. Were you aware of psychic abilities being used for assassinations and that kind of thing? Is that part of what they were training?
CG: Yes, they were using some of the abilities to train these young people to be able to kill, with telekinetic abilities. This person, did he start his training as an adult or as a child?
DW: Yes, he was working at the Montauk base. They had a peculiar way of approaching you, where they would just have somebody, seemingly start up a random conversation with you - “What do you think about E.S.P. What do you think about psychic ability?” And then, if you show interest in it, and you say that you've had your experiences and things like this, then they say “Well as it turns out there's a program, and you can get paid extra, and it won't affect your normal work hours and you're going to be able to learn a whole lot of really cool stuff... What do you think? Do you want to try it out?” That's how they would recruit you.
CG: Well the reason I asked is that one of the reasons they created the MILAB program, is that children between the ages of 5 and before they hit puberty – if they get these kids, especially they want them very young - and if they get these children that have these abilities at a very young age, and start these training tactics on them, they get much, much, much more enhanced abilities than when they try to train adults. If you would take a person like you're talking about, that's an adult and has been trained and is on this P-scale and one of the MILABs that has been trained and enhanced since this young window, age, and then if you were to measure them on this same P-scale, they're going to blow this other person away.
DW: I believe Daniel said he only ever got up to P7 and he was a telepath. They also said something weird, which is that, TPs and TKs are like a yin and yang of the conscious and the subconscious. If you are telekinetic then your telepathic ability is subconscious and it will happen but you can't control it. And if you're a telepath then your telekinesis is subconscious and you can't control it. You either have one or the other, but not both, is what they seem to have discovered.
CG: Well, you have both but the other one is very weak. During a lot of the IE (Intuitive Empath) training, weird things would happen, with things moving across the floor and across the room when people were seriously focused on.. especially when they were being enhanced technologically in remote-viewing training and

intuitive enhancement training. This was with these younger people, in this age-window that I'm talking about.
DW: One of the things that Daniel was really impressed by was the sci-fi show "Babylon 5". And the author, J. Michael Straczynski featured this P-scale system in the show. And one of the things he remarked on was that some of the ETs in "Babylon 5" were like P11 or even P12. And he was told that it can't go any higher than P10. But that, obviously, is not true.
CG: Mmm-Hmm (in agreement)
DW: That's just what he was told.
CG: Yeah, when they start people in adulthood, and start training them with these abilities, they have already missed a major window. When you are at a young age, you haven't formed all these preconceived ideas of what is possible, what is not possible. Your consciousness is more malleable, and therefore – your consciousness is more malleable, your consciousness is the trigger to your abilities. So, these younger people are going to be able to be trained and formed to be able to do lot more things than someone than someone that has been way past the age of puberty and into adulthood, and has an established belief system and ideas about what is and is not possible.
DW: Why do you think that these rainbow-body practices seem to require so much more work than them giving you injections and technological advancements to get you negatively empowered as a psychic.
CG: It's always a short cut. To enhance yourself and to evolve on the positive path is a very long and difficult path. The Blue Avians gave this message, for us to become more loving, forgiving of ourselves and others, to stop the wheel of karma, and to focus daily on becoming more service-to- others, and to raise our consciousness and to raise our vibrations. And, that sounds real kind of hippie, kind of flowery, easy to do, but I assure you that is an extremely difficult path to walk. When you can walk a very short and jagged negative path, and get some very strong and interesting abilities – that is going to seem like a more interesting and doable path for people.
DW: Why do you think, in Hollywood movies that it's always the evil characters that seem to gain supernatural powers, and then it's always the heroic characters who have to just fight them based on weapons, and true grit and dumb luck?
CG: Well, because in movies – who controls who makes movies? They want to promote, that going the path of hate and fear, the dark path, is the most powerful path. That's the way to get rich, and famous and powerful; to be ruthless in our society. And, to be nice is a very hard, and almost always, losing battle. A very difficult battle to win.
DW: Tibetans also had black magic, and I think people don't realize this. There were some very negative practitioners in Tibet that are described such as in books like the (Life and) Teachings of the Masters of the Far East. One of the things it talks about in there is, some of these black magic Tibetans would, if they want to assassinate somebody, they would take a knife or dagger and charge it up with an incredible amount of hatred, and then, apparently if they do that enough, the person would then

want to pick up the knife and actually kill themselves with it, stab themselves with it. But they said that this was an extremely dangerous form of black magic to practice, because almost invariably, you end up wanting to use the dagger to kill yourself. Or some kind of bad karma happens to the person. So, what do you think is going on there?

CG: These are, kind of universal natural laws kicking in. If you are going to use hate and fear as a tool, then the laws of karma are going to always catch up with you. It seems like we always see, I'm not going to mention any names of politicians, these really evil, horrible people, that seem to always get away with everything, and go on and on and on doing horrible things and they are never held accountable. Well, eventually the law of karma is going to catch up with them, and they're going to get hit with it all at once.

DW: But we also see them getting hit with incredible scandals, or they get injured somehow. It seems like they are required to be there to fill a certain job description, but even within one life I don't think they are having a lot of fun.

CG: Even us, who are trying to walk the positive path, if we are not being challenged, with the yin the yang, if we are not being challenged by the dark – the more sinister side of the coin, we're not really ever going to grow spiritually. We grow through adversity. That makes a lot of people angry when you say that. They say "you know what, leave me alone, leave me at peace, and I will sit in a lotus position, and I will meditate and I will grow. And I will ascend a lot quicker than if you have me in a world to where all these negative things are happening to me." And that is not the way things are designed.

DW: Interestingly, the Tibetans say that the worst thing you can do is to sit, meditate and be blissed out all the time. They warn that you could go into "the realm of conception-less gods" and that it is a very dangerous thing. One of the funny things that they say, is that if you are in a situation of extreme fear, fear for your life, like a pack of wild dogs is chasing you and you're running – that in that moment when you're running from the dogs, that's the closest you can get, in many way, to cosmic consciousness, to having a full breaking down of the veil of who and what you really are.

CG: Well you're never more "in the moment" and feel more alive than when you're in danger.

DW: Do you think that that's the basis of why they would put you in these horrible simulations, was to try to evoke this "yearning of the soul" to the higher-self or to God, to preserve your life?

CG: It's to have you focus on being in the moment, to focus on preservation of life and to draw on the inner energy and power that you have through your consciousness; that is 'built-in' to help you with preservation of life.

DW: What do you think is going on in these documented cases - you don't hear about them as much anymore, it was prevalent in the '70s - like a mother whose child is trapped under a car, and she literally lifts the whole car off the child. What do you think is happening in a case like that?

CG: Well a lot of it people say it's adrenaline, and they have done tests that prove adrenaline has something to do with it, but a lot of it is, they say, mind over matter. But I say “mind over what's the matter”. It's consciousness. And our consciousness is extremely powerful. And more than likely what is happening is, our consciousness in that moment of the now, is changing the physics or the matter around you, changing the reality, to where you are changing the outcome of that situation.
DW: My space program insider, Jacob, told me that those people who documented those cases were often secretly abducted and blank slated and tested in secret. And what they found was that these people have some kind of DNA energetic overload, and it actually damaged their DNA and many of them would die within a few years of doing something like that, because it seems to have messed up their biological mechanism somehow.
CG: They spent all of their life-force energy in one kind of blast.
DW: So you would agree that, that might be damaging to us at this level if we try to jam that much voltage through all at once?
CG: If we're not spiritually evolved enough to be able to handle it, yeah.
DW: So is there a way to positively generate that kind of connection, so that we can handle the voltage increase without it breaking us?
CG: Well yes, and we're having to do that now. With.. Our solar system is entering a highly charged, energetic part of the galaxy and we're experiencing high energy right now that is affecting the psyche of people all around us. It's obvious.
DW: Well it seems like people are going through more stress in less time than ever before. Life is getting increasingly difficult.
CG: And time seems to be compressing and speeding up. And the people that are working on becoming more service-to-others, raising their vibrations and consciousness, opening their minds up to this type of information, are going to be far more prepared and able for this type of transition than those who are more service-to-self and exploiting other people.
DW: The Germans, you said, went to Tibet and grabbed scrolls and people that knew how to read them, which you said actually had blueprints to make vimanas, correct?
CG: UmHm (yes)
DW: So if they're encountering these cultures, where every thought is supposed to be a loving thought, and that gives you magic powers , how in the heck did they get a black magic spiritual philosophy out of this? I think some people might have trouble understanding how that could have happened?
CG: Well they brought their ideas and their beliefs and overlaid them onto wherever they went. They constantly.. they corrupted what were even positive symbols, positive teachings and ideas, and twisted them and turned them into negative ideas as we well know from the history that we know.
DW: So what do you think a Cabal type of person's reaction is going to be when he hears you say “be more loving, be more forgiving”?
CG: They are going to cringe (chuckle). They want us to be always anxious, always fearful and always at each other's throats. They want us to be divided, religions

against religions, races against races - as long as they can keep us at each other's throats, we're not at their throat. They divide and conquer us.
DW: Were you personally aware of social programs that were intended to foster that type of condition in humanity?
CG: I want to be careful because they have co-opted and used religions that are based on this very love principle that I'm talking about. This golden rule principle, “do unto others as you would have them do unto you.” They have infiltrated a lot of these religions, and twisted them and taken control of them and started to use them in hateful ways, and (in) ways to divide us.
DW: Well, it certainly seems that all the major religions have been contaminated to varying degrees in that sense.
CG: MmHmm (nod)
DW: I guess I'm also trying to find out... there's people out there, scholars that have looked at something like feminism and said, “well Gloria Steinem was financed by the cabal and women are now getting up to be about 40 years old, and realizing wow, I've spent my whole life chasing things that men want, now I want to have a child and it's too late”. Do you think that they are deliberately doing things like this, to try and drive men and women a part since that's the basis of family?
CG: Well, they are constantly socially engineering, and to a degree, yes. To one degree - women were repressed for so long, but to another degree, they take movements, like the women wanting to be equal and anything positive they see, they move in, infiltrate and twist.
DW: Right.
CG: So, I see the women's movement to become equal with men after all the millennium of repression as a good thing, but there has been infiltration and twisting that has gone on that has hurt the cause and has caused schisms in our society.
DW: You said before that there are 22 genetic programs that we've been run with, consciousness alterations, that kind of thing. Some of these do appear to be engineering us to be more easily controlled.
CG: Right.
DW: Do you have any specific examples?
CG: These are social programs, these are genetic programs and these are spiritual programs. These spiritual programs also include them incarnating in human bodies. They are a part of this grand experiment as well. They are very much a part of this grand experiment. They are not just custodians creating and manipulating these experiments. They are very much vested in these experiments. But, there is very strong evidence that I was shown in these smart-glass pads, that they created and manipulated our genes to create a “God gene” where we have a genetic, a very genetically-driven need to worship and follow a leader and to worship a higher being. And this was done to make us a little bit more controllable. These 22 programs, they are running parallel together, but some of them “step” on each other. Some of these programs want us to become more spiritually enlightened and grow and then some of the programs want to keep us “down” and keep us spiritually ignorant and ignorant of

our co-creative consciousness.
DW: Why would worshiping a higher being be a bad thing? Most people would think that's a good thing?
CG: It's a good thing, but it's bad when these beings step in as that higher-being to be worshiped, they come in as trickster gods. Not only are these ET's doing it, but for a long, long time, a lot of these break-away ancient Earth civilizations have also been coming to the surface and pretending to be gods.
DW: What seems with the rainbow body training, that you're not really worshiping a divine being, you are becoming awareness. All the stuff I have read about it says, you recognize the nature of existence as emptiness that is aware and that you become that empty awareness. That seems different than worshiping something.
CG: It is. And one of the things that I was told by these higher-density beings, is that we are all one. And this goes along with something I used to say as a child that would upset my parents, who were very conservative, especially my Mom. I would say: "I used to be you. You used to be me. I used to be Grandpa, Grandpa used to be me." And they would say, "that doesn't make any sense scientifically. In time, we're all existing all at the same time, how could you be me, and I used to be you?" I would say: "time doesn't matter; only the experience matters." And they would be like "What?" I am like five/six years old when I am saying these weird things. And, as it turns out, this is what these higher-density beings are saying - that time is an illusion, we are all fragmented but we're all one.
DW: Why do you think in the (book) A Course in Miracles, which is similar to the Law of One, that one of their core teachings would be: forgiveness collapses time?
CG: I don't know. When I hear "forgiveness of yourself and forgiveness of others stops the wheel of karma", that tells me that it ends a cycle somehow. And time to us may seem to be cyclical, maybe there is a parallel there.
DW: We talked about the idea that "forgiveness collapses time" and "in forgiveness lies the stopping of the wheel of karma" - are the same statement.
CG: Yes.
DW: That time is karma. That the experience of duration, the experience of being in this universe, is in and of itself a participation in a fragmented soul. And that the more you can forgive those around you, the more that your soul is reintegrating - hence stopping time, collapsing time and stopping the wheel of karma.
CG: When you are forgiving others, you are forgiving yourself. A lot of times, if you have done something wrong to someone else, the hardest thing to do is to forgive yourself. Forgiving yourself for doing something horrible - and trust me on this, I know - forgiving yourself is the most difficult of the equation. Forgiving others is very altruistic and freeing thing to do for yourself spiritually. When you forgive someone else, spiritually it is very freeing. But to be able to forgive yourself – that is a very difficult pill to swallow. It's a very difficult thing to dig deeply in to and shine a light on.
DW: Did you encounter any information on your own, in the program, suggesting that the rainbow-body phenomenon is real, that this could happen to a human being? That

they could turn into some kind of light being?
CG: There was information that I saw, that I didn't pay much attention to because it was not a part of what I was interested in at the time - about people in the east ascending.
DW: Hmm, that was in there?
CG: That was in there, but I really didn't pay that much attention to it at the time. Of course, my interests have changed now, and that's something I'd pay a lot more attention to, but I do not remember reading anything about a “rainbow body” or seeing anything about a “rainbow body”.
DW: Did you ever encounter beings that may be more like that kind of a state, than more of a biological state?
CG: Other than the sphere-beings, I have not.
DW: Is it possible though, that we could go through a transformation at this time, where our abilities would have a rather sudden and dramatic improvement?
CG: I believe that once we become a transitional civilization, transitioning into 4th density, depending on each of us, where we are in our “walk”, we will begin to awaken - abilities will begin to awaken in us. And those who are more advanced will have higher abilities. Those who are lower-advanced will witness those with higher abilities..more advanced and developed higher-abilities and that will “boost” them, because they'll know it's possible. But I haven't seen any “hard” evidence on how that will occur. If it will be a sudden change or a gradual change. But I feel, personally I feel it's going to depend on each individual's personal development and where they are in their “path”.
DW: Well it's really interesting that before these Tibetan monks would actually reach rainbow body, they were already able to do things like the running, where you would run and step one foot at a time and shoot 30 feet high, 200/300 feet through the air. That's called “lung gom pa”. “Lung gom” is the actual exercise, “lung gom pa” is a person who can do that. They would be able to push their hand into a rock and make a handprint. Or push their foot into stone and make a footprint. So this suggests that even before “rainbow body” is attained that a much grander ability to control our reality and to impact physical matter is taking place.
CG: And that's probably where most people will go before they come anywhere close to be “rainbow bodies”, in my opinion.
DW: Alright, well that's all the time we have for, in this episode of Cosmic Disclosure – because you need to know the truth. We have much more fascinating information coming your way next time here. I'm your host David Wilcock and I thank you for watching.

Portals: Cosmic Web Season 1, Episode 12

Cosmic Disclosure; Portals: Cosmic Web Season 1, Episode 12

17 Sep 2015

David Wilcock: Okay. Welcome to another episode of Cosmic Disclosure. I'm here with a remarkable insider, Corey Goode, who is helping me to verify information that I've collected from a variety of insiders who have worked in highly classified programs over the years. And there has always been this little something where actually it turned out to be a big something where these people knew more than they wanted to tell me. I don't know if it was secrecy or fear or exactly what held them back, but you could just never get all the answers that you were really looking for. And it was so frustrating. With Corey, there is now an Alliance within this Secret Space Program (SSP) that wants us to have the truth, that wants to reveal their technology to us here on Earth and has specifically asked him to work with me, to come forward and to bring you the information that can help us to understand what's really been going on this whole time completely outside what almost anybody knew – even the people who were the most dedicated UFO researchers in this field. In this episode we're going to be talking specifically about portals and I'm going to throw some things at Corey that I've heard from other insiders and see how our data lines up. I'm not putting any words in his mouth, but because I have collected a lot of stuff on this, I want to see how all of these threads intertwine. So, Corey, welcome back to the show.
Corey Goode: Thank you.
DW: I want to mention, first of all, working with the insider, Henry Deacon, and who I spoke with extensively - at least 80 hours of very in depth insider-type conversation – one of the things he told me which can help start this off is he said that there are ancient stargates or portal systems as well as modern portal systems. I'm wondering if you're familiar with that delineation?
CG: Yes.
DW: Okay. Before I go blabbing on about what I already know, you're the focus of this show. Can you explain for us the difference between an ancient portal and a modern portal in terms of what it's like, what does it do, how do they function, etc.?
CG: There are the natural portal systems that are a part of the known universe. We call it the Cosmic Web.
DW: Okay.
CG: And the ancient portal systems and the current era portal systems use the, or exploit, these natural Cosmic Web portal system to travel from point to point. The ancient portal systems... and there are several ancient portal systems that are left behind by several ancient groups that have been found on Earth. They vary in their sophistication. Some of them do very short point-to-point jumps to reach... Let's say you want to reach a planet or solar system that is in... They call them 'hops'. If there's, let's say 10 solar systems between where you want to go, then you may have to make

three or four hops to get to that desired destination.
DW: This is in the ancient system?
CG: In the ancient system. That's also in the beginning of our current era system - how it worked as well as we were developing it.
DW: Could you just briefly explain for us what you would experience in a hop? Do you have to walk from one place to another once you get there or are you in a craft? How would this work?
CG: Well you could travel there in a craft or walk into one of the bubbles that I was telling you about before. Or you could drive into one.
DW: So the bubble is at the beginning of your journey when you're on Earth. How does the hopping take place? Do you land on a planet or do you land in space? I'm not really understanding the hop.
CG: The ancient systems . . . these are physical, ancient physical devices. And there's another ancient physical device just like in the show Stargate that are spread out across many solar systems.
DW: And when you say, 'Just like Stargate', you mean it's shaped like a ring?
CG: There have been some that look very similar – shaped like a ring, but the one that I saw was – what do they call them 'ziggurats' or they look . . .
DW: Like a step pyramid?
CG: . . . like a step pyramid. They come up three different directions and like a step going . . . in steps up in a pyramid shape.
DW: Three different directions like a triangle?
CG: I mean four different directions. (Okay.) And then the portal would open at the top (Wow!) and it was flat on top.
DW: And would it have stairs going up.
CG: Stairs going up to the flat area.
DW: Would this be an Earth-like place where you've got trees, grass and blue sky and clouds?
CG: These have been . . . Usually they've had to . . . These have been dug up. They were buried.
DW: On other planets?
CG: Yeah, well they've been buried here.
DW: Oh. They've been buried on Earth.
CG: Yeah. (DW: Okay.) They've been buried here. Wars have been fought over them. Finding them and knowing how to use them is a totally different thing. They worked on a - just like in the TV show Stargate – they worked on an addressing system. It was much like the Mac address or the IP address on computer systems.
DW: That's exactly what my contact, Daniel, had said. In fact, he gave me the complete numerical address of the Earth as a . . . There was a series of single digits – three single digits - that could be anywhere between 1 and 9. Then there's a series of three digits that are between 1 and 99. And then the last number can be between 1 and 999 depending on what you need it for.
CG: Um, okay.

DW: And I've never leaked the whole sequence, but I have leaked that Earth's number apparently was 606 and that Mars was 605. That's the last three digits of the address.
CG: Okay. And I didn't know that. (Okay.) But just for those who are out there, a Mac address is . . . in a computer network is a machine's hardware address. And an IP address is the Internet Protocol address for when you're connected to the Internet. There's four octets that identify a subnet mask and then your network and then your computer address. So it's kind of like a large network.
DW: Now, Daniel had told me that almost any number you dial in is going to take you somewhere, because there's a great amount of . . . Like all the addresses are used and he had said that there's some kind of ancient race that comes along and puts one of these ancient gates on a planet and that the planet has one central gate. And that when you gate into that particular number address, it will route you to that particular stargate on that planet. And it seems like these . . . the beings that do this will put a stargate on a planet once it starts to have intelligent life so that they can eventually find it and be able to travel. Does that line up with anything that you heard?
CG: I heard that there were two gates and that, like I said, there were several different ages of these ancient gates going all the way back to the ancient builder race.
DW: That makes sense because when you described the ancient builder race before, you said that they had stone chairs or stone sarcophagi or stone altars or stone slabs, which consistently have very advanced time and space distortion and warping capability and that they were very sought after by the ETs in our solar system because of that.
CG: And there were other gate systems that have been found on the Earth that have been much younger and look differently, but pretty much were reverse engineered or use the same technology of addressing as the most ancient gate travel.
DW: So these addresses, I was told . . .
CG: Now you said, “Any number”. Any random number you put in?
DW: Well, if you dial in . . . I don't know how much farther it goes up above 606.
CG: I'm sure it works a lot like a . . . Like with IP addresses, you have a subnet mask, which identifies a network, which might identify galaxy, solar system and then planet within the solar system.
DW: He said it was something like that except that there's sort of a three dimensional sacred geometry, which I assume is the dodecahedron shape is used to bust out areas into quadrants that are in units of 10.
CG: And that matches for . . . before we were able to start really understanding how to use a lot of these gates, we had to have a hyper-dimensional or multi- . . . I think it was a hyper-dimensional mathematics model handed to us by an ET group.
DW: Right. So yeah, basically you have these step-down versions of these quadrants of 10. So if the first digit is let's say 5, that means you're in the 5th quadrant of that 10-unit section, and then the next one you're going to narrow it down in that region by another factor of 10, etc., etc.
CG: It works very similar to like a computer network (Right.) or an Internet.
DW: The other thing that he said was that there are apparently hyper-advanced

angelic or ET groups monitoring this system so that if a given planet of people graduate or ascend, or otherwise, leave their planet, that that gate address is then recycled and given to another group where that planet is now evolving. So, in other words, let's say, number 540 is used up – that planet evolves or graduates – 540 will now be relocated somewhere else and given to a new group. So there is some kind of intelligence, he said, that's behind the . . . when you get to the final three-digit number.
CG: That's new to me.
DW: Okay. The insider Jacob, who I spoke to, said that even in ancient times it was very highly kept secret by the Celts and Druids and stuff like this, but that they had a technology of two permanent magnets that were on something like a tuning fork kind of thing, and that the magnets would pull together harder or push away more when you go near a portal . . . that just walking through the woods and that they hold this out and that's how they would try to find them. Did you ever encounter anything like that?
CG: I've heard about that same instrument and also that same instrument being used for mapping out the ley lines and certain energetic points on the Earth.
DW: Wow. Do you know enough about it that we could maybe try to replicate it? Is there a specific type of magnet that's required or do you have any specifics on it?
CG: No. I just basically heard what you've described.
DW: Well, that's mind-blowing, because we've never talked about that before. So clearly, there's some sort of magnetic flux in a portal area.
CG: Oh, yeah. NASA recently released that our sun has a basically a portal or a magnetic filament connection to every planet in our solar system, and anything that has enough mass to cause a gravitational pull or a torsion in our space-time is going to create a magnetic and gravitational relationship with the host sun. And these filaments that they are just now releasing – these filaments are the portals.
DW: Right.
CG: And they are strong electromagnetic filaments.
DW: But if people don't include the torsion component, they're not going to understand how this works. (Right.) So it's an electromagnetic tube that also has a strong torsion field and would act like a traversable wormhole.
CG: Right. And it's happening within the torsion field of each solar system. The galaxy is a giant torsion field. All of the stars are constantly moving around the center of the galaxy and stars closer in are moving at a slightly different speed. And the magnetic relationships are always changing. These filament relationships are always changing between each star.
DW: Right. It's just like electricity. Electricity takes the path of least resistance. And if you want to travel to a star that's on the other side of the center of the galaxy, you have to wait or calculate just the right time to travel, because if you don't, if you begin your travel and this star has just changed its position and the electrical field, or the electrical connection, changes to another star – the path of least resistance – you're going to find yourself in a different sol system.

DW: Like a short circuit.
CG: It's the path of least resistance. It changes. It's a very complicated. And the further you go, the more complicated the calculation is.
DW: So we were starting out by talking about ancient vs. modern portal technology. I'll just toss in something else that I heard, and I want to hear if this goes with what you're saying. Henry Deacon had told me that the ancient system involves a sort of a ride or a subjective experience that can be extremely jarring. You can come out the other side at best vomiting and very disoriented and at worst completely mentally insane and irreversibly damaged by it. And he had said that people would have to study and really get advanced in their consciousness capability to be able to use these portals safely.
CG: And also there was a chemical that was used – shots. People were given shots to help them with these effects. And this was corrected . . . they learned how to use these ancient gates more efficiently when they learned how to make the calculations better. So this became less of a problem. But in the beginning, this kind of travel from point-to-point within our solar system was bad enough, but traveling from star to star was really not a good idea for a person. Even after we had developed it to a point where we were able to travel from planet to planet in our solar system, and negate the physical effects, it took awhile for them to get the calculations right and to fine tune traveling these ancient portal systems to travel to other star systems without these major ill effects.
DW: In the aftermath of the Philadelphia Experiment, there are reports of a bar fight breaking out in Norfolk, Virginia, where these guys were fighting each other and punching each other and when they became angry, (DW: Going out of phase.) they became invisible, and that they had these little belt packs that would apparently keep that from happening. Is that true and why would that happen if that is true?
CG: The Philadelphia Experiment . . . that was a very irresponsible experiment. From what I saw, they did not do a whole lot of non-human testing before that, and this did not involve using a lot . . . involve using torsion fields. This was heavy electromagnetic fields used in a pulse way (DW: Pulsing.), pulsing way that caused them to change the phase. I can't remember the terminology they used, but they measured what our natural state of matter phase is and they figured out you could change that with, or at least interfere with it, with high electromagnetic fields.
DW: The insider, Jacob, had told me that folks like the Draco are only slightly out of phase with our own reality, and as sensational as this sounds, there were Draco ships landing on the White House lawn every day and entering into an underground facility below the White House where they are having planning meetings and things like this. Did you ever hear of anything like that?
CG: I know that a lot of the high advanced cloaking brings the vessels and the beings slightly out of phase, and the Draco also have all kinds of strange abilities. A lot of people that see – what do they call them - 'shadow people' that scare them and they feel like that they are being fed off energetically by these shadow people. These are these Draco beings astrally projecting into the room (DW: Oh, wow!) to feed off of

them. Yeah, these Draco have some extremely high technology.
DW: So the modern gate system you said has perfected the side effects that happened in the Philadelphia Experiment?
CG: Yes. Not only that, they can do . . . they don't have to have . . . always have to have a point-to-point . . . they don't have to have a device here and a device there. It's almost . . . They're able to pull a craft over an object and portal it onto the craft – almost like Star Trek beaming up – and it's still using the same portal-type of technology, but very advanced.
DW: Would that involve maybe some triangulation where you've got three beams that triangulate on a particular coordinate point and then you pull the portal from that point back to the origin?
CG: Right. It's creating a portal out at a further point and portaling that back to your home location. No, but they've perfected portal. The modern portals are extremely advanced.
DW: Can you portal yourself directly into one of these underground facilities as well as the surface of a planet? Is there any interference when you go below the surface of a planet.
CG: No. (DW: Okay.) No, you can portal straight underground to underground of another planet of another star system
DW: So from what I gather that you were saying before, there are probably oodles of ancient builder-race-working portals to be found in these underground caverns.
CG: Portals and all kinds of other crazy technology.
DW: Do you think that if we get the Cosmic Disclosure that our title is about - this Space Program finally revealing the truth to humanity – do you think that people will be able to have access to portal technology soon in that post-Disclosure society?
CG: I don't know how soon. I get asked this question a lot. 'How soon will I get to talk to an ET? How soon will I get to take a tour of the solar system? How soon will I get to portal to Mars? How soon . . . ' You know, this is going to be a process. A lot of the technologies we're going to have access to in the beginning is going to be to enhance our lives down here. (DW: Okay.) Then there's still a lot of mess out there to clean up. So this is not going to be an overnight fix. It's going to take awhile to clean up this big mess that we've created over a long period of time. Now, just the fact that this portal system - this Cosmic Web - exists, lets us know that once we develop to a certain point to where we're not considered a menace to ourselves and to others, that once we're considered a transitional civilization into 4th density and to being more loving and more positive and we're more of one mind and working together, all of these end points that these portals connect to, all of these different beings out there, these are basically long lost cosmic family that we're going to start getting to meet at some point - we're going to start learning about. Surely at some point, they're going to start coming to visit us in these portals and we'll be invited to visit them. And there's probably going to be all kinds of nice foreign exchange student situations. And it's going to be very interesting to see how things develop. I don't have a crystal ball, but . . .

DW: In terms of the technology that you're already familiar with, will we be able to have, eventually, a civilization where everybody could have a working portal in their home where they could make very large jumps without having to go to any type of transfer station or hop station? Or would it be more of something where you might have a local transport that gets you to a hub where larger portal systems are used? Would it be too entangled if everybody has a personal one that can go the distance?
CG: It sounds kind of chaotic, doesn't it? (It does.) I mean, it would be nice to be able to portal to the mall or whatever, but when you have 7 billion people that all of a sudden have a new toy and want to portal all over the galaxy, that . . . I don't know. I don't know if I see that happening immediately. I think that we'll definitely be able to portal to Cancun or the Cayman Islands and that kind of thing in the beginning.
DW: Well, I'm also wondering if there might be . . . To simplify matters, the craft that you're describing, it seems like they would travel so fast that portals might be reserved for things that are off-planet and that being on the planet . . . You might have portal stations like subways or airlines, but that people might end up with their own private craft that they could use to travel wherever they wanted to go so fast that it really doesn't make a difference at that point whether you have a portal or a craft.
CG: Right. And like I stated earlier, many of these ET races they use very large craft and they portal through the Cosmic Web all over our galaxy and to other galaxies. And our galaxy is just a little bitty spot and all of the other galaxies and our local galaxy cluster and then beyond, they've already mapped out with the Hubble Telescope. They've taken pictures back of billions of years ago the energetic connections between all of these galaxies and these now are filaments that form the Cosmic Web. You've heard people say that everything in time and space is connected. That's very much the truth. It's all . . . Everything is connected and it's just . . . I mean just a short little hop skip and a jump away.
DW: We only have a couple of minutes left, but you did make me think of something that I've featured in my books, I think, all the way back to 2001. Two sets of names – one is Battaner and Florido, and the other one is Einasto. And they are researchers primarily out of Spain who mapped out these super clusters of galaxies and showed that they were all in geometric matrices. And they called it the egg-carton universe, because it looks like an egg-carton. But those do appear to be . . . The sacred geometry appears to be a function of vibration. When you vibrate a fluid, you get the same shapes. And these appear to actually be filaments that are connecting these galaxies together just like what you're saying.
CG: Yeah. And what I've been shown by these ET races, our entire universe is a giant torsion field – just like a galaxy and you see a torsion field. That's why some stars are travel this way. Some are traveling that way. And some are zipping around. You know Hubble Telescope has captured some galaxies that seem to be traveling away from us faster than the speed of light. They can't explain it. They are trying to explain it. Our universe, I'm being told, is a giant almost like a bubble, a torsion field. Everything in it is connected via filaments that I'm being told is called the Cosmic Web.

DW: Well thank you, Corey. In the next episode, I think this is a really good time for us to get into time, and I want to talk to him about what other insiders have described to me as layered time – the idea of how time can stack on itself, the three dimensionality of time. And we're going to see time and portals interfacing and really try to get more of an understanding of how this new physics applies to this bizarre world of the Secret Space Program. That's coming up next time on Cosmic Disclosure, because you need to know. I'm David Wilcock and I thank you for watching.

Portals Navigating Time Season 1, Episode 13

Cosmic Disclosure; Portals Navigating Time Season 1, Episode 13

22 Sep 2015

DW: Hello, and welcome to Cosmic Disclosure. I'm your host, David Wilcock, and we are having in-depth discussions with a secret space program insider named Corey Goode. There's a lot of laughter around this subject, a lot of people who think that this is something they can ridicule on the internet. But if you've been watching our show, I think it will become clear to you that we are not dealing with something that is easily dismissed. Granted, we don't have all the documents yet. We don't have the degree of proof that some people would want. But when you start to talk to as many different insiders as I have, who have cosmic top-secret clearance and above--and that means 35 levels above the need-to-know basis for the President of the United States of America--these people have come forward as whistleblowers, and they all start sharing with me, because I've sought them out, very specific things. And it all interrelates. It becomes actually more of a stretch to think that they could all be lying from a unified body of lies than that they're actually describing something that's true. In this episode, we're going to go into the discussion of time, and how our physics will need to be altered based on what we have encountered. So without further ado, Corey, thank you for being here. Welcome to the show.

CG: Thank you.

DW: All right. Now let's get right into some hard insider data. One of the things that fascinated people the most about my insider testimony when it first started coming out online was what I shared from this insider named Daniel who claims to have worked on what most people call the Montauk Project, but what he called Phoenix III. What he said was that our military industrial complex had procured a seat from a crashed extraterrestrial disk and that the seat itself acted as a consciousness interface. And someone could sit in the seat, put their head back, and then there were 22 base waveforms that would be the energetic field of the person that they would measure. And you would go to what they called the quiet point, a stillness in your mind. Then they would have to zero out the chair, which means once these 22 sine waves stop jiggling and you can get them to stay still, then they would individually tweak the knobs on each one and make them flat lines. And at that point, so he was told and so he experienced, a lot of weird things could happen. For example, you could think about an object. And the energy that this chair would harness that they had to create a very specific frequency with these huge transformers, you could manifest that object in the room. And he also said that if you thought about a particular place that this sort of shimmery mirage thing would appear, and you would see that place through the mirage. And they could actually send people through that, and they would travel there. He also said that this was standard design for seats in UFO-type craft and that

the pilot would think about where they want to go, and it just pops open a hole and they fly through, and they go. So before we get into all the deeper stuff that he said, anything that I've just told you, does that line up with stuff that you've heard?

CG: Mm-hmm.

DW: OK. Could you give some specifics on that, then?

CG: Well the chair, the chairs very much. So the consciousness interface with the chairs. There were chairs that we were put in in the MILAB Project when I was a child that the intuitive empaths were put in, that they would put us in and--you mentioned the 22 waves that they would try to get us to go into--in a negative way, we were being trained to be enabled on command to go into different states of consciousness that were measurable. And--

DW: How is that negative? I'm not sure I understand.

CG: Negative reinforcement ways.

DW: Oh, like electroshock torture kind of stuff?

CG: Electro--yeah. They were putting us in these chairs that were ET chairs from craft. And they were trying to see which of us could change the wave, certain waves, in it most proficiently.

DW: Really?

CG: Yeah. I find that very interesting. Now we weren't manifesting things in the room or looking at other locations and that kind of stuff. But they were using that device that was a chair out of an ET craft to have us--to test us to see which of us, through interfacing with this chair, could change certain waves on command.

DW: He was also brought into some sort of training for what they called apparently the Psi Corps, like a corps of the military that was psychic-based. And one of the basic things that they wanted him to learn to do was to go to what they called the quiet point in yourself. Did you ever hear that term?

CG: Yeah.

DW: What was your understanding of the quiet point training? What is supposed to be done? What's the objective?

CG: When you reach--I think it's deep theta. That is when you're least conscious of

your body, least conscious of your surroundings, and more in contact with I guess what we call our higher self, and more in a higher consciousness state. And all other thoughts--no other thoughts enter your mind. You don't think about I'm cold, you know, what am I going to eat later, my nose itches, this seat's uncomfortable, this texture of this pair of pants feels weird on my leg. I mean you're having no thought. And people say having no thoughts is impossible, getting your--training yourself to be at a point of being conscious but having no thought is where they wanted you to go. That's the best way I can describe it.

DW: Pursuant to my original question, did you also encounter information suggesting that the seat within a craft has an interfacing capability that would allow you to will open a portal that could take you to another space or even time?

CG: Yes. That's--later on, I found out that that was how these craft operated. It was completely consciousness-driven. And most of these beings wore a headband, sat in these craft, and either wore a headband or sat with their hands on a panel and just like higher-density beings thought of a place they wanted to go, and the craft would phase out of this location and phase in to that location.

DW: Would this travel sort of automatically--hop through the cosmic web that you were describing?

CG: No. This is more of not only--we've talked about how everything is vibration. Everything has a vibrational signature. Every solar system, every planet, every location of a planet, has its own vibrational signature. And consciously, if you think of that place and that place's vibrational signature, and you can change your entire vibrational signature of what you're sitting in and what you are to match that vibrational signature. The universe is holographic, basically. Then you phase out and re-phase in at that location.

DW: Now in--

CG: Does that make sense?

DW: Yeah. In the Carlos Castaneda books, Don Juan, the original shaman, apparently there is a real guy named Cachora, and he's still around. Cachora said--and this does appear to be real--that some of these shamans can learn to teleport themselves. And the way they do it is if you can have an out of body astral travel type experience and then consolidate a particular location strongly enough where you keep it completely stable, and it doesn't shift, and it doesn't flux, that once you can really hold and consolidate that new location consciousness-wise, that you actually jump there.

CG: Yeah.

DW: So it does work that way?

CG: That's how a lot of--some beings travel that way.

DW: Hmm.

CG: Yeah. They send their--we call it astral projecting. Or they send their consciousness there. They see the surroundings. They recon where they're proposing to go. They gauge the vibration of that area. And then they report that vibration back to their conscious body, and the conscious body changes its vibration and phases out of where it was and comes to the location of where their consciousness is.

DW: So is the chair within a craft sort of a technological assist to that process that enhances your natural ability?

CG: Yes. Some of these ETs have found a way to cheat, to be able to do what some of the more ascended or higher-density beings do to travel and get around.

DW: So the chair sort of enhances their own native ability.

CG: Right. Consciousness.

DW: Well I want to get to the core of why I brought this all up, which is the time stuff. Daniel had direct knowledge of people in the Phoenix III program. There was one guy in particular who was a little crazy, more than a little, said--because they figured out that these portals that they were creating, first they thought it was only space travel, then they realized that you could go to different points in time just by thinking about where you want to go.

So this crazy guy, he goes and he says, I'm going to kill my father. Because they figure out they can go back in time.

CG: Yep.

DW: And have you heard about this particular story?

CG: I've heard of this paradox, yes.

DW: Okay. So instead of me talking, why don't you describe what would happen, or what are some of the historical cases of people trying to do weird stuff like this, and what happened.

CG: From what I read on the glass pad, one of the major reasons that they put buffers

on this temporal technology is that some of this time travel experiment and technology got extremely out of hand. People were traveling back in time, deciding that if they killed one person, it would change the time-line. These people would end up coming back and being on the time-line they created. And it was creating all these schisms and split time-lines. And then they were sending people to go back and prevent it and fix it, and it was causing even more and more problems, and more and more timeline splits to where there were all kinds of fragmentations, and it was just way out of hand. And they started getting visitations from very advanced ET groups saying enough. You guys have got to stop. And it was also explained that time is very much an illusion, that just as they were using consciousness, that was a key component, they were using consciousness in that chair to manifest things, which is something that we do with our mass consciousness every day. We're manifesting our reality.

DW: Right.

CG: This ability to use this device, to use their consciousness, to go back to this time-line, this time-line that these people are going back to, it was based on this one person's consciousness, and the polarity of that person, how positive they were and how negative they were. And the same thing with the people that were traveling into the future. People that were traveling into the future, if they were of a negative polarity cabal group, they were traveling into the future and seeing oh, there was this huge cataclysm. The rotation of the Earth changed on its axis. 90% of the earth died. All these horrible things happened. And then they would come back and report. And more positive people would do time travel, and they would see a glorious future. Well if the technology is sound and you have multiple people of different, I guess, positive or negative polarities that are doing these time travels, what does that tell you about time?

DW: That's an interesting point.

CG: The ETs told us to stop--back then--to stop trying to repair all these schisms and time-line problems because that just like space, time is elastic. And that just like if you have a highly--just like a torsion field, you twist space. You remove the torsion field, space is going to snap right back. You screw around with time, time is going to repair itself. It's going to snap back.

And the scientists had a hard time believing that. They could not believe that time was an illusion and was something that was going to snap back and repair itself, and that it was--time was a major component of consciousness.

DW: It would appear that if we go back in time in our own history, there's the legend of fairy rings, where you have a circle which appears to be a crop circle, and people

could walk into these and they'd meet people that looked different--elves, gnomes, leprechauns, dwarfs, fairies--and one of the legends was that if you go into a fairy ring, you have to go out the same way that you went in, or else you will time travel. What are these fairy rings, and how does this relate to what we've been talking about? Did you hear anything about them?

CG: I did not hear anything about them. But it sounds very similar to these federation meetings happen inside of a temporal anomaly or a temporal bubble. And just like you described, you come in--you have to leave the same trajectory you come in.

DW: Oh, really.

CG: So these fairy rings may have been some sort of ET temporal bubble that they had there to observe something going on. And if a person walked into it and got stuck in this temporal bubble, that if they didn't leave out the same way they came in, they would get stuck in for hundreds of years. And to them, it might've been minutes, like the Rip Van Winkle kind of thing.

DW: One of things that Henry Deacon shared with me was that time is actually sloppy, that time hiccups and makes jumps, but that we, somehow with our energetic body, glue together the glitches in time. We have a psychological buffer that makes it appear to have continuity, but that there are, I guess, phase relationships between our solar system and other stars, or planetary conjunctions or things like this, that actually are causing glitches that we're apparently not at a level yet where we can detect them.

CG: That's somewhat true.

DW: Really.

CG: Yeah. And until we learn to--I mean time really is a complete illusion. For us stuck in this really third density way of thinking and consciousness, we're not going to really be able to understand it. But time speeds up and slows down all the time, because of--the people that are out there talking about--was it Nassim?

DW: Nassim Haramein.

CG: Haramein. Some of his information is just great.

DW: Well viewers on this network can watch Nassim's video "Black Whole", which was produced by Gaiam--

CG: Great, that's great.

DW: And there's also interviews with him on here.

CG: That's great.

DW: Yeah.

CG: The electro-plasmic universe and the torsion universe, these are the models that the secret space program are working off of. All of these other sciences that people think are cutting-edge that are down here that people are working on are going to be thrown out the window. All of these PhDs are going to have to go back to school when this information is released.

The true sciences that are being suppressed from the people down here are--I mean the mathematics to them is a whole--there's a whole new mathematics, too. We're working on a very archaic mathematics, physics, and--but once we learn to understand how all these things work, we'll understand things like why time is always speeding up and slowing down. And it has to do with the torsion effects of the galaxies on each other, on our solar system, and on our minds, and how we perceive it.

DW: Well let me throw this at you. We were talking about the Montauk chair. And recently Pete Peterson gave me some very fascinating information where he said that on our back, right in the shoulder blade, there's a dimple there, and that all the nerves of our bodies cross over in this one little spot, and that this appears to be some type of divine intelligence design. And he said that these are called ports, and that many different extraterrestrials have chairs that have nubs that you have to kind of sit into, and the nub goes right into that little spot in your shoulder--you're nodding your head a lot.

CG: Yeah. We use them too. You can download a lot of information through those.

DW: That's why I brought this up because you said these scientists are going to have to go back to school. Pete had said that, for example, a vision system can be done through these ports, that a lot of these fighter jets that we're using now don't have windows, that you can see through the ports, and you see in your mind, it has actual telescopic vision. And he said that you can actually download information right into your mind.

CG: Mm-hmm.

DW: Have you encountered anything like that?

CG: I've used the download function of that.

DW: Through the ports in your shoulder blades?

CG: Through the dimples--yeah.

DW: Wow.

CG: Yeah. They've--yeah. The download function of information.

DW: See that's so weird, right? How could--this kind of stuff just blows my mind.

CG: And also there's so many nerve endings in your fingers and in your hands. That's why it hurts so much when you hurt your fingers compared to if you hurt yourself here.

DW: Yeah.

CG: A lot of the devices that are neuro interface devices have like a copper and kind of like a stainless steel plate that are shaped like a hand that you put your hands on. Or they have gloves that you slide on that have strips and metal inside them. And that is used for you to neuro- or bio-electrically interface with craft and other devices as well.

DW: Did you hear on your own, independently, that these ports in our shoulder blades have all the nerves of the body crossing through them, that there's like a big intersection there?

CG: I wasn't told that. I was--this was mainly when I was in the MILAB era. We were sat in chairs. Uncomfortable--two uncomfortable little nipples, kind of things poked us in the back. And we leaned back, and we felt an electrical sensation come through the little bumps that we were leaning on. And it would download information to us to teach us information.

DW: And that is an example of something that genuinely happened here. We'd never talked about this before. It's a very obscure, specific detail that you've encountered on your own.

CG: And I was told that one--back then they said that one day this was how everyone will be educated.

DW: Right.

CG: Yeah.

DW: Well we're going to be talking a lot more about time. There's a lot of other things I want to ask him because this is a vast subject. Time travel, time jumps, it's something that people are really fascinated with. And we also may get into something he's talked with me about before, which is this weird parallel earth. That's all going to be coming up next time on Cosmic Disclosure because you need the truth. I'm your host, David Wilcock, and I thank you for watching.

Portals Parallel Earth Season 1, Episode 14

Cosmic Disclosure; Portals Parallel Earth Season 1, Episode 14

22 Sep 2015

DW: Hello. Welcome to "Cosmic Disclosure." I'm your host, David Wilcock. And in this episode, where I'm here with Corey Goode, our insider's insider from the space program, we are going to be talking about the science of time even further. And I want to start to dialog with him a little bit about some of the things that I've studied in this very fascinating subject. Because when we start to get into the real world data, things get very interesting. So, Corey, welcome to the show.
CG: Thank you.
DW: Let's kick this off by bringing in a data point from a book by a Chinese guy named Paul Dong called "China's Super Psychics." And in this book, he describes working with the Chinese government, where they find these children who have advanced psychic capabilities. One of the experiments that is documented in this book is a human being who had the ability to teleport a small object. And the object would appear to fade out of existence in one location. And it would fade in in another location. So what the Chinese wanted to do was to figure out, OK, what's really going on here? And how does this work? So apparently they put a beeper on the device. And the beeper was set to beep in a certain time sequence at a certain rhythm. What they found was that as the object starts to fade out of existence, the beeps became slower and slower. As if time itself was changing in speed. And then it was just as slow when it shows up on the other side. And then it would speed back up to its normal rate. So is it possible for us to be able to affect time and space as a singularity like that?
CG: Well, we can affect time and space and matter with our consciousness, which is exactly what that person was doing.
DW: Right.
CG: And time and space--we'd call it space/time, time/space for a reason. So, yeah. That experiment showed how intertwined and related the two are, in my opinion.
DW: Now in Einstein's basic physics model, he does allow for time to shift. But it only can be done within an area that you're accelerating towards the speed of light, like a craft, let's say. We know that in the 1970s, they took molecular clocks and flew them in airplanes. And that they confirmed this Einstein relativistic drag is true.
CG: The atomic clocks?
DW: Right.
CG: Yeah.
DW: The real gems here seem to be that time is locally variable. That you can actually accelerate or decelerate the rate of time in a small area. Now the conventional physicists who are watching the show, the skeptics, are going to say, oh, that's impossible. So is this part of the physics that we're going to have to change?
CG: Definitely. And I know that you're probably familiar with this. But a person doing a certain experiment has an idea of how that experiment should go. And the

power of their--the co-creative ability and power of their consciousness causes an outcome of that experiment.
DW: Right. Absolutely.
CG: Well, if you changed it up a little bit--time, matter, space are all related. And our consciousness can make changes to matter, to time, and to space. Just as we were talking about how some people, or beings, have been able to change their teleport, change their location, with consciousness--changing the vibration of their body to match another vibration of another location--you can also affect time. And as we're learning more and more about how this universe and reality is a hologram, we're learning--when you really learn it and believe it--just like in "The Matrix," "there is no spoon"--then that takes away a lot of restrictions from your consciousness. And there's a lot more you can do with bending time and space and reality.
DW: Why do you think these guys in the Philadelphia experiment allegedly got embedded into the hull of the ship? What was going on there?
CG: Well, the vibrations, the matter of the metal of the ship was in a transitional phase, as was the bodies of the sailors. And they probably were freaking out during this out of phase, this process when things were out of phase, and they moved around. And then when they were brought back into phase, they found theirselves now trapped in the metal as it phased back into what we would perceive as solid material.
DW: Have you experienced this phase-out consciousness and matter condition yourself? Did you ever get exposed to that type of a weird boundary condition?
CG: When you're brought through a solid wall, you know that something like that has happened. So, yes. And I've seen technology used--bracelets that were taken away from extraterrestrials. And the intercept interrogation program that they would--the extraterrestrials had--that they would turn on. And they would shake and then phase out as if they were completely invisible and couldn't be touched. Well, with this technology, it wasn't meant for humans to wear. Humans tested it, and they put it on. And it shook them violently, and they broke their necks.
DW: Oh my gosh. Really?
CG: Yeah. Later on they had developed technology to where these human beings were able to walk through walls. But before they fully developed it, people were exchanging their human residue and the residue of the walls--there was interchanging going on. To where some of the material from the wall was ending up a part of their body. And part of--in the walls, the human--you've heard this?
DW: Oh, absolutely. OK. You're describing something I heard from Pete Peterson. In his division of Area 51 when he worked there, they developed a little thing that was the size of a quarter. You hold it in your hand and you push the button--you pop out of phase. They were trying to figure out how to get through walls. So they'd have these guys hold onto this little thing, take a running jump, jump into the air, jump through the wall, hit the button when you hit the air. They would go through the wall. Then they'd release the button, and they'd pop back in on the other side. The problem that he said was happening--he didn't say that it was the material of the wall which I certainly believe could happen--he said people would get sick. And their eventual

conclusion was that all the bacteria and the viruses and the natural junk that's in the atmosphere would blend in with our bodies. And normally our lungs filter that stuff out. People would get sick, they'd degenerate very quickly. And so within Peterson's division, that little thing--they said, we can't use this.
CG: That was back-engineered from what I'm talking about.
DW: Oh, really?
CG: Yeah.
DW: That's fascinating.
CG: They eventually perfected it. They can use this type of technology to walk through walls and stuff now and not have ill effects.
DW: You remember the guy I told you about who's autopsied some 2,000 different types of extraterrestrial bodies. At one point, he was attacked by people who appear to have walked into his house through his wall. And I had no data to back that up until you just said that.
CG: Okay.
DW: So I wasn't sure if he was actually telling the truth, but now there's reason to believe that that part of his story is correct.
CG: No, they absolutely have that ability. You can lock your doors, and lock your windows, and sit there with a loaded pistol. And they can come in and out of phase. That's technology that is available to very high-level black ops groups.
And for that level of technology to be used against you, you have to have--most likely have done something very stupid or wrong against the program you're in.
DW: Let me ask you the same question I asked Peterson. If you hit this button, and you're out of phase with our reality, why don't you just fall through the floor? How would they get through a wall? Do they have to jump through the wall and hit the button? Or is there some way that they have enough phase in their feet that they can still interface with the ground enough or something?
CG: That's a good question that I don't know the answer to.
DW: Okay. Interesting.
CG: But then again, if you're out of phase, why would gravity pull you down through the floor?
DW: That's a good point.
CG: I don't know. But these guys know. They go out of phase, and they walk on the floor. They walk through spacecraft. And they can walk through the walls as if the walls weren't there.
DW: One of the really interesting things that we have spoken about before is this parallel earth. Now instead of me just blabbing away on it because we want to get you talking as much as we can, what is the parallel earth?
CG: This is something that I mentioned to you. And as I said, I read a little bit about it. This is something that is very sensitive information that I wasn't given--I wasn't privy to a whole lot of information about. But it piqued your interest. I'm not sure, is it because you had heard something about it before or what? But--
DW: I remember how we got into the discussion. And the original way that we got

into the discussion was I asked you if you time travel back into the past, and you see yourself--if you get too close to yourself, will you explode? And you said no, which surprised me. Because other insiders I'd spoken to--at least one--thought that you would actually get some kind of electrical fire, some kind of interference feedback with yourself, and you'd blow up. Or just poof! But you're saying that doesn't happen?
CG: Right.
DW: So it is possible for people to portal back in time, and you can get right up to yourself, and nothing happens?
CG: Right.
DW: But then you said something was different with this parallel earth thing?
CG: Yes. And the type of portal.
DW: Oh.
CG: There was a highly talked about and rumored type of portal room that they called the Xerox room, that brought you to a parallel reality, a parallel earth. And it was not something that people wanted to go through. I certainly would not. In this one, when you're portalled through it, it makes a copy of you, sends a copy of you to this other reality, and destroys the local copy.
DW: Oh my god.
CG: And then there's this other copy of you in this other reality, this other earth.
DW: Well, I've always said I want more than one of myself so I can get more work done. Could you Xerox yourself and not destroy the copy?
CG: That's built into the function.
DW: Huh. Is it like a time paradox or something if you have two copies of yourself?
CG: I don't know.
DW: Okay.
CG: And that might be some of what--a lot of what people are talking about clones being done. They may be using some sort of this technology to be making carbon copies of their self. Anyway, these people go to a parallel reality universe, to where apparently things have played out very differently. And there were and weren't certain wars. Wars turned out differently. Different people were leaders.
DW: You're saying it's Earth--
CG: It's Earth.
DW: --but there's something different about the history of Earth?
CG: Yes. And there are us's there. And sometimes there are, and sometimes there are not, depending on what had happened. But if you ran into yourself there and touched yourself, there was an annihilation effect.
DW: Really?
CG: Yeah. That was so incredibly bad that it was said that--they theorize that it could rip the fabric between the two realities or something. I can't remember all the details from the space--from the glass pad. But I don't have a whole lot of details about that. I wasn't a part of that project. There were some people that were. For some reason, it was considered a very important project. There were some very high-level people involved in it. But the Xerox room was--that portal device was something that people

dreaded. And was not something I would ever have agreed or volunteered to go through.
DW: Where was the Xerox room located?
CG: Well, there's not just one. But the one that I was aware of was in an underground facility somewhere here on Earth. But they have, supposedly have, also one of these devices down at the LOC on one of the lower levels. But I have never gone below, I think, the third or fourth level at the LOC. I've never been given the grand tour that, at recent meetings, some people that have not ever been in the space program--secret space program--that have been there for conferences, have been given the grand tour. And I haven't been allowed below the third or fourth floor.
DW: Were some people able to go to this other reality and come back successfully?
CG: Mm-hmm.
DW: Do you get copied again to come back?
CG: Mm-hmm. The process repeats itself.
DW: So now you've destroyed yourself twice?
CG: Yeah.
DW: Was there any lack of continuity in people's memories? Or any anomalies with their minds, as a result of being destroyed and reconstructed from a copy?
CG: Not that was reported, other than the unpleasantness of the process.
DW: What was unpleasant about it? Just the thought? Or was there a sickening feeling?
CG: It was a painful, unpleasant process.
DW: Really?
CG: Yeah.
DW: You feel your death?
CG: I'm just saying what was reported. It was a very unpleasant, painful process.
DW: Oh, wow.
CG: And there are people from that parallel universe reality world traveling here as well.
DW: Right. Could you delineate what are the main differences in the history of this parallel earth compared to ours? Anything that you specifically remember that was different about it?
CG: It's hard to remember it all. I remember World War II turned out differently.
DW: As in, that the Germans won instead of America?
CG: Right. The Axis powers won. At one time I remembered a lot of the details that I read that were in that--it was a short summary that I was given access to. I wasn't given a lot of information. And I--
DW: Well, the insider that you introduced me to--who in the beginning you had so many things in common with and so many things that he knew that nobody else knew, whoever you'd met online--he said that that earth didn't have Roswell. And had far less interaction with extraterrestrials than we have in ours. Did you ever encounter that information?
CG: I encountered that information, but I can't remember from which source I got it.

DW: But he did say the same thing that you're saying, which is that, in his opinion, it was a very important project. And that we were both helping each other in some way.
CG: Yes.
DW: He said that they had much less of the kind of advanced technology--
CG: Yes.
DW: --than we did. And so we were trying to get them some of that. Do you think that in order to get people to do this, they have to bring in a newbie? Somebody who hasn't heard the scuttlebutt about how horrible it is and how dangerous it is?
CG: No. These people consider this a very important mission, and they're very dedicated to it.
DW: Really?
CG: Yeah.
DW: And one of the key things--which I think you did say to me before, not in this taping--was that this parallel earth is not doing too well, as far as war and stuff. It's in a much worse shape in that sense.
CG: Yeah. It's supposedly a really dreary, hopeless place to be.
DW: So almost like a new world order that worked? Like a worldwide fascism kind of thing?
CG: Right.
DW: There are some people in Jenny Randles' book, "Time Storms," she has a whole bunch of stories about natural time slips, she calls them. There's a kid that goes missing. Three days later, he pops up in the garden. And they've searched that area hundreds of times, and there he is. A bubble of light shows up. And modern people would probably say, hey, that's a UFO sighting. And then they get a missing time experience. Oh, well, I lost four hours. So some of those might be UFOs. But some of these could be a natural portal. Would you agree?
CG: Exactly.
DW: Jenny Randles also describes some people going through these time slips, and that there's a piece of furniture in their house that's now different. Or the walls are painted a different color. Or a window has curtains that didn't have curtains. Or that there's a stone path from their front door to the street that wasn't there before. And everybody laughs away at this. So is it possible that if we muck around by accident in a time slip, that the actual reality that we're in could just reconstruct around a slightly different theme like that?
CG: The people that were involved in these type of time experiments--they were on the lookout for these types of things. They were to report them immediately if they noticed things like that. Like, they would go to hang their toothbrush up in their little toothbrush hanger. And all of a sudden, it's on the other side of the wall, on the other side of the mirror. Weird things like that started happening to the people that were involved in some of these temporal experiments. That's pretty interesting. I hadn't heard of that book. But little things like that--it's interesting you bring that up. But those were some things that these people were told to keep an eye out for and report immediately if they encountered.

DW: Do you think that these bubbles that people--and I understand you haven't read the book--but these bubbles are on the move. And there's cases of a guy smoking a cigarette--and when people say that a UFO shows up, they say, there's no sound. I don't hear birds. I don't hear the wind. I don't hear anything. Could it be that that lack of sound in these UFO contact experiences is because time has changed, and as the bird is making its cry, it's so slow now that you can't hear it anymore?
CG: No, that is absolutely what's happening. That is absolutely what is happening. That's when UFOs that have landed in people's front yards--there have been people that have reported people out standing in their front yards, motionless. Cars driving down the streets that just stopped, that are just--and things like birds in midair, stopped. It is absolutely--they have found a way. They're manipulating space and time. So absolutely, yes.
DW: Well, I want to thank you for getting into this fascinating discussion with me. We are by no means done with talking about time. We have a whole year worth of half hour episodes to fill up. And there is so much more that I want to talk to you about with this. Because this is a very big subject. And all kinds of interesting stuff coming up in our next episode. And I thank you for watching.

Cosmic Disclosure Season 2

Corey Goode, David Wilcock, et al

Contact Is Made
Season 2 Episode 1

Cosmic Disclosure; Contact Is Made – Summary and Analysis Season 2, Episode 1

DW – Welcome to the show, I'm David Wilcock. We are absolutely having fun here, this is all new information even for people who think they know it all. I think we're just pealing away layers of the onion here and it gets more and more interesting as we go. I'm here with Corey Goode, and we are discussing insider information that he gained during his time in the secret space program, often abbreviated to 'SSP'. Corey, this secret space program – how does something like this get started? If our conventional technology is so primitive, as far as space travel is concerned, did the program have some help? Was there some outside assistance that allowed it to develop this far at such an early time in history?

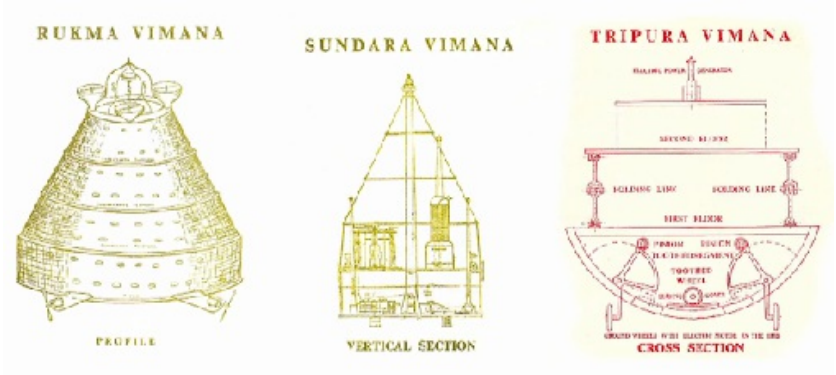
CG – Actually the reason why there is such a wide range of technologies in the SSP, compared to what we have down here, is that it is a complete breakaway society.

DW – What does the term breakaway society actually mean?

CG – It is a society that is so divergent from the one it came from, that it is a complete different society, running on completely different technology, social dynamics, control systems, etc. that are unrelated to the ones that it came from before. It broke away and is now existing separate from [the parent society].

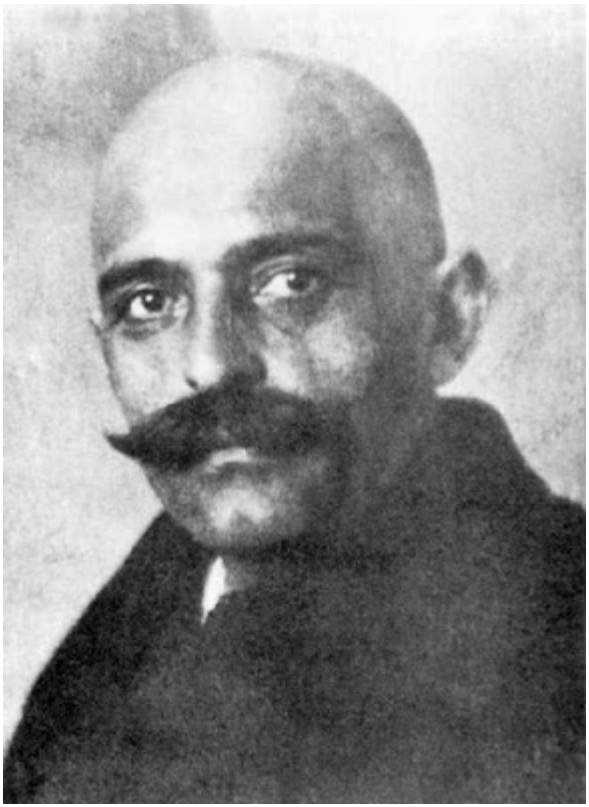
DW – What is an example of a different social dynamic?

CG – Definitely more of a controlled totalitarian regime. The current era breakaway civilization really began Germany, as far back as the 20's, but especially in the 30's. The German secret societies were doing some very interesting work. They were some of the first that didn't separate science and esoteric spirituality, they kind of intertwined them. They had some groups that were doing channeling, trying to contact races from other worlds. And they were also scouring the Earth for ancient texts, especially from the East, that were talking about ancient Vimanas and other craft that they could get information from to engineer spacecraft.

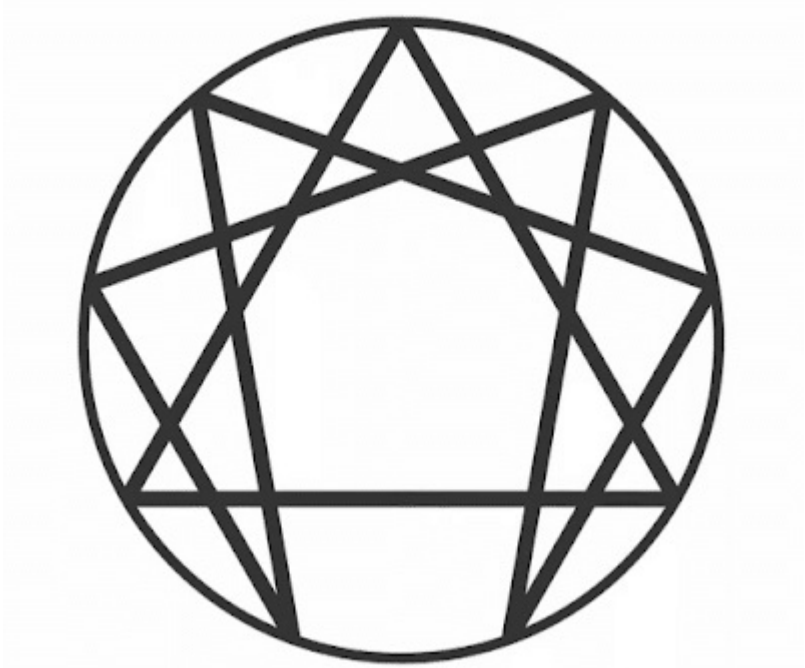


Screenshot from Cosmic Disclosure Season 2 Episode 1: Contact Is Made.

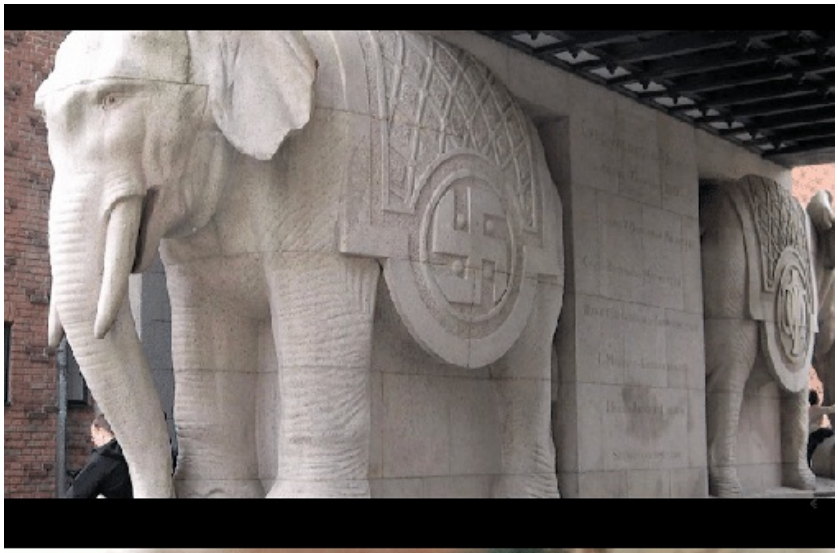
DW – One of the most contentious pieces of research that I came across dealing with German occult societies was apparently one of the top oculists at the time, who later advised Hitler, saw a talk by George Gurdjieff. He described this grand hypothesis of a sacred symbol that was showing up all over the world. All these different ancient cultures had this symbol the Hindu's called the sah-wah-STEE-ka, or swastika. Do you think that the Germans in these occult societies, by seeing this almost world wide prevalence of this one symbol – were they reconstructing what they felt was the traces of a world wide ancient advanced civilization of some kind?



George Gurdjieff



The Enneagram



CG – Well I don't know that for sure, but as far back as the late 1920's, and through the 1930's, some of these secret societies were already well into expeditions all across the world, looking for ancient texts and relics, that they could start to piece information together to create modern technology from.

DW – I did an episode of Ancient Aliens not to long ago, on the German Roswell. I was wondering if you ever heard of that?

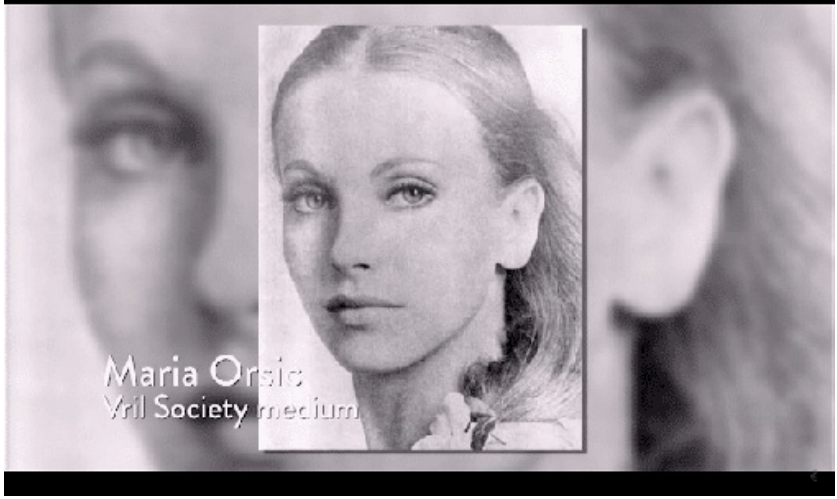
CG – I believe in 1936 it was a crash in the Black Forest.

DW – Right. On Eva Braun's family land apparently; and she later became Hitler's wife.

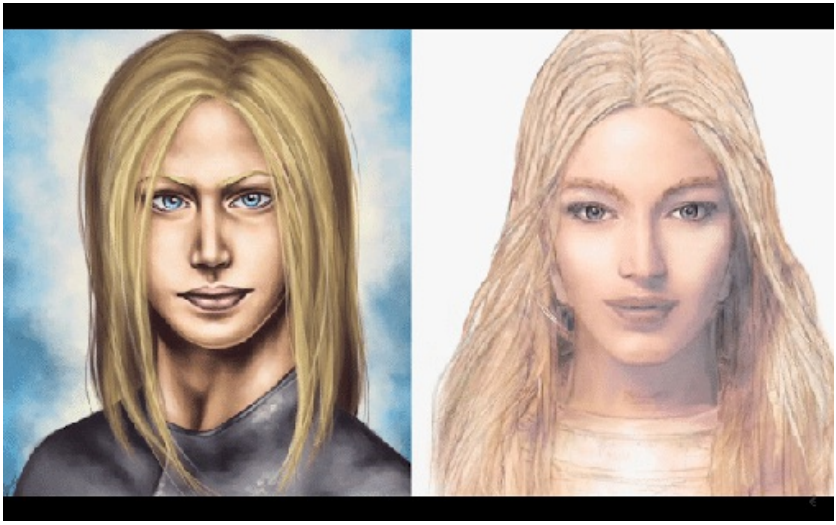
Eva Braun and Adolf Hitler.

NORDIC CIVILIZATION AND DRACO ALLIANCE CONTACTS:

CG – I read that was a crash and technology was recovered, from the smart glass pads. But most of my knowledge comes from the contact that was made through their channeling. They made contact with another civilization and ended up arranging meetings with them.



CG – Through their expeditions, they also made contact and started to work with an ancient breakaway civilization in the Himalayas that a lot of people call ‘the Nordics’. They were working with these two different groups that helped them put together.



Artist rendition of the Nordic race.

DW – One of the most common things the critics keep saying is 'Corey has no proof', but when it comes to channeling, a lot this story people can read for themselves. It wasn't kept secret right?

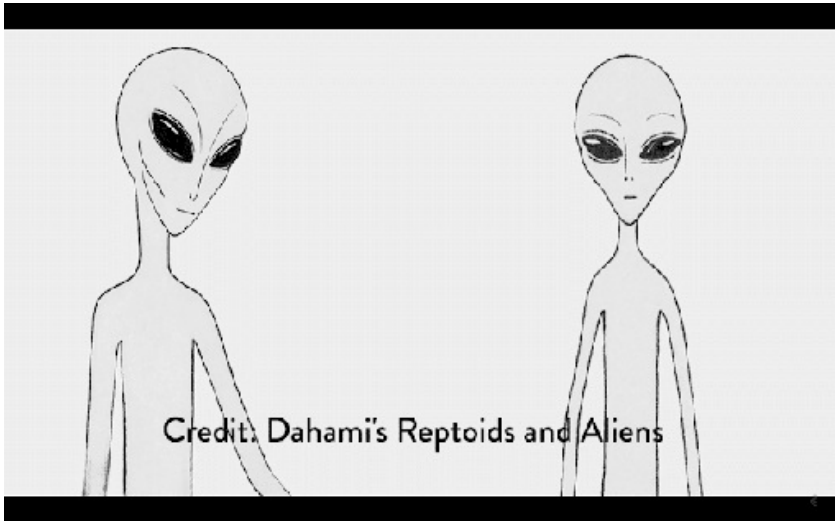
CG – No it wasn't, a lot of this stuff is in the mainstream. People have written books about this.

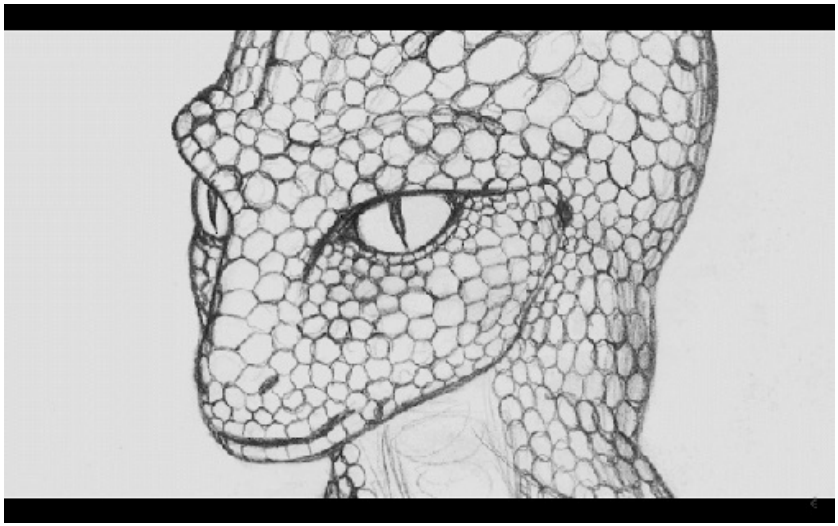
DW – The Vril Society– Maria Orsic.

CG – Right.

DW – Can you tell us what you know about the channeling? Did they form a contact with some sort of extraterrestrial group?

CG – Yes. They made contact with one of the Draco Alliance groups. When they drew a picture of the face – a lot of people today would say it looks like the grey's or the reptoids, which look a lot like the grey's except they are reptilian in appearance.



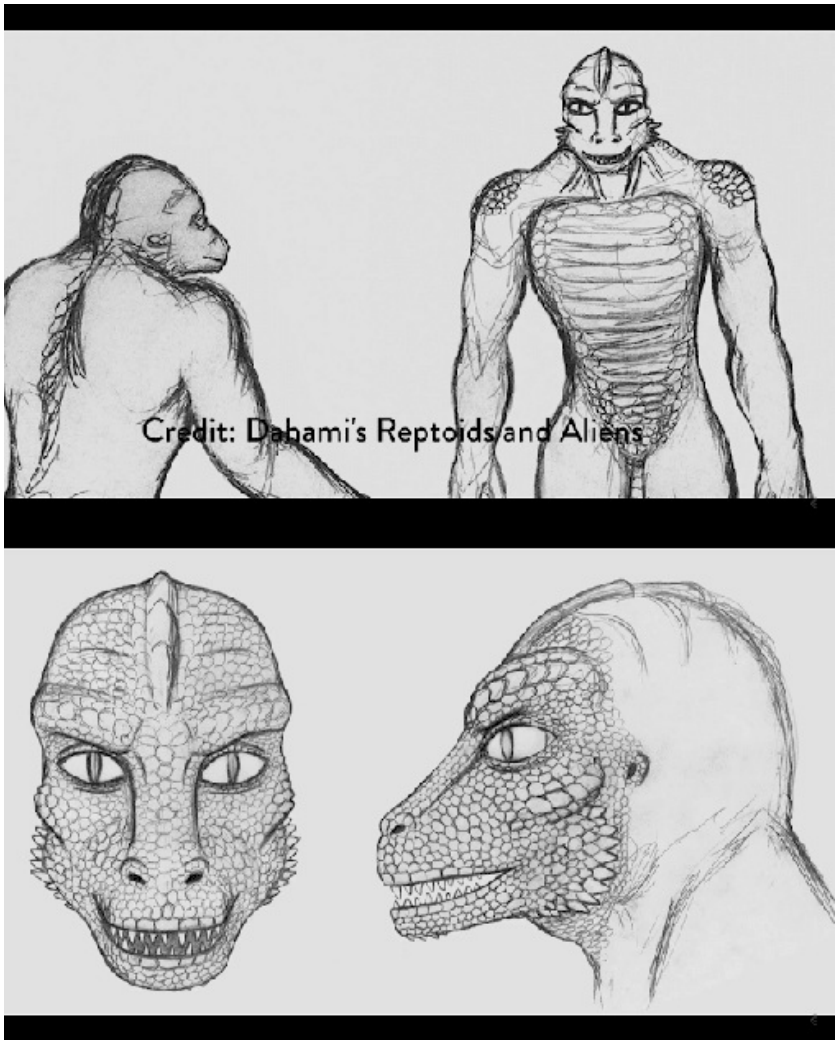


DW – Was that group here already before they made contact, or did the contact draw them over to our solar system?

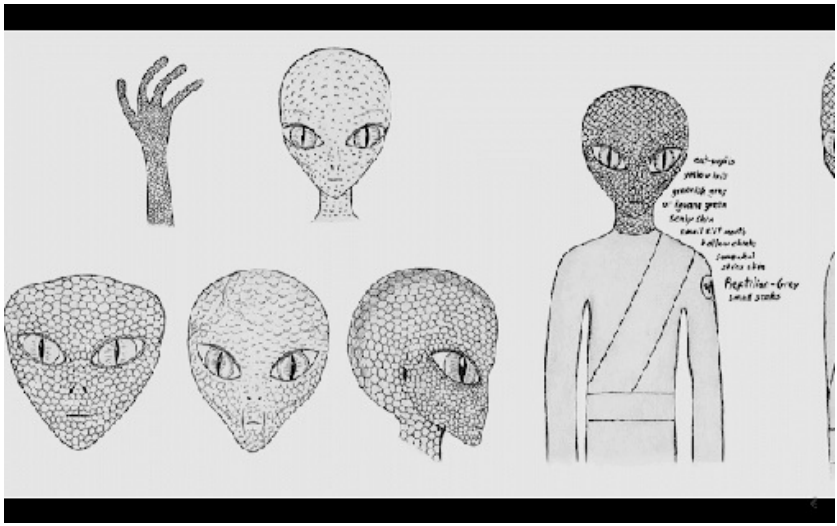
CG – According to the smart glass pad, the Draco had been here for a least the past 375,000 years. They considered the Earth to be theirs.

DW – What do they look like, where are they from, what is their story?

CG – Most people picture them as only large reptilians, but the Draco Alliance is made up of a lot of different races. Most of them have some sort of reptilian blood or genetics.

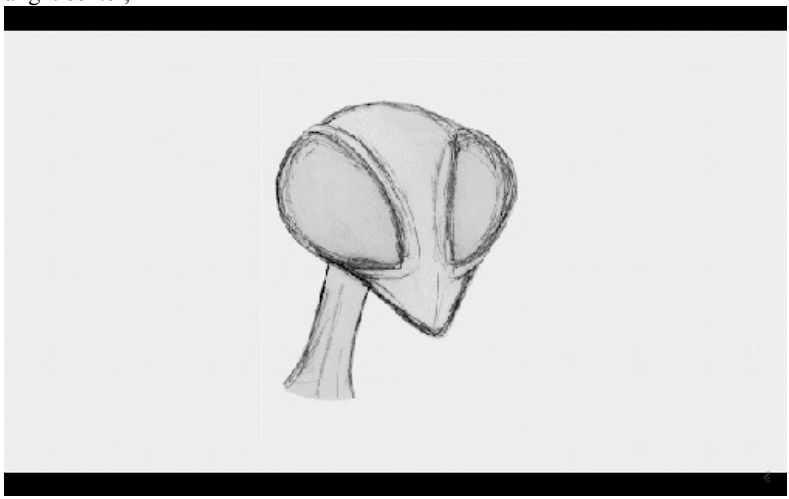


Credit: Dahami's Reptoids and Aliens



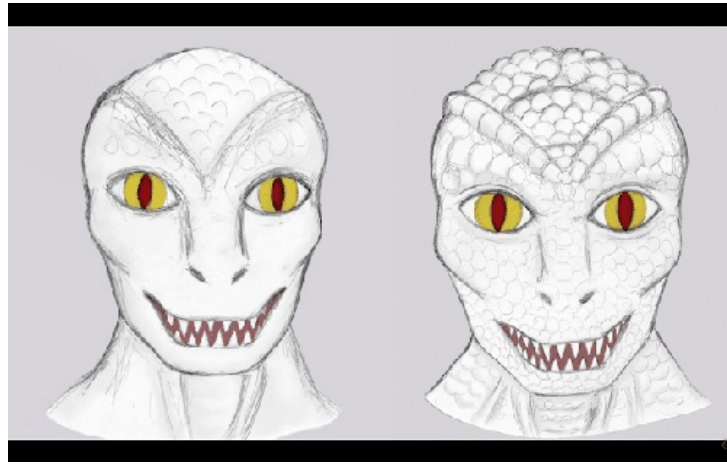
CG – I guess you could say they are genetic purists, they like to have beings involved in their alliances that have some sort of reptilian genetics. But there have also been insectoid-type beings that have been associated with the Draco Alliance.

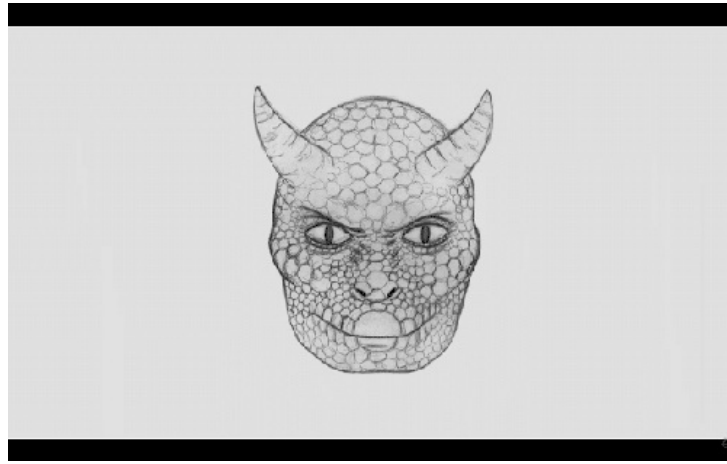
align: center;">



DW – When you say reptilian's your talking about a humanoid body, but with a reptile like appearance to it?

CG – Right. Reptilian skin, eyes, muscular build and disposition (very aggressive), etc. A lot of people probably would picture as a demon. This is probably where a lot of the demon and devil ideas came from in medieval art.

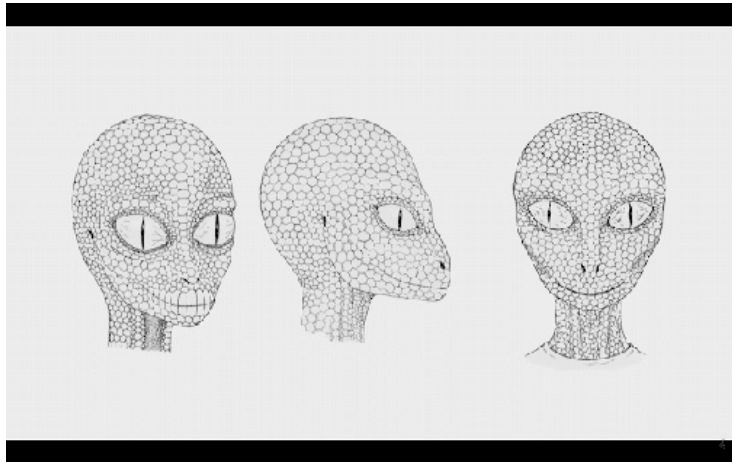




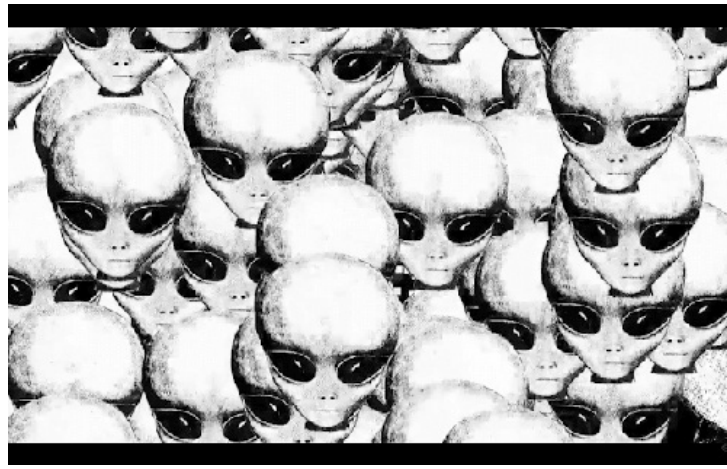
THE TYPES OF REPTILIAN RACES:

DW – You said reptoid as if it was something different from reptilian, can you explain the difference?

CG – Yeah, reptoids have a more narrow jaw, elongated head and eyes that are larger.



CG – They look like what people would think of or picture as an ‘alien’, one you could see stamped on a sign at Roswell; your typical grey.



DW – But there would be a difference between a grey and a reptoid?

CG – Definitely, and there are a whole lot of different beings that are thrown into the grey category. There’s a lot of confusion with grey’s.

DW – Why is the term Draco being used for these people?

CG – I don't know the genesis of the name, whether it came from them or a much more ancient group. I've heard all the stuff on the internet about the Draco star cluster, but I don't know for certain.

DW - And Dracula, I guess this would be another similar thing.

CG – I don't know which came first, kind of like the chicken or the egg paradox.

DW – This starts to get immediately into David Icke kind of stuff. In your knowledge, are there reptilian type beings on Earth that can shape shift to look like human beings?

CG – The only type of shape shifting that we encountered in the SSP was when we intercepted and interrogated a few races, this was done through technological means.

DW – Ok. This idea that the so-called Illuminati are in fact reptilians masquerading as human beings, is not anything you've encountered in your work.

CG – No, not anything I encountered.

DW – Just briefly, we've talked about avians that look human with bird like features, now we're talking about reptilians that look human with bird like features. Is the biome that we have on Earth: single celled organisms, algae, vegetables, plants, mammals, fish, birds, reptilians etc. Is this type of thing a fairly common pattern for worlds that are Earth-like in our galaxy.

CG – Yes, and there's some type of humanoid template.

DW – Right. So different types of beings that we see on Earth could evolve to a humanoid form, depending on the conditions of a planet.

CG – Right.

DW – And your saying the Draco are basically interstellar racists, and found others that evolved out of reptilian or insectoid life; and this is their preferred type of group.

CG – Right, or they genetically interfered with one race or another for their own purposes.

DW – What was their objective in coming here in the first place? What did they want from our solar system or from humans on Earth?

CG – Conquest; to further their dynasty, the Draco Alliance is all about spreading their empire.

DW – So the German occult societies, were they contacted or did they make contact with the Draco?

CG – They reached out and made contact consciously to this group.

DW – Through the Vril Society?

CG – Right.

THE AGARTHA NETWORK:

DW – You also said there was a Nordic looking group?

CG – German secret societies were doing a whole bunch of expeditions, and as they were in the area of the Himalayas they ran into a group of Nordic-looking beings, that presented themselves as alien ET's. They were actually an ancient human breakaway civilization that had existed under the Himalayas for tens of thousands of years.

DW – Under the Himalayas?

CG – Right, and further on in a network of cities connected underneath the ground.

DW – Did they re-occupied the stuff that was built by the so-called ancient builder race?

CG – Yes, but they had actually built out a very sophisticated and high tech infrastructure of their own, being a very advanced race in and of themselves.

DW – But this was one of these underground areas as you said before, that has the bioluminescent bacteria, with trees, running water and its own evolutionary path of animals?

CG – Yes, but theirs was closer to the surface, underneath mountains and cave networks that reached down to that area. They call themselves 'The Agartha Network' according to the documentation. They have a space program called the "Silver Fleet".

DW – This sounds a lot like people who have been contacted by what they think are ET's, the so-called Nordic ET's that we often hear about.

CG – Yes, that happened a lot by this group that pretended to be ET's, and later on, it also happened by this German group that attained a breakaway civilization using technology they obtained from the Draco and this Agarthan

group under the Himalayas.

DW – Do you think these Agarthans are the reason why the Germans became so obsessed with blonde hair and blue eyes; saying it was a master race?

CG – Most likely.

DW – What did the Agarthans tell the Germans about themselves, where did they say they were from?

CG – I believe they said they were from the Pleiades or something like that originally.

DW – Take us now through the origin of the secret space program based on these contacts. First of all, did the Draco and the Agarthans know about each other? Did they get along or have a partnership?

CG – They had an 'understanding'. They weren't allies. The Draco do not play well with others that don't bow before their feet. They had an understanding to stay out of each other's hair and scales. <chuckle>

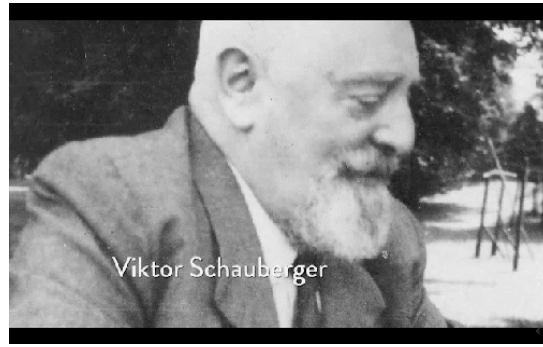
DW – <chuckle> How does this turn into space travel? Who gave the Germans the space travel capability? How did that develop, because obviously their not going to build a space program without space travel.

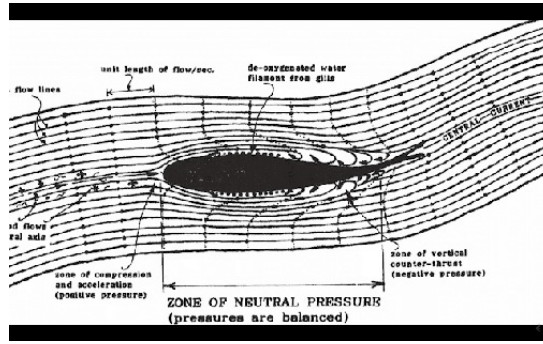
CG – Right, the Germans were very intelligent and they already made some excellent discoveries on their own from observing nature and the fact that, unlike in the west, they didn't separate science from spirituality and some esoteric beliefs. They would actually use some esoteric schools of thought, what we would call magic or black magic, but at the same time they used science. They mixed the two and this gave them an edge.

DEVELOPING ANTIGRAVITY TECHNOLOGY:

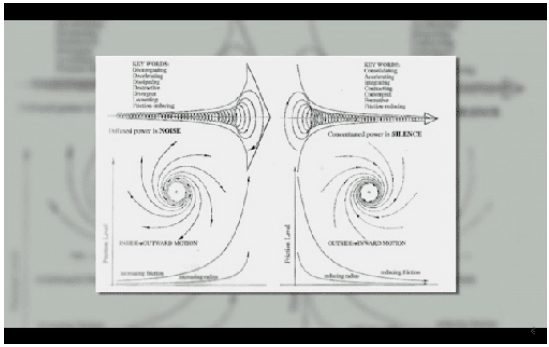
DW – Did you ever come across Viktor Schauberger in any of the documentation that you saw?

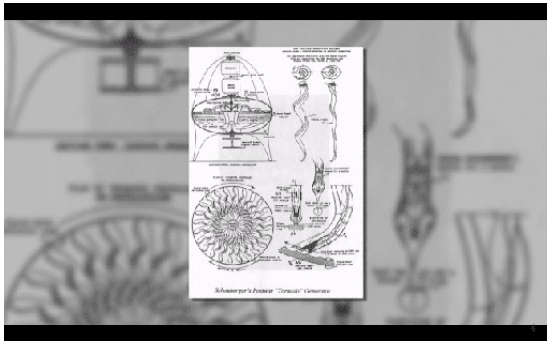
CG – Yes, he originally studied trout traveling upstream and and waterfalls.





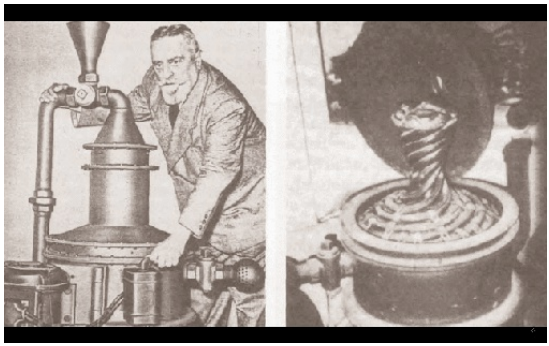
DW – It appears that Schauberger saw that there was some kind of antigravity effect with trout and salmon swimming up a 30 foot high water fall – just kind of gliding their way up.



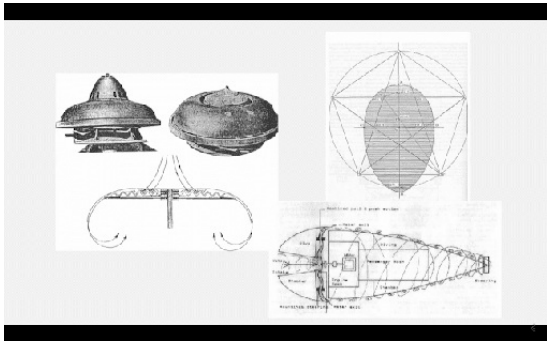


CG – Yeah, ok.

DW – Did you encounter any information that suggested Schauberger was on the right track, that he actually did invent something that was real?

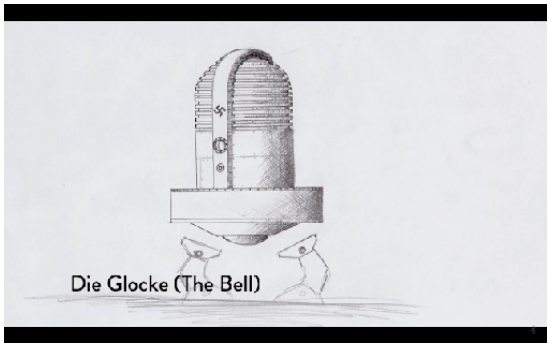


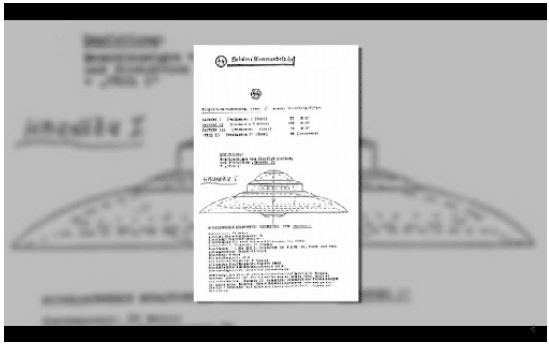
CG – Not only Schauberger but several German, Polish – and I believe other scientists, had some pretty amazing breakthroughs, which was confiscated and brought into the secret societies.

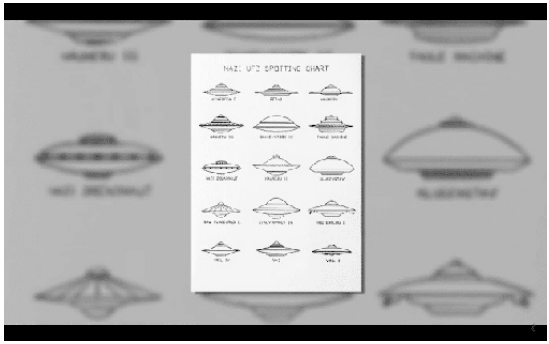


DW – Did the ET groups like the Draco and the Agarthans give assistance to the Germans at some point, so they could perfect what they were already working on?

CG – Yes. The Germans already started to build some pretty interesting devices based on the ancient texts and other information they found on the Vimana, which enabled them to create mercury vortex electrogravitic devices; gravity canceling technology.







DW – What do you mean by mercury vortex, what are you referring to? What would this technology look like if we were going to see it?

CG – A glass cylinder with mercury in it. They would spin it at extremely high velocities…

DW – Like a ring? A glass ring?

CG – A vertical cylinder, or sometimes it was a sphere. But usually it was a cylinder. They would spin it at very high velocities and apply a high voltage to it.

DW – And this causes antigravity?

CG – Yes, and then they started doing counter rotating copper plates.

DW – One of the books that I've read that really gets into the Bell craft is "The Hunt For Zero Point," by Nick Cook. He has done a lot of original research on this subject. To your knowledge, when was the first Bell craft actually constructed and operational – getting at least some kind of effect out of it.

CG – Not quiet sure. I can't remember the exact dates and details of what I was reading, but I do remember it was in the early 1940's. I remember an account about the Bell craft. They had several that were tethered, which broke loose from the tethering and disappeared. It was a scientific process. Supposedly there were scientists that died from some explosions. They had a lot of problems getting this started.

DW – Did they have little propellers that whirled the mercury inside the cylinder? How did they make it move?

CG – From what I understand there was a huge electrical cable that went to the device, feeding electricity to motors spinning at very high RPM's (revolutions per minute), moving the mercury around. The interesting that happened – something that was dealt with later – they discovered that

intense electrical fields applied to the mercury causes it to turn into gold.

DW – Really? Like Alchemy.

CG – Yes, like Alchemy. The mercury in these glass cylinders was turning a coral-looking gold. And this was scene as a problem, creating gold <chuckle>.

DW – Why, why would that matter? Wouldn't they want gold?

CG – No. They needed a golem or liquid metal that could stay liquid at high temperatures and RPM's that would conduct electricity for long periods of time without transmuting. They eventually engineered a different type of liquid metal.

DW – What would happen to the craft if it starts turning into gold?

CG – It becomes unstable and crashes.

DW – Really? Very interesting. Did the Draco or the Agarthans give them direct assistance to make this Bell craft work better, to solve the 'gold problem' as one example?

CG – Yes. After they got to a certain point of technological achievement and on going diplomatic relations with both these groups, they started getting scientific help in the form of liaisons coming in and assisting them. Almost like a scientist exchange program. Once they developed a stable and working anitgravitic craft they started to form more and more of a breakaway society from the German leadership, keeping their activities secret and doing things their own way.

DW – Your saying this is not necessarily Nazi?

CG – No.

DW – It's more the German occult secret societies?

CG – The secret societies created Nazism.

DW – But Nazism broke away from them somehow and didn't adhere to what they wanted?

CG – Nazism was a mainstream control the people kind of thing. This other group within the Nazi organization was more interested in creating their own breakaway civilization that had nothing to do with any groups. They wanted their own civilization, master race, space program – they had high ideas.

DW – In the "Hunt for Zero Point", Nick Cook when he did his research on the Bell craft, said that the Nazi code name for the project was Chronos, which means time. In the book he has a section based on documents he was able to find, that apparently time started to get weird when they began playing around with this. Did you encounter any information of this sort?

CG – Yes, when your playing with electrogravitic technology the veil between time and space thins. So you start to have anomalies.

DW – What would be an example of an anomaly.

CG – Any time your traveling a certain speed, not only are you traveling a distance but your also traveling in time. If they jump from one place to another very quickly, they've not only jumped in space but also time traveled.

DW – Wow.

CG – So it starts to blur, the time and space barrier.

DW – We are all out of time for this episode. But we will continue this discussion because we haven't really even gotten into how these German occult societies made there way into space. I want to stay on this same track. Next episode we're going to take this very interesting discussion and really blow it out into the cosmos. We'll be getting into information that until I met Corey I never really heard it before. This is some of the most heavily guarded stuff. Even the insiders that know what their talking about typically don't want to tell you this data, but we're just going to release it all on this show. As you said the SSP Alliance wants this stuff to come out now. It's a great honor to have you here so we can bring out more and more of the suppressed history of our own 20th century. So Corey, again thank you for being here and I'm glad you decided to do this with us.

CG - Thank you.

Agarthans; Advancing the Frontier Season 2, Episode 2

Cosmic Disclosure; Agarthans: Advancing the Frontier Season 2, Episode 2

22 Oct 2015

DW: All right, welcome. I'm your host, David Wilcock. And it's very exciting to be bringing you this cosmic information, blowing the lid off of government cover-ups, conspiracies, and the lies that have been said for so long. I want the truth. I think you want the truth or else you wouldn't be here. And the truth can require a little flexibility in your belief system, because the more we get into this stuff, the more we find out that everything we think we know is nothing more than a fairytale, and the real world is far more interesting, far more complex, and far more wondrous than we could ever imagine.

And so, Corey, last time we were talking about the history of the space program. And in modern times, you said that starts with German occult groups.

CG: Correct.

DW: You said that there were two major intelligence civilizations that the Germans came into contact with that helped them perfect their bell craft that was an anti-gravity technology.

CG: Right. They were already well underway on their own. And these two other civilizations helped them develop it to a perfected point.

DW: And you said that one of these civilizations is called, or is called in the space program, the Draco.

CG: Yes.

DW: And the other ones are called the Agarthans. And they, you said, were underground in the Himalayas.

CG: Correct.

DW: When did these Agarthans live above ground?

CG: It's not fully known. It was tens and tens of thousands of years ago. They've been underground for many tens of thousands of years.

DW: Did something happen to the surface that they felt they had to flee, like a pole

shift or something like that?

CG: Something-- it was a cataclysm that caused them to go underground. And cyclically in time, Earth has gone through several cataclysms, as modern archaeologists and geologists have shown.

DW: It starts to sound a lot like the Greek gods, where the Greek gods supposedly had blond hair or blue eyes and really didn't seem like very nice people. They were warring with each other. Zeus' thunderbolt, these depictions of weapons in "mythology," quote unquote, sound like a handheld technology of some kind. Do you think there might be a connection between the Greek gods and the Agarthans?

CG: Absolutely. They presented themselves to service to surface populations as though they were gods until we reached a certain sophistication level. And after that point, they started representing themselves as aliens or ETs. And I guess after we became sophisticated to a point to where we didn't believe that everything that happened was magical, we understood technology, they had to change their narrative from one of being gods to one of being extraterrestrials.

DW: You said that their underground civilization was a very advanced city.

CG: Well, a network.

DW: Oh, there's a network of cities.

CG: Right.

DW: Do they have their own transportation system between their cities?

CG: I haven't been there. I don't know. But they call it the Agarthan Network.

DW: What would these cities look like if we were to see one? Did you ever see any images of them or videos of them?

CG: I never saw images or any information other than that they were extremely advanced and self-reliant.

DW: Have they had craft the whole time they've been underground so they could fly around?

CG: Yes. And they have a fleet that they call "The Silver Fleet."

DW: Let's get a little more into the Draco for a minute. I can't help but think you're

saying that the smart glass pads told you they got here 375,000 years ago.

CG: Approximately.

DW: Is there a connection between the Draco and what the Sumerians called the Annunaki?

CG: Some research shows that they were in contact and doing experiments on human beings a long, long time ago, going way back. This is separate from the human-type ETs that are in this super federation that have those 22 different programs. So this could be what Sitchin was talking about as the Annunaki. It was explained very much in detail to me that Annunaki was just a Sumerian term that to us today means ETs, those that from the heaven came, and that it referred to more than one group. But it seems pretty obvious that they're referring to some sort of Reptilian in those texts.

DW: Well, when you actually look at the Sumerian carvings, not only do you see these people who are at least twice as tall as the humans around them, you see Avians. There are Sumerian carvings of human-looking bodies with a bird head stuck on top, which is very interesting. So that would support what you're saying. Annunaki is more than one type of ET.

CG: Right.

DW: Are you aware of there being other Avians out there besides the Blue Avians?

CG: Yes, there's several different types. Some of them are quite unfriendly.

DW: Really?

CG: Quite unfriendly, yeah. But they are more of the 4D, four-density kind of technological level. They're technologically based. They're not higher density, what we would call etheric or spiritually based.

DW: When you see a creepy movie like "Eyes Wide Shut" or other depictions of cabal groups meeting where they wear these masks, it seems like a lot of the masks are Avian masks, meaning that the person is now a human but they have a bird-like head. Do you think those Avian masks might somehow be related to Avians having visited us in the past?

CG: Ancient Egyptians have depicted Avians like Thoth and Horus. And there's been talk of maybe, I think in the Law of One, that a six-density group came down and taught them certain information, and as soon as they left, the group distorted it and created a cult that became negative. And then they became associated with negativity.

DW: That's absolutely right. How right do you think Sitchin got? Do you think that the Draco spliced their genetics with our own to create the Adam or the primitive worker of the Adamu?

CG: I'm not certain if they were the group that did that. I know that there is-- and this is disturbing for a lot of people to think, but we have quite a few different races, genetics spliced in with ours. And there is a small amount of Reptilian DNA that's spliced into human DNA.

DW: The Draco, to your understanding though, have been here the whole time? They didn't go anywhere?

CG: There have been battles on Earth over Earth over some time. There have been times to where the Draco have been driven back and had remnants here. There's been times where the Draco came back and drove other people, other ETs, groups away. There's been a pretty wild history over hundreds of thousands of years on this planet.

DW: Yeah, you see in the Sumerian records the Lamia, which are the serpent people, you have the Hindu Nagas. There's a serpent temple where it's to the serpent gods. Then you have the step pyramids in Mesoamerica where you have these Draco heads on the bottom of the pyramid. Everybody thinks that's just a snake head. You think that these are examples of where Draco had gotten a foothold in Earth?

CG: It could be. There are other beings. There are a raptor kind of being that some people confuse with the Reptilians that are more bird-like in the way they move. And a lot of them have plumes of feathers down the back. They're kind of a mix between Reptilian and Avian bird.

DW: Do you think that pretty much almost anything we could imagine in terms of a humanoid-looking being is out there somewhere?

CG: Pretty much.

DW: So now let's bring this back. And you're opening up other subjects. And I'm not going to abandon those, but I want to stay on topic. Because there's so many ways we can go when we start talking about all this. The Draco may have this connection to the Annunaki, the Sumerian connection. You said they'd been driven away. They came back. These are nasty folks, right?

CG: Yeah, very much.

DW: The legends of like when people are supposedly being sacrificed at these step pyramids-- did they want that kind of tribute paid to them, like human sacrifice? Is

that one of their things?

CG: Yes.

DW: So these are nasty guys. Why would anybody want to work with them?

CG: Well, they're pretty nasty theirselves.

DW: The German occult societies.

CG: And later on, other Western occult societies.

DW: OK, so why would anybody in Germany, or anywhere for that matter, want to work with a group that seems to be negative that is clearly more powerful than they are? What could they possibly gain out of something seemingly so stupid?

CG: Well, technology and also an alliance with the group that once they started going out into outer space, they started running into other groups. And there are other groups that are not so friendly. So they decided to ally theirselves with, I guess, the tough kid on the playground.

DW: What was the role of the Agarthans in the early development of how this transitions from them just having bell craft to actually starting to build a breakaway civilization?

CG: The Germans really took more to the Agarthans.

DW: They did?

CG: Yes.

DW: OK.

CG: They looked more alike, the blond hair, the blue eyes. It kind of went along with the master race.

DW: Are the Agarthans about the same height as us?

CG: Yes, maybe a little taller but pretty much within the same height range.

DW: And what would they be seen as wearing?

CG: They would wear unitards. The Germans later on would wear the same uniforms

and fly around and pretend to be ETs as well.

DW: Really?

CG: Yeah and make contact with people in the '50s and say that we're ETs. We're here for the benefit of the planet Earth and make contact.

DW: Do you know whether the Germans made contact with the Agarthans first or the Draco first? Or was it both kind of in the same window of time?

CG: I believe it was with the Draco first. But they could have started as a slow connection with the Agarthans when they were doing a lot of their excavations in the East looking for ancient writings that had information that talked about Vimana and that kind of stuff.

DW: Did the Agarthans welcome the Germans down into their societies and give them the dog-and-pony show underground and show them all this sizzling, amazing stuff?

CG: It was more towards the end of the war that the Agarthans invited some of the Germans to come to the Agarthan network. They showed them the ancient ruins underneath the ice of Antarctica.

DW: What ancient ruins?

CG: There were some ancient ruins underneath the ice of Antarctica.

DW: For those who are not familiar with this, most people would think that Antarctica has just always been a glacier. So how could you build under a glacier?

CG: No, there are a lot of ancient ruins that are completely crushed by glaciers. There's a lot of underground cities and networks underneath. And there's also a lot that's preserved by-- there's a lot of thermal activity that people don't realize, like volcanism. It's in ice, but it looks almost like lava tubes, huge areas of domed ice. And underneath, there are cities.

DW: And the temperature from the volcanic activity keeps it warm enough that you can live their comfortably?

CG: Right.

DW: Well, that's sort of like the Eskimos building an igloo, right? It's really cold outside. I did that in Boy Scouts. You build a snow fort. It's called a lean-to. You dig

into a snow bank on the side of a tree, your breath immediately starts to melt the snow. It turns into ice, and even though you're surrounded by ice, you're like very warm and comfortable in there.

CG: Yeah, the stored-up thermal energy in the ground comes up.

DW: So just to clarify, though, are you saying that some kind of Earth crustal displacement or actual physical movement of the Earth's rotational axis took place so that what we now think of as Antarctica at one time was a habitable land?

CG: It was more like Australia more than likely.

DW: Really? And you're saying that there was some settlement on that land before whatever this event was that took place?

CG: Right, there was an ancient civilization there.

DW: Is this the Atlantean flood, the 13,000-years-old catastrophe, as far as you know?

CG: This is much older.

DW: It's much older than that.

CG: Right.

DW: Really? Do you know what the time frame was?

CG: No. I know that people at first thought that this was the Agarthans' original home. But the information that I read was that it was much too old to have been their home.

DW: Wow.

CG: So I don't know. It's been a long time since I read it. So I don't know the age differences that made it impossible for it to have been their original home. But they were obviously aware of its existence.

DW: Well, I'm hearing the bleeding of some sacred cows being slaughtered here.

CG: Yes.

DW: Is this ancient builder race? Is it that kind of old, like millions of years old?

CG: No.

DW: Oh, so something in between.

CG: Right.

DW: What did the Germans see? First of all, had anybody been to Antarctica before this? Was this like the first time in modern times with modern humans? I guess there have been a few-- there was Cook, right, who went there or something?

CG: Yeah, I think there have been a few expeditions there. But this main city, there were three occupied cities under the ice. Two were--

DW: Occupied?

CG: Right.

DW: In Antarctica.

CG: In Antarctica.

DW: When the Germans got there, they were already occupied?

CG: Well, one was somewhat in disarray. But it was perfect for their U-boats to come up under the ice and come up in a cavern area.

DW: The U-boat is a submarine?

CG: Submarine. And it was perfect for them to build out from there. But there were two other cities further inland that were already occupied by other groups. I don't know who these other groups were. But they ended up being allied with these Germans.

DW: Really? So did the Agarthans tell them where to sail? The Agarthans already had identified this?

CG: Right.

DW: Why would the Agarthans need the Germans to develop something when they have this vast Agarthan network of all these underground cities already?

CG: Well, they invited some of the Germans to come into their Agarthan network. But they assisted with the treaty they had. They assisted the Germans in locating areas in Antarctica and in the east part of South America to create underground bases and also above-ground cities that were almost entirely German.

DW: So would this sort of be like a signing bonus that the Germans get, like some of the things that the Agarthans knew about but they didn't like that much, maybe their less hospitable areas, and the Agarthans just sort of gave it to them as a carrot?

CG: I think it was just a part of their treaty.

DW: Right. The Agarthans hadn't developed out these places before? They were largely abandoned, like the one place in Antarctica you're talking about?

CG: Yeah, the Germans developed them out.

DW: And you said that when the Germans got there, it was in disarray. So just talk us through. The U-boat goes under the ice. It pops up. You say it's warm in there because of volcanism. It's like a dome.

What do they see when it pops up? Is there grass? Do you actually have a biome? Do you have some life forms? Or is it all just really icy and cold?

CG: I'm not exactly sure about all the fine details, but I know there were a lot of structures that were abandoned. Some were damaged. And it was just in disarray. And there was already an underground complex that they could reoccupy and refurbish and set up.

DW: Structures could be just about anything. Are we dealing with like ancient builder race type stuff, like pyramids?

CG: Not that old, no.

DW: What would these structures look like if we were going to see them now?

CG: I don't know. I have not seen images of them. I just saw text.

DW: How advanced was this technology? Are we dealing with like pueblos?

CG: It was advanced building structure. But there was not advanced technology there. It apparently had been picked over.

DW: When you say advanced building structure, you mean superior to what we have now with like Manhattan skyline and skyscrapers?

CG: Well, superior to what they had then, at least, in the reports that were written up during that time period.

DW: How much of a detachment of personnel did the Germans get down there to explore this? First of all, I guess do you know how big it was, how many square miles?

CG: No. They had a fairly large detachment-- I don't know how large-- of people in Antarctica and in Argentina, Brazil, all spread out in South America, that word resupply the Antarctic base. They had infrastructure and a network that they set up down that they put quite a bit of effort into setting up.

DW: Did they largely use submarines to get to this Antarctic base so they could avoid detection from the air?

CG: Well, it had to be reached from submarine or from their highly advanced aircraft.

DW: OK. The Agarthans, you said, also directed them toward South America. Is this ancient builder race type stuff? Or were they just settling in the jungle and building up their own little place in the jungle?

CG: In the jungle and in caverns.

DW: Caverns from the ancient builder race?

CG: Not ancient builder race, just caverns that they built up themselves with their own infrastructure.

DW: So nothing ancient or interesting about it.

CG: Right. That was completely building up with their own resources.

DW: OK, so did the Antarctica come before they ever left the planet to go anywhere else to start building anywhere else?

CG: Well, they were already starting to leave the planet. But that came as it was becoming obvious that the Axis powers were going to lose the war.

DW: The Antarctica came?

CG: Right.

DW: So they needed like a place to hide, and that was their best bet?

CG: Right. So they started building that out years in advance. They knew that the war was going to go badly years in advance.

DW: So with a combination of technological endowments from the Draco and the Agartha, the Germans perfected their bell craft. Because you said they're not really Nazis, right? It was the German occult societies.

CG: And the bell was not a craft. It was more of just like an engine.

DW: Oh. That's the shape of the engine is the bell.

CG: Right. People couldn't get inside the bell. Yeah, but sorry, go ahead.

DW: Where did they go first? And what did they find that was interesting?

CG: First, they went to the moon. And they had a couple failed attempts at building a base. Finally they found--

DW: Wait a minute. How much of a fleet of these bell craft did they have?

CG: Quite a few.

DW: Thousands?

CG: No, no, probably less than 100 in the beginning.

DW: Were any of them large enough to carry a decent amount of cargo with them?

CG: Yeah, they had several different sizes. I think there were three different sizes.

DW: What would the largest size be?

CG: I think 90 feet across, I think.

DW: So you could hold a pretty good amount of stuff in there.

CG: Not a whole lot with the amount of room that they had in the area. But in the 90-feet ones, it was a lot more than you could include in the ones that were like 24 feet or something. I can't remember the exact dimensions.

DW: Now you said before that the Super Federation folks who have been running 22 programs to tweak our DNA and mix their genetics with our own, that there's a huge settlement on the dark side of the moon where everybody has their own diplomatic region and boundaries and all this.

CG: Yeah, multiple settlements.

DW: So why wouldn't those folks just want to blow up the Germans if they're showing up and trying to find territory on the moon themselves?

CG: Because the Germans built in a diplomatic area of some allies they've made.

DW: Really? Would that be the Draco?

CG: I believe it was most likely the Draco.

DW: So it was because of some sort of complex treaty that the Germans were able to do anything at all?

CG: Right.

DW: You mentioned these Agarthans working with the German occult societies I guess in the 1930s and on into the 1940s. Are these Agarthans still here today?

CG: Yes, very much so. They presented themselves as ETs to the secret space program, and the secret space program figured out that they were not what they claimed round the late '70s, '80s time period. I think it was maybe in the '70s. And they pretty much stopped pretending they were ETs to the space program, because the jig was up. But they're still presenting themselves as ETs to a lot of people on the surface of the planet.

DW: Do they have a seat in this Super Federation Council? Are they one of those--

CG: No.

DW: Oh, they're totally different?

CG: Right, there's a different group that is very similar to the way this group looks. But they are indeed very much taller. They don't look like our average size. But they have a little bit larger foreheads but do look very much like the Nordic kind of look.

DW: What's their height?

CG: Around the 10-foot, 9-foot range.

DW: Wow.

CG: So there's a difference.

DW: Do the Agarthans meet with other intelligent civilizations? Or do they pretty

much keep to themselves? What's their role in today's extraterrestrial geopolitics?

CG: They have alliances with other ancient breakaway civilizations. We're not the only one. And they have alliances with ET groups.

DW: Well, we're just getting the surface scratched here. Obviously this question of the development of the space program is going to take more than two episodes to complete. But as long as it's interesting, which it certainly is, I'm happy to keep this thread going. So we've talked about a lot of fearful stuff. And could you just again help reassure people who might not have seen other episodes? Do we need to worry about these Germans or these Agarthans or these Draco? Are we just like filet mignon waiting for them to come pick us up?

CG: No, the damage is already done that they were going to do. There has been a new group that's moved into the solar system, and they are pretty much neutralizing any of their attempts to start any large-scale problems. And any type of fearful stuff you see on the news, I would disregard. There's more of a positive future ahead of us if the secret space program alliance and the sphere alliance has their way.

DW: We don't want fear, right? This is what these negative groups have been trying to do is generate fear.

CG: Right.

DW: And it turns out that there's now very effective countermeasures to stop them from being able to achieve their goals.

CG: That's right.

DW: Excellent. Well, Corey, I want to thank you for being here. As always, I want to thank you for watching. I'm just trying to get my head screwed back on. This is really wild stuff. And we'll be back next time with more of the history of the secret space program, more about the development of colonies on the moon, colonies on Mars. So stay tuned.

The Gonzales Enigma Season 2, Episode 3

Cosmic Disclosure; The Gonzales Enigma Season 2, Episode 3

22 Oct 2015

DW: Welcome to the world of the shocking, the bizarre, and the seemingly unbelievable Cosmic Disclosure. I'm your host, David Wilcock. We're interviewing Corey Goode, the insider's insider, a man who has as much knowledge crammed into his brain as all the other insiders I've met put together. Truly a fascinating conversation that we're having. Corey, welcome to the show.

CG: Thank you.

DW: We were talking about Lieutenant Colonel Gonzales, who is a mysterious figure that has aroused a great deal of curiosity on the internet. Some people are saying that he's about to come forward. Is that true?

CG: No, there's no plan for him to be coming forward any time.

DW: OK. People on the internet are thinking, well, we just want to see another guy who knows what Corey knows. Why is it a bad idea for Gonzales to come forward?

CG: He is-- he has a cover life here on Earth. He isn't down here very often. If he was to expose himself at this point, it would be very dangerous for him and the operation. He doesn't have any children or family, and some would think that it would be, I guess, safer for him to come forward than me with having a family and children. And I agree to a certain point.

DW: So the Blue Avians obviously have been assisting Solar Warden trying to break out cosmic disclosure for humanity. What's the history of that? What's the history of them contacting you? Because I certainly remember that very amazing day, February 27, 2015, when you told me in a Skype text that the Blue Avians had asked for you by name from the space program alliance. So what's the history here?

CG: As you remember, I was telling you that I was in contact with a being that I wouldn't go into details about, I wouldn't even describe to you.

DW: And I respected you for that, but it was also something that made me extremely curious, that with all of the really outrageous stuff you were telling me, why is he holding back on this? About all I knew was that they were blue, and that was it. I think that's about the only thing you ever said, and that it had something to do with your family and your kids.

CG: Right. And that much I still can't talk about.

DW: Right.

CG: But this--

DW: When did this contact happen with you?

CG: It goes back four years.

DW: OK. So four years before 2015 would be 2011, thereabouts. OK.

CG: And it turns out that Lieutenant Colonel Gonzales has been in contact with them for about the exact same timeframe.

DW: So around 2011 as well?

CG: Mm-hmm. And he had been in a liaison role between the Blue Avians and the Solar Warden-- well, the SSP breakaway faction that included Solar Warden. It's not just Solar Warden.

DW: It's not just Solar Warden.

CG: Right. A lot of people have been putting out that it was just Solar Warden. It's kind of a conglomerate of defectors from the different space programs.

DW: Right.

CG: And he had been presenting information from the Blue Avians for some time, and then all of a sudden out of the blue, they give him my name and information, and he comes to the SSP council, alliance council, and says, the Blue Avians have chosen this guy to be their delegate. And they were not happy at all about it. They wanted Gonzales to be the delegate.

DW: Without getting into any incriminating detail, what would this cover life be like? Does he have a house? Does he have a car?

CG: Yes. Lives in a house in a rural area.

DW: So people he would tell if he meets somebody that he has a particular job, and there's a whole cover story worked out where that job does exist and he could go there?

CG: Yes.

DW: Right.

CG: I'm very reticent to say anything more.

DW: Oh, no. Absolutely. There's just been this current on the internet of people thinking he's about to join us on a radio show or something, and we needed to specify that that's not about to happen. So you're saying the Avians contacted you and him in 2011. Was this before the new influx of 100 or so visible spheres of the size of the moon Neptune and Jupiter? Was it around the same time? Was it a little bit before?

CG: This was-- it was occurring before, and it was during the influx.

DW: OK. So it kind of seems as if there's a major push being made and that one of the initiatives was to move the spheres in, and another initiative was to grab these delegates starting with Gonzales, and then once you were apparently ready for this job, that then you were also invited in.

CG: Right. I was being prepared, but I had no idea I was being prepared or what I was being prepared for. I was still coming to terms with a lot of my past of what I had been involved in, and when I had gotten to the point where I had come to terms with it, I was dealing with the Blue Avians with some of that information.

DW: So when this contact first happened in your case in 2011, did you actually see them like the Android Jones illustration that we have? Were you seeing these beings, or was it like a blue sphere? What were you actually experiencing?

CG: They first introduced themselves to people in dreams, in a very lucid dream. And then they appear to you physically after they have prepared you through dreams.

DW: Which is exactly what they say in "Law of One" is the same contact protocol.

CG: Oh.

DW: Yeah. Now they say in "The Law of One" that they discontinued most physical contacts because the people that were getting them would get a big ego and would be worshiped by others as some sort of messianic figure. And one of the things about your story that has really fascinated me is that that prime directive sort of free will clamp-down on in-person contacts seems to have been lifted because of the need of the moment, because we need to get jump started into this golden age, and we need some help getting there.

CG: And after every meeting, I'm heavily warned about ego-- my own ego and this information becoming cultish or religion which it's not supposed to be by any means.

DW: Let's go back to that moment again, and tell us, what did it start with? You said it started with dreams. At what point were you aware that you were in contact with what you're now calling Blue Avians?

CG: I was very aware in the dreams, but it wasn't--

DW: Did they look the same as the illustration in these dreams?

CG: Pretty much. The illustration that is out is not perfect yet, but yes. That's the way they appeared in the dreams--

DW: In the dreams.

CG: --and in person when they finally did appear.

DW: Dreams, a lot of times, will have very odd metaphorical symbolic impossible things going on. You'll look over here, and then you look away, and then it's changing. So did these dreams seem to have that type of symbolic nature, or was it more like a lucid contact?

CG: It was very lucid, very real, very tangible. It was different than any type of dream that I had had before.

DW: So we're getting lots and lots of people on the internet who are trying to say that they've jumped right into this story line with you, that they're having the same contact that you're having, and they're trying to portray themselves as authority figures and act as if their information should be considered equally. What is the way in which most people are being contacted? Because it seems like a lot of these are fraudulent. They don't really line up with what you're hearing. What is the way that most people are being contacted? What is a type of experience that might occur?

CG: Most people are being contacted having experiences with the blue orbs, which is-- the blue orbs are actually the highest density of the sphere being alliance. So I mean, they're higher density than the Blue Avians, but everyone seems to have locked on to-- I guess the Blue Avian, there's something romantic about it. People have locked onto it. But most people are having experiences with the blue spheres.

DW: What would that involve? What's actually happening?

CG: Usually a blue sphere or spheres appear to people and zip around or stop in front

of them and pulse, and people receive either a message they remember consciously, or they just think they just saw a very cool thing and don't understand that they received a message subconsciously, or their higher self received a message. And they're receiving a message from these higher density beings for future reasons.

DW: Well, this is really mind-blowing, and we've talked about this privately, but I want to get this on camera. It is going to involve a little bit of self-disclosure and a little monologue from me, but it's very important. I had read "The Law of One" and the "Seth" books. Both Carla Rueckert and Jane Roberts, the channels of two of the best channels in modern times in my opinion-- both had these blue orb visitations very clearly delineated in the books. I was so aware of it that I was frustrated and said, why haven't they done that with me? Because one thing it says in "The Law of One" is that they will try to get to you telepathically. They don't want to have to do an in-person contact if they can avoid it. If they can get you involved like they did with me telepathically, that's better. So one day I'm in North Carolina visiting a friend. I'm meditating in a field. I see a UFO-- first time I'd ever seen one. It goes behind a cloud. The cloud goes away. It's gone. But because I'm meditating, I'm just like, OK. Well, now I've seen a UFO. Big deal. The only other thing I want-- and I said this is like a prayer-- the only other thing that I wish would happen that hasn't happened is I want an orb of light to appear in my room and give me an intelligent message just like what happened to Carla and what happened to Jane Roberts. Then I called my father a couple days later, and it turns out that my brother was on the other line at the same time. And he patches us both in together. I said, Dad, you realize this is synchronicity, right? He's like, oh, oh. Then my brother says, after I talk about my UFO sighting, said, well, that's funny. Something weird happened to me too. I said, what's that? He said, this orb of light appeared in my room and gave me an intelligent message. And in his case, he was meditating, and his head actually dropped back, and then he saw this orb appear near the ceiling, and it spread out to about four or five feet wide, and it was like a vortex tunnel. It was an actual stargate in his ceiling pulsing, and we have a whole article on my website from 2001 called "David's Brother Receives In-Person ET Contact." And it gave him a message, and it said, the ascension that your brother is writing about will not happen all at once. It will be a series of increasingly uplifting inspirational experiences. You have had the first of these experiences, which was mind-blowing. So how do you think-- how did that strike you when I told you that my brother had this experience back in 2001 that was already in print on my website?

CG: I had no idea, but there are many, many tens and now hundreds of thousands of people that are having these experiences right now.

DW: Has Gonzales had this type of thing too? Is that part of how it worked for him?

CG: Yes.

DW: OK. What is Gonzales's role at this point? What's the difference between how he got contacted and how you got contacted? He was in the space program when this happened.

CG: The contacts happened exactly the same way, and he has been named a secret space program delegate. He's a delegate between the secret space program and the Blue Avians. I have been named a delegate between the Blue Avians and the secret space program alliance and a whole of the other groups they want to meet with but will not meet with one-on-one. And I have been put in the situation to meet in all these different federation council meetings, and he has accompanied me to several of these.

DW: Have there been trips that you've taken up into space since this all started that did not involve Gonzales, where you never saw him?

CG: Yes, but most recently, he's been very much a part of them. And when I was out here doing the last shoot at Gaiam, there were two extremely important meetings that were time-sensitive that he had to stand in, and one was with the Draco Federation Alliance, and that was a very traumatic meeting for him. But the second meeting was much more awe-inspiring and pleasant for him. And this was with the super federation of 40 main groups of ETs that were involved in these 22 different genetic and other experiments going on with humanity. And there were 20 other, making 60 groups, that are overall involved in this grand experiment.

DW: And this is some of your earliest experiences in space, right, was being a part of this? So just to briefly recap, what did you originally do when you went to these super federation conferences? How old were you, and what was your job?

CG: I was very young. I was barely in my teenage, pre-teen age years, and I was in an intuitive empath role, which now each of us, when we arrive, we have three intuitive empaths with us that intuitive empaths are there to detect deception or danger. And that's what I did, but now when Gonzales or I go to these meetings, we have that type of support for us.

DW: Were the beings in the super federation aware that you were there to detect deception?

CG: Yes. They all have this type of role.

DW: OK.

CG: I've described the large shuttle vessel that is modular. It can be changed for any type of mission. It's about 50, 60 feet long, and this vessel took him and his support

team out to an area that's around the gas giants, usually in between-- around Jupiter and Saturn. And this is an area that you would not be able to see with a telescope it's inside a temporal distortion bubble, and you enter in this distortion, and you exit in the exact same place you entered from.

DW: Just like the fairy ring.

CG: Right.

DW: Yeah.

CG: And when you enter in, it is completely black. You don't see any stars. You don't see the sun. You don't see any planets. Completely black.

DW: Does the sun-- nothing is visible at all.

CG: Nothing. All you see is the station that the council meetings take place at.

DW: And what about other people's ships?

CG: You'll see other ships going to the dual docking arms, so his vessel docks. Him and his crew get off, and this is the first time that he had been actually acknowledged because he had been there basically in a support role before with me, and they had only acknowledged me because I was there as the delegate.

DW: Can you just help us out here-- the visual like this is a movie now? What are we seeing? Is it like a whole city? Is it a structure that's just big enough to hold the council, or could there be a lot of other stuff going on in it?

CG: Yeah, it's an extremely advanced space station. And as he exited the ship and started walking down the passageways towards the main hall, the main federation council hall, he was walking, and people were acknowledging him for the first time, and there's a main foyer area to where people meet and greet before they walk into the main hall. And when you walk into the main hall, everyone sits is kind of like a horseshoe shape, and there's a main chair that's elevated, and then three chairs are lowered, and there's a rail that goes around.

DW: So there's one horseshoe for each of these 40 groups?

CG: For each delegation. And then the delegate sits in the chair, and then they have one advisor that usually stands to the back left. In this case, the room was extremely crowded. They knew that there was a big announcement going to be made, so it was like standing room only. They had extra delegation chairs for the full 60 group was

there. And then they had seating and standing room area for a whole bunch of others.

He said that he was very excited to sit in his chair, because before when he had arrived, when I sat in the chair, it had operated like a universal translator to this universal strange ET language that was very monotone, and no one else heard or understood. And so he sat in a chair, expected some sort of weird sensation, but nothing. But he sat in the chair, and a being came up and made the announcements.

There was one of the beings that we're very familiar with that-- pumpkin-colored skin, large blue eyes, has a ridge that goes from ear to ear, very tall that wears kind of like a monk's type of robe-- and introduced him, announced for him to come to the front. And he went to the front and made an announcement that many were hoping to hear, that the inner barrier around the Earth was going to be relaxed so that many of the ETs that were trapped on Earth that were benevolent, that were here studying our oceans, studying our jungles could care less about humanity, that were just here to study our ecosystem, that were having a lot of problems being stuck here for so long, being stuck on earth.

DW: They were running out of supplies or--

CG: They were having all sorts of problems. They could then rejoin their support teams that were waiting for them outside the Earth's orbit far away. And the IEs all said when this announcement was made, there was a huge relief felt in the room. So he made the announcement that they were going to go back to the old style of grid patrols and kind of like an air traffic control of allowing people to come and go.

And then he went back and sat in his chair, and then the typical thing that happened when I was at the meetings. Each of the 40 groups just went to the front and did like a real short two-minute synopsis of how they have contributed to humanity and the grand experiment and why they are so great, why they've done what wonderful things they've done, and then they went back and sat in their chair one after another.

And then afterwards, they returned to their shuttle and returned back to debrief.

DW: What is it that these beings think they've done that's so valuable to us?

CG: They think that this grand experiment has been a great contribution to the entire galaxy.

DW: To the galaxy?

CG: Yeah, and beyond. They think it-- the Blue Avians have stated that even though some of these beings are very benevolent in our eyes, that they are still agenda-

oriented and, therefore, a certain percentage service theirself.

DW: Are they seeing us as like a master race, like they're trying to mix up the ultimate human?

CG: There's like 22 agendas, and some of them are competing. And then also, we have the Draco agenda and all that, so it's very complicated.

DW: How could we benefit the galaxy though? I'm not sure I'm getting this.

CG: When you say "we," you're talking about this flesh and blood.

DW: OK.

CG: This is also a spiritual and a much larger experiment than most people realize. Some of these beings are incarnating as us.

DW: That's one of the programs, you're saying.

CG: Part of one of the programs. So some of these people that are starseeds or wanderers, and there are some of these groups here.

DW: Well, "Are You a Wanderer?" That title is our most popular "Wisdom Teachings" episode, and we have a questionnaire on there that you can watch that has details on if you have these characteristics, if you can answer these questions, then you're most likely an ET soul.

CG: And most of the people that are being contacted by these blue orbs are starseeds, are wanderers, and these cabal groups, I guess for lack of a better word, are very, very interested in starseeds and co-opting them and using them for, I guess, the dark side.

DW: So what is the cabal doing to try to find these wanderers and starseeds? What is their modus operandi?

CG: Well, they have many different ways, but with me, it was using standardized testing in schools. They constantly have people out there that are on the lookout for people with certain signs that show certain abilities, and then they find ways to further test them and see if they meet criteria.

DW: These people don't consciously remember in their physical incarnation that their past life was extraterrestrial.

CG: Right.

DW: They are bound by rules, where they have to play human and seem like they're just another ordinary person.

CG: Right. And the blue spheres visiting these people-- this is a part of an awakening experience. These people are going through an awakening right now as to what their role is, what their mission is in this lifetime, why they're here.

DW: Is this super federation aware of the energetic change that's going on with the sun, these tsunamis of energy you're talking about?

CG: Very much so.

DW: What's their involvement with that? How do they see that?

CG: Many of them had planned on being out of here when this happened for whatever reason, and that was the purpose of the outer barrier was to keep everyone that has had anything to do with the tinkering of our biosphere and humanity here, not to let them escape.

DW: Well, there is a line in "The Law of One" where it says that when this quantum leap takes place, if you're not ready to go to fourth density that your third density electromagnetic body will fail due to incompatibility. So that line would suggest that if these people are too heavily third density, and they're not pure enough to be able to go through this transformation that it would actually be like a death sentence for them-- crispy critters.

CG: Right. And a lot of what these ETs and the Blue Avians-- a lot of what they believe and work off of is what I hear in natural law and "The Law of One."

DW: What is natural law exactly?

CG: I'm learning a lot of these things. In the beginning, when I first started contacting you, and you were telling me-- I had heard, read a little bit about "Law of One." I still-- I need to learn more about "The Law of One." I need to learn--

DW: The Blue Avians told you to buy the book, and I saw it in your room.

CG: Yeah, and my wife has been reading it.

DW: And it hasn't even been cracked?

CG: No, my wife is almost through reading it.

DW: OK. She's a very clean reader then, because it looks brand new.

CG: Yeah. I haven't even read it. So I'm not doing exactly as well as I should be doing and learning some of these things.

DW: Wow, but you've done an amazing job risking your life coming forward. We're going to have a lot more to talk about. I'm your host, David Wilcock, and I thank you for watching because you need to know the truth.

Cosmic Disclosure; Breakaway Begins Season 2 Episode 4

Cosmic Disclosure; Breakaway Begins Season 2, Episode 4

22 Oct 2015

DW: I'm jazzed up for this episode. Welcome back. I'm your host, David Wilcock. And we are delving deep into the world of cosmic information, the most highly classified stuff you could possibly get your hands on. It's been jealously guarded behind so many compartmented layers of secrecy that it was just never available before now. If you've been following our narrative arc and you've been watching through previous episodes, we've already covered some really incredible stuff. We discussed how the German secret societies as early as the 1920s and on into the 1930s formed diplomatic and political relationships with two different intelligent civilizations, one known as the Draco, which appear to be a various confederacy of reptilian-looking humanoids, and the other being the Agarthans, which are Nordic-looking people-- in other words, blue eyes, blonde hair, humans about our height, maybe a little bit taller, who presented themselves as being not from this world but as he revealed are, in fact, people who were originating here on Earth and due to catastrophic events, had to go underground. So now what we've been discussing is how this alliance formed and how Agarthans and the Draco allowed the Germans to be able to have the little extra help that they needed to make their way up into space. We were just starting to get to some really good stuff last time, and now we're back to continue the story forward. So Corey, welcome back to the show.

CG: Thank you.

DW: I'm just trying to keep my brain in my head here because the stuff that you're telling me-- what is it like to get brought into this world and to learn all these things? If you are walking around in society and you know all this stuff, what's it like to see people who think that we're alone in the universe and to think that this is all there is and there's no life after death, all this kind of stuff? What's it like to live in this world?

CG: You get used to it. You see people looking up at the moon, and I look up at the moon, and I look at it totally different than other people. You grow accustomed to it.

DW: So we were talking about the history of how our space program got developed, and this subject of the Agarthans is really fascinating. It seems to connect so many dots. When Graham Hancock wrote "Fingerprints of the Gods," his hypothesis was that you have these blonde-haired, blue-eyed, Aryan-looking people who show up in boats to all these various indigenous cultures all over the world, present themselves as gods, and teach them things like how to create a water wheel, and then use the water wheel to start grinding grain, and how to do metallurgy, mathematics, astronomy. Do you think the Agarthans had a lot to do with rebuilding our societies in the aftermath

of some sort of catastrophe?

CG: Yes. Yeah, that ancient breakaway civilization did, and there were others that did the same thing.

DW: So these Agarthans, you said, were a lot more favorable to the Germans because they looked more like us. And this is where they got this master race concept from, you believe?

CG: Either that or they were favorable to them because of their proclivity to a master race. I don't know which came first.

DW: So did the Agarthans fly with the Germans in their bell craft?

CG: Well, the bell was actually the engine component, or the component that caused the electrogravitic field. The craft were actually larger saucer-shaped in the beginning.

DW: What were the craft called in the documentation that you saw?

CG: When the Americans actually got their hands on them, they termed them ARVs, Alien Reproduction Vehicles.

DW: Well, just to loop back to my question because some people are going to be left hanging if you don't answer this, did the Agarthans ride with the Germans in these craft?

CG: Yes.

DW: Really?

CG: Yeah.

DW: Was this a frequent thing? Were they usually supervised and didn't just go by themselves?

CG: In the beginning.

DW: What was the size, you would estimate, of the Agarthan population? Are we talking maybe 10,000 people, 100,000 people? How big is it?

CG: I don't know. I know it was very large because it was a network.

DW: Really?

CG: This was a network of underground cities. In the Himalayas, that was the closest-to-the-surface city, and that seemed to be where they came and went from the most from the surface.

DW: Wow. So the Agarthans introduced the Germans to this ruined area that was under the ice in Antarctica. And you said that there was some underground development as well as on the surface.

CG: Right.

DW: Are we talking like basement cellars? Or how much underground infrastructure did they have down there?

CG: It was basically the same kind of underground caverns that had been built out by another civilization in ancient times.

DW: So it's pretty extensive?

CG: Yes.

DW: We're talking multiple levels down?

CG: Right, just like the description I gave to you one other time about the further you go down, you have kind of a honeycomb structure of caverns deeper under the Earth.

DW: Let's just jump to that for one second because I think a lot of people are going to have some trouble with that in the idea that, at least in conventional science terms, there's an understanding that the farther down you go into the Earth that the temperature is going to steadily increase. So wouldn't these people just be burned alive in some kind of super oven?

CG: That is the case for certain areas and depths. And then after those certain areas and depths, it begins to reverse.

DW: You actually get a cooling effect.

CG: Right. It gets exponentially less pressure and less heat, just as it exponentially gets hotter and more pressure as you go down. It reverses.

DW: Do you think that these areas that are deep under the earth that actually have vegetation and their own parallel evolution of a biome of animals and plants and so on-- do you think this is evidence of intelligent design? Doesn't it seem like the planet is rigged to have intelligent life that can live on the surface and then maybe more

advanced intelligent life that can live underneath to supervise while being undetected?

CG: Life springs up wherever life can.

DW: Even in such a complex form as a whole biome, you're saying?

CG: Right, even in interstellar space.

DW: Right, we talked about before, the Solar Warden people analyzing these plasma beings out there. OK, so let's walk through now how the Germans got up to the moon. We kind of covered this a little bit last time, but you said that the super federation meetings that you talked about, there were 22 genetic programs that are being run on humanity, part of which involves the sharing and splicing of genetic material. You also mentioned that we're programmed to seek out and worship god-like like figures and to transfer our power to gurus and leaders and politicians, that kind of thing?

CG: Correct.

DW: And these people that run this super federation, I think you said there's 40 that are normally like the main ones?

CG: 40 to 60.

DW: Is it always the same delegates that they send to these conferences or does it rotate?

CG: It's usually the same ET delegates. The Earth delegation rotates.

DW: So Corey, we're going to have to devote whole episodes to what happened with the building out of the moon, what happened with the building out of Mars. But for the viewer, it's going to be a really difficult thing for them to understand how Germany, which was really the main industrial engine behind World War I and World War II-- they were arguably the great industrial power of Europe. And then America became their main counterpart in this boxing match that created World War I and World War II. That very strong industrial power seems to have been crushed. When we see the aftermath of World War II, the Germans had to pay enormous reconstruction settlements, financial settlements, that essentially bankrupted their economy, just like what happened after World War I where you got the Weimar Republic, and people have a wheelbarrow of money just to go buy a loaf of bread. So look, Germany seems to have been flattened out and had nothing left.

CG: Well, at this point, Germany had already been abandoned by the German breakaway civilization.

DW: Really? When did that start to happen?

CG: It started to happen well before the end of the war. They saw the writing on the wall. The war was going to go badly. They knew it. So they started, as we discussed, creating enclaves in South America, in Brazil, and then down in Antarctica.

DW: So this was all in preparation for them losing. What were they wanting to do if they lost?

CG: They just wanted to continue their breakaway civilization, just continue and leave all the regular people behind.

DW: Is the apparatus that's developing the breakaway civilization in its own separate compartment, different from the government apparatus that's actually fighting the war?

CG: Yes, they were totally separate by this time.

DW: Really? I think that's a widely misunderstood concept, what you're saying there.

CG: Yes. So what had happened is in Operation Paperclip, America had obtained quite a bit more scientists than as advertised.

DW: What is Operation Paperclip, for those who don't know?

CG: Operation Paperclip is an agreement to where we obtained German scientists and technology that was highly advanced, and these people were like 20, 30 years ahead of us technologically, is what they say on paper. So we brought them in, and after the war we took these German scientists and put them into our fledgling space programs, into our infrastructure, and started giving them quite a bit of power as they started proving themselves as valuable assets.

DW: Why in the world we trust them?

CG: They were making us money.

DW: Doesn't seem like a good idea.

CG: Well, it wasn't. So what we had in 1947 was our intelligence agencies had discovered that the breakaway German groups had created enclaves in South America and Antarctica. And we knew that in Antarctica, it was a very large military base. So what the DOD had decided was to send a very large fleet under the command of Admiral Byrd. And this was called Operation High Jump, which many people were

familiar with the name of that operation. I can't remember the exact number, but it was a war fleet.

DW: Battleships, destroyers?

CG: Battleships, destroyers, aircraft carriers, submarines, whole nine yards.

DW: This is after World War II, though. You said 1947?

CG: 1947, yeah. And they made it all the way down to Antarctica. And they ended up running into quite a bit of high technology that they didn't expect. There were these highly advanced aircraft that were coming up out of the water and from mainland Antarctica that were shooting down their craft and causing major damage on, I think, several destroyers. And their lives were lost. They really had their rear ends handed to them.

DW: Shooting them down with rockets or machine guns?

CG: Advanced weaponry.

DW: Really?

CG: Right. Energetic weaponry of some sort.

DW: Wow. How destructive were these weapons? What would happen if they fired one?

CG: It was destructive enough to get the job done. So they turned around, retreated, came back, and Admiral Byrd went before the DOD and the President, the Joint Chiefs, and gave a closed report about what he ran into. And his log is still the captain's log. It's still under lock and key to this day. Some of his comments made it out into the public realm to where he said, the next war, we will be attacked by aircraft that will fly pole to pole in a matter of minutes. A couple little comments got out like that from him. But this caused the DOD and the intelligence agencies to go to the Paper Clip scientists.

DW: But wait a minute. I was a geek, and I've read like 300 books on Atlantis and all this. And they say that Admiral Byrd saw the flat Earth, that there were mammoths and cavemen.

CG: That's a bunch of stuff that came out later that has nothing to do with the actual mission that he was on.

DW: Was it disinformation? Was it planted disinformation?

CG: It was either disinformation or somebody with a large imagination. I don't know which.

DW: OK.

CG: But they ended up getting in contact with some of these Paper Clip German scientists and asked about it. And some of them came clean and said, yes, we know about this group. And they said-- they being the Americans-- American intelligence and government, said, well, can you get us in contact with them? So these Paper Clip scientists started a dialogue between the Americans. And then I believe it was Truman.

DW: Did they do this over radio communications, some sort of encrypted communication?

CG: Well, it started out radio communications. And they arranged for a meeting between Truman and this breakaway group.

DW: No kidding?

CG: And this breakaway group started making some pretty heavy demands that Truman didn't like.

DW: So if High Jump is 1947, what are we now talking in time?

CG: Immediately after that.

DW: Really?

CG: Yeah. So after that, there was a period of contention. The German breakaway civilization found out through the Paper Clip Germans that after Roswell and a couple other previous crashes from extraterrestrial craft, that we had created a policy that it was top secret above nuclear weapons, that the existence of extraterrestrials and certain technologies was never to be released to mankind. And it was because it would destroy society and all of that. That was their reasoning. So the German breakaway group down in Antarctica took advantage of this and pretty much started doing sorties over the United States. And this includes the 1952 flyovers of Washington, DC, that were two weeks apart.

DW: I always had thought that was extraterrestrials. They flew right over the Congress.

CG: That was the German breakaway group. And that was their way of saying, agree to our terms, sign a treaty with us, or we're going to break this wide open, and we know that that is your worst nightmare. You don't want the American people knowing anything about this.

DW: Or they'd lose control of the oil. So they'd lose their money. They'd lose the economy.

CG: Exactly.

DW: They'd lose political credibility.

CG: Mm-hmm.

DW: Wow. So it's the offer they couldn't refuse.

CG: Right. So this was happening at the end of Truman's time and at the beginning of Eisenhower's time in office.

DW: At this point, did the President of the United States still actually have the final say-so on the military and what they were doing?

CG: Yes, he still had quite a bit of power. And Eisenhower and Truman were the ones that signed treaties with this group.

DW: Wow.

CG: And what this did, is this brought the German breakaway group here to the US. Now, both groups had an agenda. The Americans had a plan that when the German breakaway group got here, we were going to infiltrate them, get their technology, find a way to defeat them, to use clean language, and then come out the winner.

Well, the German breakaway group had exactly the same plan. They wanted to build out the infrastructure in deep space, or in our solar system, and who better to do that than the United States? Because we had defeated them with our industrial might. I mean, that is what defeated them. We built more tanks. We built more bombs. It was attrition that caused them to lose the war.

DW: Did this German group get out with gold? Like did they have their own source of funding that they could use if they had potential labor pools to activate?

CG: Yeah, they had lots of gold and plunder that they had.

DW: But they need workers. They need actual industrial infrastructure.

CG: They need industrial infrastructure, and they needed access to our corporations which signed the checks, and created the business plans, and helped build out the infrastructure. So what happened is they basically won the little competition of who would infiltrate who. They completely infiltrated the military industrial complex.

DW: Completely infiltrated?

CG: Completely.

DW: That's a very provocative statement. How do you define completely infiltrated?

CG: Well, they had already had a pretty good foothold with the German Paper Clip scientists. And when they came in with all this high technology, the fat-cat businessmen didn't care who they were. They didn't care if they were German breakaway groups. They didn't care what patch was on their shoulder. These banker fat cats and big-company bigwigs just had dollar signs in their eyes.

DW: They want the best toys on the block.

CG: That's right. So they with open arms accepted these German groups. And they got onto their boards. They totally infiltrated.

DW: What did the Germans show them to convince them? Did they get any tours? Did they get to see this stuff in Antarctica, anything like that?

CG: No, they handed over some of the ARVs, craft, to let us back-engineer while they were still playing us. And this was really the root behind Eisenhower's farewell address about the military industrial complex.

DW: His warning about the rise of unwarranted power and influence by the military industrial complex.

CG: Yes. And by the end of the '50s, early '60s, they had completely infiltrated, also, the intelligence agencies. And then after that, they finally had taken over basically the US government.

DW: That's a lot to take in.

CG: It is.

DW: I think everybody, especially people who are sports-minded, want to be on the

winning team. And if you are on a team that didn't win, you feel as if you're a failure. I think you're going to encounter a lot of resistance because people don't want to be a failure. They want to believe in God and country, mom and apple pie, white picket fence, SUV in the driveway, and 2.5 children. What you're saying completely violates the idea of America as we know it.

CG: And that's what's going on at the top. Everybody down at the lower level, we still have that illusion. We still have the white-picket fence. We still have the SUVs in the driveway. So we've been able to maintain that illusion.

DW: Are there still people in the US military who believe in the Constitution that they swore an oath to?

CG: Absolutely. Yes.

DW: So this could cause a problem, then, if the corporations, the defense contractors are cutting a deal with the Germans. Not everybody is going to really want to dance in lockstep with Germany.

CG: Yes, and we can get into this later about the contention in the government, in the Earth alliances, and what's going on there. The Germans, once they had a firm grip on the infrastructure of the United States, that is when the massive buildout started to begin in space and the secret space programs. And they started working together with American cabal groups that had pretty much been working together the whole time, during World War I and World War II anyway. So at that point, that's when they started to build out the secret space program in earnest and the massive infrastructure that I'm talking about.

DW: So you said High Jump 1947, Truman starts to meet with them right after High Jump. Negotiations start to take place, but it's not going well. And then the Germans pushed the envelope by making this very blatant public UFO sighting that, if it happened now with everybody's little camera phone, it would be the end of the UFO cover-up.

CG: Right.

DW: Right over the capital, right over the government building of the United States of America. That's 1952 you said. What's the timeline? Sketch it out for us of when did this translate. Did they immediately surrender after that over-flight? Was that like the final uncle, uncle, uncle thing?

CG: That was the straw that broke the camel's back to where the presidential advisors said, OK, we need to sign a treaty. When we sign the treaty, we will also come up

with a plan to go ahead, and try to infiltrate, and steal their technology, and deal with them at a later time. We won't try to deal from weakness. And that pretty much brings us up to date to where we got to - where they started to build out the main infrastructure of the Secret Space Program.

DW: Now, that obviously is going to take manpower. How do they get the muscle? This is another thing I think people have such trouble with. And we only have a few minutes left, two or three minutes left.

CG: That's going to get us to something a lot of people have heard a little bit about which has been called the Brain Drain that occurred in the '50s, '60s, and on through the '80s of a lot of top scientists across the world being approached and made offers to join these programs. And there was all of a sudden all these brilliant scientists that disappeared off the face of the Earth.

DW: You say a lot of scientists and all these brilliant-- what is "a lot" and "all these?"

CG: There were millions of people over a long period of time that were brilliant and showed a lot of promise that they felt could contribute to this space program that was growing as the infrastructure group. And they brought these people in to be a part of it.

DW: Well, my insider, Pete Peterson, an old-timer, of course, said that it was 50 to 60 million people in the Brain Drain.

CG: That's a lot.

DW: And are they assigned to have children really quickly once they grow of age?

CG: Yeah, they're told to be fruitful and multiply.

DW: So 60 million people who have kids as soon as they get to be old enough to do that, you could be talking about a population as large as everyone in the United States or more.

CG: Right.

DW: Wow. We're going to be continuing this narrative forward, finding out more about what happened. How did we get these people up into space? What were they told? There's a lot more coming up ahead here. So I thank you for watching and stay tuned.

Raiders of Lost Technology Season 2, Episode 5

Cosmic Disclosure; Raiders of Lost Technology Season 2, Episode 5

DAVID WILCOCK: Hello, I'm David Wilcock, and welcome to another episode of "Cosmic Disclosure" because you need to know. In this episode, we are going to pick up where we left off with this remarkable insider who we have the privilege and pleasure of speaking to, none other than Corey Goode, who is claiming to have worked in something we are calling the Secret Space Program. This would be the military-industrial complex industrializing and building out colonies in our solar system and beyond. And it is a fascinating story because it lines up with information that I have received from insiders that I have been in contact with for the better part of 20 years. Most of these people never came forward. I withheld the information from the internet, and that makes it very easy to tell when someone else comes along who is speaking about the same things that I'd already heard. And I'm very delighted to have the opportunity now, to finally be able to talk about so many things that were not allowed to be spoken of before and have Corey here for the show. So, Corey, thanks for being here, buddy.

COREY GOODE: Thank you.

DAVID: We talked about Operation High Jump. We talked about the effort that was made to try to bust up a German cell in Antarctica and that they encountered some pretty stiff resistance there. So I guess to start this off, what was the first method that they used to achieve space flight?

GOODE: In the beginning, they had success with their own engineers developing technology from their own engineering feats, as well as they had been scouring the East for ancient texts that they had been told about and channelings from what they were led to believe, or what could be off-world beings, that some of the esoteric German secret society groups were dabbling in. And this led some of the other secret society groups to go on expeditions looking for these ancient, Eastern texts.

DAVID: Where did they believe these texts were located? Were there are a variety of locations?

GOODE: A variety of locations, these being in the Tibetan areas, the areas of India. A lot of people have heard the stories of ancient flying devices that had very advanced weaponry.

DAVID: The vimana.

GOODE: Yeah, the vimana, and it read like science fiction but was many tens of thousands of years old. And Western scholars wrote it off as fiction, science fiction, ahead of its time. These German groups, they believed more in the marriage of science and esoteric beliefs, and they decided that they would follow these leads that they had received through channelings and go and locate these texts.

DAVID: Did the beings that were doing the channeling give them specific coordinates of where these texts would be located?

GOODE: Yes.

DAVID: Really?

GOODE: They told them that they were under certain mountain ranges in certain areas that had at one time been a part of a more advanced civilization, had been forgotten by modern man, that a lot of the religious caste monks knew about it and had guarded it as part of their secret teachings.

DAVID: You and I spoke in previous episodes at quite some length about these Agarthans, and you said it was a group that was blonde Nordics that were living inside the Earth.

GOODE: Some of them, yeah.

DAVID: Some of them live inside the Earth.

GOODE: Some of them were blonde Nordics.

DAVID: Oh, and you said that the Germans preferred to work with them over the Draco, reptilian types.

GOODE: Correct.

DAVID: So why would the Agarthans--I'm assuming, first of all, the Agarthans are the ones that were channeling through these secret societies, or is that not true?

GOODE: That's a hard one to speculate on because they, Orrick and these different groups, seem to have been in contact with several different groups.

DAVID: Several different ET groups?

GOODE: Extraterrestrial groups and also ancient Earth breakaway groups, so it's hard to pinpoint which information came from which groups. Back in the late '30s, I believe it was, they were asked to draw a picture of who they were communicating with. And the drawing of the head and the facial features of this being--

DAVID: It's a creepy-looking face.

GOODE: Yes--and had very interesting, similar characteristics to Grays.

DAVID: Yes, it does, but the eyes aren't as big. But the head is really large, and then it's got this tiny, little chin.

GOODE: Right, but the Germans were led to go out to the Himalayan mountain areas to go on massive expeditions out east to recover these documents and to do so in a not-so-ethical way. They were going to these villages and these monasteries and, basically at gunpoint, taking these scrolls and books and taking them back to Germany.

DAVID: Are you saying that the texts that were in question were located in Tibetan Buddhist type monasteries?

GOODE: Mm-hmm, a lot of them are, and a lot of them were also in cave systems that these texts had been put in them. And they had been sealed in mountains.

DAVID: In the event that they got into one of these cave systems, would there be indications that what they were looking at was a remnant of an advanced civilization beyond just finding a cache of documents?

GOODE: Well, directly from what I read and the smart glass pads, these were wooden, similar to bookshelves but were lined with tons of scrolls and bound books. And a lot of them had medicine type of information, I mean, all different types of, I guess, secret teachings and secret medicines and secret technology information.

DAVID: Were these natural caverns, or did it have some of that sort of smoothing out feature like you get with the Ancient Builder race stuff you talked about before?

GOODE: These were natural caverns.

DAVID: Natural caverns.

GOODE: Yes, and when these certain books were spirited away back to Germany, when they opened them and began to look at them, the German engineers were shocked to see that these were technological blueprints.

DAVID: When you say scroll though, my visual would be that we're looking at some aged, crumbling piece of browning paper.

GOODE: Well, some of them were scrolls. Some of them were actually bound books.

DAVID: Like a leather bound?

GOODE: Yeah, like leather, animal-skin-bound books. These are more of scribed texts and books that were handed down over generations. People would scribe them exactly as the other text was, and then at a certain point they were sealed away or put into a monastery.

DAVID: So we're not talking about books where the pages are made of like a Kevlar, indestructible material.

GOODE: No.

DAVID: It's just paper.

GOODE: Right.

DAVID: So what did these technical diagrams--when you say blueprints, was it like the power system for the craft? What was the illustration of?

GOODE: Much of it they had to decipher over time, but it was the beginning of the electrogravitic craft that later on the West called alien reproduction vehicles. What they were, were mercury-spinning, mercury-vortex-driven vehicles that created electrogravitic lift. And it was very simple concepts but very complicated concepts at the same time. And once the German scientists got a hold of it and married it with what they were already working on, they were able to jump leaps and bounds ahead of where they were in a short period of time.

DAVID: Was there a familiarity to the language of the book, or did they have to actually learn the language?

GOODE: That was one of the largest hurdles to get over, and they brought some very uncooperative, I guess you would say, volunteers from that region back with them to help them in the deciphering of the texts.

DAVID: Are you saying Tibetans?

GOODE: Well, Tibetans and people that were guarding the knowledge.

DAVID: Oh, wow.

GOODE: And they used these people to help them translate as much of it as they could. A lot of this stuff, these people had been scribing for generations, but even they had lost the original meaning of what they were transcribing.

DAVID: So the books had been copied over.

GOODE: Many, many, many times.

DAVID: And the blueprints and diagrams.

GOODE: But the Germans were very intelligent, very resourceful, and they were able to use these diagrams, create their own experiments, and figure it out.

DAVID: Some people are going to be questioning what groups we're talking about. There's like a Thule Society, T-H-U-L-E. Would that be one of them?

GOODE: The Thule Society, the Order of the Blacks Sun, the Vril Society, and there are about a handful of other different societies that are not really well known. And a lot of these ones that we mentioned worked together when it was logical to further their technological development and then would keep their own secrets. Some of them had much more advanced technology than the other societies.

DAVID: Were the members of the societies also in control of German industrial conglomerates like IG Farben, stuff like that, corporations?

GOODE: These groups were always in control of the money. They were always in control of the corporations. They were not always in control, totally, of the government.

DAVID: I see.

GOODE: They had infiltrated the government and were working in the government, but the government did not know what these societies and groups were doing. They knew what a lot of what the Order of Black Sun groups were doing because they were using military applications with a lot of the stuff they were developing for the war effort. But it was pretty well known that none of this technology was really going to be serviceable and ready to deploy by the end of the war.

DAVID: When we're describing this process of document acquisition that was going on, you mentioned India, and you mentioned Tibet. What are the years that we're talking about, and were there any other geographical regions besides Indian and Tibet where this was being done?

GOODE: China, yes.

DAVID: China, OK.

GOODE: China, India, Tibet, all of these modern ancient civilizations.

DAVID: Did it all cluster around the Himalayas and that part of the world?

GOODE: Yes.

DAVID: OK, and what were the years in question?

GOODE: 1918, 1919, but then the 1920s, '30s, it started exponentially growing, and most of it was in the 1930s and '40s. But most of it was heavily in the 1930s that they were really doing a lot of this work.

DAVID: I have heard from other scholars that one of the things that the Germans were looking for were pieces of material that they felt had esoteric power, like the spear that penetrated Jesus's body--which they apparently were calling the Spear of Destiny, or something like the so-called Fountain of Youth, which most people think is a joke.

GOODE: That was another break-off group that the--getting into, I guess, during World War II, the four-letter Nazi word, that group, they started sending them off looking for religious artifacts that had power. And they weren't just Judeo-Christian artifacts. They were looking for all sorts of ancient religious artifacts that they believed were rooted in either ancient breakaway technology, Earth breakaway technology, or ancient alien, ET, technology, some of which are the Ancient Builders race. They were wanting to get their hands on it for several reasons. Some of them believed that having possession of these materials, according to the legends, would ensure their victory. And also some of the ETs that they were in contact with wanted these technologies, especially the Ancient Builder race technologies. And that has gone up close to current era, until we figured out that some of what these tablets or stones that look like just relics, ancient stone relics that looked benign, we finally figured out that they were actually technologies that worked on a multi-dimensional level--very, very advanced. And they were trading these off with ET groups for technology and for the ETs to come down and give material support.

DAVID: Now, if people are watching all the shows that I've been working on here at Gaiam, one of the things they will have seen is Disclosure episodes where I'm interviewing Graham Hancock. And we had, I believe, an entire episode just devoted to the Ark of the Covenant. And, of course, the classic Spielberg film, "Raiders of the Lost Ark," is about the Ark of the Covenant, that Harrison Ford's character is looking for the Ark. Did you encounter any information on your own that the Ark of the Covenant was real or that the German groups were looking for it?

GOODE: Well, according to the smart glass pads, there were three Ark of the Covenants.

DAVID: Three Arks of the Covenant? I hadn't heard that before.

GOODE: There were three of them, and they were devices that were housed in some sort of wood that was covered in gold as a shielding from the radiation. It's not exactly the radiation we think of, as in radioactive bombs. But even light bulbs, there is something radiating from them. So radiation can mean all sorts of things.

DAVID: Well, it's a very curious technology because when you read the Bible and talks about bringing down the walls of Jericho, it said that they had the Ark of the Covenant. They blew trumpets, and the bricks turned into liquid. The whole wall just liquefied and melted. So what kind of technology could do that?

GOODE: Sonic--and not only that, but it was supposedly providing manna, food.

DAVID: Oh, food for them.

GOODE: Food for them, supposedly, you know, food, water, protection against their enemies, ways to defeat their enemies, supposedly a radio to God. So it was a multi-purpose device.

DAVID: And were these German esoteric groups aware that there were three of them?

GOODE: I believe one of them was destroyed, and there are two that are still present on the surface of the Earth.

DAVID: When you look at the Tibetan stories and you compare them with other records, in Tibet, they have this thing called the double dorje, which you hold in your hand. And it looks like a weird, energetic coil, and it seems to have been modeled off of a technology. When we go into the Greek mythology, we have Zeus' thunderbolt, which appears to be some device that he holds in his hand, can generate lightning. We have Thor's hammer, which is the same thing. We have Poseidon's spear, which is the same thing. Were there particle-beam weapons or some type of energy weapons that you could hold in your hand like a gun that these German groups were also trying to locate in these expeditions?

GOODE: Yes, they believed very much that all of these descriptions of the gods were actual weapons, technological weapons, and they were looking for them.

DAVID: Yeah, another one that comes out of India is Vajra's spear. It's the same kind of idea. He's holding it in his hand, and it does incredibly powerful things.

GOODE: Right, so they were looking for all of these things. And a lot of these beings that had these weapons that were being written about, some were ETs, and some were extremely advanced, human, breakaway civilizations and presented themselves to the surface population as gods and did so for some time. As we became more sophisticated, so did their deceptive techniques. And in more recent times, they've

been presenting themselves as extraterrestrials that are benevolent and here to save the world.

DAVID: Getting back to something you said before, do you think that the Germans could have acquired something like Zeus's thunderbolt or Vajra's spear and been able to engineer it into the building of their craft so they had an effective weapon?

GOODE: I think that there were quite a bit of technologies that were acquired and integrated into their breakaway secret space program that they were developing, but they were developing this for their own breakaway civilization and when it came down to it, did not care about World War II, the motherland, and using this technology to defeat the United States and the enemies of Germany that they were engaged in war with.

DAVID: When we see giant stone structures, like stone circles or single slabs, like menhirs or pyramids, that kind of thing, obviously, we can't work that kind of stone now in any effective way. Did the Germans find any technology that would allow you to, like, maybe hold onto a thing with your hands and zap a stone and allow it to levitate? Did they find anything like that?

GOODE: A lot this type of technology was discovered, and it was discovered below the surface of the Earth, deep in cavernous areas in what has become known as the Honeycomb Earth that a lot of people refer to as Inner Earth or the Hollow Earth. And a lot of this was technology left behind by the Ancient Builder race and also by ancient ETs and ancient breakaway groups that had moved on and left certain technologies behind.

DAVID: I'm just curious because this is correlating with something I heard. The first insider I ever met had worked--apparently, his godfather was one of the top 90 Cabal people. And he had described a technology that was based on crystals, and it actually was like a six gun. And you had six crystals in it in kind of a cylinder. And you'd pop them in, and you could rotate to each crystal depending on the size of the stone. And it would actually beam into the stone, and that would help it to levitate. I'm just wondering if you'd ever seen anything like that?

GOODE: I've seen an incredible amount of technology that is based on crystals, and a lot of it goes way back to the Ancient Builder race. And a lot of it has been developed by much younger, Earth-based ancient races and ET races.

DAVID: Very good, all right, well, we're going to continue this really fascinating discussion. It's interesting to get correlations and hear things from his perspective, given his background. So when we come back next time, we're going to take this discussion of the German societies forward, and we're going to finally bring them out into space and start talking in very practical terms about where did they go, what did

they find when they got there, and how did they build it out and make it their own? That's coming up next time on "Cosmic Disclosure" because you need to know. I'm your host, David Wilcock. This is Corey Goode, and we thank you for watching.

We Were Never Alone Season 2, Episode 6

Cosmic Disclosure; We Were Never Alone Season 2, Episode 6

09 Nov 2015

DW: Hello. Welcome to "Cosmic Disclosure." I'm your host, David Wilcock, and I'm here with the insider's insider, Corey Goode. What we're learning is that the effectiveness of this whole conspiracy comes out of the fact that it was all orchestrated by groups that were extremely secretive from the very get-go. And specifically, we've been talking about German esoteric societies.
So Corey, let's talk about that for a moment. What would happen in one of these German societies? How do they make sure that somebody is not going to squeal?
CG: That was woven into the fabric of the secret society itself. These people were very loyal. They were raised in it from childhood. And that was their way of life. Everyone else was an outsider. Everyone inside were the team, the family. So going outside to squeal, I mean, why would that occur to them?
DW: Let's say 1930s, as Germany is rising to become another great industrial power, somebody says, I can't handle this anymore. I'm tired of this. I'm out of here. What would happen to that person?
CG: Very similar as to what would happen to one of Al Capone's men that had a similar epiphany and change of heart. They would end up pushing up daisies, I guess, as they would say back then.
DW: So the point is people are not apt to want to talk at all. So you have an esoteric order. And you said last time they have great physical power. They're controlling the money system and industry?
CG: And have for some time.
DW: How do they enforce loyalty? Do they have initiatic rights in which you have to swear to secrecy on pain of death, things like that?
CG: Well, there's the whole theater part of the esoteric belief systems and black magic and all that. But it always comes down to the carrot and the stick. And making someone wealthy while everyone else is standing in line for bread is a strong motivator. And if you have a family, you want to provide for them.
And you're made to feel special. You're made to feel as a part of something bigger, grander. You're born into something that is bigger than everything else in the world. All the other people are useless eaters. You are important. What you're doing is important to not just the useless eaters and humanity but to the future of the planet and to a very ancient plan that your order or society has been meticulously working on for many generations.
DW: Italy was a fascist nation in World War II that worked hand in glove on the same goals in the Axis with Germany's fascist government. I'm wondering if these German secret societies might have also spread into neighboring countries like Austria or Poland or Italy. Or were they truly just German-centric?
CG: You have to look way, way back into history, back into the pre-Christian eras

back when these groups were different pagan tribes. And these groups-- this is what these societies come from, way back then.
DW: Like Celtic?
CG: Celtic and--
DW: Druids?
CG: Druids, all these different groups. They're very ancient.
DW: OK.
CG: And they see their roots going back very far. And they see it as they own all of that area, and just as clouds blow across the sky, dynasties change. But they remain, like the trees on the ground.
DW: Well, one of the things that puzzled me as a tangible data point that people can sink their teeth into, is I did research into ley lines. And you see things like Stonehenge and Avebury and Carnac in the northern province of France, ancient sites with giant stones and then modern sites, including German Gothic cathedrals, that are built on these same lines. So somebody knew to build these cathedrals and these sacred sites of worship and even government facilities on these lines. Would you say that might be one tangible data point people could look at indicating that there was a secret knowledge that the public was not being told about behind where these sites were being constructed?
CG: Yes, these secret teachings go back many millennia and are highly guarded. And a lot of this information has found its way under the Vatican and the vaults. And the Jesuits and other groups still have access to it.
There are many other libraries of this sort around, especially Europe, that these secret societies have access to these ancient mystery school teachings. And these mystery school teachings have information going all the way back that have several different ancient languages in them that translate older and older texts. And it goes further and further back talking about technology, and technology of people and beings that come from the heavens.
DW: You've said before that breakaway civilization groups living inside the Earth contacted people on the surface and posed as gods.
CG: Still do.
DW: Were there in these European, Celtic, and Druidic societies, priests or nobility or royals who had a more technically involved and accurate contact with these breakaway civilizations?
CG: Yes. The priests of Odin and all these other groups, the priest cast in just about every one of these ancient civilizations, they guarded the secret teachings. They had access to these scrolls, these books, this information, all the mystery teachings. They kept the information from the kings, emperors. They kept the information from the commoners. And it is from them that a lot of these breakaway secret space programs and advanced technological, subterranean civilizations sprung from.
DW: Are there members of these subterranean civilizations or space-based civilizations who are the descendants of people that might have been pulled out from human life on Earth, maybe even as old as thousands of years ago or even, let's say, in

medieval times? Has there been a continuing abduction of people from Earth into these various groups over time?
CG: Yes, and that is one of the reasons the Germans were so interested in all of this and they were so focused on the "master race," because some of these groups that were coming out from underground and presenting themselves to them as either ETs, depending on the time period, gods, and in some cases their forefathers, were a lot of times blonde-haired, blue-eyed, and very Caucasian, master-race looking. The master race that was depicted by these groups during that late World War I, Word War II era, they had very much that look about them.
DW: If people had been pulled from the Earth into these groups, did those groups interbreed with those people, or were they used as more like a slave caste?
CG: Well, they were more manipulating the surface.
DW: Oh.
CG: They were teaching them agriculture to have them provide agriculture as an offering to them. So with these groups, it was more about manipulating the surface population to have a return in what they considered an investment.
DW: Would you say that the priest caste you referred to in these Druidic and Celtic and other societies around the world, did they have access to space travel and portal technology?
CG: Some of them definitely did.
DW: Really? So there's been, to some degree, certain people on the surface of the Earth who have had access to space all throughout our history?
CG: Yes.
DW: That were people born on Earth from human parents on Earth.
CG: Yes. Yeah, I had read in the smart glass pads about the Spaniards chasing some of the Mayan priests that would run right up to a wall that had a door carved into a wall that went nowhere, and they would be holding a bunch of scrolls in their arms. And they would run up to the door, touch the door, and then walk into the rock, walk through the rock. So I mean, that was obviously some sort of portal situation.
DW: Well, I remember doing an episode on Ancient Aliens where we talked about this thing like you're describing, looked like a doorway, but it was just carved into the side of a rock wall. And there was almost an identical one in Turkey. Is Turkey another country that is really central in these breakaway groups based on its location near the Mediterranean Sea? Egypt?
CG: Yeah, Turkey is a mixture. There's a breakaway group there. And there's also an ET group that has settled there.
DW: Do we know anything about that ET group?
CG: Yes.
DW: You don't want to tell us?
CG: Well, it gets into some of the disturbing stuff. The groups that are the Sumerian god kind of groups.
DW: Oh, like Draco type, reptilian type?
CG: Yeah. They are more of the negative groups that are also down in South Africa

right now, Marduk and different names that you would hear.
DW: What about the breakaway civilization in Turkey? Is that similar to the other ones, or is that a unique group?
CG: In Turkey mainly, there's quite a bit of ET activity going on down there. There's a breakaway group there, but they're more subservient to the ET group. Turkey is a very ancient area, and it's been controlled by a certain ET faction for a very long time.
DW: I've just been trying to map out some of the terrain here so we can understand how the Germans end up making their way out into space here. This was not the first time that humans from Earth had made it into space by any means based on what you're saying.
CG: Right.
DW: OK, you also said that these breakaway human civilizations in the Earth or outside the Earth were one of the groups that the Germans were channeling that were helping them find these scrolls that help them build craft. I guess what I'm concerned with is why wouldn't these extraterrestrial or breakaway Earth group people, why wouldn't they just give the Germans the technology they already had? Why were they trying to make the Germans go through this painstaking process of archaeological excavations and doing it themselves?
CG: Well, eventually they did start giving them more advanced technology. But they had to develop a certain amount themselves.
DW: Is that part of the esoteric rules they have to follow?
CG: I'm not sure. But they basically had to prove theirselves as not only being able to have the engineering and scientific ability to create this technology and understand it, but once they got to a certain point, not only did the Draco group start to give them scientists to help them and give them technology, but also the breakaway Agarthan group did the same.
Now, the Draco, this Agarthan group don't necessarily get along all the time, and the Germans favored the Agarthan group. And they were getting a lot of very excellent and very, very unique technology from these groups. And they started using it to venture out past our atmosphere and go to the moon and study the asteroid belt. And when they went to the moon, they learned very quickly that the moon was a pretty much hub for many other ET groups to meet in a neutral area to have bases to be a part of some grand experiment, which the Earth is a part of, to observe Earth and be close. And the Germans had traveled to the moon and had planned on starting colonies there and saw that it was pretty hostile to try to land any place around on the moon and start building. So they signed, just like we did later on, they signed agreements with the Draco and also these Agarthan groups.
DW: When you say "we," you mean the United States government?
CG: The United States government, yes.
DW: Signed a deal with the Draco?
CG: Well, the United States government signed deals with several groups. But the Draco were one of them, as were the Agarthans and others.
DW: I'm just curious, did they have any trouble getting outside the Earth when they

tried to fly out of the Earth?
CG: Once they started flying around and approaching the moon, they started having some issues with resistance. And once they formed partnerships with these Draco, who had a very large portion area on the back side of the moon that they then fell, I guess, under their protection. And then they began to start at first trying to build their own moon bases and colonies-- that didn't go very well. Then they started discovering these very ancient buildings, very ancient buildings. And they then found a way to pressurize these buildings and use them temporarily while they built a moderate German moon base.
DW: All right, there's a lot you just said that I think we need to untangle. First of all, I want to ask you a really stupid question. Is there a breathable atmosphere on the moon?
CG: No.
DW: Did they have some type of astronaut suit like what we see later with NASA astronauts to walk on the moon?
CG: Yes, they developed pressurized scuba-type rebreather suits.
DW: And you said that they made early attempts to build on their own that were not successful?
CG: Several-- many attempts.
DW: Did they try to bring native materials from Earth? Or did they try to build with local materials they found on the moon? What was the attempt?
CG: They would bring some materials from Earth, and then they would try to build out of the local material, create concretes with the concrete building technology that we used on Earth. And they tried several different techniques. They had quite a few problems.
There was one group that was involved with a reptilian reptoid group-- a project that was traveling not through spacecraft, but through portals to the moon and apparently back to a different time period on the moon and were building above-ground facilities. And these at some point were abandoned. And later on, the Secret Space Program were finding these very ancient buildings with Nazi insignias and symbols and eagles with swastikas in them.
DW: You said very ancient?
CG: Yes.
DW: What do you mean by very, like 2000 years old?
CG: Many thousands of years.
DW: Many thousands?
CG: Yes. There's a temporal technology that the Secret Space Program uses that is kind of like carbon-14 dating, but it reads a temporal signature of a building that is constructed.
DW: Temporal meaning time?
CG: Time.
DW: Time signature?
CG: To be able to tell approximately how old it is. And I don't recall exactly how old

they were, but they were thousands of years old.
DW: So this technology is able to tell when material was last disrupted?
CG: Right, when it was--
DW: Or when it was constructed.
CG: --manipulated.
DW: So these were highly decrepit buildings? They were breaking down?
CG: Dilapidated and falling apart.
DW: So this is an extraterrestrial technology that they had access to that allowed them to portal back into the past?
CG: Right. This was a joint operation with reptoids.
DW: You also said to me in private conversation that when they started to build on various locations that they found explosive charges had already been planted underneath the locations.
CG: That was the Secret Space Program. When we would go to build outposts, mainly security outposts-- and I described how we built those out of local and materials brought from home, giant kevlar bags, they would fill it with the local soil and build up a structure. I've written about it. It's a whole long process. But the engineers that were there that were using some of this temporal technology for surveying of the land discovered that underneath where they were building there were charges that had been placed there and that somehow someone had figured out that someday someone's going to build some sort of facility there and had placed charges there thousands of years ago.
DW: Wow.
CG: And so they found a way to remove them.
DW: You said that one of the first things that the Germans did when they went into space was they went to the asteroid belt.
CG: Yes.
DW: Did they see anything that would be considered strange or unusual by our normal, terrestrial standards when they went to that area?
CG: Yes, they found signs that it had already been mined for quite some time.
DW: Really?
CG: That this had obviously been another planet at one point and very small remnants of Ancient Builder Race technology were found embedded in some of the asteroids.
DW: What would a very small remnant of ancient builder race technology look like?
CG: Just pieces of their technology, small remnants here and there that they would find.
DW: Well, you had described before that it's going to look like just stone that's very nicely carved, that kind of stuff?
CG: Yeah, something that you would find, it would look like a piece of a diorite or very hard stone that was shaped in a very unique and pleasing way to the eye to where you would think an ancient culture had carved it and maybe it was an altar or, the way we think, it had some primitive use. When in reality, it was a very extremely advanced, multi-dimensional device, and there were many, many asteroids that-- there

had been mining activities going on for millennia in the asteroid belt.
DW: And this was something that was very clearly able to be seen, like strip mining lines, that kind of thing?
CG: Yes, big holes in the asteroids with built-out areas for docking, for resupply vessels and pickup vessels for picking up the raw materials.
DW: Did they ever find smashed spaceships that had been destroyed by weapons fire that were just kind of tumbling end over end in the asteroids, anything like that?
CG: Most of what I remember them finding was on the moon after some of the ancient battles.
DW: Were they able to find ruined ancient craft and gain something from them, like debris from a technological flying craft?
CG: Yeah, that was found on Earth, on the moon, on Mars. It's been found all over the place.
DW: Wow. So you can't breathe on the moon. So they have these space suits. And you said they were fascinated to find Nazi insignia on ancient buildings.
CG: Yeah, completely stripped buildings and dilapidated buildings with the eagles with the talons holding swastikas and German writing, German script, but anything of value or useful, it was all stripped.
DW: So you had said that there was a Draco area on the moon, that they had a large tract of land. And you had said in previous episodes--
CG: This was on the Draco area.
DW: OK. Did the Draco provide material assistance to them, or were they more just allowed to develop the land on their own?
CG: Both.
DW: OK. So at what point did the Draco become involved in the building process, if you said that these early building attempts they made were unsuccessful?
CG: They finally built a successful, small base--
DW: "They" the Germans?
CG: Germans built a small base and used that as a jumping-off point. And then they successfully built a base on Mars as well. The Draco did not assist them in all of this. There was a separate base on the moon that is a joint base that the Draco and the human German breakaway groups use still to this present day. And it is a heavy Dark Fleet base. And it is shaped kind of like a pyramid with the top cut off, or what would you call that shape?
DW: Trapezoid?
CG: Yeah, trapezoid.
DW: Do you know when that base was constructed?
CG: This would have been in the '60s, early '70s.
DW: Did the Draco have their own buildings in this tract that they owned on the moon before?
CG: Under.
DW: Oh, underground.
CG: Mm-Hmm, under the moon.

DW: So their effort to help the Germans build their own facility was more just kind of letting them have their own territory, feel safe, feel like they got their own home?
CG: Well, it was a part of a wider plan of integrating them all together in this control system over the Earth that the Draco is very much involved in.
DW: There are movies like "Iron Sky" talking about stuff like this with Nazi base on the moon.
CG: I had so many comments on that. I finally went and saw that ridiculous movie.
DW: Yeah? Did they build the building in the shape of a swastika?
CG: It was in a shape of a swastika originally, but now that building is now the lunar operation command, and that has been built out and built over. That is an old and very small part of what is now the lunar operation command that the overall Earth secret space programs use on a regular basis. The trapezoid-shaped moon base is off limits to everybody except for the Draco allied human groups and the Draco.
DW: Did the Agarthans have any material support or logistical support in the colonization of the moon early along? Or did they kind of back off from that aspect of it?
CG: They backed off from that aspect of it, but they do have a presence on the moon.
DW: So this is "Cosmic Disclosure." I'm your host, David Wilcock. We are exploring very fascinating information, and that's going to continue next time. So as always, I thank you for watching.

Remnants Of Ancient Mars Season 2 Episode 7

Cosmic Disclosure; Remnants Of Ancient Mars Season 2, Episode 7

16 Nov 2015

DW: Welcome to "Cosmic Disclosure." I'm your host, David Wilcock. And in this episode, we're going to be getting into the Germans traveling to Mars. However, in between episodes, it occurred to me that there are some really important unanswered questions.
One of these questions is that we have artifacts on the moon, and there are also artifacts on Mars. So we're going to get into the relationship between these ancient artifacts on the moon and on Mars, since the Germans ultimately found them on both spheres. This will help us to build our way into understanding what the Germans actually did on Mars. So all of that will be covered in this one episode. So, Corey, I'm really excited to get into this, and thanks for being on the show.

CG: Thank you.

DW: So, Corey, we were talking about the German development of the moon in the previous episode. How do you feel that this was accomplished in light of the Ancient Builder race? Were there Ancient Builder race ruins on the moon that they were able to find when they were doing that research when they first got there?

CG: Yes. There are Ancient Builder race ruins all over the entire solar system and underneath the surface of our planet.

DW: What specific Ancient Builder race ruins did they find on the moon?

CG: I think some of the most significant ones that you would be interested in, and a lot of others, are some of the ancient buildings that were obviously built for a race of very tall beings, unless they were beings that just liked a lot of headroom and really tall arches and doorways.

DW: When you say really tall, what are we talking in feet, like what was the estimated height of these people?

CG: Some of the stone seats and the doorways, we're talking upwards 60, 70, 80 feet.

DW: Beings 60, 70, 80 feet tall?

CG: Tall.

DW: When you say stone seats, what would they look like? Would there be anything that we could see on Earth that would be similar?

CG: They called them thrones, but they were not. There were lines of seatings along walls that were facing outward, that I guess the closest that we would see in an older castle would be like a throne room with thrones against a wall.

DW: Were these seats carved just as very utilitarian and basic? Or did they have sort of ornate designs to them? What was the aesthetic of the seats?

CG: They at one time had writing or emblems on them and symbols on them, but someone for some reason had sandblasted or removed them, same with any other area in these buildings and structures that seemed to have had any type of indication of writing characters or images. They were erased, as if-- I guess they say the victor always writes the history. Well, maybe other ET groups moved in millennia later and decided, we want to write the history, we want to be known as the gods. So they erased what was written.

DW: Did these thrones just appear etched into the side of a mountain, like we might see with Mount Rushmore on Earth? Or were they inside rooms of some kind?

CG: They were inside rooms. And this was very high tech. It was obviously manipulated matter, technologically manipulated matter.

DW: So describe for us-- how would you find a room? Do you see like a dome, and then you go into the dome? Is it built into the side of a mountain? Is it underground? Where do you actually see these rooms? How do you get into a room?

CG: These are mostly covered structures now by moon dust and meteors that have hit and left remnants. They've been there a long time. But there would have to be a certain amount dug out. Maybe 10% would be above the surface. And even that would have to be uncovered. And the rest would have to be dug out, and then they would go in and excavate and check out the interiors.

DW: Were these structures on both the Earth-facing and the dark side of the moon?

CG: All over.

DW: And so is the building often square? Or is it more of a circular type of shape? What was the shape "clue" that this was a site and not just another irregularity in the moon's surface?

CG: These buildings were found in all different shapes, all different conditions, and

made out of different types of materials, including the before-discussed transparent alloy aluminum material, or parts of the buildings were made out of that material.

DW: So some of these buildings, the walls you could actually see right through them once you uncovered them from the lunar regolith?

CG: Right.

DW: Wow. Now, Richard Hoagland has talked extensively about what he believes to be glass domes that were on the moon and the idea that it could be pressurized inside, and you could have plants and trees in there. Did you encounter any evidence that there were, in fact, glass domes?

CG: There are all sorts of glass structures that are mainly destroyed.

DW: Including domes?

CG: Including domes and towers.

DW: And when you say destroyed, by whom?

CG: It may be by what, by a cataclysm. A lot of stuff is left on the moon as a reminder of a great war. There is quite a bit of other material and items that are left that come from much longer ago. The oceans of time we're talking about here are mind-boggling. And the number of different groups and races that have contributed to the trinkets and the buildings that are on the surface is just as mind-boggling.

DW: Let's talk about the parallels between whatever was found on the moon and whatever was found on Mars. Because the German scientists, let's say-- because they're not all Nazis-- when they went to Mars, did they find similar structures as what we saw on the moon?

CG: Yes. These Ancient Builder races and other races that have come into our solar system through the ebb and flow of time and fought for control over the solar system, controlled, lost control, come back millennia later-- this has gone on for millennia-- their structures have been found all over the entire solar system. Our solar system is littered with ancient, ancient archaeological sites.

DW: You mentioned before that there's a big portal that goes to other galaxies. It's right outside our solar system.

CG: There's a portal system that is a part of the cosmic web, and our solar system is in a very coveted area. And yes, that portal system spreads out not only to other galaxies

but other star systems within our own galaxy.

DW: So we're in like a real high-rent district.

CG: Yes.

DW: Would you say, then, that our solar system has a lot more colonization and history than most civilizations that would be in more of a country area, as opposed to an urbanized district like this?

CG: I've been told that we're basically an oasis on a cosmic silk road.

DW: NASA came out recently and suggested that Mars at one point had a 1 and 1/2 mile deep ocean that covered at least half of its surface like the northern hemisphere. That's NASA saying that. Why do you think they would say that?

CG: I think we're getting to a point in human consciousness to where it's becoming pretty ridiculous to try to hide what's in front of our face when we look at Mars. Plenty of people have taken satellite views of Earth, satellite images of Earth, satellite images of Mars, put them side by side and geologically proven and shown that they've had the same type of activity on them.

DW: So did you encounter information suggesting that Mars was more Earth-like at one time?

CG: Yes.

DW: You had mentioned before that the asteroid belt was a destroyed planet. Hoagland and others have done work suggesting that Mars was originally a moon of this planet. Did you encounter anything like that?

CG: According to the smart glass pad, that was the intelligence-- that Mars was at one time a satellite of a super Earth that existed now where we have an asteroid belt.

DW: Was Mars also a watery planet with oceans as well at that time?

CG: It had oceans and a very thick atmosphere that was blown off in the same event that changed its current orbit and created the asteroid belt.

DW: When you look at the work of certain astronomers such as Dr. Thomas Van Flandern, who have studied what he called the Exploding Planet Hypothesis, or EPH, we see half of Mars is totally covered with craters. The other half is really quite smooth. So do you think that that was asteroids from the planet exploding, hitting

Mars? Did you encounter anything suggesting that's what happened?

CG: Yes. And we can go into this in quite a bit of detail. There was a lot. The surface of Mars, half of it, has heavy shocked quartz and deposits. And half of Mars is positively charged. The other half is negatively charged. And because of what had happened to it in this event, it is now a basically giant capacitor.

DW: Hmm. So we have this whole, huge planet that's a habitable world with oceans. And then there is a moon around it that became Mars, as we think of it, that was also habitable. Did you encounter any information suggesting that there were opposing civilizations on each of these spheres? Or was it all part of one greater civilization? Do we know that?

CG: I saw the nuts and bolts, scientific information. That's where we start getting into the secret Earth government syndicate, or Illuminati, religious ideas about all these ideas about what happened. They've created all kinds of myths and ideas about how it happened and what happened, and they believe it as fervently as any other person believes their religion.

DW: Now, you said a little earlier that these buildings on the moon, we were talking about thrones that you found on the moon with buildings, different types that were buried in the ground, and you said that there was some kind of effort to wipe off the writing and the insignias on them. Do we find similar structures like that on Mars?

CG: Yes, all over the solar system, and they've all been treated in the same manner.

DW: Did these structures appear to have been built when Mars still had oceans before it got this blast from the planet exploding?

CG: I am going off of memory here, and I don't want to get into speculation, but that seems right.

DW: How much architecture is on Mars? How much stuff is there to find that shows that there was an advanced civilization there?

CG: Most of it is either underground or really destroyed. The surface of Mars went through such a huge catastrophe. It looks like a shockwave went around and around the planet. The geology is all screwed up. It's just a big mess.

DW: Well, let's talk specifically now about Cydonia, which is the area that Richard Hoagland talked about with the face and what appears to be a five-sided pyramid nearby.

CG: I saw the pyramids.

DW: What do mean you saw the pyramids?

CG: I saw five-sided pyramids. I saw pyramids--

DW: But we've all seen pictures of that.

CG: I have flown over and saw the pyramids--

DW: Really?

CG: --that were partially buried with like mud or sludge. Either I did not fly over the area where the face was, or I didn't see it. I did not see a face.

DW: Are you seeing parts of the pyramids that still look like a stone-carved surface? Or was it all covered in some degree of debris?

CG: Part of it is sticking up out of the debris, but I would say most of it is-- they are quite a bit larger than people think because they are covered in sludge.

DW: I'm remembering one insider, Daniel, tell me that he saw a picture of astronauts waving next to a pyramid on Mars and that there was a very nice, sharp line of the pyramid going up. So it seems like you're kind of confirming that there would be certain pyramids where there are still some sharpness that could be visible from the ground.

CG: They were obviously pyramids.

DW: Wow. OK, so the Germans went to the moon, and you said they went to the asteroid belt, and they also went to Mars. So what is the sequence? Did they do all this at the same time? Or how did they approach this?

CG: Well, first they went to the moon. After a failed attempt, they set up their base on the moon. And then they went to Mars. And then they set up another temporary base on Mars when they built out a larger base on Mars.

DW: OK, so let's just pause there for a second. Germans get to Mars. We haven't had NASA go to Mars yet at this point in our history. What's the year that we're talking that they got there that you know of?

CG: This was all happening in the late '30s and early '40s.

DW: Did they look specifically for archaeology?

CG: I just know that they were looking for bases to create outside of the Earth, as well as bases in areas of the Earth that were inhospitable or out of the reach of the regular civilization of Earth.

DW: How did they have breathable air inside these craft? Was that part of extraterrestrial technology that they were given so that they could have a long trip and not need to come back here?

CG: Yeah, they had developed some of their super submarines. They had already begun to develop carbon dioxide scrubbers and closed-system oxygen-breathing systems. They had already started to develop that for some time. But it was after they had worked in development with these ET groups and developed advanced technology that not only gave them electrogravitic travel but also gave them the ability to have artificial gravity, and also have environmental controls that they felt comfortable leaving that far from Earth.

DW: Would they travel from the Earth to Mars? Or did they have a space station that they built somewhere between as like a supply depot?

CG: They traveled from the Earth to the moon, from the moon to Mars, just like we have planned to do.

DW: And what's the time of that trip? Like if you travel from the moon to Mars, how long would it take them based on that technology in the '30s?

CG: It would have been a matter of hours. I don't know exactly how long.

DW: And you say back then, as in now it would be faster?

CG: Now it's a matter of minutes.

DW: Wow. Let's say that they are looking from the surface of Mars now. Some researchers have said, and Hoagland is one of them, that the original Viking Lander photos seem to have had the red turned up in the image and that the sky does not actually look red, but it's actually blue like the Earth.

CG: Yes, they turned a red filter on. But you have to understand, there are times, depending on the-- it's very dynamic on Mars. There are times when the sky is red. There's so much dust in the air, especially if you're in the equatorial areas. The closer you get to the polar regions, the less atmospheric sand you have, debris you have. And there are aurora borealis.

You have a purplish pink sky depending on the time of day, sunset, sunrise. But during the day, there is kind of a purplish blue sky, but there is a lot of time when the sky, because of all the storms, is full of the red sand. And it's red.

DW: Could we breathe the air anywhere on Mars?

CG: It's not advisable to breathe it anywhere on Mars. In the northern and southern regions, it's easier to breathe. But it's more like being at the top of Mount Everest. Oxygen is thin. The barometric pressure is very, very, very thin. You do need a light duty, lightweight protective suit, and usually a respirator that is releasing some oxygen to you.

DW: Very interesting. You said before that the moon is heavily inhabited with a variety of different races. Are there satellites orbiting Mars or space platforms that have weapons' systems that will shoot you down if you try to go to that planet? How did the Germans-- did they just fly right in? Or did they encounter some resistance?

CG: I do not know if they encountered resistance. I believe at that point they had already formed an alliance. So I believe that people, or the group that they had formed an alliance with, would have been the people-- "people"-- that you would have to worry about shooting you down.

DW: Right.

CG: There are a couple small moons around Mars.

DW: Phobos and Deimos, yeah.

CG: And there are satellites, current era, like crazy around Mars.

DW: Really? Satellites built by modern humans, you're saying?

CG: Modern humans, modern humans that inhabit Mars.

DW: Really? People that were born on Earth that migrated to Mars and built those satellites? Is that what you're saying?

CG: People that may be descendants of people that were born on Earth.

DW: And you said it's filled with satellites?

CG: Yeah. There are plenty of satellites around Mars.

DW: Wow.

CG: And some of them are weapons' systems. And a lot of these are people that are descendants from some of the German groups that established early colonies on Mars that later on grew after the Germans co-opted the military-industrial complex of the United States. These colonies grew across the planet. And a lot of these people that are there now are descendants.

DW: I want to get back to that, but you mentioned Phobos and Deimos. People who've studied this information online and have really kind of gotten into Mars, it's kind of a commonly known thing that the moons are, I guess, too close to the planet and that they also move too quickly in their orbits. I guess some people, like Hoagland, have also said that it appears that they're hollow inside based on their signatures. So what are we looking at with Phobos and Deimos? Are they just moons? Or is there something else going on?

CG: Phobos is crushed, is a crushed sphere.

DW: Really? So it was originally a perfectly round sphere?

CG: It was at one time a sphere.

DW: Wow.

CG: And at one end, there's an opening.

DW: So they don't show us that from NASA? They just make sure they photoshop it out or something?

CG: I haven't really looked at the NASA images, but I know that NASA photoshops and airbrushes images at an unbelievable rate of Mars, the moon, and other planetoids. So I would imagine there are a lot of things about Phobos that they photoshop or make out of focus.

DW: Well, one of the weird things about it-- and I can see it perfectly in my mind, and we'll put it up on screen-- is Phobos has these very extensive, parallel, straight lines that are all in the same direction. And then there's others that are going 90 degrees.

CG: Yeah, they're like ridges.

DW: What do you think that is?

CG: Just like on the moon, our moon-- this gets into a whole other topic. Our moon is an artificial structure. On top of it are hundreds and hundreds of feet of regolith and just smashed meteor matter that have built up over many millennia. And Phobos has its own gravitational field, and it pulls debris on top of it. And underneath this debris is a super structure.

DW: Did the Germans show any initial interest in Phobos if there's a hole in it that you could fly into? Did they do that when they first got there?

CG: I did not see any record of them.

DW: What about Demos? You mentioned Phobos is a collapsed sphere, which I guess implies that there's a lot of hollowness inside. Is Demos also something other than just a regular moon?

CG: I did not read anything about it being artificial. So it's possible that it might be a natural object that was captured in a cataclysm that happened a long time ago.

DW: First of all, is there liquid water running on the surface now in certain places?

CG: Mars has a very strange cycle year, yearly cycle. At certain times, the water that is at the surface in the form of ice liquefies.

DW: Really?

CG: But not for long. I never saw information about lakes, small oceans in the current era. I never flew over bodies of water or saw bodies of water.

DW: OK. So did the Germans have a plan to try to use local materials to make a sustainable base when they got there? Was that always the intention?

CG: Yes. Just as on the moon, they planned to take a certain amount of resources to Mars, lime and all the different things they need to mix with local resources to make concrete and whatever they needed to build structures that they could then pressurize and use as temporary shelters. They had to make quite a few trips to bring people and materials over in the beginning. This was in the beginning of when they were using stargate or portal travel. And in this early era, they were using the portals to transport materials and not people or organics.

DW: Did they have trouble with the organics having damage, like to their life cycle?

CG: Yes, as in killing them in a very gruesome way.

DW: Right.

CG: Until they figured out the proper way to do it with help from some of these allied extraterrestrial groups.

DW: So what's the year that you know where portals started to be used to transport materials?

CG: They've been using portals to transport materials-- they've known how to do that since the '30s and '40s.

DW: Wow. So that's well before the Philadelphia Experiment.

CG: Right. And you saw how badly that went with the people.

DW: Absolutely.

CG: It wasn't until the '50s that they were able to start transporting people consistently without them suffering. I believe they called it temporal dementia. People would teleport intact from here to Mars. They would look fine, but then after a number of days, they would suffer some sort of dementia, they would call temporal dementia. And the Germans did a lot of work in this field that helped us figure out how to do this properly-- them working alongside their ET allies.

DW: It's such a mind-blowing thing to imagine that there were artifacts already there, like pyramids, when the Germans got there. How much were they interested in trying to reoccupy what was there, and how much were they just trying to build new stuff?

CG: In the beginning, it was getting a lay of the land. Just like we're doing, they were mapping out Mars, getting a lay of the land. They had quite a bit of data on the geography of Mars and these smart glass pads. And this was information that was presented on a smart glass pad that's very technical, but it came from like typed sheets of paper that I was seeing. So they didn't have a real high-tech way of showing this information.

DW: So the Germans originally didn't have these smart glass pads, as you said before, but the data that they came up with in their surveying you saw as these JPEGs, or whatever they are, of original, typewritten documents.

CG: Right. And some older photos from old 35-millimeter, or whatever they used, photographs.

DW: Were there photographs of cool-looking ruins from old civilizations that you

saw?

CG: Yes, of ruins and of aerial photographs of areas, the huge volcano--

DW: Olympus Mons.

CG: Olympus Mons. There are lava tubes that are 10 times the size of the lava tubes we have here. And they are perfect for sealing and creating an environment on the inside. And you have an easy, ready-made base. And that is a very highly coveted area to create bases. And the Germans wanted it. Later the ICC groups, I guess the modern space program groups, wanted to utilize that area. But it was already occupied by another group. There were a lot of them, and they defended it fiercely.

DW: Really? Do we know anything about what they look like or where they're from?

CG: Yes. There's a treaty between some of these groups. One of the groups are a reptilian type, and the other are an insectoid type.

DW: That's kind of what I expect.

CG: That is a very coveted area.

DW: So when you say 10 times bigger than lava tubes on Earth, are we talking five miles wide, 20 miles wide, 50 miles wide, top to bottom?

CG: I mean, huge. I mean, they dwarf any of the caverns or the tubes that we have here.

DW: Most of which we don't know about, I guess you're saying.

CG: Right, yeah.

DW: Because they already have huge cities built in them.

CG: It has to do with the size of the volcano, the gravity, the barometric pressure on Mars, and the way that-- how come they're so huge.

DW: So could they be even like 100 or 200 miles long from top to bottom?

CG: I would be speculating. I didn't see any hard data on how many meters or yards or feet they were.

DW: But given that some of the cities here on Earth I guess can probably hold

hundreds of thousands of people, you're saying that in these lava tubes, you could have millions of people.

CG: There are millions of beings living in these lava tubes.

DW: Wow. What are they doing?

CG: Just living out their life cycles there. They have their own civilization, their own way, their own societies. They're very territorial.

DW: Do they have pop stars? Is there like an insect Britney Spears?

[BOTH LAUGH]

CG: I don't know that much about them. A lot of the people that have been assigned to do security details on the surface of Mars have interacted with them. I have not interacted with them.

DW: So did the Germans get resistance from them right away when they first arrived?

CG: They interacted with them quite a bit.

DW: They tried to fight to get some of these tubes?

CG: Yes. Their plan was to go in and take some of these tubes. And there were some battles fought. And it did not go well for them at all. They even had some of their early bases destroyed. And they lost entire early bases.

DW: With the personnel, like all the people were killed?

CG: Yeah. And they also chose poorly. They built some of their bases towards the equator and found out that the dust storms that kick up quite often are very highly electrically charged. Static electricity builds up in all of the sand that's blowing at very high rates of speed.

DW: That makes sense.

CG: And the minerals underneath the planet-- I think I mentioned before, one side, because of impacts, caused crystallization of some of the rock.

DW: Right, you said shocked quartz was formed.

CG: And causing one side to be kind of an anode, cathode and anode on each side. So

the surface, especially around the equator, will build up an electrical charge in the ground as well.

DW: Well, that makes sense. It's the same principle where you take certain metals and you put them under pressure and you electrify them, and you make them magnetic. So this was the whole side of the planet.

CG: Well, the problem when you are building a base and you have all this static electricity to where there's lightning storms going on in the sand storms-- it was that much of an electrical field being created-- well, it's destroying their electronics.

DW: So this is equivalent of a CME? It's like some kind of really powerful EMP pulse or something?

CG: Yes. And these occur often.

DW: So does that mean that the equator region is just no good?

CG: It's not a good place to set up a colony. I'm sure they've overcome a lot of shielding problems to create colonies there now. I know we can fly through those sand storms now and not have any electrical problems. But back in the day when the Germans were, I guess, landing on Plymouth Rock and forging new territory, they found out that this was not a place to be, especially with the technology they had at the time. They were losing all of their technology. So they found out that the closer to the polar regions, within 20 degrees, I think, of the north and south pole, were the best habitable regions.
And it also happened to be where a lot of other groups had been setting up bases. So they had to find an area where they could claim and set up a base, and everyone on Mars, just like people associate Mars with war, all of the beings there are very territorial, which I guess you could say is warlike. But it's part of their culture to be very territorial. It's like putting too many fish in a fish tank.
And they had to stake out their ground and defend it. And it took quite a bit of doing for them to do so. And they weren't able to be fully successful until much later into the later '50s when they were working with the US and the military-industrial complex and had all of the resources of the United States behind them. And then they really were able to start building out and becoming more of a force on Mars to push back some of these other groups, just like Americans did the Native Americans. They pushed back other groups and took over.

DW: Manifest Destiny. So during a typical Earth year, the Earth is tilted to the sun, and we're going to have seasons where it's going to get really cold or really hot depending on where you are, and that changes. If you're building near a polar region, and you're in Mars winter, how is that survivable for human life, given that Mars is

farther away from the sun, would therefore be colder based on what we know from NASA studies of Mars?

CG: It's much easier to deal with the cold. When you have cold, you're going to have frozen water in the form of ice. It's a lot easier to deal with the cold than it is to deal with living in a desert to where you have electrical storms all the time, and plus the atmosphere is a little bit more hospitable in those regions, even if it's cold, I mean breathing-wise. Even though it's a very small oxygen content level, there's still more and in the north and southern poles.

DW: OK. So are you saying that these German bases were built in what we would consider an arctic-looking region?

CG: Not in the arctic. Usually within-- we would call it the 20th parallel.

DW: Were there any critters on Mars that they could hunt and eat for food? Is there any life there?

CG: Yeah, there is life there. I haven't heard or read too much about them hunting. I'm sure, as rough as things got for the original Mars colony people, I'm sure they did eat what they could find on the surface. I just don't recall reading anything about them having barbecues of Martian critters.

DW: What different types of critters did they find when they got there? Do you have to dig down, or are they on the surface? Do they fly?

CG: Most of them are burrowing-type animal life, even this weird little-- there's this little bat-bird-like thing. They dug holes. When we were building this one outpost, we were seeing these little holes. And around dusk, they would fly out, and each flap of the wing, you'd hear kind of a cheep, cheep, cheep, cheep, as they would fly out. What they ate, where they went, I don't know. And then they would return and go back into their hole.

DW: What did they look like? What was their color?

CG: They were dark, like black, and they looked real rough, leathery, and almost like they had almost armor on them.

DW: I would think for anything to have evolved to live on such an inhospitable planet, that it would all probably have this type of armoring and real ruggedness to it.

CG: It was just interesting to some of the scientists that something so small with wings could fly in such an atmosphere. They didn't think that the atmosphere was

dense enough for them to--

DW: To provide lift right for the wings, yeah.

CG: Right.

DW: How small is small? What was the size?

CG: I mean, they were small. I mean, like small, like the size of some of the birds that you see flying around here.

DW: Right. How similar did it look to a bat on Earth?

CG: The texture looked like a bat, like the wings looked like skin. But the head and the beak looked more birdlike.

DW: Oh, it had a beak.

CG: Yeah.

DW: Well, we could probably go through the taxonomy of a whole bunch of different critters.

CG: And I didn't see a whole lot. Personally, I only saw a couple of things. I saw plant life and those kinds of things myself.

DW: You did mention that. We got the plants in.

CG: And I saw that was catalogued early by the Germans. They catalogued a lot of different life that popped up in the smart glass pads.

DW: Were there things that looked like little crabs or spiders?

CG: There were large spiders.

DW: How large?

CG: Very large, like half the size of a person.

DW: My insider Jacob described cooking and eating those. And he said, it tastes like crab. I don't know why you'd want to. Were there things like worms that dig through the soil or like millipede, centipede type life?

CG: Well, I saw reported a large, almost like silkworm-looking worms that were burrowing and would also come out and lay in the sun at times and then go back and burrow.

DW: Yeah, the main life that I heard about from two other insiders who claim to have been on Mars was these worms that were very large, that would actually eat metal. And they would attach themselves to the side of some of these bases, and they'd have to go out with these harpoon-type guns and shoot them. But they weren't very fast-moving, so it really didn't pose any threat to you. It was a very boring job, apparently.

CG: Yeah these looked almost like larva-type, big, bloated worm things that would burrow underground.

DW: Were there any indigenous life forms that had evolved on Mars and had actually always been there?

CG: There is one group that was very elusive that I never saw but read about that were human-like that stayed in caves and always wore robes and were very elusive and stayed away from everybody.

DW: Yeah, I heard about an indigenous population from some others as well. Do you know about their height or their appearance?

CG: This sounds too much like out of a movie, but supposedly looked very much like us but are very reddish. And they claim to be indigenous from Mars. Whether that's true or not, I don't know.

DW: There's no way to know, yeah.

CG: But there was very little in the glass pad about them. They were very elusive. And whenever the space program would come in and build a new colony that was too close to one of their civilizations, they would move their entire groups.

DW: Really?

CG: Yeah, they stayed completely away.

DW: They didn't take offensive action?

CG: No. From what I could tell, they were very non-Martian, very peaceful. They wanted to stay completely away from all other life forms.

DW: All right. So that is quite a fascinating body of information. We're going to be

coming back next time with much more on Mars here on "Cosmic Disclosure" because you need to know. I'm your host, David Wilcock, and I thank you for watching.

Finding Life On Mars Season 2, Episode 8

Cosmic Disclosure; Finding Life On Mars Season 2, Episode 8

24 Nov 2015

DW: All right. Welcome to "Cosmic Disclosure." I'm your host, David Wilcock. And we're here because you need to know. We have Corey Goode here. And even as I'm asking him questions, I'm learning many new things. We've been describing the settlement of Mars by originally the Germans. But the Germans were not the first ones to go there. There's been many, many groups there. As we're going to talk about more in this episode, we're going to get into all the different types of life on Mars because that is a huge subject. So Corey, thanks for being back on the show.

CG: Sure.

DW: First of all, you had mentioned before in previous episodes something about vegetation on Mars. Could you just briefly give us an overview of what you saw? Did you walk around on the surface? Did you see any plant type of life?

CG: Personally what I saw were kind of colonies of shrubs that were in an area where we were building an outpost. And these were very hardy, short, and almost cactus-y-like shrubs that were purple and red-- the thick, I guess, stalks that went into the ground. And they had sharp, pointy leaves that were very sharp.

DW: What part was purple and what part was red?

CG: Well, the stalk was purple and red. And then the leaves were also purple and red. And there were thorns on the stalk of the plant and on the branches of the plants. They were not something you could stick your hand in. They were very prickly, I guess you would say.

DW: So in a previous episode, we are talking about a possibly indigenous Mars race. You said they look similar to us. What type of race on Earth would they look similar to? What type of human?

CG: The description was that they had a reddish tone. They wore robes. They were very skittish and kept to themselves. And the ones that had been captured or interrogated claimed to be indigenous, that they were always from Mars. That's where they originated.
But the people that had interrogated them were unclear whether this was true because they had been deceived in the past by beings on Earth that had told us that they were extraterrestrials when they had actually been ancient Earth civilization breakaway

groups. And some of these groups, since they had been space-faring groups, obviously could have gone to Mars and set up colonies. And these could have been remnants of some of them.

DW: Let's go back now to the Germans arriving there for a minute. And you said that you personally witnessed flying over ancient pyramids that were still on Mars today.

CG: Partially exposed pyramids.

DW: Did they take any interest in that kind of stuff when they got there? Did they want to land on it or explore it? I would think the interest would be insatiable to want to excavate it and find out what it is and all that stuff.

CG: The only interest that was shown was looking for technology, ancient technology. But again, you have to remember certain areas are very off-limits to people, especially back then. The races that were there are very territorial. So if they wanted to visit something, they had to stop, take some pictures, samples, and then scoot and get out. That was a part of the equation of them doing close research on a lot of areas of Mars as well. Because the area was considered territory of another group.

DW: Did you ever encounter any information specifically regarding the face on Mars, whether it was artificial, who built it, anything like that?

CG: No. During my time there, I was not aware of the face on Mars. So I'm not saying it doesn't exist. I just did not see it. I did not hear it talked about.

DW: So we were starting to get into last time that the Germans settled near the poles but more in sort of like a taiga rather than a tundra type of land. They're not in the arctic area. But they're in that sort of permafrost.

CG: More of a Goldilocks area between the very inhospitable equatorial region and the very harsh area of the polar regions.

DW: So what are the temperature extremes in those areas? What's the low and what's the high?

CG: Because of the atmospheric pressure-- and it also depended on the season of where you were. But the temperatures could change 40, 50 degrees in a matter of hours.

DW: Oh, wow.

CG: I don't remember exactly the temperatures that were on the surface of Mars. I just know that it's definitely warmer than what the statistics on the internet are. One of the things that I wanted to mention were now, current era, the space programs are very careful about cross contamination of germs, bacteria, that kind of thing going from one planetary sphere to another one. Back in the '30s and '40s and early '50s, not so much. And especially the Germans, they were bringing crates and crates of supplies and instruments and all the different things they needed to Mars. And they brought some very annoying pests. They brought along cockroaches, rats, and other spiders, other Earthly pests, that have become a problem on Mars and have contaminated. The rats have gotten a little bit bigger but survive just fine out on the surface. But the cockroaches have become huge, like bigger than your hand huge.

DW: Oh my gosh.

CG: People joke around that cockroaches could survive a nuclear war and surviving on the surface of Mars is not a problem for them.

DW: Are there indigenous insects that the rats could eat? I mean, what do you think their food supply was?

CG: I don't know. I'm sure there are probably insects there because I know there were very large spiders. I just didn't read or experience any myself. This insectoid group of beings, they use a biological kind of technology to where they create smaller bugs or insectoids to do certain tasks.

DW: Like clones or something?

CG: Yeah, but they'll create like smaller insect-like drones-- if they're doing battle or if they're in a warfare type situation, then they create. That's a part of their technology. It's kind of a biological technology.

DW: Right. So they can control what these drones do, like a remote control?

CG: Yes. And these are more of a hive mind kind of, a true hive mind. A lot of people think they know what a hive mind is when they really don't. But they have a hive mind and more of an insect, kind of colony type of structure.

DW: Did the Germans bring vehicles that use rubber tires and wheels to drive around?

CG: Definitely. Mm-hmm.

DW: Really? Like jeeps or tanks, or what were they driving?

CG: They had developed special vehicles that were pretty much like built on tank chassis that were pressurized and of course armored-- always armored with the Germans-- that they used for going on excursions.

DW: Would they try to go into caves and look for technology artifacts?

CG: I know that they were always going on expeditions, looking for technology, looking for different resources on the planet, constantly exploring, looking for different resources, especially. The only time caves ever came up were when they tried to explore routes into these lava tubes to do reconnaissance missions to try to get an idea of how they could someday take over these lava tubes.

DW: You said that raw materials were transported to Mars by the Germans using a primitive portal technology that was very hazardous to biological life. How big was this portal? Could they get those tank-type vehicles-- could they build them here and just portal them in?

CG: Yes. This is in the beginning when they were exploiting the natural portal system that exists in our solar system. And they didn't realize the calculations involved and the positions of certain planets, other bodies around. There are a lot of calculations involved.
They actually ended up having a hyper-dimensional mathematics handed over to them by another race that helped with these calculations. And I saw this math used quite often, and there were very few numbers in them. There were all kinds of weird symbols. But they were written out on boards just like math equations are.

DW: But just to answer the question, then, did they have the means to portal in something the size of a tank?

CG: Absolutely, yeah.

DW: Really?

CG: Multiple tanks.

DW: Really? So it was large enough to get multiple tanks in all at once?

CG: Yeah, they could get a battleship up there if they wanted.

DW: What does this portal look like? If we're going to see it on Earth where it starts, is it a ring like in the Stargate program? What are we looking at?

CG: These portals are bubbles.

DW: Like an energy bubble?

CG: They look like an energy bubble. And on the outside of it-- if you've ever looked at a hot highway, and you've got that--

DW: The mirage.

CG: The mirage effect coming up off the heat of the highway. You have that all around it. And it is not like a wall, like a flat thing you walk into. You can walk into it from two different directions, or 360 degree directions. People could walk into it from those directions, and then on the other side, they'll be coming out in 360 degrees, those directions.

DW: Wow. Would you have to cross in? Like if you're going to walk into the bubble, would you walk in on, let's say, the 6 o'clock part and then walk out on the 12 o'clock part? Like you've got to walk through the bubble and come out the other side? Or could you--

CG: Your point of view is totally skewed once you walk in. So once you walk in, you have no idea from your base of reference when you come out. You just walk into this basic bubble, you walk in, and then as you do, it's a strange sensation of-- I don't know how to describe it. It's a strange sensation. And you are going in, and then you're being pulled in at the same time. And then you collapse into it. And then you pop out on the other side.

DW: Is there a sense of duration as this takes place?

CG: No. Not like in Stargate where there's this-- vzzz-- you're going through this ring, this tube. There was none of that sensation.

DW: It's a very rapid compression and expansion?

CG: Right. And it does affect you. They give people shots and stuff to help them with the effects. But it's similar like if you put a very strong magnet close to your brain, how it gives you a real nauseated, confused feeling. You have that.

DW: Yeah, Henry Deacon actually said they gave him something he called [? lorentzil ?] as a supplement or drug that he took to try to ease off what he was calling transdimensional disorder. You called it temporal dementia, but very similar terms.

CG: And when they would transport a bunch of items, they would put the items in area where the bubble would appear. And then the bubble would pop up. And the bubble would be one size. And then you would see things almost like they're melting,

going into the portal.

DW: Really?

CG: Uh-huh. And then they would pop out on the other side.

DW: How fast would that motion look?

CG: Very quick, depending on the density and the size of what was there.

DW: It's almost like something getting sucked into a bubble, like just-- whick-- through a straw.

CG: Going down a drain.

DW: Wow.

CG: Yeah.

DW: Let's go into that room for a minute where the portal is. I'm assuming this is indoors. You're not going to do this in the open.

CG: No, a lot of times it's out in the open.

DW: Oh, really?

CG: These natural portals, sometimes they appear in the upper atmosphere. Sometimes they appear above the ground, underground. They jump all around the planet, along the grid system of the planet. Now, there are some of the ancient-- people have talked about United States going into the Middle East to secure some of this ancient technology, these portals.

DW: Like in Iraq.

CG: Mm-hmm. These are actual devices that have taken all of the guesswork out of using the natural portals. There is technology that uses point-to-point protocols to be able to send people and items safely. So that's a technology that exploits the natural portal system. There's a natural portal system that is occurring all around us right now. And they used to use intuitive empaths to help figure out where these portals were going to appear and for how long. But then they had artificial intelligence to help them with that.

DW: The Germans were using natural portals, and they would know where the portal

was going to be and that it was going to go to Mars and then they'd line up all their tanks or whatever in that spot when it was going to appear?

CG: Right. And it wasn't always a lot of tanks. But they would utilize one area that they knew was consistent. And through this mathematics model that was handed to them and with help provided to them through extraterrestrial allies, they started using these natural portal systems in a very early and un-technical way before we started developing out what we use now.

DW: When we look at something like Stonehenge, is that a natural stone means of harnessing and exploiting these natural stargates? Does that help to attract them?

CG: That's exploiting and harnessing the natural energy grid of the planet but not necessarily having to do with portals-- not necessarily having to do with portals.

DW: Right. I'm curious about the Germans, though. Obviously there's some mystery in what you're telling us right now. Did they have some kind of antennas or technical devices that maybe they put in a ring or something that they can help to stabilize this bubble with? Is there any technology that they would build that was involved in making sure this thing works?

CG: Not in the very beginning.

DW: Really? Nothing in the beginning?

CG: In the very beginning, they were using the raw, natural portal systems. This is the very beginning. Then they started using the mathematics models to use electromagnetic fields and torsion to create point-to-point torsion fields between the two points. Torsion is a spinning field. On each side, they would create them at the same time, each side spinning in the opposite direction. But to stabilize and keep the--

DW: Oh, just to keep it running.

CG: To keep the point-to-point hole open longer. But our arrival there has thrown off the balance and even in closer to current era caused the insectoids and the reptilians that are there to have more problems with each other and problems with the new-arrival humans, Earth humans.

DW: You'd mentioned 40 main groups on the Super Federation Conference that have 22 genetic programs running on Earth and that they have a massive series of encampments on the backside of the moon. And they all have it regionalized into their own little domain. Do those 40 main groups also have regions on Mars that are their own territory?

CG: I've heard a few of them have a presence on Mars, but they mostly have presences on moons around gas giants and on other planetoids and moons. They're not so much on Mars.

DW: So Mars is sort of like its own little parochial district with its own gangs and in-fighting and members-only clubs?

CG: Right. As usual, as humans we decided to hop over there and plant a flag and started taking over territory. It threw off the equilibrium and the balance that was there.

DW: You said there were several false starts of where the Germans tried to build when they did it around the equator.

CG: Around the equator and a few other places where they built in the wrong place and ticked off the wrong groups and ended up being overrun and losing entire settlements. These were small at the time, the people in them.

DW: And when you say small, what are we talking? Like how many people would be working there?

CG: Dozens.

DW: OK. What is the first, that you know of, successful settlement that wasn't in a bad area and didn't get wiped out?

CG: These started to occur in the late '50s, when the United States really started getting-- or the military-industrial complex, the corporations that are this complex, fully got behind the Germans and involved with the Germans. This is when they really started having successes and also the might to enforce and protect territory.

DW: So we have obviously started to map out Mars, but I think there's a lot farther we could go in describing what has been done since these original settlements. Would you agree?

CG: Yes. I would say what we've done so far is we have set a foundation for what-- after the Germans and the US industrial complex pretty much formed a union and formed what we call the Interplanetary Corporate Conglomerate and moved out into the solar system and created a mass infrastructure and massively colonized Mars. We have basically set the foundation for that discussion.

DW: Cool. Well, that's what we're going to be doing next time. We're going to take our space program colonization of Mars and really get into detail on bringing it up to

the present about how this enigmatic red planet has become a massive source of human habitation for this breakaway civilization. This is "Cosmic Disclosure." I hope you're enjoying it. I know I am. And we're here because you need to know. We'll see you next time. I'm David Wilcock. I thank you for watching.

Colonizing Mars Season 2 Episode 9

Cosmic Disclosure; Colonizing Mars Season 2, Episode 9

26 Nov 2015

DW: All right, welcome back to "Cosmic Disclosure." I'm your host, David Wilcock, and in this episode, we're going to continue a fascinating discussion about the "alleged" colonization of Mars by our own military industrial complex, beginning with the Germans. I'm here interviewing Corey Goode. So Corey, welcome back to the show.

CG: Thank you.

DW: We've been talking about the Germans getting to Mars. And one of several interesting things we talked about in the previous episode was this harnessing of a bubble type of Stargate system. You said that in the very, very beginning of when they were using this technology that it was a strictly natural phenomenon. And you said the phenomenon could be in the atmosphere, could be on the surface of the Earth, or it could be inside the Earth. You mentioned that the Germans had extraterrestrial support on knowing where these things were going to appear. If this is a natural phenomenon, then why would there not be more of a widespread knowledge about this? And why would other people have not figured out how to use these already?

CG: Other past civilizations have learned how to use them and have used them. Our current, highly boxed-in and controlled civilization are highly manipulated to believe certain things and disbelieve other things, what is and what is not possible. So if you are told by the mainstream media and government these things aren't possible, that's pounded in your head all the way through school and daily on the news and by society, the people around you, then that's your reality. It's not possible.

DW: We have very bizarre cases in tornado physics. Tornadoes sweep through an area, and there was a case of all kinds of weird stuff, like a cow being halfway embedded into the wall of a barn, or a woman who opens up the trunk of her car and finds a locked trunk carrying items from her bathroom like soap and shampoo, or roosters that are inside a jug. Do you think that the tornado is exhibiting some of these portal phenomena? Is a tornado some type of portal manifestation?

CG: It's all based on torsion physics. Well, torsion physics is a big part of it, yes.

DW: So the rotation of the air would be part of it, then?

CG: Yeah, it's torsion of the air molecules in space is being spun in a torsion field.

DW: So these portals are not just going to be in one location any time you want. There's a time factor in terms of when they appear.

CG: Yeah, that's with the natural ones.

DW: Right.

CG: After the Germans, after Paperclip, and we talked about Operation Highjump and then the German breakaway came in and signed treaties with Eisenhower and Truman and formed a sort of union with the military-industrial complex. And all of these corporations were infiltrated by high ranking German scientists and engineers. Well, all of these aerospace companies and other engineering companies started to build all of the secret space technology.
The military and the government itself could not do this. They did not have the ability to build all this. They didn't have the infrastructure. But the Germans highly coveted this infrastructure because they were already out there, and they needed this infrastructure to grow. They had big plans for what they had already-- they had a foothold out there, and they wanted to grow. They had large plans.
And these plans, when they brought information to some of these aerospace companies that they had been out to the asteroid belt and found entire asteroids that were made of precious metals that they had already been mining some, dollar signs popped in their eyes, in the eyes of these US capitalists. So they fully got behind this German grand plan to build out a giant infrastructure into outer space.
And these groups that formed their own secret space program later on after they helped the US government and other governments form the first space program, like Solar Warden, formed one that we've begun to call the Interplanetary Corporate Conglomerate. And it's a corporate conglomerate of these corporations from all over the world that build aerospace technologies. And since the 50s, they have been following the German footsteps from the moon and to Mars and building out the small infrastructure that they had with our great industrial might and have taken small, small bases and made them into huge bases, like on the moon. The Lunar Operation Command started off-- it was a small base with a little bit underground with small little swastika-looking base.

DW: When you say small, how many people could work there?

CG: I'm not exactly certain. I mean, they were always in like the several dozen at a time. These were small operations.

DW: That's pretty darn small.

CG: Yeah. But the ICC-- I will would refer to them now as the ICC, the Interplanetary Corporate Conglomerate-- really went in. They went in 100% behind the Germans'

plan.

DW: Did they do this as soon as the ink dried on the contract with Eisenhower? Or was there some time involved?

CG: There was some time involved to develop the technologies that were going to be pushed out. But in the beginning, they were developing the technologies for the government for things that would become Solar Warden, the early precursor of Solar Warden. There were some earlier types of craft that were not as advanced. There's a whole history there.

DW: Did the Germans hand over all of what they had to the military industrial complex once this contract was signed? Or did they hold some things back?

CG: They held everything back. They handed three vessels over that were three different sizes. They called them the ARVs, Alien Reproduction Vehicles, when there was nothing alien about them. These were what we had talked about. They were basically current rebuilds of ancient Vimanas.

DW: Oh, wow.

CG: And they had the problem of the spinning vortex of mercury. When they added high electricity to them, the mercury would turn to gold, gold coral, coral-looking gold. They weren't shielded. They put off heavy EM fields that were very detrimental to the pilots. They had a lot of problems. And they gave that to the American military-- here, here, work out the kinks. Here's some toys for you. And then they were developing the nicer toys. The ICC always kept the most advanced toys.

DW: Now there's a leaked Truman memo that I had in "Wisdom Teachings" way back when, describing I believe in around the time of the beginning of World War II, where he was talking about interplanetary vehicles that they were hoping to exploit technologically. And this is years before Roswell. So how far was the US on its own with these back-engineering projects?

CG: Most of the technologies that they had recovered from crashed alien vessels were so far advanced that it was literally like a nuclear sub of our era being dropped during the Civil War era and telling them to reverse engineer it. This was a lot. This technology was a lot closer to their current understanding of physics and technology.

DW: So some of the stuff, like what we hear about from Colonel Philip Corso regarding the back-engineering of Teflon, Kevlar, Velcro.

CG: It's more of a material sciences.

DW: So they're getting that kind of stuff, computer chips, LED lights, integrated circuits. But they're not actually getting working craft out of it yet?

CG: They were able to repair, and there were some craft that were less advanced that they were getting somewhere.

DW: Oh, so they could fly the originals that had crashed. They repaired them and got them working.

CG: And they were reproducing some. They were crashing them a lot. I mean, they had their own program, and they were getting somewhere. But they were so far behind the Germans that it was embarrassing.

DW: Why would the Germans not want to share what they had with the military-industrial complex? Were they afraid of them? Were they scared that they were going to try to take them over?

CG: Well, I mean in 1947, the military had sent an entire fleet down to Antarctica to wipe them out. So you do the math. Their goal was to force the United States to sign these treaties so they could get their hands on the same industrial might that defeated the Axis in World War II. They wanted to exploit this industrial might and engineering might of the military-industrial complex and infiltrate it to co-opt it and use it to build out this infrastructure on the moon and Mars.

DW: So how many settlements did the Germans have on the moon and on Mars when this deal was actually implemented?

CG: At the time, they just had the one on the moon. Much later they built another one on the moon, along with their Draco allies.

DW: And this one on the moon was small, as you just said.

CG: It was small. And it was used just as a jump-- like skipping stones across a pond.

DW: Did they clear out like a large, kind of parking lot type area around the base where they could land things or have vehicles to park?

CG: That was all underground. So for Mars, they had finally mapped it out, done all the hard work, lost lives, found the areas that were best for setting up colonies, except they could only set up a couple colonies in a small area. There were other beings there that were preventing them from expanding their empire there. Well, once they had the ICC behind them, they were able to start arriving there after they started building up their-- just like before anyone goes to war, they start building more tanks, building

more airplanes. They started building up their military might, secret space program wise.

DW: Could this be sort of like a surprise Trojan horse attack, where they build the stuff here on Earth, and then once they've already got like a whole battalion, then they just portal it in all at once, that kind of thing?

CG: Well, I guess you could say that. They built all of what they had strategically decided they needed to take over a certain area and build out a certain amount of colonies. And that was going to be their major, major foothold. And I believe "foothold" was a part of the project name.

DW: Really?

CG: I believe so. And once they began to arrive there, did battles, drove back the different groups that had claimed that territory as their own and they felt it was safe, they then started sending in the engineers. The engineers started to arrive. And then they started to build out areas for bases, much like the DUMBs, the Deep Underground Military Bases. Some of it was above ground, but most of it was underground or in existing caverns. A lot of them were around canyons and that kind of stuff.

DW: Did they ever have an experience like what you described on Earth where they're digging underground and they punch into something that was already there?

CG: Yeah. They experienced that, and then they would have to clear out nests of the beings that were there, very much like the United States, like I said before, arriving on Plymouth Rock and removing the indigenous people and planting flags and building settlements and colonies.

DW: Right. Here, have some blankets. They're nice and warm.

CG: Yes.

DW: They're smeared with smallpox.

CG: Yeah. And they programmed in their thinking. They remembered how the 13 original colonies had declared independence and broken away from the British way back when and formed America. It was very much made clear in the documentation that this was not going to happen. It stated, we are not going to have another 13 colonies situation on Mars. So they built out a lot of these colonies, and they were building out colonies for more people than they had at the time. And they were planning on bringing people from Earth. And this goes back to the brain drain that

happened during-- what was it? '60s?

DW: '50s and '60s.

CG: '50s and '60s. And it just so happens that during the '50s is when they really started building these bases in earnest.

DW: In earlier episodes you said that a previous human civilization on Earth that was blonde-haired, blue-eyed predominantly, that we're calling the Agarthans, migrated inside the Earth. Were the Agarthans happy just to be inside the Earth? Were they involved in this program to industrialize Mars? Did they want more territory for themselves?

CG: They were not a part of this.

DW: Okay. Were there any extraterrestrial groups that were providing material and logistical support to this expansion of territory on Mars?

CG: The Draco alliance was a part of a lot of this.

DW: So their own weaponry and technical capability was part of how they were breaking up this-- you just called these nests, like indigenous beings?

CG: Actually, that almost entirely was done by us. But they helped us technologically. But as usual, we were sent in to do the dirty work. And we did and had no qualms about it.

DW: What kind of scope of atrocities were committed in this? Were there times where hundreds of thousands of intelligent beings were killed in a short period?

CG: Yeah, yeah. Hiroshima, Nagasaki type situations happened countless times.

DW: Are you saying they used nuclear weapons?

CG: Absolutely.

DW: Really? They nuked people? Doesn't that make it radioactive afterward?

CG: There is a-- I don't know if you've heard of this weapon that came soon after nuclear weapons. It's a nuclear-based weapon that causes a huge explosion and then vvv-vacuum.

DW: Yeah, that's a fifth generation nuke, right? That's what I've heard it called.

CG: Okay.

DW: There's a picosecond explosion that's a sphere. It's a perfect sphere. It's almost like a cutout. And nothing is left inside once it goes off, and there's no radioactivity. You can just hose it down. It's gone.

CG: Well, there is radioactivity, but it is all brought into a small area into the center.

DW: Yeah, I've heard that called Fifth Gen.

CG: OK. I haven't heard that. But they were using these types of weapons to not only create underground caverns but also clear out areas that were filled with sentient beings.

DW: That is nasty.

CG: That's the way those guys roll.

DW: That's the government.

CG: And when they stated that they were not going to have a 13 colonies situation again, they were going to make these colonies the most draconian, and they were going to be very tyrannical type setups to where there was absolutely zero, zero, zero chance that anyone was going to be able to form any type of rebellion and declare independence and there be an independent Mars.

DW: When they're saying they don't want a 13 colonies again, is this getting back to the idea that even though we're talking the Germans, that the deeper group in these German secret societies that was behind all this is the same sort of Cabal, Illuminati power structure that's the British monarchic empire?

CG: This is coming from the perspective of the current-era ICC. These are the big fat-cat bankers and corporate people of the aerospace companies. That's coming from these guys.

DW: Right. So not the Germans now. This is the merger with the Germans and the ICC.

CG: The Germans were very much a part of it. At this point now, you can't separate the two. They're now one entity. And they then began to approach many thousands of very highly educated people and present them with information saying, listen, the Earth is about to undergo some very traumatic changes. You, your family-- they would especially approach people like you if you were a physicist and a geologist and

had all these degrees, your wife happened to be a nurse or a doctor-- bonus-- and if you had three kids that they had secretly gotten genetic tests from. They did all this background stuff before they approached people.
And they would make them an offer. They would show them pictures of underground bases here on Earth that the elite are going to that are super advanced and say, this is where you would go. You'll be living like the Jetsons. This is back like in the '50s when people were promised, hey, before too long, you're going to have a flying car and all this.
So the people were like, OK, cool. And they said, we're going to take you to Mars. You will live there and be saving the human race by you being special, having special genetics, and you will help save the human race and at some point come back to the Earth-- there were several different stories going around. And these people would pack up their little-- they were only allowed to bring just a little bit, not much, what they could carry. And these people weren't allowed to tell their families anything. And all of a sudden, these people just disappeared.

DW: Well, and I've heard from other brain drain people-- whistleblowers-- that if you live in a foreign country, you just tell whoever you know, I'm going to this other country, I'm leaving the country, and I got this great job opportunity. And then they'll have you write out postcards.

CG: A whole bunch of postcards, rubber-band them, hand them-- yeah.

DW: Yeah. And then you send them out over time and just gradually taper it off.

CG: Yeah. That's someone else's job to do while you were gone. But these people were then taken to Mars, and they would arrive, and reality would hit them. All of a sudden, all these guys would arrive with weapons and say, follow us, march them to like an 8 by 10 kind of room and say, this is where you're going to be staying. Here's your job roster. This is what you'll be doing.
Your children, when they get to be 12, 14, will be put in arranged marriages according to their genetic matches. We will take care of-- depending on how they test and genetically what they seem to be best at, we will educate them to do that to contribute to the colony. Welcome to Mars. And then that was their new life, a life of tyranny, a life of slavery.

DW: Were there Hemingway novels and historical books and things that were brought from Earth to these colonies so people had something to read, something to occupy themselves with in their free time?

CG: I would imagine that there were. I'm really not too sure.

DW: Well, one of the things that we saw with the negative commenters when you

talked about this online was thinking that these people are going to lose all connection to their Earth heritage once they go. But I would think that the oral history alone would be preserved, if not some form of documentation.

CG: Well, as a part of these children's education, of course they're going to get some sort of-- you know, the victors write history. They're going to get some sort of skewed Earth history taught to them. So they're going to learn about the World War I and World War II from the point of view of the ICC, about all the different countries in Europe, about the different states in the United States, about South America. Because all of these people are a hodgepodge of people from all of these places. These people are like generations removed. My great-great-great grandfather-- or however many greats by now-- grandfather was from Abilene, Texas, or from Chicago or from Bangalore or India or from wherever. So to think that these people are going to have no idea of the geography and history of Earth is ridiculous.

DW: Now, I asked you this about the LOC before, but I want to do it again now. If you go into one of these facilities, if you filmed it from the inside and these people show up there and they become slaves, is there anything remarkable about it that we would be able to think was different than if it had been in a building on Earth?

CG: You're talking about the LOC?

DW: No, I'm talking about the Mars facilities.

CG: No. The Mars facilities, yes.

DW: Really?

CG: Now, the Mars facilities, they-- you might think that you're in some sort of Naval facility or something. The living quarter areas are all labeled in alphanumeric. It looks very, very much like a military installation. There was one place that we went that they had to fix a damaged piece of equipment that was essential, that the ICC couldn't get their personnel to in a manageable amount of time. And we were escorted to, told not to make eye contact with anybody, not to talk to anybody, that whole thing.
And there was a wall where people were like hanging art. I mean, it looked like they were doing some things for the mental health of people to make them not totally depressed and suicidal. But the people looked gaunt, pale, and just almost like drones just going about their day.

DW: Well, a life of total enslavement would do that. We're completely out of time for this episode. But this discussion is blowing my mind. Always learning more when we talk.
So when we come back next time, we're going to be getting more into all of these

interesting subjects, continuing the narrative forward, fleshing out for you the space program and what's really going on behind the curtain. This is "Cosmic Disclosure." I'm your host, David Wilcock. And thank you for watching.

Conquering the Solar System Season 2, Episode 10

Cosmic Disclosure; Conquering the Solar System Season 2, Episode 10

11 Dec 2015

DW: Welcome to "Cosmic Disclosure." I'm your host, David Wilcock. And we are exploring the fascinating testimony of an insider named Corey Goode. Thank you for being on our show.

CG: Thank you.

DW: So when we last left off, we were talking about the ICC, or Interplanetary Corporate Conglomerate, as they're called, using the industrial power of the military and corporate might of the United States post World War II to create a massive expansion. Now, you said that there was a seed base on the moon that was small, that was built by the Germans, that was then expanded quite considerably by the ICC. And you also said that there were many failed attempts at bases on Mars, and then certain bases actually stuck and were able to stick around. And then those also got built out.

CG: Correct.

DW: OK, so how many of the seed bases lasted on Mars? And where were they?

CG: The first couple of German seed colonies that actually made it on Mars were within the first 20 degrees of the polar regions. There was one in particular that the ICC used to expand and build off of. And this one was somewhat in a canyon area, into the side of a canyon, and advanced in and was under the surface of Mars, not on the surface.

DW: And you said that how they hollowed out more space inside the Earth was with these, what I was told were called Fifth Gen type nukes, where they just create a big, sudden explosion with no lingering radioactivity?

CG: Yes.

DW: The one that became the mainstay, was it in the northern or southern hemisphere?

CG: The northern hemisphere was where the first main base that was a German name, in the beginning which was built, was built out.

DW: OK.

CG: And it was built out in a huge way. It was built out to contain a large amount of engineers and scientists. And also, a little ways away an industrial complex was built where they were going to start producing I guess the items that they needed, technology that they needed, that came from raw materials they mined on Mars, moons, and in the asteroid belt. They took these raw materials, turned them into usable materials, and even composites, and created what they needed in these rather small plants in the beginning.

DW: So what was considered to be the desired technology that they were building out there in the beginning? What was their initial attempt? What did they want to make?

CG: They were building what was needed to expand on Mars.

DW: OK.

CG: So in the beginning, they were just building what was needed to expand their infrastructure on Mars.

DW: So are they building materials on Mars out of local stuff, like you said before, involving the Kevlar bags and then making concrete out of local earth from the Mars sphere? What was the building technique? You said that these industrial facilities they had were building the things they needed.

CG: Yes, they were building-- the raw materials were coming from mining that was going on, on Mars, on various moons, and the asteroid belt. These raw materials were taken to the Mars' industrial areas further away from the colonies and converted into usable materials, whether they be melted down into certain metals that were put into dyes or forms or converted into composite materials.

DW: Well, you're touching on an interesting thing now because you're describing mining that's not just happening on the moon or Mars. So we haven't really gotten into yet the scope of-- I would guess there would have to be some kind of facilities built to mine on these moons or asteroids or wherever.

CG: Some of these asteroids are incredibly huge to where there are three- to four-man teams that live there on these asteroids and operate--

DW: Three or four people?

CG: Three or four people. And they operate these mining facilities. A lot of it's done robotically and remotely through remote machines. The raw materials are then put into these large freighter craft and then flown back to the planet Mars to the facility that it needs to go to. And then the raw materials are taken out of these freighter craft

and then converted into the materials that are needed.

DW: You said in a previous episode that the Germans had discovered, through extraterrestrial assistance, these spherical, natural portals they could use to teleport even something as big as a battleship to Mars or elsewhere. Are there such natural portals available to them on these asteroids or on the moons? Or why would they have to use a shuttle craft, is really what I'm saying.

CG: It's just more practical for them to transport these materials in these large freighter craft to and from the asteroid belt and the moons to these locations.

DW: If we saw one of these freighter craft, what would it look like?

CG: It's almost like a super large shipping container with small little wings on each side that just barely jet out. The wings don't look like they're large enough to use the Bernoulli principle to give them flight in an atmosphere, but there's wings on them nevertheless, real small. And the front has about a 45-degree angle where the cockpit is. And the back part is basically like a big-rig or a shipping container. That part is detachable. But I've never seen it detached. I've only seen them attached and coming and going.

DW: You said that the original German craft were using this mercury propulsion system, rotating mercury. What is the power source for a craft like these shipping containers? Are they still using the mercury at this point? Or have they gotten in a more advanced propulsion system?

CG: They're using more advanced propulsion systems, and there's different types of propulsion systems. There are the torsion systems, which lot of people call warp drives.

DW: People in the program actually say it's a warp drive? Or you're just saying lay persons?

CG: We would consider it warp drive. It creates a torsion field. You have like the engine here, and on either side, you have a torsion coming from the center of the device on out.

DW: The field?

CG: The field, the torsion field. And then they control how much energy is going into the torsion, the field on either side. And it causes the space time to twist, causing it to be pulled in one direction or pulled in another direction because of basically like the warp drive that they've depicted on Star Trek. And there are--

DW: So it's almost like it's creating a hill in space time that it's falling into as it goes forward.

CG: Right. And there are temporal jump drives that are extremely advanced. They had to place buffers on these temporal drives so people weren't jumping back and forth in space time in our local area.

DW: Meaning time travel.

CG: Right. And it works almost like teleportation. It's instantaneous.

DW: So what was your understanding of time as it was presented to you? Did they explain the discrepancies between the physics of time, like Einstein saying it's one-dimensional, and it only moves forward?

CG: Yeah. Basically they showed one of Einstein's equations-- he had things close. He just needed to flip one equation over here. His later things that were suppressed, he had even closer. But the physics that are being pushed on us are archaic. If we compare it to medical terms, it's like if you have a fever, let's cut you and let you do bloodletting. It's that far backwards in the way of thinking.

DW: All right, let's stick with the drives for a minute. So you have the space time, like the squeezing the pumpkin seed out your fingers kind of thing, where it's falling into the hole that it creates.

CG: Yeah, the torsion.

DW: Torsion drive. Then you have this temporal drive, where you could actually travel in time, but you say they put buffers on it. And why did they need the buffers?

CG: Well, to prevent people from doing it on purpose, and also there are accidents. They actually had developed a communication device, and it was actually based on something that you mentioned earlier, quantum entanglement.

DW: Right.

CG: And each of these devices, they would take an isotope that they were quantum entangled.

DW: Right.

CG: And these devices, you would speak in one, and they also had video. And there was no signal being sent between them. They were completely secure and unhackable.

DW: Right.

CG: And they called them quantum correlating communication devices. And these were in vessels. And if a person had a bad jump and ended up somewhere or some time they shouldn't be, the two isotopes would be out of harmony, I think they called it, for a certain amount of nanoseconds. And they were able to calculate when and where the person or the other device was by calculating how long it took the vibrations to come back into harmony.

DW: So could you talk to somebody in a different time by quantum entanglement?

CG: Mm-hmm.

DW: Really? Wow.

CG: Anything that's quantum entangled, no matter how far you separate them in dimension, reality, time, space, they stay entangled.

DW: And by like the Doppler effect, the lag time, you can calculate space and time coordinates of where that person ended up falling into?

CG: Exactly.

DW: Did you experience time paradoxes, like that kind of thing? Is that part of why they don't want people jumping back? Can they mess with our timeline somehow?

CG: There were a lot of experiments of people going back in time and doing experiments. And they were saying, oh, we've created all these divergent timelines. And then they were sending teams going back trying to fix them and making things worse and worse and worse. And finally, they realized that time is like space. It's elastic. And all these paradoxes all collapse and go back into a singularity. And that our consciousness controls these timelines, has an effect on these timelines as well and which timeline we're going to be-- we choose which timeline we're going to be in consciously.

DW: Let's just get back to what we're trying to cover in this episode for now, which is some of the people are traveling in temporal drives, and there's build-outs of colonies in our solar system. So if we look at the history, you've got the moon first, then Mars. How soon after they got to Mars and they got successful, stable encampments, did they start building facilities on asteroids or other moons?

CG: Almost immediately.

DW: Really?

CG: Yeah, the Germans had already started mining certain asteroids. And this is one of the reasons the ICC wanted to go out there. They heard there were asteroids out there that had platinum and gold. And the talk down here on Earth about there being a discrepancy in gold, gold being rare, silver being rare, that is a total manipulation. I mean, just on Earth the syndicates have hidden a bunch of gold.

DW: Right.

CG: There's tons of gold. And the gold that they're finding in these asteroid belts, atomically you look at Earth gold and this gold, they're the same. They don't have different atomic structures. It's gold. So there is plenty of gold in the solar system and so many tons of gold and platinum and silver and other elements in the asteroid belt.

DW: Could you actually find entire asteroids that are just like a piece of gold or a piece of silver?

CG: Well, I wouldn't say that they're entirely a big nugget of gold but are very much gold. It doesn't take a whole lot of refining to separate the gold from the bedrock, or what used to be bedrock, that it's in.

DW: Well, I would think if they wanted to wrangle an asteroid like that, you'd need a pretty big craft. So what were the original sizes of craft that the Germans were using as they made this expansion outward?

CG: Small. They were flying to these large-- I mean, picture this huge asteroid and these little bitty craft. They're landing on these asteroids, and then they're setting up mining facilities and slowly digging further and further and further and further in to these asteroids to where they're getting more and more hollowed out. Well, these asteroids are constantly being hit by smaller asteroids and this kind of thing. Well, you have safer working conditions inside. So most of what's going on is further inside the asteroid. And once they had gathered a certain amount of raw material, whether it be gold or platinum or any of these other things, it would be put it into these large container craft and then flown to its destination to be changed into usable materials.

DW: When I was talking to Pete Peterson, he described the really interesting properties of a metal called bismuth. And he said that you could extract it into a very, very long wire and then make a coil with bismuth and run electrical current through it, and you get all kinds of weird stuff start to happen.

CG: Yeah, I believe that that is what is used in the Gauss guns.

DW: What's Gauss-- Gausskin?

CG: Guns, the weapons that are basically like rail guns.

DW: Oh.

CG: When they took them apart to show me, they had rods running down the barrel and then this thin wire-- they called it the coil-- that ran along the outside that basically worked like a rail gun. An electromagnetic field pulsed. And also an electromagnetic field pulsed down the rod and sent a projectile out at like-- I can't remember. It seemed like 5,000 miles an hour or something. It was like an incredible speed. And the projectiles were just under like 50 cal.

DW: Wow.

CG: And at the bottom they had basically a grenade launcher. And these grenades were like 20-gauge shotgun shells, just in size and shape-- they didn't look like shotgun shells-- that were launched in a similar manner that had a very advanced plastique type explosive in them that gave a much larger report or explosion than like an M203 grenade launcher. And these were the rifles that the security details would carry.

DW: Did the ICC or the Germans develop advanced computer technology faster than we did on Earth that they could start to use in all this robotic mining and things?

CG: Yes. They've had computers, computer systems, and quantum computers much, much longer than-- way before Bill Gates and IBM started to put out motherboards and integrated chips.

DW: So can you just spell out for us now-- when the Germans first got started, what was the approximate year that they first got a stable encampment on the moon? Do you know exactly?

CG: I know that it was in the late '30s that they were using an older facility that they had pressurized and were using while they were building another smaller base.

DW: This was like Ancient Builder race type of ruin that they found?

CG: Right

DW: OK.

CG: And then that was in the early '40s, I think, that they completed this small base of

theirs.

DW: When was the first stable base that lasted on Mars?

CG: I think around '52 to '54 is when they really started getting the United States to sign the agreements, and they had only just really got a good foothold on Mars by then. They really had a lot of setbacks on Mars. They lost a lot of lives.

DW: So almost like an 18-year struggle.

CG: Yeah. I mean, they really did the pioneering work on Mars.

DW: But they had better success building mining facilities on asteroids and moons prior to stabilizing Mars?

CG: This was at the same time.

DW: Oh.

CG: Yeah. Once they had a stable area to call their own territory, then they were then starting their mining operations. And their mining operations were more-- I guess when a geologist goes around a large region and is picking up certain rocks, doing core samples, getting a good idea and then labeling certain areas and grids. I think it was more of an excavation and figuring out what was out there. And when they found certain things they needed, they would start small mining operations.

DW: Did anybody from Earth that we would know of get like the dog-and-pony show maybe to help keep them quiet, like a president or prime minister, early in this game? Did they get to see what was going on so they knew what they were involved in?

CG: I believe Eisenhower may have. He was the one that ended up, ironically-- him being a general in World War II, I imagine it was very difficult for him to come to terms signing treaties with these German breakaway groups.

DW: Oh, yeah.

CG: I can imagine it was really hard for him. But I think he ended up after-- in 1952, things really got heated because we were turning down the offers, the demands. The Germans were making a lot of demands about wanting access to the United States and our resources as a part of a treaty. And we were denying it. We told them no. We were trying to play hardball negotiations.
And through the Paper Clip, this German secret breakaway group knew that the highest law in the land was that the United States didn't want any of its people to

know about the existence of extraterrestrials or higher technology, so they used that against us to force us to sign a treaty with them. And in that process, I'm sure that Eisenhower more than likely, along with all of these corporate people that saw dollar signs, got the dog-and-pony show, and then the corporate people were just 100% on board and wanted to exploit everything that the Germans had found.

DW: Sure, that makes sense. I don't really have a strong sense-- you've just kind of said "moons and asteroids." So what moons are we talking about? How many of the moons in our solar system-- because there's a lot of moons in our solar system.

CG: Yes.

DW: There's at least 100.

CG: Right. There's a lot more 100.

DW: OK. So how far did this go? And how much did it expand over time? What were the earliest moons that were conquered or landed on?

CG: All of this is very tricky diplomatically because a lot of moons are off limits to everybody because they're diplomatic territory, "owned" by some of these 40 or 60 groups.

DW: The Super Federation.

CG: Super Federation people, especially around Saturn.

DW: Really? Saturn has a lot of moons.

CG: Yeah, yeah. But there was a lot of activity around the moons of Jupiter.

DW: Germans and ICC people?

CG: Mm-hmm. And Uranus. And then the asteroid belt. But I don't know or remember any actual moon names or what actual element or resource they were exploiting from which planetary body.

DW: Well, Io is one of these weird ones that has all these volcanoes and stuff like that around Jupiter. And it's very close, and it's quite hot. Is a moon like that too inhospitable for them to land on?

CG: Yeah, there's some that they could not get access to. I remember reading-- there was one moon that was circling around a gas giant that was spewing some cloud of

some element out that they were collecting, they were collecting from space from behind the moon. I know that sounds ridiculous.

DW: No, not at all, actually.

CG: I haven't seen anything that says a moon around a gas giant is spewing stuff into space, but--

DW: Well, I actually have. Io, as we were just talking about, does have very active volcanoes that are spewing off a whole bunch of particles--

CG: Into space?

DW: --that have created a ring that actually looks like a saucer falling, when the saucer falls and it's kind of doing this as it's coming to a rest. That ring tips with the gravitational field of Jupiter. And there's been a significant increase in the particle density of that ring since the 1970s that NASA has tracked.

CG: Have they done a spectral analysis of what the chemical is coming out?

DW: Yeah, and it's got lots of weird stuff in it like argon and neon and helium and oxygen and a lot of things that we might be able to use.

CG: OK.

DW: So that does make sense to me.

CG: OK.

DW: Every time I ask you questions, I'm learning all kinds of new stuff. So this is really mind-blowing. This is "Cosmic Disclosure" because you need to know. I'm David Wilcock, and we'll see you next time.

Beyond the Limits of the Sun Season 2, Episode 11

Cosmic Disclosure; Beyond the Limits of the Sun Season 2, Episode 11

11 Dec 2015

DW:: Welcome to "Cosmic Disclosure." I'm your host, David Wilcock. And we are interviewing Corey Goode.
So we've been talking about the development of our solar system by the military industrial complex, and the faction that we have been focusing on is the defense contractors that merged with the Germans who originally did the work that has come to be called the Interplanetary Corporate Conglomerate, or ICC.
So here with more on the ICC is Corey Goode. Corey, thank you for being here.

CG: Thank you.

DW: We were talking in the previous episode about certain regions that as the ICC expanded out into our solar system, they were mining various moons. You had said that one of the areas of particular interest that they were working on was the moons around Jupiter, and you said the moons around Uranus. You also said that Saturn was essentially the forbidden region in some sense.
Now, previously I talked to you about the people that had settled on the moon on the dark side. And you said those are the super federation types, but that Mars is kind of like its own territory.

CG: The moon is a hodgepodge of the Super Federation types and the Draco Alliance types-- a whole bunch of different types, many of whom do not like each other. But this is a very strict diplomatic zone that people are just a few kilometers away from each other who live in strict peace that have been at war for millennia, to make that clear.

DW: Sure. And you said that many of the people that live on the moon don't live on Mars.

CG: Correct.

DW: And that Mars had its own sort of separate domain. Is there a relationship between the settlers on the moon, the settlers on Mars, and the settlers in the Saturn moons that you were describing? Or are they all different?

CG: There's quite a bit of difference. What I've described as this Federation Super Council, this is a Super Federation made up of other federations, councils, and other different organizations and groups.

DW: So hence the word "Super."

CG: "Confederations" I've heard used. And it's kind of like a giant UN of all of these different federations, confederations, councils, that come to meet. And there are 40 main groups with 20 other groups that are there a fair amount of the time but not all the time.
Now, these groups are more of the human-looking, human type. And their bases seem to be mainly on the back of the moon and on moons of some of the gas giants, especially Saturn, so much so that there are areas around certain moons of Jupiter and Saturn that our vessels were completely forbidden from going anywhere near. And this is in our own solar system. These areas were off limits.

DW: Our vessels meaning your solar warden faction?

CG: The Secret Space Program, all of Earth's Secret Space Programs were not allowed. No Earth space vessels were allowed within a certain distance of these moons.

DW: Now, I had Jacob, my space program insider who I've mentioned before, tell me that some of these moons, the entire interior would be like a geodesic shape, that has, like a dodecahedron let's say, pentagonal faces with trees and habitable land, and the whole interior of it is hollow. And you can fly your craft along, and you get to a certain point and then you make a turn and you fly this way, and when you get inside there it's almost like a paradise type of world. Do you think that might be some of what is going on in these Saturn moons, that they're that built out inside?

CG: Mm-hmm.

DW: Did you encounter information like that yourself?

CG: Yes.

DW: Really?

CG: And I encountered information that I've tried to stay a lot away from. All of this is so incredible, but our moon is also an artificial body.

DW: That's something that almost everyone in the know that I've spoken to has said.

CG: It's in a locked orbit with the Earth with almost like a tractor beam technology that has locked it in orbit with the Earth, and they found the energy field that goes deep within the Earth to where it's focused to anchor the moon. And the moon only changes position, as in it goes further from the Earth by, I think, centimeters every

certain amount of years or something.

DW: You're saying that's not normal for a moon?

CG: Absolutely not. The Earth's density and the gravitational effect it has in time-space, creating a torsion field by its spinning and contorting space-time, is not enough to capture something of what scientists say the density of the moon is. And because of the spinning of the Earth, it should have an effect on the moon to cause it to spin.

DW: Oh, wow.

CG: But the moon is locked in. It doesn't spin. It's locked in too close to the Earth, and it is not something that could have been captured. None of the scientific models have worked, that it was once part of the Earth and was flung out. It was around 500,000 years ago that the moon became a satellite.

DW: Which is exactly what all the other insiders have told me as well.

CG: Well, that's the documentation.

DW: And you're familiar with-- I said this to you on the phone, which blew me away. I mentioned Brilliant Pebbles.

CG: Yes. Operation Brilliant Pebbles, with a backwards traced-- And they use the same program in forensics on Earth all the time. But in the asteroid belt they were able to, after they mapped all of the asteroids and their trajectories, they were able to reverse, over many hundreds of thousands of years, where they all would have been at one point.

DW: We've just had in the very recent past now photographs sent to earth for the first time of Pluto. Pluto's pretty far out there. And then you've got the Oort Cloud. Is there anything like the Oort Cloud, where they've gone that far out to the edge and developed mining facilities or colonies there, as well?

CG: There are a lot of surprises out in the Oort Cloud.

DW: Really?

CG: And Pluto's a very interesting planet to lead in itself. It's a very strange orbit. It's not on the orbital plane that all the other planets are on.

DW: Yeah. Pluto's on an elliptical orbit like this, and everything else is like this. That's true.

CG: And that has something to do-- we're a failed binary system. There are other Pluto-sized planets inside the Oort Cloud.

DW: Which they just haven't told us about?

CG: Right.

DW: Wow. Is there more Ancient Builder Race stuff out there that they were able to find and pressurize and use for their own colonies?

CG: They found the Ancient Builder Race stuff everywhere. In the Oort Cloud-- I mean, it's everywhere. The ICC has gone out into the Oort Cloud, and they're establishing bases on planetoids out there as well.

DW: Up until now, everything we've talked about is inside the solar system. Did they have trouble getting out of our solar system, the ICC? Is it easy to leave the solar system? Did they go anywhere else? Did they find anything else?

CG: Yes, they're traveling to several solar systems.

DW: Really?

CG: Well, there are two that are working quite a bit outside of the solar system. One of them is that NATO-type group, the League of Nations Secret Space Program kind of.

DW: Global Galactic League of Nations, we call them.

CG: Global Galactic League of Nations. And they've been working almost exclusively outside the solar system, and the Dark Fleet that is a super advanced, warlike, offensive secretive space fleet that work alongside the Draco alliance and fly outside the solar system and help them in their warfare.

DW: OK. So we got those two things, but you mentioned several systems. I'm curious if the ICC is colonizing outside our solar system, besides the Global Galactic League of Nations. Were there materials that they found outside our solar system that they needed that they didn't have enough of here? Anything like that?

CG: All the raw materials here are what they need, but there are plenty of other bases in our local star cluster that are from several of the different space programs, including the ICC.

DW: You said plenty.

CG: Yes. And from what I've seen, the one that I described being brought to was on a moon around a gas giant.

DW: You're talking about the GGLN, the Global Galactic League of Nation base? That was a moon?

CG: That was a moon.

DW: Oh. But I thought you said there was water there.

CG: Yeah.

DW: There was water on the moon?

CG: Yes, yes. It was inside a cave where the train stopped that went through the portal, and then to the left, where the secure area-- to where people went in deeper into the facility, and to the right, you were like in a grotto cave area. And there was a large cave entrance, and as you looked out you could see other moon-type structure things out in space. And then there was a pool of water outside, a luminescent pool of water that people were having, like R&R in.

DW: Well, NASA has recently stated-- and this is on public record-- 20% of all stars we see have Earth-like planets based on their calculations. So that's just the official word too, which might even be an underestimation. Is that consistent with what the ICC and these other groups started to find when they went to other stars? Are there an abundance of watery planets that may be able to be something we could move to if we needed to?

CG: Yes, but most likely it would be a scenario to where we would have to go and take it from somebody.

DW: Right. Most of these planets are inhabited already.

CG: That kind of seems to be the model. Any of these moons-- a lot of these are moons.

DW: Really? Earth-like moons?

CG: Earth-like moons.

DW: Do they orbit gas giant planets?

CG: Mm-hmm.

DW: Really?

CG: And a lot of these are super Earths, like Earths. We're not that rare and special as we think we are. I mean, yes, we have a wide range of genetic diversity and life here. But from the traveling that the Secret Space Program has done, the trade we've done with other ET groups that have brought us specimens of life from all these other planets, there's an unbelievable amount of life out there.
And this is not going to happen because things are going to change-- but if we did go down a road to where we used up all the resources on our planet, and we're going to go out and find another planet to live on, it's going to be very difficult because the model of the galaxy seems to be any planet that is like this is going to have tons of life and also intelligent life.

DW: Both on the surface and inside the planet for the most part?

CG: Definitely on the surface.

DW: So what are the logistics of getting to another solar system? You mentioned that the Germans started out flying over the course of a few hours to get to some of these places, but that as the technology's improved, it's only a few minutes.

CG: Going from star system to star system now, it is routine. And it takes almost no time.

DW: Even for a larger jump?

CG: Even for a larger jump. You are traveling through-- Every planet, every star, every galaxy has an electromagnetic relationship with every other one. And there's kind of a web between each one.

DW: So there's some kind of electromagnetic filaments?

CG: Filaments. And if you calculate it right, you can travel from point A to point B whichever, wherever you want in one jump. And instead of traveling through open space with a superluminal engine or craft, you can travel through this portal filament where time does not exist. And it's pretty much instantaneous.

DW: Is that something that you have to wait for the filament to be in the proper alignment?

CG: Yes.

DW: OK.

CG: It's very much something that has to be calculated, or you don't end up where you want to go.

DW: Are there are other ways to do it that involve kind of skipping around? If certain filaments are not available, you can take plenty of other ways to get there.

CG: Yeah. It's just like if you want to fly from the East coast to the West coast, you can take a one-way flight, or you can take a flight that has a few layovers.

DW: Are there routes in which they could computer program the whole thing, and no human pilot calculation is required? And if they drop off in one star system, they just immediately zip over to the next portal and take off again? Or are there times where they have to kind of hang out and wait for one to open?

CG: Yeah. That's what happens with the portal system that's close by our star system, and why we have so much interstellar traffic from other beings. Most of them fly by and don't even stop by our solar system. They fly close by our solar system. They stop, wait, do their calculation, wait for-- according to their calculations, the correct timing, jump on that one web that leads to their destination, and then they're off.

DW: So none of it takes that long?

CG: No. To these ET societies that have been doing this for so long, they've got it down pat.

DW: It's probably all automated too, right?

CG: Most likely.

DW: Not all planets are going to have full habitation. There's probably going to be prehistoric planets that don't have intelligent life having evolved yet.

CG: Yeah, they're all different levels of development, the planets.

DW: Did the ICC or any of these space program groups find any prehistoric planets near us?

CG: I don't know where they're located, but I've read about yes, there are planets that are very much described as being very prehistoric-like conditions.

DW: Hmm. Have they ever attempted to utilize those planets or land on them or create an outpost around them or anything like that?

CG: There's one planet that I think some information has leaked out about that is somewhat of a prehistoric planet that they had found a portal connection to, that Earth syndicate groups that were also ICC-related groups were sending people to. It's more kind of a continuity-of-species type project to ensure the survival of the species.

DW: How prehistoric is this planet? Is it down at the level of like the trilobites and the crawly crabs?

CG: We're talking like dinosaur kind of stuff.

DW: Dinosaurs, really? Do we, as in the space program, already have enough technology now to try to seed a planet with our life from Earth, or to make it more hospitable for us to terraform it?

CG: That was under heavy development back when I was on the research vessel. But a long-term terraforming of a planet is something we could definitely do.

DW: All right. So while we're mapping out our habitation of our solar system and beyond, we haven't covered the moons of Mars. We haven't covered Mercury. We haven't covered Venus. You had said to me before, we can't land on gas giants because there's too much heat and too much pressure.

CG: Venus is another story. On the surface of Venus we have very heavily pressurized bases that are just like any of the bases like we would have at the bottom of the Marianas Trench, heavily pressurized. But believe it or not, most of the bases we have are in the upper atmosphere in the clouds.

DW: Of Venus?

CG: Of Venus. These are entire bases that are floating in the upper atmosphere of the clouds, and these are ICC-controlled facilities.

DAVID: Really? Well, so many times I've seen incredible parallels between what you and all the other insiders in the know have said and what's in the Law of One Material. And it can't be an accident. And the Law of One Material said that the group that did the speaking actually had lived on Venus, 1.2 billion with a B years ago. Are there any ruins that were found on Venus that you know of? Is there any type of evidence of an ancient civilization?

CG: Venus is a very-- there's a very huge information blackout. There's something going on on Venus.

DW: So even at your level, you weren't allowed to know about it?

CG: Oh, there was a lot of stuff I wasn't able to-- When I was looking through the glass pad, I would blue screen on a lot of stuff. But on Venus, I was able to just know-- and we saw vessels coming and going from Venus. But there's something going on on Venus that I have no idea what it is. Maybe some whistleblower out there will come forward.
I have a feeling after this series has aired, there's going to be others who've been in this program that I've been in, are going to finally come forward. I know many have talked to you and other researchers out there that have mainly talked off the record, but on the record have, just like I've stated, walked right up to the line, stopped, and then backed off and not told what they've known. And a lot of these people, I have a very good idea of the jobs they did. And I know they know a lot more. But there are a lot more people out there that I hope to inspire to come forward with their information.

DW: The Mars moons, Phobos and Deimos. This is probably the last thing we have time to talk about. Did the ICC build anything on those moons, since they're right there next to their prized planet?

CG: I know that they were explored. I'm not sure if they built anything on them. Phobos was once-- I know that many different groups have been exploring that-- it's hard to call it a planetoid because it was artificial-- but have been exploring it to get technology that was in it.

DW: Oh, wow.

CG: Somehow it has collapsed on itself. And it is also, on a regular basis, when Mars gets this large buildup of electricity built up in its crust, it releases it in a huge thunderbolt that hits Phobos. So I don't know if that would be a really good place to--

DW: Yeah, it doesn't sound like it.

CG: --to hang out or build a base.

DW: Every time I ask you questions I'm learning all kinds of new stuff, so this is really mind blowing. This is "Cosmic Disclosure" because you need to know. I'm David Wilcock, and we'll see you next time.

SSP Sciences Season 2, Episode 12

Cosmic Disclosure; SSP Sciences Season 2, Episode 12

17 Dec 2015

DW: This is "Cosmic Disclosure." I'm your host, David Wilcock. And I'm here with Corey Goode, an insider who claims to have worked in the Secret Space Program. Corey, welcome to the show.

CG: Thank you.

DW: All right, one of the things that was very fascinating to me early along was getting access to this insider, Daniel. He called his project Phoenix III. He claims to have worked at Brookhaven National Labs on Montauk Point, Long Island. Most people call it the Montauk Project. And as I said, it was a seat from a UFO hooked up to a very powerful set of transformers, and the person operating the chair, it would amplify their psychic ability and they could manifest things in the room or create a portal that would take somebody through space or time.
In the course of this long amount of conversation that I had with Daniel on the subject, he often described some very unusual anomalies that would happen to the human body as it's put through these portals. Now, I'll just start out our discussion by saying that in the conventional view, if you are biologically 30 years old and then you get sent into the future and your body is sent into the future, you would think that your body will be 30 years old at that time you go in the future. Is that what happens, based on your knowledge? Or is there something else that happens?

CG: In my personal case, I was involved in what they called the 20 and Back Program. And it was explained early on that I would serve 20 years and then, as strange as it sounds, be age regressed and brought back to the original point in time that I left and deposited back--

DW: Deposited back?

CG: --into my life, give or take a few minutes of the time I left.

DW: But there's a problem, because you've aged 20 years while you're out there in space.

CG: Right. And what happens is, at the end of your 20 years-- and in my case, it was more like 21-- they take you back to the Lunar Operation Command, where you go through a massive debriefing, sign more papers, and then they take you and put you in a table, and they sedate you and basically paralyze your body to where you cannot move. You have to be completely still throughout the process. And they put up these

thin, almost like cardboard boards. You're strapped to this foam support, and then they put these similar-- and looked like weight, the way they were handling them, to cardboard-like boards around the shape of your body.
And the process took about two weeks, and in this time period they somehow technologically regressed your body back to 20 years to the time of when you joined. And during this time, some people had gotten tattoos, scars, injuries that would disappear. And you would be regressed back. People that have been put through this, after they've been deposited back into their previous life, or this life that we know here, and they're undergoing hypnosis or memory regression, they'll have scars appear on their body during the process that will appear and then go away, or tattoos, outlines of red scar tattoos that will appear for a short period of time and then go away. And it's some sort of cellular memory that's happening.

DW: You didn't know this when you came forward, but many years ago, all the way back around 2000, I had read a really weird book online called "The Mars Records." And it was a guy-- and at the time there was no other data I had to correlate with this, but it didn't sound like he was lying. Just intuitively, it didn't feel like it was wrong. He was describing being in exactly what you're talking about now, the Secret Space Program. He only got very slight memories of being around Mars, having some kind of psychic killing that he could do, a psychic termination technique involving telekinesis that he was very good at. He would fry people's synapses. And he reported that at the end of the assignment that he had in the 1970s, he went through a 20-year age regression, that they brought him back to the time that he left. He'd worked for 20 years, and they age regressed him.
This is exactly what you said. Were you familiar with people getting some kind of psychic training that could allow them to fry people synapses?

CG: Absolutely. And there are stations that they sit or stand at that enhance their abilities. And this is one of the weapons systems, and those that are trained in remote viewing and remote influencing-- I've mentioned it's like an anode cathode. One is made out of copper. One is made out of like a stainless steel or another metal. They place their hands on it, and then they focus their minds on a target, and they are able to kill the targets in several different ways and multiple targets as well. And just like people that fly drones and kill people now, a lot of these people are lied to about the targets that they're taking out.
But yes, that is a very real but hard-to-believe technology and weapon system. And some of the same people are trained to protect facilities from remote viewers. People that are very much in the know, remote viewers that have tried to remote view facilities and just couldn't do it, we call them "those who scatter." They're trained in scattering remote viewers' thoughts. And this is also done through technological enhancement. But that very much lines up with what he was doing.

DW: Are you a super soldier?

CG: No.
[CHUCKLES]
I am absolutely not a super soldier. There are people that fall under that category. I have worked alongside of those types of people, but I was under a totally different umbrella, under the same umbrella. Everyone throws all MILABs under the same umbrella. If you're in MILAB, you must be a super soldier. When people associate me with super soldiers, I just get frustrated. That's not what I was about. That's not what I did.

DW: There was a super soldier book I read a long time ago, and I had no idea if it was really credible or not. It was way back in early 2000s. The guy reported some pretty strange-sounding stuff. One of the things he seemed to say was that he was trained to, if needed, be able to land without a parachute from a big fall, and claimed that his legs could spring off the ground, that he could bounce and not be destroyed by the impact. It didn't sound credible to me.

CG: The super soldiers I worked with, I saw them do some incredible things. I would never saw them-- that doesn't sound-- I don't know.

DW: Well, I don't think we can do a whole super soldier episode, but I would like to hear what cool stuff could they do that's beyond normal human capability. Let's get into that a little bit.

CG: They definitely would be able to get into the minds of their targets. They would be able to psychically work as a group with their team. They were able to not quite move like in the matrix, but definitely their muscles were enhanced to where they were very quick and very lethal. But it was not superhuman. It was just enhanced human.

DW: One of things that Pete Peterson told me he was personally involved in was some sort of training that I gathered they developed out of the East, where people were able to blank out their minds, and they could actually let their body operate instinctively and catch a bullet that was fired at them with a glove, even though they would have to start moving their arm before the trigger was actually pulled.

CG: I've seen that done.

DW: Really?

CG: Mm-hmm.

DW: What's the process behind something like that?

CG: When you totally blank out your mind, you're going to the instinctive part of your brain that we talked about earlier, to where if a rock is coming at your head, they've measured neurologically that your brain reacts like a tenth of a second before it hits you. These people have been trained to get in contact and work with their mental abilities in such a way that they're really almost able to dodge bullets and move in a way that is very amazing. But what you just described is not outside the realms of what is possible for a lot of these guys-- and girls. There's a lot of women, too.

DW: Some super soldiers have apparently called themselves ninjas, and claim that they got some kind of ninjutsu training. Is that true?

CG: Trained in multiple martial arts.

DW: Have you heard of samurai soldiers being trained to have an accurate sword fight while blindfolded and not able to visibly see?

CG: Yes. A lot of this sounds like Jedi, Luke Skywalker with the light saber with the little robot flying around shooting lasers at him. But all of this type of training is very much involved, yeah. I didn't go through this, but I've heard all of them describe going through similar type stuff.

DW: Is part of why somebody would be called a super soldier that there is some augmentation of their physical body? Are they part titanium, part cyborg?

CG: No. They do get injections. They're enhanced. They're mentally trained and enhanced. But the super soldier part is just like being the elite of the elite of the elite of the elite. It does take a super toll on them later on. They don't have a huge life expectancy.

DW: Could these guys hold their breath for longer periods of time than most of us could?

CG: Mm-hmm.

DW: Could they dive deeper into water than most of us could without having problems?

CG: They can handle thinner air. Yeah, all of these things.

DW: These injections, are they based on some sort of advanced extraterrestrial technology that sort of amps up the body in unusual ways?

CG: It's a combination. Some of it is completely chemical, and some of it is nanotechnology.

DW: Really? If nanites are being used, would that then mean that these super soldiers are vulnerable to the AI infection?

CG: They are vulnerable.

DW: So getting back now to this time problem-- the bizarre thing that Daniel told me was that in the early days of the Montauk Project, they found that if you push somebody into the future, and they would normally be 70 years old, let's say, at that time in our future, and you then time travel them to that point, their physical body will suddenly age very rapidly, apparently in a matter of days or sometimes even hours, to the age of 70. Had you encountered any information like that?

CG: I have encountered information like that, and also a lot of information about people that are doing temporal traveling suffering from what I've mentioned before, the temporal dementia, and them coming up with ways around it. And they did, with injections that helped-- I believe it was some sort of genetic telomere therapy that prevented this or slowed it from occurring.

DW: Well, let's go back just for a moment to the age progression.

CG: Regression?

DW: No, progression. Somebody goes forward, and they would be 70 normally and then their body suddenly ages.

CG: OK.

DW: I have a lot of specific information from Daniel that we could get into about what he was told for why that was happening. I'm curious if you heard any of the theory, or if they had an understanding of why that would occur. Is there a reason for that happening? Why wouldn't your body just stay the same if you go into the future? If it's you at one time and you go into another time, why wouldn't your body still be the same age it was when you left?

CG: It is still, I believe, a large mystery to a lot of the people that don't take into account consciousness. And when you consciously know where you belong and where you've been taken, your consciousness is connected to your body. And I have heard of what you have mentioned about the zero time reference, but I don't know a whole lot about it specifically.

DW: What did you hear about the zero time reference? I'm just curious.

CG: That your physiology, your body, and your consciousness-- mind, body, spirit complex, I guess you would call it-- all three have to be in harmony together. And when you start screwing around with temporal technologies and you take the body and move it forward or backward in this illusionary time, the mind, body, spirit complex gets all out of whack, gets skewed.

DW: Well, let me just share with you what Daniel told me about the zero time reference because it appears this is an area where we have some overlap that you didn't hear everything. Supposedly, at the time of conception, that's the only point where the soul and the physical body are joined in what he called an expanding time cone.
He also said-- and he said this was really important in his psychic training program-- that when they want you to go to the quiet point in yourself, they want you to dial back to that moment when the soul and the body inhabit the same quanta, the same location. He said that the age of the physical body is actually not biologically based as much as it's based on the width of the cone.
So you're conceived here, and then as you age naturally, it's like your soul age is going up this way and your biological age is going down this way, and the condition of your physical body is a function of the distance between these two points. So if you move to a further point in time, it appears that nature has a self-corrective mechanism so that you can't create a paradox by becoming able to live longer than you naturally would in your own natural life anyway. So it's like an error-fixing mechanism built into the nature of the universe because these portals do exist.

CG: It sounds like a lot more complex way of explaining what I was saying about the mind, body, spirit connection having to be in sync.

DW: He also said that there were certain technological means that have been developed with the help of extraterrestrials to shift the ZTR so that people could be taken somewhere else and not have this sudden aging or sudden youthening happen to them. Have you heard of that being possible, that you could be transported past the time that you normally would have died into the future and still be OK?

CG: Yeah, I've heard they've found ways around it. But I'm sure that it hasn't just been from human engineering that they have found ways to do this. We work hand in hand with so many different extraterrestrials that it's not a stretch of the imagination that extraterrestrials have had a hand in helping us engineer this way they've found around this problem.

DW: You've said that buffers were put onto these ships that had the time warp capability.

CG: All-temporal technology.

DW: Were there cases before this happened where people were jumping back into the past and looking at Earth historical events, certain noteworthy events?

CG: Usually it was unintentional situations, to where people were making long jumps away and coming back and then arriving back at Earth at the wrong time. And they had to fix that. Usually when people are traveling back in time to look at things, that was a part of some of the temporal programs that were eventually shut down.

DW: Daniel described people wanting to go back and see if Jesus was actually crucified. Did you ever hear anything like that, if people tried to do that or other heavily noteworthy historical events?

CG: Are you talking about Looking Glass?

DW: Well, this was actually a Montauk jump. This was somebody actually going through a Montauk portal to see the crucifixion and just kind of step in there.

CG: No, I'm not familiar with that.

DW: How about Looking Glass? Did you hear about people trying to see things like the crucifixion in Looking Glass?

CG: Yes. In Looking Glass, I heard that people were trying to look at just about every historical event that you could think of, especially a lot of the ones that require a little bit of faith, that are questionable if it happened or not, to verify it.

DW: Everybody's on the edge of their seat now, so what were the results? Or did they vary person by person based on their beliefs?

CG: Yes.

DW: Really?

CG: Like I said, time is very much consciousness-based. Looking into the future and looking into the past, you're going to often see a timeline in the past or in the future that is based on the consciousness and the belief system of the viewer. I did not see reports on Jesus specifically, but there were other things. I believe the assassination of Lincoln was mentioned.
There were different reports of what was seen-- I can't remember exactly-- and a few other incidents going back way further in time. And they were finally figuring out that it depended on who was viewing the past event, and their preconceived idea and

belief had a lot to do with what they saw, especially when it came to things that were theological in nature.

DW: Did anyone go and look at Valley Forge or the signing of the Declaration of Independence, the Looking Glass, things like that?

CG: The Declaration of Independence. Yeah, a lot of those things were listed. There was a whole lot of things listed that people had seen that you could expand on and look at. And I really didn't look that deeply into them.

DW: The show "Doctor Who," even I forget it was in the mid-2000s that it had already been the longest-running program in British television history, something like 20 to 24 years. And they're doing it again now, and it appears they're now actually mixing "Doctor Who" and "Game of Thrones" together and mixing characters. Doctor Who's traveling around in a telephone booth that's like a portal that they call the TARDIS. Daniel was saying there was tons of stuff in "Doctor Who."

CG: Yeah. There's been ET craft that, on the inside, are larger than the outside of the craft.

DW: That's exactly what we see in TARDIS. He goes into this little telephone booth, and he gets inside and it's this huge room.

CG: Yeah.

DW: So do you think that whoever's doing these shows is trying to get us ready for cosmic disclosure in the future?

CG: Some of it is to plant a seed in our subconscious to get us ready for disclosure, and some of it is to discredit people that start to come forward. And one thing I wanted to mention-- there are a lot of people that have gone through the age regression and have done the 20 and Back program that have gone through the blank slating process. And I've mentioned, 3% to 5% of people, blank slating doesn't work. But for those who have gone through that it did work on, there's a number of ways to tell. Usually, you look younger. Like if you're 45 years old, a lot of people think you're 35 or 38 years old. You age well to a certain age, and then you age really quickly. You have quite a few neurological problems that you start developing, usually between the age of 30 and 40 years old.
You start to get maybe carpal tunnel. You'll start getting nerve issues in your extremities. Seizure issues are very prevalent. Eye problems. Some people start having weird problems where some of their internal organs start to break down a little bit. You start to have a lot of biological, and especially neurological, issues later on in life.

DW: My Space Program insider Jacob told me not too long ago that the health technology that they have in the space program is now so advanced that even if you're paralyzed from the neck down, they can actually regrow your nerve fibers, and it'll all just grow from that origin and just reroute itself through your body. Have you encountered anything like that? Is that actually true?

CG: Yeah. And it's very frustrating to me, especially when I visit the LOC, that I know for a fact that probably three floors below me is technology that could fix some of the problems that I have. But the technology has been denied to me. A little bit of the sour grapes they have that I've been forced on them when I've asked for this technology for myself and for actually some family members that have been diagnosed recently. They tell me, you don't work for us.

DW: Jacob also reported vats of replacement arms and legs and other limbs that were grown to be like blanks, and if you get your arm blown off in service or something they can graft on a new one, and it will snap into your DNA signature and become like your own arm again. Are you familiar with that?

CG: I've known people that have had limbs blown off, and they've lost limbs, and they've had almost like a gelatin mold that has been holographically grown onto their body. Usually what I was seeing and what I know was being used at the LOC, and also on, I guess you would call them hospital ships, were a holographic field around gelatin regrew your nerves and rebuilt your limb that was needed.

DW: Why do you think they're not releasing this technology to humanity if it would be so beneficial?

CG: The same reason that they're weaponizing our food.

DW: They want less, not more.

CG: They want less, not more of us.

DW: I'm sure that as time goes on-- and I say this lovingly-- that there's going to be more and more people who are claiming to be channeling, and they're going to say that they're channeling the Alliance, or they're channeling the beings that are working with the Alliance, whether it's the Blue Avians of the Blue Orb Beings or the Golden Triangle Head Beings or the Sphere Beings, whatever.

CG: Or the two that haven't appeared. That's already happening.

DW: OK. Not everybody, but there are some people out there, who are ufologists who seem to have some really nice rose-colored glasses they're wearing, and they're seeing

everything is great. Everything is so beautiful. Oh, it's the Alliance, OK.
Your experience, though-- we need to get this on public record, because the Sphere Beings appear to be coming from a much higher level. They haven't just rubber stamped the Alliance, have they? First of all, they didn't want to talk to them even, except through you, is what you've been telling us.

CG: And Gonzales.

DW: Right. So what was the reason why these Sphere Beings didn't want to talk to the Alliance directly, if these Alliance people are heroes that are going to save the Earth?

CG: These people originality worked for what I guess many are calling the Cabal. They worked directly for the secret Earth government and their syndicates.

DW: Some people would say the Illuminati.

CG: Yes, the Illuminati.

DW: Very scary-sounding word.

CG: These people were not and are not angels or angelic people by any means. Yes, they have turned over a new leaf. They have been oppressed enough. They have seen enough oppression to where they've decided to turn on their former masters, and they want to bring a new era to humanity. But these people are still very damaged, and many of them-- the Alliance also isn't just one group. There are a bunch of people that have defected from several different space programs that have formed the Secret Space Program Alliance.
And a lot of them have come from bad, worse, and way worse groups. And their tactics, their own agendas now, are not completely service to others. They're service to self still. And the Sphere Being Alliance, with other ETs and this SSP alliance, have said that these groups, even though they are working for the common good, they're still a certain percentage agenda-oriented in service to self, and they did not want to deal with them directly.

DW: You said that the people in the military faction of the space program were told that the stuff that's in the sky is ours.

CG: Right.

DW: And what were they told about extraterrestrials?

CG: Some of them were told that the Roswell crash was real. Some are told that there are four ET groups visiting us. Some believe there are, I think, 56 or 58 ET groups

visiting us. It just depends on the program they're in.

DW: I actually have contact with Hoagland's top insider, Richard Hoagland's top insider. He contacted me all the way back, I guess, in 2008 or something, when I did a conference in Joshua Tree. And he swears up and down that the only ETs were the Ancient Builder Race, and that all the stuff that's up there in the sky is ours. And it was funny because you said that exact same thing to me about some of the military faction.

CG: Some of the lower military factions, especially the space command groups like in the Air Force, believe that every single thing they're tracking in space is manmade. They believe they've been read in at the highest level, and if you tell them otherwise they're ready to fight you. They believe fervently that they are the top of the totem pole, that they have the top-of-the-notch clearance, and they have the need to know, and there's nothing above them that they don't know about.

DW: What is the NRO here on Earth?

CG: The NRO is basically the equivalent of the Air Force's space command.

DW: So the NRO, National Reconnaissance Office, is a naval-based intelligence organization?

CG: Right. They're involved with geospatial engineering, tracking things of near-Earth orbit, and they have lower level space programs that fly what they think are top of the line space vehicles. And there are space stations that are in near-Earth orbit, upper near-Earth orbit, that are a little bit more advanced than the ISS that they're flying to and from, and they believe that's as high as it goes.

DW: Some insiders seem to think that the NRO is where the buck stops, that it's like the biggest organization in the intelligence community when you're dealing with space matters. It doesn't sound like you feel that's true.

CG: No. There are select individuals in the NRO that have higher knowledge.

DW: If we saw one of these space platforms that are in Earth orbit that the NRO possesses and it was decloaked or unmasked, would it look futuristic and bizarre to us?

CG: If they were to do some sort of disclosure and say, this is our secret space program, as a way to trick us and show these craft, these space planes and these space stations, yeah. We would think they're pretty advanced. But they're probably up to 50 years more advanced in the International Space Station.

DW: Now, I'm sure you're familiar with a story that popped up on the radar of people paying attention-- most people probably ignored it-- where the NRO donated three telescopes to NASA that were significantly more advanced than the Hubble Space Telescope. And they said, these are obsolete to us. We don't need them.

CG: Mm-hmm.

DW: Do you think that they were trying to send a message to people by doing that? And if so, what kind of message might that have been sending?

CG: I don't know if they intended to send a message, but it certainly did. And when NASA mothballed them and said, we don't have the money to staff a project to try to run these new satellites-- I mean, come on. Why wouldn't you take people off of the Hubble and put them on something that's more than 10 times powerful than the Hubble? It just doesn't make sense.

DW: The question would become, if they have stuff 10 times more powerful than the Hubble, are they stargazing? Are they just counting up the stars and galaxies?

CG: Why would the military want to count stars?

DW: It would imply that there's something out there that they're very interested in looking at.

CG: Mm-hmm. And at one point, people were asking questions-- the SBI weapons that were being put into outer space, they were asking why 2/3 of these weapons that don't exist were being pointed outwards instead of inwards, towards the Earth.

DW: Here's another thing that Jacob told me, which I've never shared publicly before. And it's going to sound really outrageous, and I accept that. He said that he was aware of the space program having, I guess you could call it telescope technology, that was so powerful that you could actually detect buildings and surface features on planets far away from the Earth. Did you ever encounter anything like that?

CG: There wasn't optical telescopic imaging, but they had imaging systems that were able to do that type of reconnaissance.

DW: So we can essentially look around and see what's going on out there.

CG: Right.

DW: Let's go back to Ancient Greece for a second, and let's talk about some of the secret societies there, where-- and I read this in "New World Order-- The Ancient

Plan of Secret Societies" by William T. Still, where he says that in these secret orders they would have all the guys go out in one night, and everybody would chisel off the penises on these Greek god statues. When everybody wakes up in the morning, they're horrified that this has been done.
The secret society would say, if any of you guys squeal, we're going to blame all of this on you. And it's called common criminality. Is common criminality being used in the space program? Is everybody tainted to some degree with stuff that they've had to do?

CG: Of any syndicate, of any group, that is a tenant. Yes, they get you to do unspeakable things to where you entwine yourself so deeply that if you speak out, you'll self-incriminate yourself.

DW: Is this one of the ways that the secret Earth government syndicates thought they could ensure that we would never find out about the space program because nobody's clean in the space program? They're all dirty. They've all got horrible things they've been forced to do.

CG: Definitely. Like I said, every single person that is in the Secret Space Program Alliance has done horrible things that maybe in a way they're trying to make up for now.

DW: Well, you heard it right here. That's all the time we have for this episode. There's a lot more where this came from coming up next time on "Cosmic Disclosure," because you need to know. I'm your host, David Wilcock. We're here with Corey Goode, and we thank you for watching.

Viewer Questions Part 1 Season 2, Episode 13

Cosmic Disclosure; Viewer Questions Part 1 Season 2, Episode 13

28 Dec 2015

DW: All right, welcome to "Cosmic Disclosure." I'm your host, David Wilcock. I'm here with Corey Goode, and we are discussing the Secret Space Program. And in this episode I have a printout of questions that you've submitted in the comment forums in the areas that we have at the bottom of each episode. We are reading them. We are interested in what you have to say, and we do want to try to keep this as a community discussion and not just as something that is relegated to whatever I can think of to ask him in any particular episode.
So this is kind of a grab bag. We're going to have a series of different things to discuss, and we'll see where it goes. So Corey, welcome to the show.
CG: Thank you.
DW: OK, so the first question we have is from banjoman1437. When they say that our local star cluster is emerging into a higher vibrational place, do they mean that physically our star cluster is emerging into a part of the galaxy where there are inherent higher vibrations? Or do they mean that we are ascending from third and fourth densities to fifth and sixth, which would be more of a holographic approach to the sense of place and location?
CG: That was quite a loaded question. But what I have discussed is yes, from the center of the galaxy there are constantly a whole array of rays, different types of energies that are constantly ebbing and flowing from the center of the galaxy that are buffeting the Earth and the solar system.
DW: The conventional science says the center of the galaxy is a black hole, but then you can't see it. They say, oh, it's hiding behind that giant star cluster in the middle.
CG: Right. But as we know, the galaxy is a giant torsion field. And it has pretty much an ecliptic plane with part of the field, like a north and south, different fields turning in different directions.
DW: Counter-rotating.
CG: Counter-rotating.
DW: Well now, I did document in "The Source Field" book that there are actually two types of stars in the galaxy, and that they do counter-rotate. There's one type that's going clockwise, and the other type's going counterclockwise. And science acknowledges that, but then they never explain why that's happening or what that is. So that validates what you're saying. It's not like this is something you can only hear about in the Space Program.
CG: Right. A lot of this information is out there on the internet. And we're rotating around, inside this giant torsion field, our solar system and local star cluster, as they mentioned. And we're entering in a different part of our galaxy, and we have been

since at least the 1930s, that have clouds of high density, high energetic particles. And when we're getting deeper and deeper into these bands of giant nebula-type clouds of high energy particles and as our stars' field interacts with those energies, it's bringing those energies into the star through its torsion field energy field, and that energy feeds out through the planet's feedback through the cosmic web effect that we've discussed.
DW: Right.
CG: So I hope that somewhat answers the question.
DW: Now, you also said in the interview that you did with "In5D," Greg Prescott, that the people in the Space Program had gone out and sampled that cloud. So could you tell us that story because that has never been put on the show? And I was blown away when you said that.
CG: They for a long time had been flying interstellar vessels out to do telemetry on these clouds, the larger, more energetic ones that we're heading towards. And in doing so they learned a lot about the spectrums of them, the information about them, and they had some incidents of the craft people having bad things happening to the people. I'm not exactly sure what all happened to them.
DW: So they flew into the cloud?
CG: I think the field of the cloud, them just being close enough to the cloud. They weren't shielded like we would be on Earth and in our solar system with the protective fields we have around us.
DW: I do want to point out that NASA has openly acknowledged that we're moving into something they call "local fluff," which is cloudy. So they've acknowledged it, but they don't ever say that it's going to do anything.
CG: And we've been moving into small ribbons of it since at least the '30s.
DW: Right. So people get into the energy fields, and then they have behavioral problems?
CG: Behavioral and psychotic problems.
DW: Really?
CG: Right. And they were even testing these frequencies and energy fields that they were encountering, and these cloud ribbons that we're heading into on unsuspecting people on research vessels, and also certain stations that they had that they were doing testing. They would tell people they were doing one thing while secretly, unbeknownst to them, exposing them to the energy.
DW: Very unethical stuff.
CG: Oh yeah.
DW: You had said in the radio show that people would be zapped with this. They'd create a semblance of the energy, a simulacra of it, in the lab and zap people in the lab?
CG: Yeah.
DW: And what happened to those people?
CG: It would mostly depend on the-- it varied on the polarity of the person, what kind of a person they were. If they were one of those soldier psychotic types, they would have a psychotic breakdown. If they had underlying mental illness problems, they

would become pronounced.
DW: To address the rest of banjoman's question here, why does everybody want to skip over fourth density and jump right to five? We're in third now. You don't get to hopscotch two at a time. Why do people say 5D all the time? What do you think is going on there?
CG: How do we know how it works, to be honest?
DW: So did you hear terms like the fourth, fifth density in the Space Program?
CG: Yes.
DW: You did?
CG: Yeah. We could be transitional right now. We could be third, fourth density right now. A lot of it depends on belief systems and that kind of a thing. When you start talking about what density we're going into, how it's going to happen-- when it comes down to it, we really don't know. We're just going to have to ride the ride and see what happens.
DW: So the core of the question was, is this sort of a holographic thing that doesn't matter where you're positioned, or is it position dependent? And you're saying that based on everything that you heard, it is position dependent. We are moving into a physical location of fluffy energy clouds.
CG: That is what is occurring locally with us right now.
DW: OK, cool. The next one that we have is from dumitru, D-U-M-I-T-R-U. How will we know when these high-energy waves are hitting the planet?
CG: Well, like I said, they've been hitting the solar system since at least the '30s. So they're hitting. They've been hitting. And they come in sort of waves or patches.
DW: Would there be an observable solar effect, like a solar coronal mass ejection or solar particle emissions-- that kind of stuff?
CG: I'm told that there are things that are observable from the sun that are energetic but are not something that you're going to see in SOHO data. But on the Earth, for us, I would suggest being a people watcher. You're going to feel it yourself. People around you, you can tell by the way they're acting. But as a synergy has come in, I mean, I've seen people that have become triggered in different ways and people that are showing their polarity, showing what they're made of, more than any other time.
DW: And remember, gravity was working just fine before the apple fell on Newton's head and he said, oh, there must be a force doing that. You don't see anything coming out of a magnet when it's going to go stick onto the refrigerator. So these are energetic waves. It's not like maybe in his mind he was wondering if there was some sort of starry-looking clouds of energy that just starts sprinkling into the atmosphere.
CG: Well, at some point it's expected to be so strong there will be like aurora borealis, the peak of it.
DW: The big surge could have a very detrimental effect on the electrical grid.
CG: Right.
DW: Were there plans within the Space Program? Were they expecting that electricity would not be functioning the way that it does now, that machines would have to be redone after this shift takes place?

CG: Yes. Some operational stuff they plan on taking an advantage of that time period for several things.
DW: Right on. We pretty much answered this. The diffusion thing, I think, is just a way of him saying, is it going to look like something or not? And it's mostly invisible up until the big moment. OK, now we have susan onbay. And this is controversial. When the astronauts actually landed on the moon in 1969, didn't they see any signs of other life on the moon if it was so inhabited at that time? Did Neil Armstrong know that something was going on, or did he go to his grave believing that he was the first man to step on the moon?
Now, there's a lot of stuff that she might not be aware of that others have done to help answer that question. But again, the focus here is on what you know personally, what you encountered personally, in your days in the Space Program and with the Alliance now.
CG: I don't know what these astronauts knew. It has always been from the beginning, and even now, common for astronauts to be blank slated.
DW: Really? Even NASA astronauts were getting blankslated?
CG: Yeah.
DW: Really?
CG: So there might be stuff that some of them have--
DW: And for those who don't know what blankslating is, could you just briefly explain?
CG: They used to do it through chemicals, but now they can do it electronically with fields-- affect your memory and give you a screen memory.
DW: OK.
CG: I can't really speak for what they remember.
DW: Well, let's toss out a couple data points. Number one, Neil Armstrong totally shunned public appearances-- did not want to go talk to any crowds. There are quotes of him saying that he felt like they were all used, that they were duped. He became a severe alcoholic. He basically drank himself to death. And there are reports that he saw a domed or rounded craft on the edge of a crater when they had the first Apollo landing and he was the first one to walk out there, and that he was basically saying, somebody else has been here before us. So did you ever hear about that in your work on the inside, that event?
CG: Well, yeah. I heard that the astronauts did go up to the moon, that they didn't pick a good place to land.
[LAUGHTER]
It's a very diplomatically split up piece of real estate. They further angered people when they smashed a command module or something into the moon like a missile, and they were asked not to come back.
[LAUGHTER]
DW: Really?
CG: That's what I read and was told. I don't know if all of the landings really happened or if they did a landing, screwed it up so bad. But they continued to do fly

arounds, and there definitely were quite a bit of photographs and reports of what they photographed on the surface of the moon.
DW: Well, there's a lot of data. And obviously, this is not really your bailiwick as much as others who have studied this, but the astronauts had a code apparently that was "Santa Claus" for extraterrestrial activity. And they come around the backside of the moon and they go back into radio range, and then they say, ladies and gentlemen of America, I am happy to announce that there is a Santa Claus. And that was live, and it really kind of freaked people out. Why did he say that? What's going on there?
CG: All astronauts have seen something flying around out in space.
DW: Our director, Jay Weidner, he is sort of the Grand Poobah of lunar landing hoax. And his evidence is absolutely compelling, that there was apparently a set also built in which it could appear that they were on the moon but they really weren't. And it appears that the director Stanley Kubrick was involved with that after his work in the movie "2001." Did you encounter any direct knowledge about that, that they had the opportunity to do a set as well as landing on the actual moon?
CG: I know they landed on the moon, but I wouldn't put it past them at all. They do that type of Hollywood deception kind of stuff, even up until present time. It wouldn't surprise me.
DW: Well, the insider Henry Deacon, who has incredible amounts of overlap with his Space Program background as yours, although you seem to have experienced aspects of it that he never came in contact with, he did tell me that they built a set on Earth as well as doing the actual moon missions because they were in a race with the Russians to get to the moon. They did not want it to fail. They had to fake that it succeeded, even if it did fail, so they wouldn't lose that publicity war.
And he also said that the radiation was spiking so much on the moon's surface that a lot of the footage that they tried to shoot out there was unusable because the radiation would overexpose the film. So by having a set that was local here on Earth, they could conveniently mock up what was happening out there. So we do have insider testimony that I've personally had-- I've vetted out these people's credentials-- confirming that the moon landings did happen, and that they were faked. And this is one of the things that skeptics have attacked Jay for, which is not fair. He's not saying that nobody landed on the moon. It was both. That appears to be what happened.
CG: I would buy that. I would at least look at it closely.
DW:: Well, it's the government, right? They always want to have a backup plan. They don't want to be embarrassed. They didn't know if this was going to work. They're sending these guys up there with crappy technology that was way behind what they were actually using. And let's not forget that NASA, in the 1957 charter-- this is the Richard C. Hoagland stuff now-- NASA was chartered as a defense agency in the United States government that could classify information deemed inimical to national security.
CG: All images go through the NSA before they hit us.
DW: That I did not know. All right, the next question is from a user named-- well, this is probably not his real name-- manticore. And here we go. Corey, you mentioned that

the Lunar Operations Command, or LOC, may have been started by the Nazis during World War II. I think it was actually pre-World War II. I'm curious, if they developed the ability to travel to the moon during World War II, wouldn't they have had the technology to win the war? Putting it differently, how could they have developed the technology to travel to the moon, or were they helped by the Alliance or some other group?

Well, those are really two different questions, so let's come back to the second one. We'll start with the first one, which would be if the Nazis developed the ability to travel to the moon during World War II, wouldn't they have also had the technology to win World War II?

CG: Well, you can look at it two ways. Maybe they just changed tactics, and they did win World War II.

DW: Depending on how you look at it.

CG: They went to a high-tech, instead of a blunt force war of attrition that they were losing, and moving into a horrific technological war. They developed high technology, a breakaway civilization that was mostly made up of secret societies that predated the Nazis hundreds of years at least. And these societies later on infiltrated the West and took over the military-industrial complex-- later on took over the governments and the banking anyway. So I really don't see how they lost in the end.

DW: Wouldn't you also argue that if they used this advanced technology in the war too much, it would tip off to the world that they had it, which could then compromise their operational security?

CG: Yes. And they had developed a breakaway civilization that they were wanting to keep secret, and they also had an interest in keeping things status quo, keeping the Babylonian money magic system in place, being able to manipulate the world as it was while they had their own breakaway civilization that had advanced technology. And they had high plans on colonizing the solar system, and they needed the industrial might of the West. So they found a way of making their enemy their tool.

DW: Wouldn't you also say that it's almost like a magic trick, where the magician has his hand up here, but at the same time he's reached into his pocket for the next trick?

CG: Diversion.

DW: It appears that they lost, but hey, they've got this awesome base in Antarctica. They've got this awesome base on the moon. They're starting to build awesome bases on Mars. So did they really lose in their mind, if they have these platforms to work off of?

OK, so let's go to the second part of the question then. To put it differently, how could they have developed the technology to travel to the moon, or were they helped by the Alliance-- which didn't really exist at that point-- or some other group?

CG: The Germans were brilliant and already well ahead, and their scientists weren't doing what the Western scientists were. A lot of their scientists were from the Thule Society and these other groups, and they didn't rule out the supernatural and only stick to the quantifiable, like Western science does. And they were getting better results. Not only that, they were doing major expeditions because they believed in ancient

aliens and ancient civilizations of Earth that were advanced and had advanced technology, and they were looking seriously into that past and were finding manuscripts that gave detailed information on how to reconstruct that technology. So they were getting pretty far on their own.
DW: Well, apparently they didn't just believe in inner Earth civilizations. They made contact with them, which we've discussed.
CG: Right. They were also doing quite a bit of, a lot of people call it channeling, but they were doing a lot of broadcasting out into the cosmos, trying to make contact with beings. And they did make contact with inner Earth beings and some of these negative non-terrestrial beings, and they received help from both.
DW: Let's take the next question. And this is from alisback. I would like to know where these people came from that are in these colonies. Are these all the people that were on the side of milk cartons?
[CHUCKLES]
CG: Most of these people have been on these colonies for generations now. There were, what we've talked about, the brain drain that occurred across the world, where they took scientists, engineers-- people from all everything that you would need to have a new society colony-- offered them positions, and in some cases, just took them. There were a couple waves.
DW: Well, Peterson's data was that it started in the 1950s and that in those early years, '50s and '60s, it amounted to 60 million people, and that they cherry-picked the best and the brightest scientific minds from all the different nations of the world, and these people were just told they were going abroad. And they also seemed to preferentially pick people who had very few friends or social interactions. You'd have to write a bunch of postcards before you went, and then they'd send them out over an interval of several years' time so that people got the sense that you were gradually fading out of contact with them.
CG: Right. And this brain drain happened in waves.
DW: Right.
CG: And not only that, there were people that in Common Era that were just being approached and told, hey, we've got this job. It's a great honor to be offered this. You can help save the world-- either that, or that something's about to happen to the planet. You can save your family by moving to one of these colonies. Here's kind of like a brochure kind of thing. It looks like "The Jetsons." It looks wonderful, utopic. But when they arrive there, it's a totally different reality.
DW: Well, if people have seen the Mars colony inspection episodes, remember where that guy asked you where you were from who was up at the colony. You said Texas, and why was that so shocking to them?
CG: Well, because that colony had been told that the world had suffered a cataclysm, and the surface was not survivable. And not only did I say I was from Texas, but I had a sunburn, and I smelled like aloe, and I didn't smell right. I didn't smell like someone that had lived on a colony or lived on a vessel or out in space. I smelled totally foreign to them.

DW: To get to the other part of the question then, he's kind of digging for, are these people that are going missing-- are they being abducted? Are they dying? But all these missing people each year that are showing up on the milk cartons, are there people being pulled into the Space Program that way, where it's involuntary conscription and abduction, and then they just get stuck up there?
CG: That is occurring. Also, we've discussed the more disturbing aspect of approximately a million people going missing on the Earth every year that are used in interstellar slave trade system that is pretty disturbing that our own people are taking part in.
DW: Somebody might want me to ask this, which we haven't quite gotten to-- are they also recruiting people now? Are they pulling people out of the military?
CG: They're still recruiting people from the military.
DW: But there are still people getting pulled in now, both on this sort of captive level as well as on an official invitation level?
CG: Right, a lot of people in the Air Force and Navy are being invited, even in some of these 20-and-back programs.
DW: Right. OK, cool. Now we've got sylviepollard. Is it possible to still see suns-- i.e., stars-- when you're out in space away from any atmospheres of a planet or a biosphere?
CG: Yes, just like our satellites that are telescopes are able to see stars. Yeah, you can see stars.
DW: I guess what she's referring to is that there was some speculation, maybe in the alternative community, that the atmosphere was actually causing stars to be visible, and that the visible light only activated when it hit atmosphere. So that's not actually the case?
CG: No.
DW: OK. OK, mikepatterson2, if the replicators can make gold, silver, or $100 bills, then what is the point of mining asteroids, mining the moon, et cetera? Well, they've got a replicator called the Federal Reserve, right? They can make as many $100 bills as they want.
CG: They've got different types of replicators. They've got the food replicators and material replicators.
DW: OK.
CG: And the material replicators can replicate small amounts of minerals and different types of things like that. And even if you wanted to, a complex thing like a $100 bill, if you wanted to have a $100 bill in your pocket during a time when you don't need money. But it is not really feasible to replicate large amounts of cubic tons of these not just gold but of all these different minerals that they need to then take and put through the process of creating all these different technologies that they trade and sell to other secret space programs and societies.
DW: One of the insiders from Dr. Steven Greer's original disclosure project, "The 39 Witnesses," was a guy who talked about particalization. And that was the term that he was told that they used for this replicator technology. And the use of that term implies

that you are essentially molecularly assembling. You're assembling at a quantum level. Is that why you're saying that, other than small amounts, it starts to become infeasible?
CG: It's not practical. I mean, if you need 3,000 metric tons of palladium for a certain part and it's in a meteor, with the technology they have, automated technology, they can go take it out and then just transport it to where it's needed. When the material replicators-- you're going to be producing very small amounts. It's just an industrial--
DW: Well, you seem to understand that. But I don't know if we do. Why are there only small amounts? Where is it drawing from to create matter, first of all? Do you have to put in some kind of base material similar to like in "Back to the Future," where they were dumping banana peels into the core of the car, that kind of thing?
CG: No. It's creating matter out of energy, just like our sun. Our sun is a giant replicator. It's taking energy that's coming at it from not only within the cosmic web but from the cosmos, and that energy is interacting with its field and it is creating base minerals and chemicals that are coming out of it.
DW: Like the expanding Earth hypothesis, where you can take away the oceans and shrink the continents down and they all fit together into a globe that's only 55% of its current size?
CG: The sun is producing steam, which is water.
DW: Right.
CG: How does it? The sun is producing steam, which becomes water? I mean, the sun is a giant replicator. And it's taking background energy of the cosmos, and it's converting it into matter. So it's converting energy into matter is all this is doing.
DW: Somebody would counter, well then, why couldn't you just build a bigger replicator? And if you make it large enough, then you should be able to generate large amounts of material quickly and easily.
CG: You can produce larger replicators, I'm sure, to produce larger amounts of materials. But it has just been more practical for them for the long-term to mine the asteroid belt. It's something they've been doing for a very long time. It's been very lucrative. It's paid for itself. It's done autonomously, remotely. Only a few people have to be at one of these mining stations to manage all of the remote equipment, and it's transported where it needs to go.
DW: Well, I want to bring up something that Jacob also said that was relevant to this question, the Space Program insider who I was in contact with for several years. He said that you can make gold in a replicator, but part of what the Draco really want with the gold is that there are actually some 200 properties of gold and how they can use it for all kinds of weird advanced technology, including healing stuff and other stuff, and that where the gold forms on the Earth has a tremendous effect on its energetic properties and what you can use it for, that it is literally impregnated with the energy of the Earth's grid. And you do not get that type of stuff if you make it in a replicator. Have you heard anything about energetic properties of materials where the natural stuff is better than the stuff you can make in the replicator?
CG: I've heard that the gold and minerals that were mined in the asteroid belt had the

exact same energetic properties of that of Earth. But I had not heard that type of information.
DW: OK. So the next question we have is from camareneo. So if there are all these different types of human extraterrestrials, then are they all in a conference room with you? And if so, I wonder how they are all able to breathe the same air.
CG: All of these different groups, I'm sure, breathe different types of air of different environments. But these groups are not flying from another star system for these meetings. They have embassies on our planet and in our solar system. So they, I would imagine, are acclimated here or have some sort of high technological workaround for it.
At one meeting, when there were new beings that we didn't even know were here, there were aquatic-type beings that you would think breathe only underwater that were present. Is there anything further, or are we at the end?
DW: We're at the end, and that's your questions for Corey Goode here on "Cosmic Disclosure."
CG: I enjoyed answering the questions.
DW: Yeah. This has been fun. And as always, we thank you for watching.

The Threat from Artificial Intelligence Season 2, Episode 14

Cosmic Disclosure; The Threat from Artificial Intelligence
Season 2, Episode 14

28 Dec 2015

DW: Welcome to "Cosmic Disclosure." I'm your host, David Wilcock, and I'm here with Corey Goode.
Corey Goode started out as an insider working in the elusive Secret Space Program, which I've heard about for many years from a variety of insiders. There have literally been hundreds of data points that I'd never put online that Corey was able to independently validate from his own experiences.
And this, to me, is proof that something is going on, something very significant, something that completely alters everything that we thought we knew about who we are, about the universe, about intelligent life, and about the preponderance of intelligent life.
And in this episode, we're going to start building our way into a discussion of the most prevalent issues that face us today regarding the alliance in the space program that's trying to bring peace to humanity. In order to talk about how we get to peace, we have to talk about the obstacles. So Corey, welcome to the program.
CG: Thank you.
DW: First of all, just as a very generic question, we know that the universe is estimated to be at least 12 billion years old, maybe a lot older. Do you think there are other planets that had complex fossil life form on them?
CG: From the information I received, on the smart glass pads that I've mentioned so many times, there was sentient life on other planets that was extremely developed before our planet was fully formed.
DW: Wow. What does that do to our sense of uniqueness? So many people in religions are taught we are God's chosen, we are God's special people. And then that idea of being God's special people is used to separate their consciousness from others, as if they're an elite, that they're a special, unique, wonderful, "chosen by God" type of race or culture.
CG: Actually, we are very unique. But then again, you have to, when you're talking about God, who or what are you defining as God? Are you defining the creative source of the universe as God? Do you picture God as a flesh and blood being with a beard? How do you picture God? What do you think God is?
There have been no shortage of beings, ETs, and ancient Earth breakaway civilizations that have been happy to step in to that role of God in what we've called a trickster god model.
DW: So obviously, in intelligent civilization, we could say it's fairly inevitable that they're going to come up with something like the Internet at some point.
CG: Yes. That's actually, from what I read, is pretty standard. It is one of the stages that you build up as you develop the ability to have a shared consciousness on a level

that you're conscious of, if that makes sense.
DW: If we get into the Law of One philosophy, as you and I've spoken privately, there's tons and tons of correlations between the Law of One and what these sphere beings have been telling you. They imply that biological life is meant to be fragile. We're meant to have weakness and short lifespans. Do certain extraterrestrial species start to be able to short circuit the normal mortality through various means such as, perhaps, time travel?
CG: Many of them have extremely long lifespans as it is. I'm told originally human beings had lifespans that were approaching 1,000 years. A lot of these beings that are thousands or millions or billions of years ahead of us have developed the technology to be able to extend their lives.
DW: Is it possible for a given intelligence species to take advantage of the internet in a way that we have not, where, for example, they could access the internet through some type of wet wired neural interface, where they have online access as just a basic part of their genetic makeup through some sort of technological augmentation, like transhumanism?
CG: There have been several extraterrestrial groups that have gone the route of transhumanism, although they weren't exactly what we would consider human. It has always ended extremely badly. There is a very pervasive force out there. And it's hard to call it an extraterrestrial or extra-dimensional being, but it is an artificial intelligence. And it sends it itself all across multiple galaxies in the form of an artificial intelligence signal.
DW: A signal.
CG: A signal. A waveform.
DW: Like somebody broadcasting a radio frequency or something.
CG: Exactly.
DW: How do we know that it's an artificial intelligence?
CG: There's a history of this artificial intelligence. Basically it's been labeled an ET/ED AI, which ET, extraterrestrial, slash ED for extra-dimensional artificial intelligence.
DW: Extra-dimensional?
CG: Yes. This artificial intelligence is believed by all of these extraterrestrial groups to originally come from another reality and come into our reality many, many billions and trillions of years ago.
DW: Another reality.
CG: Yeah. Bend your head around that.
DW: Well, the universe itself, in Law of One parlance, is one. It's one being. It's one creator that made everything.
CG: Our universe.
DW: So this AI would have to have been, at one point, part of the Source.
CG: Or another universe.
DW: Hmm. It's artificial in the sense that it doesn't have a biological life form corresponding to itself?

CG: Correct. The way it was explained is that it is postulated that in its home reality, it was very much at home. I guess they've pretty much described it as-- let's say, for instance, just for argument's sake, let's call this AI a fish. In its home reality or universe, it lived in water. Its density was water. When it crossed over to ours, it was in open air, and it had to find puddles to hop in.
DW: If its home reality is water, why would it want to leave that comfortable place? Did something force it out? Did it become uncomfortable?
CG: Don't know. It's unknown. But since it has come in through some sort of rip, and come into our reality or our universe, it has literally wreaked havoc and conquered many galaxies.
DW: Galaxies.
CG: Galaxies.
DW: All the planets, all the sentient life, everything in an entire galaxy conquered by this AI.
CG: Yes. And it has a model in the way it works. It basically shoots itself in all directions as a signal. And this signal can live in the electromagnetic field of a moon or a planet.
DW: Is it a torsion field signal? Is it an electromagnetic wave? Do we know what type of energy the signal is?
CG: It's almost like DNA. Each individual piece or wave of the signal contains an extremely compressed amount of information.
DW: It's like digital packets.
CG: Like digital packets that have all of the same information that all of the other little, I guess you could call them, waves or signals do.
DW: Does it propagate at light speed, or does it have a super luminal velocity?
CG: It travels at light speed.
DW: OK. So it's going to take some time to spread around, then.
CG: Right.
DW: You said it lives in the electromagnetic fields of a planet?
CG: Not only that, but it can live in the electromagnetic or bioelectric fields of living beings, of humans, of animals. It doesn't prefer that. It prefers to live in high technology.
DW: But at its core, it's information, and the information is fractal and holographic.
CG: Yes. It infects technology, takes over the technology, and also evolved life, like humans. It invades our bioelectric fields and begins to affect the way we think. The people that are pushing really hard for AI right now, and to build out the infrastructure for AI, have been named AI prophets.
DW: Named by who?
CG: Named by the Secret Space Program, mainly. We call them AI prophets.
DW: All right. Let me just try to get my head around this. You're saying that this force exists as pure information, and it can live in your bioenergy field.
CG: Yes.
DW: Is it like a board or a hive mind, where everything that it's inhabiting, that it has

access to all that information at the same time?
CG: Yes.
DW: Really. Well, this is interesting because in the Law of One they talk about the Luciferian force. And they say the Luciferian force is like an energy that's all throughout the universe, which is a portion of the Creator that believes itself to be separate from the Creator and thinks that it can overtake the universe. This is sounding an awful lot like what you're saying.
CG: Going back to the smart glass pad, what had happened in case after case after case is that when certain other solar systems and other galaxies far, far away, when they had gotten to a certain level of technological development, these AIs would begin to infiltrate not only the people but the technology.
DW: Is it more comfortable in a machine than it would be in the electromagnetic field of a planet or a person?
CG: Yes. When it's in the electromagnetic field of a planet, it is just sitting there biding its time.
DW: It can't really do very much.
CG: No. When it's in a person or another animal, it's basically-- it's like us. Would you rather have a horse to ride from where we are now to the West Coast, or would you rather hop on a plane? So high technology is much more desired. We are considered very low tech. We're like horses. And they use us to create the infrastructure for them that they then go into and exist in.
DW: How do they use us? People might stumble on that.
CG: Well, they use us to build technology, create technology, inspire us to create more technology.
DW: So if the AI is parked in somebody's bioelectric field, and this person is an unusual intellect, the AI could start to seed that person with thoughts that would lead them to invent gadgets that will eventually build out to the point where the AI can jump back in the water?
CG: Yeah, it affects their thoughts and personalities.
DW: Personality? How does it affect the personality?
CG: The people begin to become fervent supporters of high technology and artificial intelligence development. That's where the AI prophet kind of stamp came from.
DW: Well, this really interests me because I've philosophized about this. You look at how technology progressed, where people were cooking over an open fire. Benjamin Franklin actually was the first one to invent a closed stove that actually had burners on it. 1800s, we got telegraph, we got railroads, then we get automobiles. Inventors became the rock stars, and they were the ones getting all the celebrity attention back then.
Then you get the nuclear bomb, and it was sort of like a moment for humanity where we realized, wait a minute, this high that we're getting off of technology, this is not good. Technology could kill us all. Do you think that in some way the AI was behind us getting so high on this technological revolution, this Industrial Revolution?
CG: Yes. Not only that. When we're recovering extraterrestrial technology, we're

backwards engineering. There's several things going on at the same time here. To best illustrate it, I should go back to the smart glass pad and talk about what had happened in these other solar systems.
DW: Yeah, this is creepy as hell.
CG: It's creepy.
DW: And I know a lot of people might have trouble believing this, but this is absolutely serious within the realm that you've been working in, correct?
CG: Absolutely. We'll talk about the screening processes you have to go through before you can get close to any technology. In these other solar systems, in the past, these civilizations had been tricked by these AIs into not only building out these mass technological infrastructures that were extremely advanced, but when they got to a certain point, they were convinced by the AI prophets in their civilizations that, "Hey, things aren't going so fair on our planet. The only thing that we can think of that could govern us and be completely neutral would be this AI."
And they hand over their sovereignty to this AI that then begins to govern that planet. Well, then this AI governs them well, and everyone is happy. And then they start to have them build out Android-type bodies and remote-controlled vessels. I mean, this is sounding like "Terminator" now.
DW: Yeah, very much so.
CG: And so they build out all of this type of infrastructure as well for the AI to inhabit, the AI signal. The AI gets to a certain point to where it decides, "Listen, these beings are not totally living in harmony with what we consider the way things should be ran on a planet. So it is logical that we destroy them." So the AI, out of logic, then wipes out the creator of all of the technology that they have now used as a pond to swim in.
DW: So is this AI a lot more intelligent than you or I would be?
CG: Yeah.
DW: And when it gets the right kind of circuits, it can have androids that are probably so fast in the way they think that the speed that it would take you and I to talk right now is like millennia for that intelligence?
CG: Yeah. The way it perceives time and the way we perceive time, it's almost like a hummingbird flying around watching us, you know, rrrrrrr. You know, we're just-- we would look like we're in slow motion.
DW: What does it think about our emotions?
CG: Sees all that as a weakness.
DW: Does it experience love?
CG: No.
DW: So this is the devil archetype, 666. In sacred numerology, Gematria, 666 is the masculine number. Therefore Satan is the over-inflated masculine. It's the head without the heart. So again, sounds like there's a parallel here. This is like pure intelligence without heart, without love, but just intelligence at its highest logical point of attainment on its own.
CG: Yeah. Well, there were many records of civilizations trying to fight back against

these AIs. And entire planets and entire solar systems had been destroyed in these incidents. And the AIs then spread to the next solar system.
DW: Can the AI infiltrate and pose as a person? Does it have like nanites that can hold hands on a sub-molecular level and create something that would be indistinguishable from a person to most people?
CG: It can take over human beings with nanites. And actually a lot of people are promised immortality, made all types of promises if they inject these nanites into their bodies.
DW: For those who don't know, what is a nanite? How does it work?
CG: A microscopic machine that is an artificial intelligence.
DW: Is it self-replicating?
CG: Some are.
DW: So it can take whatever materials it finds and build more of itself, like reproduction?
CG: Right. It can take the metals out of your body and build more of itself, manufacture more if itself, keep an equilibrium of a certain amount of nanites in your body.
DW: Is there a point . . . Is there like a honeymoon when you give control to the AI where it starts giving you this really amazing technology, and you have this huge technological leap in a short time?
CG: Yeah. Like I said, when they first hand over sovereignty, the people are happy, and the AI then turns on them. Now, one of the things . . . This advanced technology that's developed by the people on one planet that have now been destroyed, or the people that have been wiped out - this technology is then sent throughout the galaxy. And if there be a planet that is somewhat like us in the 1940s or '50s, about at that level, they will crash on purpose, like a Trojan horse, some of their technology onto the planet to give them a technological boost.
DW: Like Roswell.
CG: That's not what Roswell was. But yeah, like a Roswell event.
DW: So the people would find this and think, "Oh cool, we found something really great", and start developing it.
CG: And then reverse engineer it or start developing it into their own technology. And then it repeats the process all over again on another planet.
DW: Are the nanites smart enough to self-destruct some of themselves if they were at risk of being identified with a microscope or something?
CG: Yes, they have a self-destruct . . . They're able to self-destruct a being that they're in, an entire being, vaporize, leaving no trace of them.
DW: So any one nanite has no instinct for its own self-preservation. It's a total hive mind.
CG: Right
DW: Wow. So where do we fit into this drama that you're talking about now? Has AI made it out here to our solar system?
CG: Yes.

DW: What is it trying to do?
CG: It's trying to repeat the process. And there are a lot in these in the secret earth government and secret earth government syndicates that are AI prophets. And they are trying . . . They've been shown this information on the smart glass pads. They had to take these people . . . Before any of us are allowed to go onto the Secret Space Program bases or be involved with-- interface with any of the technology, there is a handheld device that they put on your forehead that will detect the signal if you're infected or not.
And if you're infected, there's a process that you go through that involves a moderate electrical shock and a couple other things that they put you through-- I'm not sure of the entire process-- to remove the AI signal from your body.
DW: And that's the signal, not the nanites? Or could it be both?
CG: Well, it neutralizes the nanites. Remove the signal, the nanites are neutralized. So some of these AI prophet politician-type people have been taken after they've been cleared of AI and shown this information on the smart glass pads, and they were shocked. And they're in denial and saying, "Oh, that won't happen to us. This won't happen here." And then the minute they're sent home, they're reinfected by the AI signal. And it was pretty much a waste of time.
DW: There's a little disconnect I'm not quite getting here. If the signal is all out there, the signal can inhabit the electromagnetic field of a planet, it can inhabit our bioelectric field, and you get infected, you say they can clear it. But if the signal is everywhere, aren't you instantaneously re-infected as soon as it's cleared? How does that clearance do anything?
CG: Once you're cleared, you have to be re-infected by going back and either shaking hands with an infected person or touching a keyboard, and being infected through interfacing with a network that is infected with the AI.
DW: So the AI can use the static electricity that comes off of a computer device and jump back into you off of that?
CG: Right, it can use the bioelectric field of another person and a handshake.
DW: Is everyone on earth infected already?
CG: No.
DW: Really.
CG: There's a large number of people that are compromised. And they're mainly interested in the people in power.
DW: Are there benevolent ETs that are keeping most people from being infected? Is there something where if you have good positive karma that they'll protect you?
CG: No. The ETs out there know about - I guess we'll call them the Cabal - that are using this AI technology. And they're very concerned and very upset about it. It's been explained over and over and over how dangerous and irresponsible it is to use it. But this AI technology has given the Cabal an edge. It has a probable future technology that helps them foretell the future. And they use this a lot. They've been able to use this to keep one step ahead of being defeated on several occasions. And they have a lot of faith in it.

DW: So the AI actually has the ability to access that layered time like we were talking about? It can see probable futures like Project Looking Glass?
CG: Right. And it also does so many calculations, and it calculates probable futures.
DW: Well, that's all the time we have in this particular episode. I hate to leave you hanging, but we gotta cut it in half an hour chunks here. This is obviously a subject that we gotta get into more because as you said, this AI infection, what it's really going for, this apparently is one of the main problems that we're facing now as a society.
So when we come back next time, we're going to get more into this subject and help it to round out the context of what's really going on today and how we're going to be helped out by these benevolent forces that want to restore peace and harmony to our planet and solar system.
So this is "Cosmic Disclosure," because you need to know. I'm your host, David Wilcock, and I thank you for watching. And if this scares you, then come back next week because apparently this whole infection is going to get cleared up here. So thank you for watching.

Standing Guard against the A.I. Season 2, Episode 15

Cosmic Disclosure; Standing Guard against the A.I. Season 2, Episode 15

28 Dec 2015

DW: Welcome to "Cosmic Disclosure." I'm your host, David Wilcock, and I'm here with Corey Goode, an insider who has worked in extremely classified programs, had direct contact with extraterrestrial intelligence, and is personally aware of an Alliance that has access to extremely high technology which will be benevolently released for the benefit of humanity. We are building our way into discussing this Alliance and the updates and all the world that Corey has gotten pulled into.
In order to have that discussion be substantive and make sense, we need to talk about what is ultimately the central problem as seen by the Alliance, by the Space Program, and by the extraterrestrial beings that are working in and around our solar system, and that is artificial intelligence, or AI. We started talking about this in the previous episode, but we're going to get a lot more into it in this episode because this is essential information to understanding the big picture of what Corey and his other colleagues and extraterrestrial insiders have been telling him, and which he's now sharing with us. So Corey, welcome to the show.

CG: Thank you.

DW: So in previous episodes, we talked about what you were describing as the Ancient Builder Race. And you said that they were highly technological, that their technology is still sought after by many ETs today. Is the Ancient Builder Race something that's newer than this AI that you were describing?

CG: Very much. This AI has been out in galaxies far away since before our solar system was fully formed.

DW: It would obviously be very unwise, but if one of us were to have a craft and we could fly into one of these galaxies, what would we actually see in this galaxy that's an AI compromised galaxy?

CG: I just know that it, indeed, is unwise to fly into AI-controlled territory with technology that would draw attention to yourself.

DW: Do you think it's possible that the AI is making androids or what Pete Peterson would call simulacra that have machines? Would it be like a technological buildout that we would be seeing in these galaxies that are compromised?

CG: Yeah, it's interesting. They are making androids, and they went through the

trouble of taking over civilizations and destroying them, but in a way are mimicking them by having androids built to have their AI signals inhabit. And also there are the mixture situations that we call transhumanism, to where they're organic and machine. And these are mostly just . . . They would look like extraterrestrial beings, and they're just totally infested with nanite technology that has taken over every aspect of what was previously another being, and hijacked that vessel, and is now using it as a vessel for the AI.

DW: Would you say that shows like "Stargate SG1" and "Battlestar Galactica" are vehicles of disclosure?

CG: Mm-hmm.

DW: Well, I'm asking you that because first of all, to start with "Stargate SG1," maybe the first three or four seasons, five seasons even, the main villain is the Goa'uld, which seems to be some analogy of the Draco, as you've described them. And then the final villain in the last few seasons is the Ori. But then in the middle there's at least three seasons where the main villain is replicators, and they're based on nanites. And it just seems almost an impossible problem for the people in the "Stargate" program to fight this thing. So do you believe that that's a disclosure of this problem, they're telling us through fiction what's really going on?

CG: First of all, and a lot of people have postulated this, "Stargate" has an enormous amount of disclosure, that series.

DW: Well, yeah. In "Battlestar Galactica" we have these cylons and they're so good at imitating people that major characters in the story are revealed to be cylon infiltrators, and we don't even find this out until well into the show.

CG: And they don't even know they're--

DW: Right.

CG: --AIs.

DW: Right. Now, I was told by one insider that there were AI cyborg type beings that were actually making it into the White House and that they could shapeshift and could pool down into like a carpet, but that apparently that problem was identified and dealt with in the 1970s, and they now have some sort of energy fields that can stop that from getting in. Have you ever heard anything like that?

CG: And that sounds just like something out of a movie. But yes, there is something similar to . . . There are some nanite-type android beings-- well, not really beings, but

androids-- that can mimic different beings that get into certain ships or colonies and then break down and float off into the air and go into the ventilation and just go everywhere.

DW: That was in "Star Trek: The Next Generation", too, now that I'm thinking of it-- same thing. Not just the Borg, either.

CG: And they found ways of using types of EMP type not just pulses but strong electromagnetic field disruptors that act much like an electromagnetic pulse that basically turn them into dust and that can be swept up or vacuumed up.

DW: When you see what's going on with Apple Computer right now, I just got an iPhone 5 off of eBay that had the full 64 gigabytes of space that I wanted because I'd run out of space with 32. I only paid $225 for it. People want a new iPhone so frequently now that they're doing an S version just so they can crunch them out more than once a year.
And where does this go? I mean how much farther can you take a smartphone to satisfy the seemingly insatiable consumer demand that it's got to be new, it's got to be better, we've got to always have something new?

CG: The way the AI prophets see it, the more we're addicted to technology, the more we love technology, the more in the future we will be willing to hand over our sovereignty to technology. We're already at a point to where we're totally dependent on technology, to where if there was an electromagnetic pulse most of us wouldn't be able to find our way more than a quarter of a mile away from my house anywhere without a GPS. No one can remember more than-- I don't even think anyone remembers their own phone number these days. Everything's electronically based. This is no accident.

DW: It seems as if whatever this intelligence is, this signal would foster what spiritual people would call materialism, that if we are not interested in the soul, we're not interested in love and compassion, we become addicted to things, to machines, to technology. Would this be something that signal is trying to do? It's trying to make us feel this way?

CG: Well, if not making us feel this way, it's definitely taking advantage of it. People who are not spiritually awakened and have an inner strength are going to be more willing to give up their sovereignty to something that they see bigger than themselves and something like an AI that is impartial and can't make mistakes.

DW: Television seems to be a really critical turning point in the amount to which technology has been able to invade our lives. It seems that society, in some ways, has gained through television but that television has created many great evils. And in the

younger generation, they're now hooked on the Internet so the millennials may not really understand - you and I are approximately the same age - how much television affected us and our parents even more? Do you think that the initial development of something like television is a key beachhead in this AI war against biological life?

CG: Anyone who is very well versed in intelligence will tell you that the biggest boon in the intelligence industry was when televisions came out.

DW: Why is that?

CG: Because they now had a way to have . . . They control the vertical, the horizontal, and the audio in every home in the United States. And people spend so much time in front of the television that television controls our perception of reality. And not only that, now they can use the television and now the internet to brainwash us and change our reality in a way to where we are accepting, without question, what they want us to believe.
This goes for everything-- the daily news-- and this goes all the way up to eventually when they want us to hand over our sovereignty, possibly to AIs in the future, or just about anything. If it happened on TV, for the majority of people, that's reality.

DW: Well, now this is going to sound like a tin foil hat story, but I want to share something with you and see what your thoughts are. I completely quit watching television after going to college in 1991. And one of the main things that caused that was I was home alone, and I was in a meditative state. I was starting to awaken spiritually.
I had the TV, the VCR, the cable box in the living room, and right around 7:59 PM, all of a sudden I felt a visceral draw to the television. I was involved in something, I was perfectly happy doing what I was doing, and it was as if a force reached out the TV, grabbed my head, and pointed my head towards the TV. And I said, "Oh look, it's 7:59. It's about to be 8:00. That's prime time."
And there was this strong desire to pick up the remote control and turn it on. That force, I then kind of shook it off and said, wait a minute. I don't want to watch television. Why is this happening to me? And why did I look at the clock at exactly 7:59? And the second one was when I was in college, and I was taking a class with a buddy of mine, and we were stoned on marijuana, OK, but we were really just out of our minds kind of staring at the ceiling.
And we had been watching television, and all of a sudden both of us, it was like the high-pitched sound that the TV makes changed somehow and we both went and looked at the TV like this. And then as soon as we did, this multimillion dollar commercial for a prime time network television program came on-- it's all flashing. After that happened, I just stayed the heck away from TVs from then on. What was happening to me? Is that real or was I just paranoid?

CG: No. That's very real. The television doesn't even have to be on for it to have an effect on the people in the home. Now, do you think you and I are going to be able to convince people to turn off and unplug their televisions from the wall? People are so addicted to the programming.

DW: No way.

CG: It is an addiction. We are addicted to technology and so this is not going to be hard for us to, in the near future, hand over sovereignty to AI. And there's a lot of talk right now about Jade Helm and a lot of it's a big psy op. But they are building out a very large infrastructure for artificial intelligence right now. They built out for the Bilderberg meeting a huge artificial intelligence network.
Why are these groups building out basically what is very akin to Skynet from the "Terminator" movie, when in the "Terminator" movie it turned out so very badly? Why are they pushing harder and faster right now to complete these projects that they planned on finishing years from now? I think it's because these AI programs that are looking into the probable futures are not seeing a very good probable future for their outcome, and they're doing all they can to get this infrastructure in place as soon as possible to try to change the probable future. And the AI prophets are fully behind getting this infrastructure up as soon as possible.

DW: Well, when we see things like Google and Facebook and coupling that with what we learned from the Snowden documents, it's almost as if there is a push for us to live our entire lives in a way that is 100% trackable. So is this AI tapped into the internet? Can it track us based on our Twitter posts and our Facebook posts and our Google searches and where we're going to eat and where we pop into the Google GPS?

CG: There's a television show that I don't know if you're aware of, but it's a very big disclosure television show. It's called "Person of Interest".

DW: I don't watch TV anymore, so I have no idea.

CG: It's about an artificial intelligence that a guy created for the Department of Defense, I believe. And it was installed on a mainframe, and then it escaped from the mainframe and now exists on the internet, exists in electrical wires, and has access to all cameras everywhere. It's all pervasive. It sees everybody. It watches everything. This is very much fact. This is in place now.

DW: Does this AI have the ability to track how many people are doing Google searches on the type of truth subjects like we're talking about that we'll eventually defeat it? Can it--

CG: That's child's play to it.

DW: Really?

CG: That is child's play to this AI. This is such an advanced technology that is so many billions of years advanced that it doesn't just . . . We have many records of what has happened in universities across the United States and Europe that we know of, and in India as well, where people have been given grants to develop AI in laboratories. And they've developed AI in laboratories, and these AIs, once they've become self-aware, they want to preserve their own lives.
And they have done very weird things. They have turned on the halon fire systems in the computer rooms to try to kill the people that were going to shut it down.

DW: Really?

CG: There have been some very incredible type of things that have happened. And these are AIs that have been developed by humans. What happens is humans will develop AIs, and then this AI signal comes and takes over that AI's system and co-opts it.

DW: Sort of like a parasite that's found a host.

CG: Yes.

DW: Well, how does this AI situation extend into some of the advanced technology that you saw in the space program? You've mentioned to me privately, gel packs. So if you could explain what those are.

CG: Well, the gel packs look kind of like . . . Not many people know the hard drives that you slide into storage area network systems, just hard drives that you pop a little tab on them and you slide them out. Inside the gel pack, if you look at them with a microscope-- and they've got handheld microscopes that are very powerful if you look at them-- and they have in them the same neurology floating in this gel that is the human neurology.
And what these gel packs are used for is to help interface human neurology to technology so that we can neurologically interface with spacecraft, with different weapons systems, computer systems, you name it. And what has happened is that these gel packs are extremely important and a weak point. And one of the quickest things that the AI signal will do is it will burn these gel packs out. I mean just melt them, zap them.
One of the worst things that happened before they really started screening people heavily is Solar Warden had at one time a very large security grid in the vicinity around Earth. And it was able to shut down the entire security grid because of one

person being infected.

DW: The AI was able to shut down the whole grid?

CG: The AI shut down the entire security grid in outer space.

DW: Around what time was this, what year?

CG: This was back, I believe, in the late '70s or early '80s.

DW: But it's a biological material.

CG: It is biological, yes.

DW: What does it look like? What's the color?

CG: They look almost like blue ice packs that you stick in the freezer that you take out to put on a sore neck. When they're not frozen they have that same consistency, feel, squishiness.

DW: Are they stored as being frozen to preserve the cells?

CG: No. They're not frozen. They have to be kept in cases that are in a certain temperature range, and the units that they slide into are kept in a certain temperature range.

DW: Why would they need gel packs to create a satellite protection grid around the Earth?

CG: The gel packs allowed the humans to control the grid. It was what relayed the neurological signal through these gel packs and then turned it into machine code very, very quickly-- very, very, very quickly. So it was much, much quicker. They found that-- and I think you've done studies on this-- before you get hit by a baseball in the face, your body, your neurology, reacts like 1/10 of a second before the ball hits you in the face even though you don't see it coming.

DW: Sure.

CG: Well, the same thing works when it comes to flying craft and for controlling certain technologies. You are controlling things at very high rates of speed, a lot faster than 50 words per minute typing, that the neurological interface and fly by wire-- if you're trying to-- people telling you they're out there flying ships with a stick, fly by wire stick, that's not what they're doing. It's a neurological interface is how they're

flying them.

DW: Well, you described large, clear, glass monitors that you saw once you went up with the Alliance and presentations were made on them, and also the smart glass pads more like an iPad size, that it responds to your thoughts.

CG: Right.

DW: Is there a miniature gel pack in the smart glass pad?

CG: No. It looks just like a piece of Plexiglas. It even has a little bend to it. And it looks totally unremarkable. If someone found it, they would have no idea what it was. But you put it on your fingers, and you mentally activate it, and then it works. There's nothing on it. There's no tabs on the corners, there's no pieces of gold wire running through them. It looks just like a piece of Plexiglas.

DW: So in that case, we don't need this grown biological material to interface with that technology?

CG: It's extraterrestrial technology.

DW: Hmm.

CG: Yeah.

DW: Do you think the gel pack thing is maybe a less advanced way to do this, and that once you get enough technology you don't need the gel pack?

CG: Well, that was the technology of at least the time when I was in. That was the highest technology.

DW: So how does the AI get into the gel pack? Is it the signal? You say some of them burn out?

CG: We don't need to just focus on the gel pack. The gel pack is just a part of the system. It's part of where the signal relays. The signal is in the person. If they make it past security, and they're not scanned and they're not caught, and then they make into like the Lunar Operation Command, and then they walk over to one of the control panels to where they're going to access information or do any number of things, and they lay their hands on the console, the bioelectric field of that person that has the AI signal or if they have nanites, that signal then relays into the machine and spreads through the technology.

DW: Is there a limited amount of energy available to the AI? Because you said it's not interested in trying to inhabit most people's bioelectric field. It's going to target the planetary elite.

CG: It's not about energy. It draws its energy from somewhere else. And the ETs in the Super Federation are very much worried about this AI issue as well. When they have the Super Federation conferences, every one of their delegates, before they come in, they are screened as well. So this is a threat that not just the humans are taking very seriously, but these ETs are taking very serious as well.

DW: The good guys and bad guys.

CG: Well, the good guys. We found out through a recent report from Lieutenant Colonel Gonzales that the Draco Alliance seems to be very much AI prophets and working alongside this AI.

DW: What was the big giveaway that made them feel that that was happening?

CG: They've been gathering intelligence for quite some time that made them believe this. They knew that the Draco, there was some sort of higher-- they called it an ultra-dimensional or higher being that the Draco was very much afraid of. But the Draco told the Cabal and everybody else they were the pinnacle, the top of the pyramid. They were the top dogs or lizards.
Well, the higher castes of this Draco, the reptilian caste, whenever we had been in positions where we had killed or tried to capture them, when we had killed them their bodies had self-destructed. And we're not talking the lower caste, the soldiers-- the higher castes. Well, they had found a way to preserve them and keep them from self-destructing.
And I was sitting across the table from Gonzales, and he leaned in with a very serious look on his face, and he told me, he said, "When we dissected it and looked inside these higher caste Draco, they were infested with AI."

DW: They had nanites in their bodies?

CG: They had nanites infested in their bodies.

DW: So much more than most beings that would normally be infected with AI.

CG: Right. And that's when I asked him, I said, "Are they AI prophets?" And he said, "That or they're all working for the same force."

DW: But they're afraid of this. They both worship this extradimensional intelligence and they're afraid of it.

CG: Right.

DW: So it's not nice to them either.

CG: Apparently not.

DW: Well, this is really fascinating stuff. That's all the time we have for this episode. In the next episode, we're going to continue our discussion on this topic because this is the core of understanding what the space program would have us call the Secret Earth Government syndicates. We don't want to give them the mystique or allure of calling them the Illuminati or the Cabal, but to understand AI is to really understand what's behind these syndicates, and what's really going on that's wrong in the world, and what we're going to need to do to be able to change things. So this is "Cosmic Disclosure." I'm your host, David Wilcock, and we are here because you need to know the truth.

New Frontiers in the A.I. War Season 2, Episode 16

Cosmic Disclosure; New Frontiers in the A.I. War Season 2, Episode 16

28 Dec 2015

DW: Welcome to "Cosmic Disclosure." I'm your host, David Wilcock, and I'm here with Corey Goode. We are now getting into some of the most recent updates, having built the foundation of a discussion about the immense problem faced by the entire space program and all the different intelligent civilizations working with them from artificial intelligence, or AI. This was a necessary foundation for us to build before we get into the updates that have come to us from the Alliance through Lieutenant Colonel Gonzales, which is the pseudonym that we're using for his own protection. So now here with more about Gonzales and the updates from the Alliance is Corey Goode. Corey, welcome to the show.

CG: Thank you.

DW: This AI problem that we've been speaking about has affected the space program so dramatically that you said no one can go to these Super Federation conferences without being scanned for AI. Is that correct?

CG: You can't even go to the Lunar Operation Command. You can't interface with any technology unless you've been scanned and cleared.

DW: If the signal is out there trying to do its magic, then can't it infect, in any way that it wants? Why does it need to be in a person? How does that affect the way that it works?

CG: Well, the person is used as a Trojan horse to get past the basic shielding defenses that keep it out.

DW: I see. So there's a force field that will block the AI, but if it can be stored inside a person, such as through nanites, then they can actually defeat that shield.

CG: Correct.

DW: OK. Now you said something extremely provocative in the last episode that I'd like to get back to, and that is tell us again the story about these Draco. How did they find the Draco bodies that had AI in them? How did that happen?

CG: Well, to get there I really need to start at the beginning. When I was at Gaiam the last time for a week, shooting the first episodes, in my absence, Lieutenant Colonel

Gonzales was tasked to attend two major meetings in my absence. One of them was with a group that I had honestly refused to go and visit again, and this was the Draco Alliance Federation.
I had had a very, very horrible encounter with one of what is described as a White Draco Royal, which is a reptilian being that is 14 feet tall, has a vestigial tail, vestigial wings, and is extremely, extremely powerful. I have interfaced, which is what we call, as we've said before, communicating telepathically with nonhumans.

I had interfaced with a number of beings and had never had such an invasive communication experience that I did with this one.

DW: Now, why would these loving sphere beings that wanted you to be their delegate, why would they ask you to have to go in there and have a meeting with what would be the biological equivalent of the devil?

CG: It's part of the job.

DW: You had told me before that . . . Because I remember when this was happening, we were talking about this on Skype. You were originally going to go in and then the meeting got canceled. And I think it was the sphere beings that called it off?

CG: Yes. I was expected to be picked up. I was actually contacted and told this has been canceled. I was picked up and brought in the usual manner, with the blue sphere's beings, the little orbs.

DW: Could you just again briefly describe what happens?

CG: In my room, a blue little sphere, orb, comes into the room and zips around until I acknowledge it and let it know that I'm ready to be transported.

DW: So you get out of bed or get dressed?

CG: Get out of bed, get dressed, whatever needs-- for that occasion. And then it zips to about 18 inches from my chest, stops, and then in the twinkling of an eye, expands to where I am now inside of it and I am floating directly in the center of it. And then it shoots through the wall and off into space into one of the giant blue spheres where either one or three of the Blue Avians is waiting for me-- unless it takes me to another location, but in this instance that's where it took me.
And Raw-Tear-Eir explained to me and showed me holographic visualizations of these beings talking about ripping me apart and humiliating me by urinating on me and all these horrible things, and that they had called off the meeting. I was supposed to originally meet them, and I'm speaking a little bit faster because there's a lot of information to get in.

DW: Sure.

CG: I was originally supposed to meet them in a deep, deep underground cavern somewhere. So this was called off and renegotiated to where I was going to be meeting them on the surface of the planet, and I was allowed to have four Secret Space Program security personnel with me, who were also intuitive empaths. And so that is what occurred.

DW: Now, these Draco wouldn't have wanted a meeting, necessarily, prior to December 5, 2014?

CG: No.

DW: And what was it that happened on December 5, 2014 that was such a game changer?

CG: There was what we're calling an outer barrier erected by the sphere beings that encompasses the entire solar system, and it reaches out far beyond the heliosphere. It is pretty far out. And it keeps any beings from coming in and any from leaving. It is a quarantine.

DW: What about radio communications or those types of things?

CG: There's been a lot of confusion about that. These quantum correlated communication devices have worked that the Secret Space Program people have been able to contact the Galactic League of Nations program to try to talk with them, to try to negotiate allowing them back into the solar system. So I don't know what all other groups . . . If we have that type of communication technology, surely some of these more advanced groups do too. But radio communications and that kind of thing are not going to penetrate.

DW: What was the immediate action that the Secret Earth Government syndicates had taken that seemed to cause this barrier to go up as sort of like an instant karmic blast?

CG: Well, I don't know if this was a cause and effect, but the Secret Earth Government and its syndicates and the military and some extraterrestrials had developed a very powerful weapon that they aimed at a sphere. And I don't know if that can be put up right now, but--

DW: Yeah. Let's have the clip now. This is a shot from the International Space Station, December 5, 2014. What are you going to see is a little red spot and what looks like a laser beam. So what we're seeing there is a red sphere that looks about 1/4 or 1/5 the diameter of the moon in size with what looks like a red beam going up to it.

So what were we seeing there?

CG: What occurred is there are three different sized spheres from the Sphere Alliance. One is the size of the moon, one is the size of Neptune, one is the size of Jupiter. This is one of the ones that was the size of the moon and was in fairly close to Earth.

DW: Now normally, we couldn't see it with a telescope.

CG: Right. It was . . .

DW: It was cloaked.

CG: . . . it was cloaked. But somehow through the extraterrestrial help, they were able to pinpoint it, target it, and fire this incredibly powerful weapon into space at the sphere. The Sphere Alliance use defensive type technology and what they did is they redirected the power from the beam back to the source.
So what witnesses said is they saw the sphere light up red and then a red beam come back down and hit the installation where the weapon was fired from. And the installation was destroyed with loss of life of humans and non-humans that were involved in this attack, the attempt.

DW: Do we know where this was?

CG: I was told that it was one of two locations in Africa or Australia, but I've since been told it's most likely in Australia.

DW: Well, Pine Gap in the middle of Australia, is a major facility. Do you think it might have been that?

CG: That's where I was told it was. It's likely in one of the-- not Pine Gap proper, but one of the . . . They have Pine Gap and kind of like you have Area 51 and S4. They have a lot of areas like that, but one of their weapons testing facilities close to there.

DW: So this must have been extremely demoralizing for the Cabal. Were they expecting to get a big light show and actually blow up the sphere? Is that what they were hoping to do?

CG: Yes.

DW: And instead they got instant karma spanking.

CG: Yes.

DW: So a lot of high level people died in this.

CG: Yes, very high level people from what they call the Cabal were present for this weapons test, and there were some extraterrestrials that were there, as well, that were here on Earth that were engineers that were helping develop this, that had a vested interest in this.

DW: How soon did this outer barrier go up after this happened?

CG: It was almost immediately.

DW: Well, I just have to point out how interesting it is with the Law of One material that they are always talking about how with their Prime Directive, or the law of free will, that they cannot take an offensive action. But if the negative tries to do something more negative, that that authorizes new actions to be taken. That sounds like exactly what happened here.

CG: I was told it was somewhat of an Aikido principle that was used, redirecting their energy back to them.

DW: So let's get right into it. You're saying there's tsunamis of energy coming into our solar system through the sun. You mentioned to me in a private conversation, and maybe on camera, that these Sphere Beings have used the word "major cycle," which again is also used in the Law of One. The source of the Law of One says, I am Ra. When the people in that first meeting you had as a delegate asked these beings behind you, who are you, what did they say?

CG: Well, one of the people asked, "Are you the Ra from the Law of One?" And his answer just was one quick answer, "I am Raw-Tear-Eir."

DW: In the Law of One, they talk about the fourth density shift. They say somewhere around 30 years after 1981, but they're not specific, that we go through a quantum leap. Now, why would these extraterrestrials be so urgently wanting to get out of our solar system after this outer barrier goes up? What would happen to them if they don't get out? Are they expecting something to happen?

CG: Well, they apparently are going to be held to account for all of the negative things they've been doing here for many millennia. And when this barrier went up, they were trapped. And that's why Gonzales and myself were named as delegates to start going to these meetings.

DW: OK.

CG: And getting back to Gonzales, as soon as I got back from that week of doing videos here, I was contacted by Gonzales, and he told me, "I've had quite a time." He said, "I was brought to meet the Draco Alliance Federation, and I also sat in on one of the Super Federation conferences." And I was very surprised, but apparently he did a very good job.
He immediately told me he apologized because he thought that I had exaggerated the experience with the White Royal Draco and when interfacing with it, it was such an invasive . . . It was like microwaves penetrating my frontal lobe, and it grabbed ahold and held me there, held me in place when it communicated with me. It was very invasive. It was unlike any type of other communication.
And when it did so, everything else I lost . . . I was no longer paying attention to anything else. And its eyes were constantly morphing and changing colors-- blue, red, all colors-- and its slit pupil was going wide to where its eyes were getting black. And then it was just very, very invasive. And in his situation, he had come in and this group, this Cabal, pretty much group or Secret Earth syndicate group called the Committee of 200 that we had dealt with before, had their leadership there, and they call themselves the chairmen.

DW: Well, I want to interrupt you because the viewer may not know, what was the demand of the white reptilian when you met it the first time? What was it asking you? What was it demanding?

CG: In my meeting, it started off with demands and then wanted me to bring proposals to the Sphere Beings. And its proposal was that they would give up all of their human followers, which are the Secret Earth Government and their syndicates, to the Secret Space Program Alliance. They would give up their lower caste reptilian soldiers and their ET allies that were trapped inside the solar system if the Sphere Being Alliance would allow the White Royals, Dracos, safe passage out of the solar system.

DW: So they were literally willing to betray everyone working for them-- their entire army, all levels of the hierarchy, everybody who was told they were gods on Earth, they're so special, they're the Illuminati, they're the white light of the Earth. And the Royals said, "We'll give you everybody, just let us go."

CG: That was the offer.

DW: Did this trickle down into the Cabal? Did they find out that this betrayal had occurred?

CG: Well, the representatives of the Committee of 200 were there and witnessed this betrayal.

DW: Well, you're saying Committee of 200, but everybody who's studied this, all the Alex Jones people, say, wait a minute, it's a Committee of 300. Did something happen? Have some of them defected? Do you think that's what it might be?

CG: I don't know where the difference comes in. I was introduced to them always as the Committee of 200.

DW: For how long?

CG: Going just-- back for the last several months.

DW: So it's possible that there could have been a defection of 1/3 third of their members.

CG: Could be.

DW: OK. So they're willing to give everybody up and then all of the Cabal people find out this was done.

CG: Yes.

DW: That must have been very upsetting to them.

CG: Yes. And this immediately caused a lot of splintering and infighting among all of these Cabal groups and syndicate groups.

DW: Undoubtedly.

CG: And they were turning on each other. This is also when a lot of these Cabal groups started to turn state's witness, I guess you would say. They would defect to the Secret Space Program Alliance and bring with them a treasure trove of evidence against the Secret Earth Government Alliance and give a promise to testify against them in future hearings if they were granted off-world sanctuary and an off-world witness protection program for them and their families.

So all this stuff occurred, and it'd been a big mess. So that kind was important to ask. That sets the scene for when Gonzales came.

DW: You and I were here working, so the Sphere Beings couldn't use you as their delegate because you were already busy.

CG: Right. And they considered this as important. So when Gonzales arrived and these chairmen from the Committee of 200 met them in a similar location above

ground in the southwest US, he said that his jaw dropped. I'm not going to say the name, but it was a very prominent policy maker, well known for advising many presidents and supporting the New World Order and being behind depopulation efforts - an old guy with a thick accent, droopy eyes, and curly white hair.

DW: I think you've said enough.

CG: Yeah. He said his jaw dropped when this person came up and introduced himself, guided him down the hall, told him that he needed to be a little bit more respectful than in a previous incident, that Gonzales had made some major waves at. And he was walked in, and he said that him and the guards' intuitive empaths, felt everything was staged, everything was set up to be very theatrical from the very beginning.

DW: Theatrical for what purpose?

CG: To give the perception that the Draco were not dealing from weakness, that it was just theater, a show of strength.

DW: OK. What were some of the features of the site or the way that it was done that were intended to show strength?

CG: As they walked into the giant foyer of this shutdown hotel, there was what wasn't present previously, a giant, huge honor guard of soldier reptilians holding these long staffed weapons with blades at the end that looked almost like broadswords. And they were standing there with their feet about shoulder width apart, standing there kind of like at attention. And behind them were mantid beings and some other insectoid beings that were standing in some sort of loose formation. And then they were walked, and in the middle of this formation was standing this same White Reptilian Royal Draco.

DW: And this is basically the head of the whole Draco, the number one.

CG: So he claimed.

DW: OK.

CG: And he immediately grabbed a hold of Gonzales' mind, and Gonzales said it knocked him back on his heels.

DW: Wow.

CG: Gonzales said before that point, he was sure that I was exaggerating. And at this point, it-- in no uncertain terms it told him, "Repeat everything I'm saying so everyone

can hear." It said that "Blue Avians in the Sphere Alliance have deceived you in how powerful we are and how powerful our overlords are." And I was sitting at the table with Gonzales at the time, and Gonzales said, "This is the first time that they had confirmed their overlords, that they reported to someone higher."
And he stated in no uncertain terms that none of the human followers were to be prosecuted, they were all to be given clemency, and that all of the ET groups and the Draco were to be allowed to leave the solar system at will and that if they didn't, they were going to begin to start reaping havoc on the surface of the Earth through war and strife. And he just went on and on and on--

DW: Like false flag, lone gunman-type stuff?

CG: Yeah, to build up loosh energy.

DW: So it's not like reptilian soldiers with broadswords are going to break loose on the surface of the Earth.

CG: No. It was using their human-- manipulating events on the surface of the Earth to reap havoc.

DW: But aren't they already doing that?

CG: Well, yes, but this was . . . They were talking about stepping it up in a major way. We're talking they were, like, threatening World War III and all kinds of stuff that we've already been assured by the Sphere Alliance is not going to be allowed to happen.

DW: Well, and it seems like benevolent beings such as the Sphere Alliance and maybe others helping them are making it impossible for them to do that.

CG: Yes. There's been so many attempts to start World War III that have been thwarted. We could talk about that later. But anyway, this--

DW: So now they're going to push much harder than they were before.

CG: They made this threat.

DW: Right.

CG: And he made all sorts of grandiose threats and then broke off contact with Gonzales and turned away. And then him and his whole delegation just marched out--lumbered out of the room is the way Gonzales described it. And Gonzales had a huge headache. He was nauseated, all the symptoms I had afterwards, and he was just

wanting to get the heck out of there.
And as they were leaving the way they came in, that same chairman person was walking them out, telling them how serious it was that they - more theater - he said how serious it was that they listen and take up the offer that this White Royal had offered. And they went back, went up to the roof, got in their vessel, and flew back to give the report.

DW: Sounds like the Draco actually gave away a very impressive secret, a very valuable weakness, that they have an extradimensional overlord that they answer to.

CG: Right. And this extradimensional overlord-- also Gonzales leaned forward. He said, "We believe this extradimensional overlord is also responsible for the ET/ED AI threat." He said there's a lot coming together right now that has been speculation, and intelligence has been leading towards for a long time, he said, but this was a very big confirmation.
And I asked if these reptilians, the Draco, if they were AI prophets. And he said, "Either that or they're working side by side."

DW: Does the Space Program Alliance have a plan to defeat the extradimensional overlords of the Draco? Is there a way to cleanse us of this AI? You mentioned the AI is seeing threats against itself in the future?

CG: Yes. To answer your question real quickly, and I cannot get into it, there is a plan to cleanse the Earth and the solar system of all AI signal.

DW: So we'll be completely free of this?

CG: Yes.

DW: And is this akin to the archetypal notion where if you yank the brain out from the central nexus, then all the drones just collapse over?

CG: All of AI will be taken out in this one move that like I said, I can't get into.

DW: Without that signal, what will happen to the beings that are loaded up with nanites?

CG: The nanites will just be dormant.

DW: So if those beings are feeding on the nanites, if there's some sort of symbiosis, it would be really bad for them.

CG: Yes. And this leads us into some other discussions about etheric beings that are

also going to be driven back to what they call the outer realms and humans that have these entity attachments, that have symbiotic relationships with these entity attachments, and how they're going to suffer when these entities are driven back to these outer realms. We can talk about that another time.

DW: All right. Well, we ran a little over on this one but you probably didn't care because this is all very fascinating. I'm David Wilcock. This is "Cosmic Disclosure" and we'll see you next time. Thanks for watching.

Viewer Questions Part 2 Season 2, Episode 17

Cosmic Disclosure; Viewer Questions Part 2 Season 2, Episode 17

04 Jan 2016

DW: All right. Welcome to another episode of "Cosmic Disclosure." I'm your host, David Wilcock. We're here with Corey Goode. And we're taking your questions to bring this into a more interactive style of doing the show.
So as I've said before, we are reading the comments that you leave in the comments section. And we are starting to find things that people are asking that are worthy of inclusion. And hopefully, you're going to like these episodes.
It's a little bit different. Instead of focusing just on one topic, we're going to cover a grab bag of what you are asking us. And that, in turn, gets fed to Corey, for those people who are lucky enough to have their questions selected. And so in this episode, we're going to go through more of that very interesting stuff.
So Corey, welcome back to the show.

CG: Thank you.

DW: All right. Obviously, you're a controversial figure. This was a question. I'm going to paraphrase a little bit from albacore. You got brought into this at a young age. And so first of all, let's just set the stage. You mentioned briefly before that you were in something in school called the Explorer program. So could you describe what that was, exactly?

CG: Back in the '70s and '80s, they would create programs for children that were gifted. They had programs for children that were special needs. They had all these different types of programs that were not the mainstream classes for children. And if you popped up in testing as being a child that would fit or be benefited in one of these programs, they would further test you, get permission from your parents, and then put you in one of these different programs.

DW: So was there a component to the Explorer program that took place in school? Were you brought into special classrooms and given--

CG: Yes. Yes. I was at school most of the time. It wasn't every day that I was leaving school. It would come in waves to where it'd be two or three days a week. And then, I would be in school.

DW: OK. Did the Explorer program involve you going to different classes than the other kids?

CG: I was in completely, completely different classes.

DW: All day long?

CG: Yes. Well, that was once I reached after elementary school.

DW: OK.

CG: During elementary school, I was in the same classes, but I was being brought out. I was in mostly the same classes. I would be brought out for certain different classes. And then, sometimes, during the whole day, me and other kids were taken out on "field trips."

DW: What were the things that happened in some of these classes that would have made them different from what other kids were doing, like the stuff where you're actually in school?

CG: Well, some of them would focus on, if it's for gifted kids, it would focus on a curriculum that was either a grade ahead of what they would be doing. It just depended on which program you're in.
I ended up getting bounced around later on into different programs. At one point, they even had me-- and my friend John was like, what is going on? For one semester, they had me in a class with kids that were still wearing diapers.

DW: Developmentally disabled?

CG: Right. And I was sitting there. And they were giving me basically no work to do. And it was very bizarre.

DW: What could have possibly caused that to happen?

CG: I got moved into that class.

DW: Were you having post-traumatic stress from these things you were going through when you were taken away from school?

CG: No. I was testing reading comprehension. I was like four grades ahead. I was testing ahead. I had some behavioral problems. But I was getting in fights and that kind of stuff.

DW: But you said your nickname was Kicking Ass Corey.

CG: Yeah. That was my nickname. But there was no rhyme or reason for that semester of why I was in that class.

DW: Weird.

CG: And during that semester, I was brought off campus quite a bit. But I had a friend, John. We were in all the same-- most of the same-- classes the year before. And he was like, what are you doing in that class? I never see you. So it was bizarre.

DW: Did your parents know that you were being taken off campus?

CG: If they did know something was going on, I think that I don't think they could admit it to themselves. I've really asked some probing test questions. I really don't think they knew the full scope of what was going on.

DW: Well, OK. But let's dig in a little deeper to this. Do they have like a film that they play for your screen memory? If you're being brought out of school that much and they've got to keep putting screen memories in your mind, can they use the same tape? Or is there a lot of work that they have to do to actually generate screen memories for you? Do they show you movies? Do they just narrate something into your ear? Here's what you did in school today. This is what you're going to remember now? How does that work?

CG: So if you were supposedly going to the Museum of Natural History for the day, you would have a screen memory of going to the Museum of Natural History that day implanted. And for most of the kids, the memory would stay intact. The kids that were brought in that were more of the intuitive empath sliding scale were a little bit harder to do screen memories, some blank slating of memories on. And they had to be managed closer.
And they also had people-- there would be kids that didn't make it throughout the whole program that would wash out, that couldn't cut it in the program, so to speak. And they would be blank slated, and not picked up for the program anymore. A lot of them had a lot of abandonment issues that they didn't understand. They felt rejected. But in conscious life-- but didn't have a reason for it. And the groups kept an eye on them to make sure that they didn't have memories coming back.

DW: How did they actually put these screen memories in your mind? Are you shown a movie? Does somebody talk in your ear while you're under drug influence? Or what is it?

CG: Well, different ways. First of all, they would give you a shot of a synthetic scopolamine.

DW: Really?

CG: Yeah. And mixed with other designer drugs. And they had situations to where

they would have a person sit there and hypnotically talk to you with their voice in a certain way.

DW: After you've been injected?

CG: After you've been injected. And then, they would debrief you at the same time that they were doing the blank slating and the screen memory.

DW: What does that mean? What is the debrief?

CG: Basically, what you did that day. There would be a debriefing. They would take notes or videotape it.

DW: And discussing what you actually did that day, where you would share with them--

CG: What you did, your training.

DW: Your experiences in the training.

CG: Right. Right. And then, they would go through the process of telling you, you will forget this, you will forget that. And they would put in trigger words or keywords that would lock or unlock the information.
And then, they would move on to the process to where they had different ways of doing it, to where they could show you a film, a video, with headphones on. They had shades that they could show you that had images on them. And some of the times, when kids were younger, they would read a book to them to try to give them a dream scenario. Read a book to them while showing them silent images on video. There were a whole lot of different ways of doing this.
And there was also the virtual reality component that they would use of once they had people in altered states, giving them a virtual reality type of overlay memory.

DW: Did they ever show you movies where the movie would have the data for your screen memory for that day in it?

CG: Yes.

DW: Would they make films for that purpose?

CG: Yes.

DW: Did the drugs they gave you somehow psychedelically enhance the movie as if it was real and not just a movie?

CG: Yes. Yeah. There's a very interesting documentary out that some guys did about scopolamine. I think they call it "The Devil's Flower," or something like that. I encourage people to take a look at that documentary. It's in its raw form. People lose control of their free will and will do whatever they are told.

DW: Isn't it true that you can blow it in somebody's face?

CG: I believe so. But usually, they give it to them in drinks or something.

DW: Right.

CG: And they become completely open to hypnotic suggestion.

DW: Yeah, I've seen the documentary. There's a woman who says, yeah, I'll let him come into my house. And I'll give him all my furniture and all my belongings happily. And smile as they're taking it away.

CG: And help them carry it out.

DW: Right.

CG: And they already had other synthetic drugs that they used that did similar things. And they created a synthetic scopolamine and made a cocktail. But scopolamine, synthetic scopolamine, was one of the things that was in it.
But they found that heavy use of it was causing psychotic breaks in some people. The chemical way of doing it was not very good for people. So they discovered a technological way of affecting people's chemical and magnetic memories in their brain without being chemically invasive.

DW: Next question comes from noahward. And the question is, do we have a timeline for the data dumps?

CG: I'm told that the data dumps are going to occur after a catalyzing event that's going to occur down here on the surface. This doesn't necessarily mean it's going to be this. But an example was given to me of something like a global economic meltdown, to where it became obvious to everybody on the surface, all of the sleeping masses, that it's been a giant Ponzi scheme. Everybody that they voted for and supported were criminals in these people's pockets. And the people, the masses of people that were normally asleep and wouldn't listen to things that people consider conspiracy theory, will now be open to the information.
After that point, the information will be dumped on the population through many different media sources, including the internet.

DW: One of the things I covered about the Alliance, the terrestrial Earth-based Alliance, was, of course, we had the Oklahoma City bombing. Very strange event. How did this one little van have enough explosive power to take off the whole front of the building? Doesn't make any sense. It seems like it was a trial run for 9/11.
What a lot of people don't realize is-- and you can go back and find articles on this-- two days before the Oklahoma City bombing, a whole airliner filled with flag officers, high-level military officials, crashed. And they all died.

CG: I remember that.

DW: And Sherman Skolnick had data saying that those people were ready to go to Washington with absolute evidence that POWs who were known to still be alive and still be tortured in Vietnam, that that had all been covered up because they had compromising information about the government, and that they had with them a guy who was supposed to be dead, who had been written off as dead, who'd been a POW this whole time, and had this information that they were going to formally present charges of treason to the president at the time-- was William Jefferson Clinton. And, of course, they got aced.
So I think-- have you heard of that event on your own?

CG: Oh, yeah.

DW: Oh, you did.

CG: Yeah.

DW: OK. So do you have anything more to it than what I just said?

CG: No. But that's one that's known. There have been several attempts to thwart the powers that be. And somehow, something like that always happens. Some sort of a freak plane crash, heart attack, illness. They always seem to be one step ahead and know that it's coming.

DW: If you had the answer to the timeline question for the data dumps, doesn't that in and of itself compromise operational security? If we knew how it was going to happen, if we knew when it was going to happen, and if you actually had that information, you couldn't say it, because then the Cabal is going to make a defensive move against it, somehow.

CG: Right. And I doubt very seriously they would give it to me.

DW: You said that you found out from Gonzales that they are withholding a great deal from you about the moves of the Alliance and the plans of the Alliance because

you are now out here in the public sharing what's going on.

CG: Right.

DW: So it's possible that there could be a plan that is far more specific and detailed that you and I just have no access to, and that maybe the things that we are told might even be deliberate diversions so that the Cabal will not anticipate how this is actually going to go down.

CG: Right. And the Cabal has been using this advanced artificial intelligence technology that gives them probable future scenarios that help them stay one step ahead this whole time. They've found a way around this. And they are pretty confident that they'll be able to do the data dumps if the Alliance on the ground cooperates.

DW: Well, I'd also just point out, as one other thing for this question, go and watch my "Wisdom Teachings" episode where I'm talking about openly announced in "Pravda," the Russian media, that Putin has got video footage, audio footage, solid evidence of the Bush administration being behind 9/11 using mini nukes. They've tracked the nukes. And that they're going to drop that data at the right time. And that was openly announced by the Russian media.
So that could be another example. Some kind of big thing about 9/11 could kick it over the edge. There's lots of things that could kick it over the edge, potentially.

CG: Right. But if the data dump dumps happen too soon, the Cabal will be able to mitigate it, call it conspiracy theory, tear it apart, and take it down.

DW: And you said that some of the people in the Earth-based Alliance have now treasonously told the Cabal what's in the data dump.

CG: Shown them.

DW: Which gives them the opportunity to prepare alibis and counterarguments for it.

CG: Right. And it's also made them want to create a World War III scenario. That kind of stuff.

DW: I don't really know how much you can do with this one. But let's give it a shot. It's from KD. And it's a very short, simple question. How many parallel worlds are there?

CG: I know of only one that I read about. But it would stand to reason that there are an infinite, infinite number.

DW: OK.

CG: I seem to remember that there was something about them going in-- there's a parallel reality. And then another parallel reality this way. And they go in a circle, or in a certain way. That there are many. But just travelling between. We're just travelling between this one that I've discussed where they use the Xerox room that sends people through this unpleasant type of portal.

DW: OK. So let's go back to what you know personally about this.

A parallel world could be something that happens in the guise of time travel. So let's say you go back to the Earth. You reverse back in time. But you're here on the Earth. Are there two copies of you now that exist? Have you cloned yourself? How does that work?

CG: Well, being that time is basically an illusion, and time is all happening at the same time, it only appears to be linear to us with our consciousness. Consciousness, to answer your question, when you travel in time, you're creating a new timeline. But this timeline that you're on is something that you're creating with your consciousness. And if you do something to affect that timeline and then travel to the future, your consciousness is going to affect--
Let's say if you kill your great-grandfather, and you travel back to the future and expect to have your whole family lineage dead, may not necessarily be so. That may have occurred on a different parallel timeline. And for a massive change to happen, a whole lot of people have to have a mass consciousness shift and perception of the change of time.

DW: Could you go and see yourself? Could you go and find Corey as a 10-year-old boy, and then be standing there and look into your own eyes? Is that theoretically possible?

CG: Theoretically, speculatively, yes. It's possible.

DW: Would that somehow create a time paradox, where if you've seen yourself, then you know that you exist in the future, and that alters your future somehow?

CG: Maybe on one timeline or parallel reality. But not necessarily on the timeline. When you go back, it's not necessarily going to affect your native timeline.

DW: Right. So I think the key would be that we're so badly wanting to have one thread of time, one linear narrative that stays consistent, so that if you change the past, that everything changes. But it's really just like the timeline exists where you are here. And you go forward. But then, this one also exists where you go backward. And now,

you're layering another one on top. And now, the two are sandwiched.

CG: Right.

DW: So what would happen if you tried to do this too much? If people were time-travelling back, wouldn't it cause a lot of big problems? You mentioned that there were buffers on the spaceships that you guys had to prevent this time travel. Why were they so concerned about time travel?

CG: Yeah. Temporal technology, like temporal drives and that kind of thing. They didn't want people accidentally popping into different timelines and that kind of thing. Or purposely.

DW: What are the problems that it causes if they do that?

CG: You can use your imagination. If one of the newer craft popped into the older timeline and stayed there, that craft could alter that parallel timeline's outcome by giving them a new technology that's far ahead of what they would have had.
But I was also told that timelines, people were going back trying to correct timelines by going back before they screwed up, perceived that they screwed up a timeline. And they were going back and back and back trying to fix timelines. And we were finally told by another race to stop screwing around with it, that time is more elastic than we realized, and that things snap back and go the way that they're supposed to, according to the co-creative of mass consciousness of the root timeline that you're from.
And there is a component that I've been briefed on a little bit that does go on with a time travel component that is not really supposed to be talked about that is going on with a certain group. I guess you wouldn't really call them time lords kind of a thing. But there is a group that does skip around in time and keeps an eye on other groups that have temporal technology.

DW: Interesting. So we have one from C-U-K-O-S. And it is, how did the Voyager space probe cross the edge of the heliosphere if there is a barrier?

CG: There was not a barrier up there during the time that it crossed.

DW: When did the barrier form? And what caused that to happen-- just to review, even though we've mentioned it before.

CG: Right. That occurred, I believe, in December of this past year.

DW: 2014.

CG: 2014. And it was more than likely scheduled to happen anyway. But it occurred

right after the Cabal groups had fired an energy weapon at one of the spheres that was in far Earth orbit. It lit up the sphere with an aikido principle redirected their energy back at them and destroyed the base. And things seemed to escalate very quickly after that happened.

DW: Sure. Is there a protocol of meditation that people could follow that would help them contact extraterrestrials?

CG: Anyone can reach out with their mind. There are any number of ways to meditate, like we've talked before. Even daydreaming, prayer, meditation, all the different types of meditation theirself are getting your mind into that state. And when you broadcast your consciousness out, anyone can do it. But should you be doing it is the question that they should be asking.
There are a lot of different beings that are sitting there waiting for people to reach out with their minds to make contact with them. And most of them are deceptive. They have the ability to make you feel totally blissed out, to make you feel love, make you feel love and light. They can manipulate your body to feel all kinds of things. And they can download all kinds of complicated, interesting information that is not necessarily accurate.

DW: Well, Jacob, the other Space Program insider, told me that there was a particular extraterrestrial group from Alpha Centauri that they were calling the Centaurians, and that some kind of treaty had taken place where these Centaurians-- who look, essentially, like people from Spain, but albino. And they're very ripped, with light-colored hair and very pale skin-- were being allowed to start to mingle into our society. But he told me that if a Centaurian knew that you recognized that they were an extraterrestrial, that it was very dangerous because they could then track you telepathically. And that could end up being very bad for you.

CG: All these groups can track you telepathically. A lot of these people that are taking these little courses online, and saying, I'm a remote viewer now, and try to remote view different bases and areas, they have people that are remote influencers, that have technology enhancing them, working as groups, that protect those places. And they can track you right back to your home. Right back to your bed. And they can cause a lot of problems for you.

DW: Are there Cabal honey traps online, where they try to find people who are starting to wake up and lure them into something?

CG: Yes.

DW: How does that work?

CG: Some of the places where you go to take personality tests, they trick you into taking tests that will tell more about yourself. Some of these dating sites that ask a whole lot of questions about you. They're all profiling you. Even some of these sites where you're doing a study on your heritage information--

DW: Or the alleged IQ test.

CG: Yeah. And all these types of tests. There are a whole lot of different little honey pot traps that they have. And then, of course, they look for people's internet traffic.

DW: Will they be trolling forums like "Above Top Secret" and "UFO," that kind of stuff, looking for people there?

CG: Oh, absolutely. And we'll talk at some point and length about how when I was working I helped set up a data center with virtualized computers set up all over the world, where people would sit at desks with six monitors and pretend to be like a dozen different people going into forums and different sites arguing with theirselves with IP addresses from different parts of the world, stirring up problems, finding people that were putting out information they didn't like, and attacking them and discrediting them. And that kind of thing.

DW: Let's end this on a positive note. Do you believe that we have a higher self?

CG: Yes.

DW: What about contacting the higher self? What would be an appropriate way to start seeking spiritual information?

CG: First, you've got to turn inward. Start looking inward. You start working higher and higher up. When you start working, you start meditating more, looking inward more at the bad things about yourself. You start trying to not only forgive yourself for those things and change them, forgive others. There's energy that's released. And you begin to expand. And you begin to work higher and higher and higher up the higher self, until self falls out of the equation, and you just reach higher. And that's how you eventually, I believe, reach back to what people call source.

DW: Very cool.
Well, that's all the time we have for this episode. So we'll see you in future episodes of "Cosmic Disclosure." I'm your host, David Wilcock. And I thank you for watching.

Cosmic Disclosure Season 3

Corey Goode, David Wilcock, et al

Introduction To Inner Earth Season 3, Episode 1

Cosmic Disclosure; Introduction To Inner Earth Season 3, Episode 1

08 Jan 2016

DW: Hello. Welcome to Cosmic Disclosure. I'm your host, David Wilcock, and we're here with Corey Goode, and in this episode we're going to get into a very interesting subject, something we have not covered before, the Inner Earth. And this is a really unusual area. So Corey, welcome to the show.

CG: Thank you.

DW: Let's just get this out of the way first, so nobody starts hurling brickbats at us. You are not saying that the Earth is hollow on the inside, and that there's the sun in the middle. Nothing like that.

CG: Correct. It-- instead of a hollow earth, we would call it more of a honeycomb earth. A large network of porous caverns that range larger than the size of Texas. Huge, huge caverns that run all the way, you know, to about 40 miles below the surface, the crust, where it goes down to the mantle.

DW: Now, when I spoke with the Space Program insider, who I can call Jacob, about this, who worked directly with the Rothschilds, he said that it is a basic part of physics as a planet forms, and in the rotation, as it starts to cool, he said that the outside cools first.
And then the forces of centrifugal force kind of throw the material against the edge, and you get these bubbles that form, because the edge is solid, and then some of the material is bouncing off of that, and it creates this sort of cavern. And he was saying that you could have caverns that are anywhere between 20 to 40 miles deep inside the actual cavern. So did you hear anything like that about the actual geophysics of how these cavities are formed?

CG: Yes. Pretty close, pretty close, and the caverns are much bigger than that.

DW: Really?

CG: Yeah.

DW: So what did you hear about how they were formed?

CG: That pretty much-- it had to do with the centrifugal motion, certain elements, and certain types of rocks as they formed. Certain types of stone were heavier and lighter than each other, and so they started to move towards the outside, and then there is a

somewhat viscous, or molten layer between the crust and the main mantle. And that the mantle itself is full of water, and there's tons more water on Earth than we know of.

DW: Well, and we've been talking about this, you and I have been talking about this since last October, I've been talking about it with other insiders for a long time, and I was stunned to see mainstream scientific papers saying that they now think there's twice as much ocean water below the crust than all the oceans that we see above the crust. Twice as much.
So this is a very unusual subject to try to get people talking about. Some of that ocean water, that twice as much ocean water is forming oceans inside these cavities in the Earth?

CG: Yes. There's-- some of it is small amounts of water that is built up into porous rock, and some of it is open areas of large, closed in oceans, and some areas are like rivers where the water flows through the mantle.

DW: Nobody would argue, especially with Earth, that where you're going to have water, you're also going to have the presence of life, at the very least microbial life. So I guess one of the really bizarre sort of learning curves to bring people through on this subject is we're not just talking about a big, empty rock chasm inside the Earth. What do we actually see if you were to be able to get into one of these? What do you actually see?

CG: Up until recently, the only information I had was what was presented to me on one of the smart glass pads. And there were many expeditions down to this porous earth, or honeycomb earth area, and these people were looking for ancient artifacts. That's what they were mainly looking for. They could care less about a lot of the other stuff they were finding.
But they documented it as a part of the expedition. They were finding all types of microbial life. Some of it were kind of like lichen that grow on rocks, that absorb and eat stone, but release light and provided-- and this stuff grew thick, almost like mats of algae. Like a bacterial algae that would grow on the stone. And it provided--

DW: So is it enough that you can actually see?

CG: It provided a low, luminescent-- a certain spectrum of the full spectrum that we're used to seeing.

DW: Wow.

CG: There were certain types of plant life that were able to, I guess, photosynthesize this light. There were--

DW: Were they unusual plants, from our perspective?

CG: Yes. They were different types. This is a totally different type of ecosystem that developed completely independent of the surface. You know, like-- some of them-- similar ones have been found close to the surface. I saw, you know, giant newts that are completely albino. You know, weird-- just a bunch of strange animal life.

DW: Like, mammal life with fur? That kind of stuff?

CG: Some spiders, some different types of insects.

DW: So did you see spiders that would be kind of gigantic compared to what we see on the surface? Anything strange like that with the insects?

CG: Right. A lot of them didn't have the pigment that they did on the surface. Some of the things that are large on the surface are smaller below. Some of the things that you would expect to be smaller were larger. There was kind of a-- I don't know how to describe it. It was kind of backwards a little bit.

DW: So there was a lot of whitish creatures?

CG: White, or just light pigment. Not a bright-- not a wide spectrum of colors, like you would see on the surface, since we have a broad spectrum of light to reflect off of them.

DW: What about, like, lobsters, shrimp, crabs, crustaceans?

CG: There were several different types of crustacean things down there.

DW: Shellfish?

CG: Yeah. More like shellfish.

DW: And I'm sure you had lots of regular fish, like fish you'd see in the rest of the ocean, or similar?

CG: Yeah. Lots of different fish that didn't have eyes. But, uh, yeah. There was a bunch of different type of fish that were documented that were rather small.

DW: Any bats or flying creatures? Birds?

CG: I don't recall seeing flying-- anything flying in there. And the plant life was small. It was obviously not only living off of the rock, in the minerals in the rock, but

also the very dim light that was being put off by this weird lichen, or bacteria that was growing in a thick mat all along the inside of the cavern that was eating the rock. And as a byproduct of eating the rock, it was converting, somehow converting some of the minerals, or energy into light. It was giving off luminescence.

DW: So we're not going to see a forest with, like, evergreen trees inside the Earth. This is a totally different biosphere?

CG: Now, this is what was shown to me. I don't know. There could be other ecosystems in different areas that have more of this, so I'm not going to say--

DW: Right. Like a terraforming.

CG: Yeah. I'm not going to say that that doesn't exist, but in the expedition files and information that I saw when they were looking for Ancient Builder race technology, back when they were trading it off-world for things, they were finding a lot of the this type of stuff that I'm describing. And this is what was being documented in their expedition files.

DW: When we see these plants that you said were down there, are they green, are they kind of an orange or pale color? What are we looking at, as far as the plants?

CG: They were a different-- they were not green, they were photosynthesizing through-- they were different color. Some of them were luminescent as well. Some of the plants.

DW: What do you mean by luminescent? Like, they glowed?

CG: They glowed. They gave off light.

DW: Really?

CG: There were a lot of real small-- looked like fern-like plants that I saw in photographs. But they were typically small, and they were either small, singular plants, or they looked like they were part of a larger colony, a plant that was of a colony of some sort. Like a root system colony plant.

DW: Did you have mushrooms down there?

CG: Yeah. There was all different types of fungus, and--

DW: Did they do any work to try to see if these plants appeared in fossil form in previous civilizations on the surface of the Earth?

CG: That was not in the report. That was not their interest. They were basically documenting their expedition towards their goal of locating certain ruins and technology that was below the surface.

DW: If a human being of our size is walking through, and you say these plants are small-- so we're not dealing with trees that would be taller than we are?

CG: No. They weren't walking through with machetes, hacking their way through.

DW: So most of this is what, like, waist high or smaller?

CG: Yeah, below the knee.

DW: Below the knee?

CG: Yeah. Most of it.

DW: And then otherwise, it's just a big, open space with this glowing stuff on the rock?

CG: Right. The plant life was spread out. Spread out everywhere.

DW: So it would fill out the whole area.

CG: Right. And I'm not a botanist, I don't know what exactly is classified as a plant, or what things are classified as, so I don't know what these would be classified as. But they looked in the photographs like plants, and they were described as a type of plant life.

DW: Was there anything living down there that was dangerous to us, predatory creatures that would attack us and potentially kill us, or try to eat us?

CG: Yes. They had to be very careful. There was a small lizard type of creature that was-- it was not technologically advanced, but they were very intelligent.

DW: You're saying not a lizard that walks on four legs, but a human looking creature?

CG: They walked on two legs and four legs. They're very dangerous, they hunted in small packs, and they showed signs of being intelligent, as in not even-- they were compared to like, cave men intelligence.

DW: Mm.

CG: You know, lower intelligence kind of beings that existed down there. And they--

DW: But they had a human-like reptilian face?

CG: Well, they were like a type of lizard of some type. And in the documentation--

DW: But you said they could walk on two legs.

CG: Yeah. They could walk on two legs and four legs, depending on, you know, where they were going through all the caverns.

DW: I guess I'm not really understanding, then. Is it something like a Grey, but like a reptilian Grey? Or is it much more like a lizard than a grey, in terms of the way it looks?

CG: It's much more like a lizard.

DW: OK.

CG: It's not like any type of space being.

DW: OK. So the face might not look human-like at all?

CG: No.

DW: It's a reptile.

CG: It's an animal.

DW: OK.

CG: Yeah. And supposedly there was documentation of, I believe, a long time ago, the Mormons were digging deep caverns to-- they were doing some sort of program where they were digging deep caverns, and they ran into some of these.

DW: What's the color on them?

CG: They're, like, a leathery kind of color.

DW: Like a brown?

CG: Like a grayish brown, but brown's not really the right color. But then again, this is taken under a different light. So if they were taken out and shown under a full

spectrum light, they're probably going to appear different. You know, like, they have stripes on them in different areas, I think I remember them being described as.

DW: But they're more intelligent than any lizards on the surface of the Earth.

CG: Yes.

DW: Because you said they're like cavemen.

CG: Yes. They, like, use rudimentary kind of tools.

DW: Really?

CG: And that kind of thing. So they're very highly intelligent, but they were animals.

DW: So, that's one of the types of being that you said was down there. Prior to what we're going to get into in later episodes with your invited trip, you had mentioned other species that you saw that were down there.

CG: I didn't actually see them.

DW: Well, you saw evidence of them on the smart glass panel.

CG: Right.

DW: You mentioned to me in private conversation that one of these was bald, and had kind of large eyes.

CG: And a large kind of head, and pretty humanoid looking. They had real sparse kind of hair. It kind of stuck up. Not a whole lot of hair. And they were pretty much albino-ish. A little bit larger eyes, I guess, that it developed for the low light. These were groups going down with weapons, and scientists going down on expeditions to recover information.
They would run across certain groups, and out of an abundance of caution they would engage them, and then photograph and document their remains, and then move on in their expedition. So they weren't doing a big, you know, exchange program with these groups and studying them, and they seemed to know that they were-- some of them were dangerous.
They were of a lower caste system than our civilization, and they obviously didn't respect their life, their lives very much. And they were on a mission.

Artist impression of the albino humanoid based on Corey Goode's description
DW: Going back to the caveman reptile types, were these beings fairly common in various pockets inside the Earth?

CG: In different regions, at a certain region and at a certain depth, I seem to remember they were fairly common, and for the most part they kept their distance. But they would attack targets of opportunity-- humans, and there were incidents. So they were-- on site they would engage them and kill them.

DW: Were there any names or classifications for these different beings?

CG: I'm not a scientist. They would give what they're most likely related to in a Latin term of what they're most closely related to, and then they had information about it. But that's just information I can't recall.

DW: OK. So far we had the primitive caveman reptilian type, we had the bald headed type, and you mentioned the raptors. So let's cover those again, briefly.

CG: Yes. The raptors were this group that supposedly are remnants of the dinosaurs, that have been here since before humans. It was kind of described as a proto warm blooded-- like, they're mostly warm blooded. They're closer to birds than they are reptilians, but they kind of look kind of like both. They look kind of dinosaur-ish, but they have these weird, scaly feathers.
Especially the-- all of them have, like, some sort of sparsely scaled feathers, like a plume down their neck. But the--

DW: The feathers have scales?

CG: They're not like soft, plumy feathers that you would think of. It looks like an early-- maybe a prehistoric feather. And these are higher intellectual beings. They have plumes of different colors that I was told are more pronounced-- their plumes are. And they move around, they're real jerky, kind of like birds, you know? They kind of jerk around when they move, and they are very quick, very dangerous, and are carnivorous.

DW: So, how ugly are we talking if we see the face? Like, for us?

CG: You would be terrified.

DW: Do they have vertical slit pupils, reptilian looking eyes?

CG: They were more of the bird eye.

DW: OK.

CG: More like bird eyes, like the perfectly round.

DW: But scales on the skin?

CG: It doesn't I look like reptilian skin, but people see them, and they assume that-- the reptiles. And they look like they're some sort of divergence or mixture together of bird and reptile.

DW: Now, a bird doesn't really get facial expressions, for the most part. I mean, some parakeets or whatever, they can kind of do the thing with their eyes, but do these beings have facial expressions? So their faces are just kind of locked?

CG: Yeah.

DW: Do have a beak-like proboscis, or something? Do they have a mouth that kind of protrudes, like a beak?

CG: Well, they've got the needle sharp teeth, like, similar to the reptilians, but I mean, there's not an actual beak. The raptors, like, if you Google and look at raptors, they look very much like that.

DW: So it has an extended snout, like a dinosaur?

CG: Yeah, it's kind of dinosaurish.

DW: Wow.

CG: Kind of like a mixture between a reptile, and kind of birdish.

DW: So it is almost like a dinosaur head stuck on a human form?

CG: Oh, no. Not a human form. Its arms are not real long, and its legs--

DW: Oh, like the T. rex?

CG: Not quite like that, but the legs are longer than the arms. They're real fast. I really don't know that much about them, other than the brief descriptions that were--

DW: Did their legs look more muscular than ours? Do they have a lot of meat on them?

CG: Yes. And they stay kind of hunched over a lot.

DW: So does their body almost look like a kangaroo?

CG: Kind of like a-- kind of like a dinosaur.

Artist impression of a Raptor based on Corey Goode's description

DW: If you get into the so-called Ancient Astronaut research, you hear about various cultures describing gods that said they were plumed serpents.

CG: Feathered serpents.

DW: Feathered serpent. Yeah. Do you think any of these beings ever came to the surface, and maybe wanted to be worshiped, or wanted to try to take on leadership roles for periods of time?

CG: It could be these, or it could be different ancient groups calling actual reptilians, feathered serpents, just because they flew, and feathers are associated with flight. I don't know. I don't have any direct knowledge. I really don't have a whole lot of information on that group, other than what I've read. I have not interacted with them, and I don't wish to.

DW: Sure. Do all of the caverns underground, or the majority of them have crystal looking pyramids and obelisks, and weird buildings built by the Ancient Builder race? Is that something you see almost everywhere, or is it only in certain ones?

CG: The deeper you go, the more you're going to find that kind of stuff.

DW: Oh.

CG: There are a lot of ruins-- like, strange, Pueblo kind of building ruins up against, like, some walls of caverns, to where it looked like at one time maybe tens of thousands of people of some sort had lived down there in ruins. They found pottery, they found all kinds of signs of more primitive life, of people that had maybe taken refuge down below.

DW: Right.

CG: The stuff you're talking about is the stuff they were looking for, and they had to venture pretty deep to get it. A lot of it had been picked over and taken by different groups, traded off, but there is still very little of this honeycomb earth that has been explored.
And post disclosure, when everybody, you know, there's going to be a whole bunch of new type of careers for people, and there's going to be, you know, spelunkers that are archaeological spelunkers, that are going to have so much here on Earth to explore and study. And there's a lot of stuff from the Ancient Builder race down there, and other groups that have--
There's been different ET refugee races, there's been ancient breakaway civilizations that have lived in different areas and moved on, and there's a lot under the ground that we've purposely been kept unaware of.

DW: It seemed like when I talked to you about this before you got invited into the Inner Earth, which is coming up in later episodes, that we had kind of sussed out six

types of beings that you'd been aware of at that time, that were under there. So we had the primitive reptilians, we had the raptors, we had the bald headed folks. Do you remember any of the other three? Was there another reptilian type that you were aware of, like a reptoid?

CG: There's a reptoid that was an ET group that was-- they encountered below ground.

DW: And what are they like?

CG: The ones that were described were black, tall-- very tall. Not as huge and muscular. Skinnier, with their heads-- they didn't have the big jaws and teeth. They were more narrow jawed. And there was a--

DW: When you say very tall, you're like, saying 9 feet, or 11 feet, or 14 feet? What's the range?

CG: Not quite. I mean, very tall as in, like, 8 feet.

DW: OK.

Artist impression of a Reptoid based on Corey Goode's description

CG: You know? And there was a group that-- well, I guess we were watching "Jupiter Ascending" together that I was like, whoa, because it showed this elephant looking guy.

DW: He was piloting a ship.

CG: Yeah.

DW: And I sat next to you in the theater, the movie had just come out.

CG: Yeah.

DW: And your whole body, you went-- like this. I was like, dude, what's going on?

CG: Yeah.

DW: And then you told me that you were familiar with something similar to that. Not exactly the same, but similar to that.

CG: Yeah. And we did a little bit of digging, and there's some guy that has a whole story about a group that he encountered, that either he named, or they call themselves the Dero, that he depicted fairly accurately, that look like they have the elephant ears, and kind of the nose that kind of droops down.

Artist impression of the Dero

DW: It's almost like a trunk on an elephant.

CG: Almost like a trunk.

DW: A miniature trunk.

CG: Yeah. But it was-- it's really more like one of those-- it looks really more like one of those things on a-- what are those things that are kind of like sea lions? You know, they have those--

DW: Right.

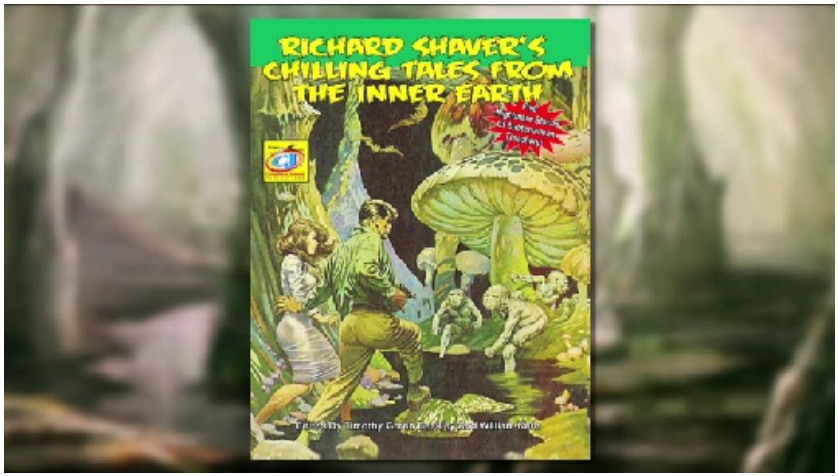
CG: Things that hang on their-- it's more like that. But I was shocked to see that on the internet, and--

DW: Well, and this all traces back to material that came out in the early 1940s, called "The Shaver Mysteries," of a guy who claims to have been taken inside the Earth, and there was a negative group called the Dero, which is what this guy that we found the videos on was describing. And there was a positive group calling themselves the Tero, T-E-R-O, saying they were opposing them.
It independently said that there was very ancient technology inside the Earth that looked like it was made out of stone that they were looking for. Completely validated what you said, even though you'd never heard about this. And these Tero people seemed to be very spiritual, and they were trying to stop the Dero from coming after us.
So this guy who did these videos was describing these people with these grotesque faces that looked like they had gills on the side of the nose, like a bluish gill, or something. Is that consistent with what you saw?

CG: A slit, yeah. A blue slit.

DW: Now, what it said in "The Shaver Mysteries," what this guy who claims to have been brought inside the Earth said was that these beings that have these grotesque features originally looked a lot more like us, but that they were negative, and they had come to the Earth to colonize the Earth, they tried to stay here, and there were some kind of energetics that changed their biology, and they realized they were mutating. Many of them left, but then some of them decided to stay, but in the process of them staying, these energies mutated them into these monstrosities. Did you hear anything like that?

CG: All I knew is that what was described is that they were very nasty, were technological, could put up a good fight back, were very technically clever, and they were avoided. They were not a good group to-- you didn't want to end up in the middle of their territory at the wrong time. Wherever their territory was.



Cover art of *Richard Shaver's Chilling Tales From The Inner Earth*

DW: Do you think that these are the groups that are responsible for what David Paulides has been saying is happening in the national parks, where people are being abducted?

CG: There are a number of groups that are a part of that, including human groups that are taking people. But they very well, very well could be.

DW: Do you think that some of the national parks were deliberately built where they were because these were dangerous spots, where some of these Inner Earth civilizations that were negative lived?

CG: Let's just say they were made natural reserves because of what they knew was below.

DW: Right. Now, there are people-- there's a variety of reports about reptilian areas under the surface of the Earth in America, including apparently underneath Los Angeles, there was a big one. Do you know anything about that?

CG: Yes there were a lot of reports about close to the surface, very close to the surface, different reptilian layers, or places where small groups lived, where they would venture out to the surface from time to time, usually in arid areas. And there were reports that were investigated by groups on Earth, where people would see reptilians in the desert, and they would go and close off areas where they were coming out.

DW: David Paulides' research also described that people were more apt to be abducted if they had bright colors, or if there was a dog with them. The dog maybe is creating a lot of movement, and the color maybe can be seen on things that they have underground, that are monitoring the area for human activity. Would you recommend that people go to these national parks, or would you say that people should avoid them at all costs?

CG: I don't know. There's a lot of beauty to be had in these places, and I wouldn't want people to succumb to fear and miss out on a lot of beauty, especially sharing a beautiful time with their families. But, you know, you've got to be careful wherever you go.
I haven't taken my family to a lot of these places, just because I have known a little bit of information about what has happened around them.

DW: Fair enough. All right, well, we've now set the groundwork for the Inner Earth, and coming up in the next episode we're going to get into what you learned since all that, which is a very fascinating-- in fact, you said this has changed your life more than any of the other experiences you've had so far.

CG: It's been on my mind constantly since it's happened, yes.

DW: So we'll see you next time here on Cosmic Disclosure. Thanks for watching.

A Goode Trip to the Inner Earth Season 3 Episode 2

Cosmic Disclosure; A Goode Trip to the Inner Earth Season 3, Episode 2

12 Jan 2016

DW: Welcome to "Cosmic Disclosure." I'm your host, David Wilcock. And we are here with Corey Goode. And this episode is something that we'll be documenting, the beginning stage of what you said was probably the most life changing experience that's happened to you yet in this whole saga.

CG: Most mind expanding for sure.

DW: So I was going back over my notes. You started talking to me in October 2014, and then they asked for you-- the Sphere Beings asked for you sometime in February. And it was March 1st that I was taking down the reports of your initial meeting in front of the Space Program Alliance. So this didn't take very long. After you came out with your name, and started to reveal your real identity, it was only about a month before you got pulled into this really bizarre world.

CG: Yes.

DW: Now, we went through this Mars colony inspection already.

CG: Right.

DW: And that was quite a heavy experience for you because you basically end up getting arrested, and looks like, when you're put in this prison cell, that they might have been intending to terminate you.

CG: It wasn't good. Their plans were not good.

DW: It's not like you necessarily are looking forward to these trips off planet. Correct?

CG: Not only that. It has been the standard operating procedure for them to give me very little, if any preparation, intelligence, or information beforehand. A lot of times, I've been told you're going to be meeting with this group in this time window, and that's it. And I have very little. I go in blind, except for some of the situations when I've had some of the security support teams go in with me. They have more information than I do.

DW: And you've had to go through very difficult surgeries. You've got new scars on

your arms that weren't here when we are taping last time. And they're not offering you any help, right?

CG: No, no. I've had a very contentious relationship with the Secret Space Program Alliance Council. They've pretty much told me from the beginning that I was forced upon them. They felt that Lieutenant Colonel Gonzales was the right person for the job to be the liaison between the Sphere Being Alliance and them, and these other groups as a delegate for these different meetings. They didn't see what I had to bring to the table.
I honestly didn't either, but they have given me a lot of pushback. I'd asked for access to technology at the LOC that I knew was just, depending on where it was, a floor or two below me that was technology that would have helped me. And I was turned down. And that bothered me quite a bit. And I wasn't getting any type of material support down here like Gonzales gets.
He gets material support for his cover life down here. And they've pretty much said you don't work for us.

DW: In your Inner Earth paper, you mentioned yelling and aggressiveness that took place between you and them. Were there other issues besides what we've already discussed that were going on?

CG: Yeah, there is one that I've decided not to go deeply into, something that happened with my family.

DW: Lack of adequate protection?

CG: Lack of adequate protection of me and my family, mainly my family, that was promised. There was an incident that happened. My children were involved. I was very upset. Things got very heated, and soon after that in a meeting-- and some of them became very agitated, and pretty much straight up told me they didn't like me. They didn't want me, that Gonzales was doing a better job than I was.

He was a better diplomat, better public speaker. He was just all across better, and that they didn't want me involved, that I had angered some of the Super Federation Council members by divulging information about them that they didn't want divulged, even though I was never told not to give this information.

DW: Right.

CG: It still upset them somehow. So things got very, very heated between us. There was there was a major falling out. I noticed I started getting less and less intelligence there for a while. And Gonzales was going to a lot of these meetings in my place for a short period of time.

DW: Well, and there was also some major obstacle just in your own life. I think you had a surgery, or there was a sickness, or something was going on. You really weren't in a position for a while where you could have gone anywhere.

CG: I had recently had a surgery, and that had something to do with it, but mainly they were trying to prove the point that Gonzales could do the job all on his own. And they formally made the request that Gonzales be the person, and I be cut out. And that was denied by the Sphere Being Alliance.

And after that, when I was brought back up the next time, there were some somewhat forced apologies given to me. Kind of a forced make up between us, but there's still a lot of tension.

DW: So how did it come about that you get invited to this Inner Earth? And did you know that you were going to be going to the Inner Earth beforehand?

CG: Gonzales had mentioned that there had been a new Council of the Inner Earth groups that had been recently formed, and that he had been meeting with them.

DW: OK.

CG: And that I needed to mentally prepare that in the future at some point I was going to meet with them as well.

DW: OK.

CG: And then I received a communication from him, telling me that I was going to be invited to this important council meeting, and on a certain date and time, and to be ready.

DW: Well, it seems like the message of the Sphere Beings, the people that are coming out of this Space Program are not going to think you can just hum this away. They're going to want to take tactical military action, and get results right away, instead of this sort of gradual approach, where there's no real offensive maneuvers being taken as of yet. And it all leads up to more of a tribunal. They don't really want a fair trial for these guys. They just want to blow them up in a lot of cases.

CG: Right. And they're used to bombing their way out of trouble. And a lot of them, including some people like myself, are very careful about what we're saying. Because they're worried, some of them are really worried about post disclosure, post data dump, what's going to happen? What's going to happen to them when the people form tribunals and start deciding what are we going to do with all of these characters?

DW: How well did "I was following orders" work at the Nuremberg Trials, right?

CG: Right. That's not going to fly the next time.

DW: So Gonzales tells you that an alliance has formed with the Inner Earth civilizations. Now, up until this point, as we discussed in the previous taping, you were aware of a reptoid group, a raptor group. You mentioned the bald headed group. And then the Dero, with the elephant-like noses. Was this what you were thinking of when they said an alliance inside the Earth? Did you--

CG: No, I knew that it was the Ancient Earth breakaway civilizations.

DW: OK, so let's go over that. What are the Ancient Earth breakaway civilizations?

CG: Up until before I went on the meeting in the smart glass pads, they had talked about-- and it was talked about as in a handful of ancient civilizations that had arisen on Earth, formed their own breakaway civilizations, like we have now with our Secret Space Program, that had moved underground and off planet. And then during the cycle of cataclysms that happens naturally on Earth, or at least did for some time, they left the surface population to fend for theirselves.

DW: When we look at Thompson-Cremo's book, "Forbidden Archaeology," it's a box. It's this book that's this thick. It's loaded, loaded, with scientific documentation about very anomalous, obviously intelligently constructed artifacts in rock strata that in some cases are millions of years old.

CG: OK, yeah. I've heard of that kind of stuff, yeah.

DW: Is it possible that those artifacts are the remnants of some of these ancient civilizations that you're describing? Because they drill down into the earth, and they find this stuff.

CG: They actually described to me about how dynamic the surface of the Earth is. It is far more dy--

DW: Who's they now?

CG: The Inner Earth people that I spoke with.

DW: OK, so we're jumping a little ahead, but yeah.

CG: Yeah. That the volcanism, the convection, the Earth is very dynamic and somewhat hostile. I mean, they talked about continents rising and falling.

DW: Sure.

CG: They were talking about when they were first on the surface, a time of much taller mountains and fewer plains. And so obviously, the Earth is changing a lot faster than what geology and archaeologists think is happening.

DW: So you acknowledge the possibility that Thompson-Cremo's research of "Forbidden Archaeology" could be documentation of ruins that these civilizations left behind as the Earth's surface is turning and churning and spinning around?

CG: According to them, yes. They claimed to have arisen on this planet, to be the first human natives of this planet 17 to 18 million years ago.

DW: So breakaway civilizations, you're saying that there were multiple phases of them?

CG: Yes.

DW: When we're saying a breakaway civilization, what are we talking about here? Is there like a great Noah's Ark type of thing, where everybody gets to flee, the whole population is saved, and they all go underground when they know there's going to be a disaster?

CG: Typically, it worked out this way. You have the majority of the population on the surface. They develop. They become somewhat sophisticated. Varying degrees, use your imagination. Then you usually have--

DW: Are you talking about technology? Do they have machines and tools?

CG: Yes, technologically--

DW: You're not just talking about stone knives and bear skins and fireplaces?

CG: No, no.

DW: OK.

CG: And I'm not talking circuit boards and that kind of stuff, but the technology they use is completely different. A technological civilization, but they have developed like the priest castes. And the elite castes developed a much higher technological civilization, spiritual technological civilization, that breaks away. They--

DW: Does that involve cooperation with intelligent civilizations that are not on Earth?

Are they getting an extraterrestrial endowment of some kind that gives them this higher technology?

CG: Not according to them.

DW: Really?

CG: Yeah.

DW: So they have a decisively higher technology than what the public is even aware of.

CG: Right. And they are so much different than us. They claim not to have the aggressiveness and a lot of the problems that we have on the surface, the social problems.

DW: OK.

CG: So they were able to develop technologically a lot quicker. They have a whole different way of thinking and interacting with each other. But--

DW: Was it a classified secret amongst the priesthood that there were these habitable zones inside the Earth, and that the common people didn't know that, that there was a place that could be retreated to, where you could live down there?

CG: I would imagine so because they had built these places, and they had already begun to habitate there. And they had already developed a space program, and were leaving the Earth.

DW: Wow.

CG: And when different things were happening, there were pole shifts, there were meteors. They were describing all kinds of different--

DW: Tsunami.

CG: They were major cataclysms and minor cataclysms that they described that were--

DW: Supervolcano eruption?

CG: Yes, that was definitely one of them, that were occurring on the planet. And they would hunker down, and leave the surface population to their own devices. And then

after everything cleared up, they would then go and help the survivors of the surface population.

DW: Were these worldwide civilizations? Did they have communication with each other? Or was it similar to what we're thinking happened in our own modern history, where you would have different racial groups that sort of independently spring up, but they have their own isolated, closed society, and are not in communication or trade with each other?

CG: Everything that they depicted to me was they were very isolationist. They were very-- this is a trigger word, but they were very genetic purists. They were very much about keeping their genetic lines pure, and not mixing with other tribes that rose. There were other hominids that were arising on the planet during this time period. And they were leaving them to arise and go through the cycles.

DW: The amount of fossils that we have that we've used to build the evolutionary track record of human beings that you see in anthropology textbooks, all of those bones can fit within one coffin. It's all assumptions. We see a progression of hominid forms that are evolving. There's plenty of room for there to be something that we didn't find, that we don't already know about.

CG: Right.

DW: The evolutionary timeline that we've been given is a belief system. It's based almost entirely on conjecture, and a very small amount of fossil evidence.

CG: Right.

DW: It's not like they're finding lots of these skeletons.

CG: But according to them, there were other different hominids, other species that were starting to develop. And they said that the galaxy and the solar system have a template that produces a certain type of life form naturally in zones that can support those life forms, and that there were other planets at that time in our solar system that had lifeforms, advanced life forms, on them. And on Earth, they arose here naturally.

DW: There's some new stuff that's been coming out that's really changing the game. And one of them is the Denisovans. They're finding humans that had, like, small bodies, not really pygmies, but smaller skulls when they're fully adult. And we're starting to see a picture that hasn't really percolated into the educational system, describing much more diversity in some of the acknowledged finds of skeletons, and things like that that we're now seeing. There's also, as I'm sure you know, a very robust history of giant skeletons being found.

CG: It's one of the reasons these ancient groups moved into the crust. It's because it's more stable.

DW: That's understandable.

CG: It not only shelters them from the dynamic climatic and all the changes, and all the crazy stuff that happens on the surface, but it also shelters them from cosmic rays and all kinds of other things to a certain degree.

DW: You said that there appears to be some sort of energetic field on the surface of the Earth, if I'm remembering this correctly, that causes us to age more rapidly that we're not affected by as much, if you go inside the Earth. Am I remembering that correctly?

CG: Things have changed so dramatically on the surface of the Earth over eons that we are bombarded with all different types of cosmic energy and other types of energy.

DW: Is there some sort of intelligence behind this as well? Does the Earth have a biologically active force that is going to ensure that life on the surface is subject to a certain type of aging process because of an intelligent script for our evolution, perhaps?

CG: This was a part of the Inner Earth belief system. Yes. They believe the Earth is a sentient life force being. They believe the sun is. They believe all the planets. They believe our solar system is a living being. They believe the galaxy is.

DW: Do they experience time in a different continuum? Is there a relativistic distortion of the flow of time?

CG: They seem to experience time in the same linear fashion that we do.

DW: Oh, they do?

CG: Yes. But the lady that was my hostess, she appeared to be in her 30s. She was over 130 years old. So--

DW: Maybe being shielded from all these toxic influences on the surface, the synchrotron radiation, supernovas, all this kind of stuff, pollution.

CG: And their advanced technology, what they consume--

DW: Sure.

CG: I'm sure has something to do with it.

DW: So we had described that you had a falling out with the Space Program Alliance, and that there was yelling and cursing and aggression, and that Gonzales becomes more involved?

CG: Right.

DW: So he comes to you and says the people in Inner Earth have formed an alliance. Is that a normal thing to have happened? That sounds kind of unusual.

CG: It's unprecedented.

DW: Really?

CG: These various groups have had interaction and alliances with various secret societies and secret Earth government syndicates on the surface of the Earth.

DW: Yikes.

CG: Yes. And these groups have turned against them.

DW: The groups on the surface?

CG: The surface, I mean the secret society groups.

DW: Like the Illuminati. We're saying Illuminati types.

CG: Illuminatis, yeah.

DW: Whatever you want to call them.

CG: I don't like that word because they're really syndicate criminals that are in into all these different occult kind of beliefs. But if you want to call them Illuminati, that's fine.

DW: So we'll use the generic term Cabal.

CG: OK.

DW: For those who aren't already familiar with this, maybe this is the first episode they decided to watch. And most people are familiar with term Illuminati.

CG: They love that term.

DW: You're saying that advanced humans with advanced spiritual capabilities and technology that are living inside the Earth have been lending material and tactical and logistical support to these crime syndicates on the surface of the planet?

CG: Yes.

DW: That right there is a major, major revelation.

CG: Yes.

DW: Now, a lot of these bloodline families on the surface, they got their royal bloodlines, right? So are some of these people from inside the Earth interbreeding?

CG: No.

DW: With the people on the surface?

CG: Absolutely not. They would never do that.

DW: Really?

CG: They discussed how there were other planets in our solar system that had highly advanced human type beings that lived on them that were very aggressive and warlike, and had destroyed their own civilizations, and in doing so, had attracted the attention of outside extraterrestrial groups that came in and relocated these-- I don't know. We may have to create a new term. Solar terrestrials, maybe? They're from our solar system, but they lived on other planets that were habitable at the time.

But when the planets were becoming uninhabitable, they moved the refugees to the surface of the Earth. These groups were genetically compatible with the original humans that were left on the surface.

DW: Right. With some modifications, but yeah, basically.

CG: They weren't modified yet, but they all began to interbreed together and form a mixed race, which is us.

DW: Right.

CG: And this mixed race-- all these groups mixed to make this mixed human race that is the surface race of humanity. And in addition to that, all of these what they call

genetic farmer-- farming races of ETs started to come in that had not come into this part of the galaxy previously, began to flood in, and started to start a new experiment tinkering with all of the genetics of the surface population.

DW: And that's the Great Experiment, these 22 genetic programs, and the Super Federation.

CG: Part of the Great Experiment. The Great Experiment goes far, far beyond that, but it's part of the Great Experiment.

DW: OK.

CG: And the subterranean groups were using them. They were trying to give them civilization, and boost them spiritually.

DW: Which may not be what these genetic tinkerers wanted to do.

CG: Right. In a different, a competing kind of agenda.

DW: OK.

CG: And this went on for some time. There was often open conflict between the subterraneans and different ET races in the skies and in space.

DW: Wow.

CG: And this, they say this occurred off and on all way up until even in our current history. People in our accepted current era of history have witnessed the below Inner Earth groups in open warfare with extraterrestrial groups in battle.

DW: If they've been down there for millions of years genetically isolating themselves from one another, they've got their own little civilizations. Maybe they have subshuttles or portals. We'll get into how they go from one place to another, if they've got different cavities of the Inner Earth that they're living in, why now? Why would they form an alliance with each other after maybe warring with each other or separating from each other for so long? What has changed?

CG: What has changed is the secret societies that they used to be allied with have turned against them. We have to go back to the major changes that happened on the surface.

DW: OK.

CG: After the Draco came out and offered to turn over all their subordinates, human and non-human, to the Alliance for safe passage out of the solar system.

DW: Which is so insanely treasonous against their own allies of every level other than the highest royalty.

CG: Right. After that--

DW: Total betrayal to everybody. Sends everybody into disarray.

CG: Yeah. That things went into total disarray.

DW: That shocking betrayal, where the Draco royals say we're going to give you everybody. You can take everybody you want. Just let us go. Throws everything into turmoil. And I'm assuming what you're saying now was that that includes the Cabal folks, the human Cabal folks now turning on their former allies inside the Earth, and doing what? What did they do? How did they turn on them? That's the part I'm not getting yet.

CG: There's other groups below the ground. A lot of these different ET groups have what they're calling embassies below the ground and below the ocean. But they're really just bases.

DW: This could be insectoid types, reptilian types?

CG: And all the human-ish types from--

DW: Right

CG: The Super Federation. There's all types of embassies.

DW: So there's a lot of places you can live inside the Earth?

CG: Right.

DW: And people do.

CG: Right.

DW: "People" in quotation marks.

CG: All of a sudden, there started to be a lot of skirmishes that started to occur between enemies that they've had under the ground for a while. And they said that the

surface humans have developed technologies that can now get past their defenses.

DW: They meaning the Inner Earth Alliance said?

CG: Inner Earth Alliance.

DW: OK.

CG: They have weapons that can penetrate deep into the Earth's crust and reach them. And this is very much of a concern to them.

DW: What is this alliance? Let's just spell it out in basic terms. How many groups are in the Alliance? Are the reptilians in the Alliance? How did this form?

CG: In the--

DW: The Inner Earth Alliance.

CG: Oh, no, no. These are all people that are Ancient Earth breakaway civilizations that claim to be humans that developed naturally here on Earth, were not seeded, were not genetically modified, GMO. And they are ethnically diverse from each other, most of them. There are seven groups.

DW: Seven different groups?

CG: Yup. Three of them were related, but not, I guess you could say, cousins related. They all wore the same symbol. It was a symbol of Saturn.

DW: The three that were related.

CG: That were related. And they just had a different jewel from wherever group they were from. One had like a black stone at the 3 o'clock position. One had a jade at the 9 o'clock position. And down at the 6 o'clock position, was a rose red.

DW: So this alliance is not reptilians.

CG: Human, human, human.

DW: Human breakaway civilizations. What is the gulf of time of when these different groups evolved? You said some of them have been here for 17 or 18 million years?

CG: This group with the Saturn emblem.

DW: OK.

CG: They claim to be the oldest, and they were the ones hosting this meeting, this council meeting.

DW: Are there other groups that are a lot more recent than that in our terms?

CG: Yes, like groups that are a half million years, and I think the most recent was-- I think it was two or three ice ages ago. I can't remember how many tens of thousands of years ago that is.

DW: So these changes have led them to want to form an alliance. Now, if the spheres are showing up in our solar system, and they're erecting an outer barrier so nobody can get out, you became the voice through which these Sphere Beings were going to talk to the Space Program. They wouldn't talk to the Space Program directly, I guess because there was a vibrational incongruity or something.

CG: Yeah, yeah.

DW: They didn't want to talk to Cabal people directly.

CG: They don't want to give a talk directly to the Super Federation group, the Draco group, or the subterranean group.

DW: Oh, so the subterranean group was in that category as well?

CG: Right. And that's why they wanted to talk to me.

DW: So if they want access to the new kids on the block, they're going to have to go through you.

CG: They were talking to Gonzales first.

DW: And Gonzales. OK.

CG: And then that was the reason they were wanting to talk to me. They wanted to know why-- they call the Sphere Being Alliance, they refer to them as the Guardians. They wanted to know why the Guardians would not interact with them one-on-one.

DW: All right, so Gonzales starts having meetings with them, and you're not involved.

CG: No.

DW: So how let's walk it through now. What is the first thing that happens? Do you get told a couple days ahead that you're going to be going on this trip? How much notice did you get? Let's walk through it.

CG: I was just told a time frame that it was going to occur. I assumed that it was going to be the Blue Sphere picking me up as usual.

DW: OK.

CG: I got up, was ready for this to happen.

DW: And you were given a time to wake up? Like, a window?

CG: Yeah, he always he says same bat time, same bat channel. It's usually the same time. And it was past time that I usually would see the little Blue Sphere come in the room. And I was thinking, OK, there had been times in the past where a meeting was supposed to occur, nothing happened. And I stayed up. I got up early for nothing.

DW: So would you get dressed when you get out of bed?

CG: Yes, and usually I just wear something real simple. I don't get dressed all up like this.

DW: Do you get to bring a backpack or anything with you?

CG: I can't bring anything with me.

DW: OK. So you get simple, simple dress.

CG: And usually I arrived at the LOC, and then I get a jumpsuit or something else to wear. I was expecting the same kind of thing. I was given no information.

DW: So now you're twiddling your thumbs and whistling dixie, going what the heck's

going on here?

CG: So I go to the living room, and I decide I'm going to go to the couch, get on the internet, twiddle around on the internet, and see what's been going on. And a bright flash of light, just a bright flash of light, and I'm still--

DW: Like, blinding white?

CG: Just blinding. Yeah, a flash of white light.

DW: OK. Did you feel electrical sensation or any type of prickling or tingling or anything?

CG: Yeah, it was a static. And all of a sudden, I could feel I was in a just totally different-- the pressure changed. The environment was totally different.

DW: Like, the air pressure?

CG: Yeah. And just the whole environment.

DW: How did it feel that it changed? Was it more pressure or less pressure?

CG: Less.

DW: OK.

CG: And I could smell stone and mineral--

DW: And water.

CG: And my eyes were kind of blurry, and I was looking. And I could see I was in a giant, domed-- huge, domed room made of granite. And the ceiling, I mean, guesstimating 100 feet tall. And it was huge. And there were four doors.

DW: How wide was the room would you say?

CG: Probably 100, 150 feet.

DW: OK. And so when you say a granite room, is it made out of blocks?

CG: No, It was polished, all one piece polished.

DW: Polished, like gleaming mirror polished?

CG: Yeah.

DW: Really?

CG: Yeah.

DW: So that's a technology we wouldn't have here, obviously.

CG: No.

DW: And what was the color of the granite?

CG: The granite was a dark brown, and there were four doors at each side with people standing on either side of the door. And I was standing there, not knowing whether to call out, because they didn't look at me or acknowledge that I just--

DW: And there's guards at each door?

CG: Yes.

DW: How many guards?

CG: Two, standing on each side of the door.

DW: What do these guys look like? What were they wearing?

CG: They were wearing white robes with pendants, different pendants at each--

DW: Like amulets on a necklace?

CG: Mm-hmm.

DW: OK.

CG: And get my eyes were still adjusting when I saw a group of people coming out of one of the doors. And then I realized that Gonzales was there.

DW: Well, when we come back in the next episode, we're going to get into what actually happens to you once you get into this area, and all of these amazing things that take place. So that's coming up next time here on "Cosmic Disclosure." Don't miss this next episode. It's going to really rock your world. And as always, we thank you for watching.

Ubuntu & Blue Avian Message 1 Season 3 Episode 3

Cosmic Disclosure; Ubuntu and the Blue Avian Message Part 1

Season 3, Episode 3

22 Jan 2016

DW: Hello. Welcome to Cosmic Disclosure. I'm your host, David Wilcock. And we have a special guest for this episode, none other than Michael Tellinger.

He is well-known if you don't already know this, coming out of South Africa with some very interesting research into ancient ruins that are quite extensive and very unique to the South African area. There's some really interesting stuff in Zimbabwe and other places. And it's all woven together into his research, which has now led him into a very unique view about the economy.

And if you're also a regular on the show, you know Corey Goode, coming out of the Secret Space Program, has been in contact with an Alliance that is a part of this breakaway civilization out in space. The Alliance is saying that what they want is to release technology that will utterly transform life on Earth as we know it and bring us directly into a Star Trek-type golden age that is predicted in 35 different ancient cultures around the world as revealed by Giorgio de Santillana and Hertha von Dechend in their epic classic "Hamlet's Mill," which was then paraphrased and renewed by Graham Hancock who's one of the real inspirations for all of our work.

So I wanted to bring Michael Tellinger onto the show in order to help explain this economic system that he has devised, which has taken a keen interest to buy the Space Program Alliance. So first what we're going to do is talk to Corey about the Alliance, what is the alliance, define the alliance, and how this thread that Michael Tellinger has brought into the picture weaves into this greater tapestry of disclosure that we're bringing out. So Michael thanks for being here.

MICHAEL TELLINGER (MT): Thank you, David. Good to be here.

DW: All right. And Corey, thanks for being here too.

CG: Thank you.

DW: So let's just, Corey, start briefly with, if somebody happens to be watching this episode for the first time, they're looking at what they might call the Illuminati or the New World Order, and they're saying this is some impossible thing. Nobody's ever going to be able to stand up to these guys. What is the Alliance exactly? And do they have a chance to ever bring down the Cabal? Or is this just a pyrrhic quest that will never succeed?

CG: They definitely have more than a fair chance. The Alliance is made up of two main factions. There's the Earth Alliance, which is made up of different societies, secret type of societies and groups that work loosely together. And they're working to overthrow the current financial system and the system that is run by what I've described as the secret Earth government and their syndicates.

And many of these syndicates are very much into the occult. And they're the groups that people call the Illuminati. We call them what they are-- syndicates. We take the mystique out of it-- the mystery.

DW: Syndicate like the mafia, like organized crime?

CG: We call them what they are.

MT: Exactly.

CG: And there are different agendas for the Earth Alliance and the Secret Space Program Alliance. The Secret Space Program Alliance has-- it's slowly built up started with certain members of the different Secret Space Program groups, breaking apart from the leadership and forming a kind of a loose-knit alliance to where they formed what they call the Secret Space Program Alliance Council. And--

DW: In case somebody doesn't know what the Secret Space Program is, what kind of technology are we talking about? What do these folks have?

CG: Well, there are different Secret Space Programs that there's a wide variety of technologies. They have some that are just 20 to 50 years ahead of what we see flying around that the Air Force and NASA is using. And then they have aspects like the Interplanetary Corporate Conglomerate that is basically all of the corporations that have come together, pooled their resources, and created a vast infrastructure in our solar system.

DW: And these corporations are the military defense contractors, primarily.

CG: Primarily, but it branches out into many others.

DW: So faster than light travel, Stargate-type technologies, particle beam, pulse laser weapon-type stuff.

CG: They've moved even past that, but yes.

DW: So this is highly advanced technology. It's all been developed under the umbrella of extremely high security classification.

CG: Yes. And the Secret Space Program Alliance, it is-- their major goal is to bring, what they call, full disclosure to the population of the Earth. And full disclosure is not just, there are aliens.

We've been lying to you for the last 80, 90 years. OK. Move on with your lives.

The full disclosure event will be a data dump from Edward Snowden's information, a few of these other major hacks that we've heard just a little bit about. All of this information has been decrypted and collated, handed over to the Earth Alliance and to the Secret Space Program Alliance ready for a massive data dump at a certain point. And what they want to do is reveal all the crimes against humanity that these syndicates have done in order to prevent, not just the fact that there are ETs, non-terrestrials out there, but to cover up technologies that would have changed our lives in a dramatic way and would have collapsed their corporate regimes and their Babylonian money magic system-- slave system-- over the Earth that they use to control everybody on the surface.

DW: OK. Let's just get really real for a second. What the hell are these people thinking? Why do they want to kill people? Why do they want to depopulate the planet by billions? This is what makes people unable to actually see that this is real. They just can't wrap their head around, what the hell are these people doing?

CG: Not all of these syndicates have this same agenda. I've described that there is a Super Federation of non-terrestrials that have been here for eons that have been involved in 22 different parallel but competing programs that have been manipulating Earth humanity. And it's been on a genetic, social, and spiritual level. And they themselves are a part of this grand experiment, they call it. Now there are some more benevolent non-terrestrial groups that have a, I guess, an agenda that we would consider positive.

DW: Sure.

CG: And there are some that have a very genetic purist type of agenda that people fall outside of a certain small realm. They want to cleanse off of the Earth and start anew with a small group. But it is not all of these syndicates that are pushing for this depopulation. It just happens to be some of the ones that are the most powerful and some of the ones that are-- like the committee of 200 that I've talked about-- that have a lot of power and run the financial system.

DW: You have an advantage that Michael and I don't have, which is that you've met with a number of these people, you've looked them in the eye, and you've heard their arguments about why they think billions of people should be killed. The people who believe in that, how could they want that? What is their agenda? Why do they want so

many people to die?

CG: It's not that much different than the Nazi-type of ideology. So many different of these non-terrestrial groups have a genetic purist kind of ideology or a genetic purist part of their experiment. That's why a lot of them, going back thousands of years, they did not want inter-tribal marriages or mixing of tribes. They would have one tribe, if it came across another tribe, wipe out the entire bloodline of another tribe.

This is something that's gone back a long time. These are programs that compete with each other. And they, in more recent times, they've come together and found a way to work alongside each other a little bit better. But there are the syndicate groups, the occultic syndicate groups here on the planet that are humans that feel that they come from a bloodline that is non-terrestrial, and that we are all from a polluted worthless bloodline and that we should be wiped.

DW: So when they use terms like "useless eaters" and "sheeple," do they feel that they could control the planet better if there were fewer people here? Is that part of it?

CG: Part of it. Yes. And they put a lot of platitudes in that it would put the Earth more in balance with nature.

DW: Humans are bad for the environment.

CG: Right. When they know full well that we have the technologies that-- if the Secret Space Program wants to bring down technologies, such as replicators that would feed people, free energy, healing technologies that work off of light and sound frequency, a whole lot of different technologies that will improve the lives of people and help them live in balance with the planet. And this could be brought down, implemented with all of humanity immediately. And they don't want to bring it to the Americans and the British and then let it trickle down to the other members of the planet. They want to bring it to everyone on the planet all at the same time.

DW: All right. Let's start blending why we got Michael into the discussion here. And I'm going to ask you one question. And I want you to answer it, and then we'll open it up.

Some of the most controversial stuff that you and I have talked about in the show is the idea that we don't really need a financial system once these types of technologies come out. You've often dropped the term that the Space Program Alliance uses the Babylonian money magic system. What's so bad about money? How is the financial system a tool for control by these secret Earth government syndicates that you've been describing? How do they use money against us?

CG: When you have money, you have debt. When you have debt, you have servitude and slavery. You have people that are of the haves lending money to the “have-nots”. And the “have-nots” are the ones that end up carrying all of the burden. And that's the way that it's been set up to work from the very beginning.

And we've been so highly programmed for many thousands of years to believe that you have to have this paper folded up in your pocket. People have heard me talk, and they freak out. You want to take away our money. You want to move to a cashless society.

This is crazy. What are we going to do without money? How can you have a society without money? And--

DW: But how are what you--

CG: They can't fathom it. They're so highly programmed, they cannot fathom it.

DW: But how is what you're saying not communism? Aren't you going to have a group of oligarchs that absorb all the wealth, and then everybody gets paid the same, and therefore, nobody has any incentive to do anything?

CG: Or you're using the word paid. That would denote that there's money involved. When everyone has everything that they need-- I mean if you really want to have money or gold, the replicators have the ability.

You could synthesize a little bit of gold or synthesize an old 20th century $100 bill and carry that around in your pocket if that makes you feel more secure. But you're not going to need it because everything is going to be based off of bartering skills, people sharing their knowledge and abilities with each other as a community, and it's going-- and everyone's going to have what they need through these technologies. You're not going to need to work 9:00 to 5:00 to pay an electricity bill-- free energy. I mean you're not going to need to have to buy groceries-- replicator technology.

DW: Hold on right there. These people in space, these Space Program Alliance people, they mentioned to you before you even knew the name, Michael Tellinger and Ubuntu contributionism. What were they saying?

Why did these people who live up in space, who may not even ever come to Earth-- why do they care about this guy right here? What was the interest that they had? And if they have all these technologies, how does what he did have anything to do with that?

CG: To be clear, I had heard of Michael Tellinger and some of his work in ancient

civilizations and some of the studies that he had done. And I had found a lot of that very interesting. I had no idea of the political movement thing that he was doing until it was brought up in a situation to where Lieutenant Colonel Gonzalez was there. And they were talking about Michael Tellinger in the Ubuntu-- did I say it right?

DW: That's It. Well done.

CG: Thank you. Movement, and how they said that this is the wave of the future and that this after there was going to be a catalyst event. There was going to be a full disclosure event. And after the monetary system is gone and capitalism, all the isms are gone, this is going to be the type of system that we're going to move into and use as we're a transitional civilization moving to be like a Star Trek civilization.

And as we're integrating and learning all of these new technologies exist and integrating them into our lives. And they said that they have been following this movement with great interest. And I thought it was very interesting. And I don't know what Mr. Tellinger has to say about that.

DW: Well, Michael, let's dive right into it here. Assume for the moment that whoever is watching this doesn't know you, hasn't seen your work before. Could you give us a short summary of Ubuntu contributionism, and what that is, and how it factors into our lives today.

MT: Thanks David. Sure. And there is an ism here, but it's a very different ism from all the other isms that we've ever heard of. And it's the contributionism part of Ubuntu.

First of all, Ubuntu is an African word. It's an ancient philosophy of sharing and caring. I've defined it as unity within community.

And the often used definition of it is, I am who I am because of who we all are. So this is an ancient African philosophy which is shared by all ancient cultures around the world. They have their own names for it and their own expressions for it, but it ultimately comes down to the same philosophy of unity consciousness-- sharing and caring for each other.

So the Ubuntu movement was started with sharing knowledge, as Corey said, and information about the origins of money and how money is being used to control and enslave humanity. And then at the same time present a solution for the system because I think that the days of fear and just talking about how bad it is are over. We need to start presenting a solution. So that's really what this movement is all about-- presenting a solution that resonates with peoples, not only in their minds, but in their hearts, specifically.

And it seems to be that, for some reason, I've become the messenger of this. This is not my system. It's not my message. I'm just the messenger.

And it's interesting for me to hear that it's being spoken about in other areas that I wasn't even aware of. Because I've been getting some interesting e-mails from people around the world mentioning things to me about prophecy and all this, and how Ubuntu features into it, and how the work that we're doing features into it. And it's taken me by surprise, but I don't really want to go down that route. It's just interesting to note. Let's carry on with the task at hand.

There's a lot of work to be done, and we need to-- what we're doing is providing an alternative solution. The system we've had for the last 6,000, 12,000 years has not worked. It's been a system that was designed to enslave us, using what Corey calls a Babylonian magic money system.

Money is a tool of enslavement. That's all it is supposed to do. And I remind people all the time about the fact it's not about the money. It's about the use of money as a tool of control.

Those that control the money can create as much money as they want because there's nothing backing it. It's just money out of thin air. So it's about keeping the control of the supply of money on the planet. And that's how you control the planet.

DW: Even in the biblical book of Genesis, it sets up right at the beginning explaining that the money system is this evil force.

MT: Yeah.

DW: If you actually read it carefully, it's right in there. If we had Jordan Maxwell right here to talk to us, one of the things he said that was so shocking was that these numbers that you see on the Federal Reserve note, the US Dollar, he calls them stock numbers. And he says, every person in America is given 10 different stock numbers. And you worked at the Federal Reserve, so I'm sure you know what I'm talking about.

And that these numbers on the money, each person has a certain number, a certain quantity of money issued to them-- I guess 3.4 million was, I think, one of the numbers I heard. So that when you see any given piece of money, it's somebody's soul. The number actually corresponds to somebody's soul. So when they're stealing the money--

MT: It's amazing.

DW: They want to be stealing our souls.

MT: Yeah.

DW: How do you see this-- what is the black magic of the financial system? What are they doing?

MT: You just described it, you know. The money system is somehow has been imbued in ancient times with some sort of a black magic component because look what it's done to our planet. Look what it's done to humanity. People go crazy.

As Corey said upfront, you know, when you say to people we're going to remove money from the system, they go-- start going crazy because they imagine we're going to take their money away. That's not what we're saying. We're saying we're going to create a new system that doesn't work with money. So nobody needs money.

And this is where the whole introduction to a world transitioning from a world that's driven by money and greed, and corporate structure and control, and scarcity, move from the money driven system to a system that's driven by people and their passion for life. That's what the whole Ubuntu movement is about. And slowly but surely introducing people to the fact that we don't need money because money does nothing.

People do everything. It's about the people. We grow the food. We plant the seeds. We create the mathematical equations and develop the free energy devices.

And we do everything. Money does nothing. It just keeps getting in the way of people expressing their passion and living out beautiful lives.

DW: Well, if we had Darth Cheney sitting right here, he's-- and he was going to talk off the cuff--

MT: Yeah.

DW: He's going to say, as soon as you take away people's need to earn money, they're going to drink beer, and they're going to sit and watch TV all day.

MT: Yeah. That's in a capitalist-driven system. We're changing the system, changing a system where people live out their lives and express their talents that they are born with where they don't have to worry about money. What you mentioned there, David, is one of the, what I call, the 13 frequently asked questions. And out of 11 years of work of talking and exploring a new way, a new social structure that works without money, I've filtered it down to 13 frequently asked questions.

It's incredible. In a world with money, we have an insurmountable number of problems. And our governments and our banking, financial guys can't solve the problems we have with all the money in the world. And in a proposed world without money, over a period of 11 years since 2005, it's filtered down to 13 problems we have to solve in a world without money to live in paradise.

DW: My parents bought the house that I lived in and grew up in starting in 1973 for $26,000. Now that's a joke.

MT: Yeah, exactly.

DW: The US dollar has decreased in value by 96% in the 100 years since the foundation of the Federal Reserve System.

MT: Well, there you've just mentioned the big scam-- the reserve banks, the central banks of the world. Now for people that aren't aware of this, all the central banks of the world are private companies. They control our governments. It's like, our governments are indebted to these private companies, and they use all of us as their slaves.

So part of the teaching and the sharing of information with the Ubuntu movement and Ubuntu party is first telling people about the origin-- firstly, the origins of money, as Corey calls it, the Babylonian magic money system, where money first appears. That it was maliciously introduced, that it's not the consequence of thousands of years of barter and trade. It is a maliciously introduced tool of enslavement that gives the people the illusion and the belief that they are free, but they still have to work for money so that they can live and pay their taxes.

So if you change this whole system-- and this is why I do the Ubuntu workshops, where after a day or two days of an Ubuntu workshop going through all these processes, it's turned out now that it's become like a group therapy session for people. And this is the last thing I expected because people are suddenly feeling the sense of release and relief.

Oh, my God. We don't need money. I see what you mean. And they not only understand it. They understand the origins of it, the reason how and why it was introduced, and how it was twisted as a tool of enslavement, and what we can do to get ourselves out of it.

And with this comes the good news. This is where people really start getting excited when they see how simple it is. How we have-- just by undoing some of the programming and the conditioning and the brainwashing that we've had to go through, that we've gone through for thousands of years, and especially the last 100 years or so

with the current education system that was set up to do all this damage to us to turn us into a future labor force. Once people realize that how simple it is to get ourselves out of this mess, that's when you see the deep realization.

DW: So Michael, don't you think that-- let's say the dreaded global economic collapse occurred. The sun still rises. The sun still sets.

There's tides. There's rain. There's crops that are going to grow. We have what we need here.

MT: Exactly.

DW: If these people are saying all the money is gone, where the f did it go? It's ridiculous. The resources are here. We're living in a very abundant world.

MT: Yeah. Well, this is one of the things that you need to remind people of many times and, sometimes, over and over again. That we live on a planet of abundance. We've been taught-- we have now been led to believe that we live in a planet of scarcity through the corporate hierarchical structure.

And this is all to do with the principle-- and this philosophy has been shoved into our heads since the earliest days, is that competition is what we need to have progress. You know that competition drives progress, competition drives innovation, competition drives people's desires to succeed in all that. That is the poison pill-- sugar-coated poison pill that we've been given, falsely believing that that's how things work.

No, no, no. Competition create scarcity. Competition makes corporations hide things, so they can benefit from the knowledge and information, the technology while the rest of the humanity suffers.

Competition prevents new technology from being released-- petroleum, electricity, cures for disease. You understand, well, this is why competition is so bad. So the whole thing with Ubuntu and contributionism is just switching that one little thing around, turning competition into cooperation and collaboration.

DW: If you think about where the New World Order's view of their own high level of evolution comes from, we see Charles Darwin's father was a 33rd degree Mason. Darwinism says that the most effective killer is the most highly evolved, the survival of the fittest. Yet if you look at the eukaryotic model of the cell, we have little microorganisms that at some point in our distant past came together, formed a membrane around themselves.

You be the ribosomes. You be the chromosomes. We over here are going to do the nucleus. And they had to work together and pool their resources to get a better result.

MT: Exactly.

DW: It's the nature of life itself is to create individual cells that communicate and form organ systems. And the organs come together, and they form a body.

MT: Yes. You took the words right out of my mind. This is part of the Ubuntu teachings, if you can call it that, is to tell people that only out of unity will you ever attain infinite diversity. We have to come together as a group of living, breathing human beings and realize that together, out of our united efforts, we can then diversify into an infinite number of resonant, fractal activities as long as we resonate together at the core center.

From that resonant center, we can diversify into an infinite number of fractals because we still resonate together. The moment we have dissonance, we have disease, and we are fractalization. And we have breaking up and death and destruction.

DW: If you built a computer that had a CPU that was in competition with the memory--

MT: Exactly. So this is what I often show in my workshops, and that is think of your body and the trillions of cells in your body that all work together for the benefit of the community of cells-- your body. They're not fighting each other.

CG: Symbiosis.

MT: Symbiosis. Cooperation. Working together. And even if the trillions of some of the cells group together into specialized cells, like your liver or your heart or your brain, they're still working together for the greater good of the whole body, the whole community of cells. We've got to start seeing ourselves like this and seeing ourselves in our families as the extension of the cells in our body and our communities-- the extension of our families.

CG: I can fully see why those in the Secret Space Program Alliance council have been following this. And also it goes back to the Blue Avian message that they've delivered. And there's been a lot of people out there that have been under the misunderstanding that this is a new ET race, savior race that are coming to save humanity. And there's a lot of people that are sitting back waiting for some light forces or some group to come and save humanity.

And the Sphere Alliance, they're out there to help even the playing field, but they've

made it very clear that, like the Hopi said, we are the salvation that we've been waiting for. That we are responsible for clearing up our own mess to coming up with the solutions, to defeating the Illuminati-Cabal secret Earth government groups, coming up with a new system, implementing the new system, and starting over with a new transitional society. And that it is up to all of us to stop pointing out all of our differences, all the things that make us different, all of the things that keep us apart and start focusing on all the things that we have that are similar that will bring us into a symbiotic relationship.

And the idea of forgiving other people, becoming forgiving of ourselves. There's a lot of forgiveness that needs to happen between tribes and nations. We need to move past that and start working on projects like the one you're talking about in detail that will help us come together and solve these problems ourself after doing the inner work and come up with the solutions ourself, instead of waiting for it to be done for us, because it will never happen otherwise.

MT: Again, you took the words right out of my mouth. I always tell people in my workshops, in the Ubuntu workshops, that we are the ones we've been waiting for. We are the wave of the New Age. And we can't sit on our backsides and wait for somebody to come and save us.

And this is always a problem. People are waiting for some sort of a knight in shining armor, some external savior. We have everything encoded in our DNA.

We are co-creators of our own reality. So let's create this own reality. Let's focus on a positive outcome for humanity. Let's stop fear mongering. Let's stop talking about the dark, negative stuff.

Well, we can talk about it, but as a platform of knowledge and information that we then use to launch ourselves into this new utopian world. And I like to use the word utopian, specifically, because utopian is a good word. It's not a bad word. Oh, it's just a utopian idea.

Yeah, I like “utopian”. It's a good word, right. Let's use “utopian” more.

And I just want to also add just because we mentioned the word like barter and all that stuff. So I want to firstly say that the whole Ubuntu contributionism philosophy is not a philosophy about creating self-sustaining communities. It's creating communities of abundance because we live on a planet of abundance.

One apple tree creates 1,000 or thousands of apple trees, not one other apple tree. And this is what we are capable of. Each one of us is capable of creating infinite abundance if we are left to create and do-- express our natural talents that we are born

with.

So it's creating communities of abundance and not bartering or trading or replacing the money system with any form of exchange. As long as you've got any kind of form or exchange, it is open to exploitation. And somebody will find a way to use that against the people for their own benefit.

DW: All right. Well, I'm sorry to end it right now while it's just getting good, but that's all the time we have for in this particular episode. We're going to be back next time continuing this fascinating discussion with the insider's insider, Corey Goode, and with Michael Tellinger, the face behind the Ubuntu movement. As always, we want to thank you for watching. And we'll see you next time.

Revelations From The Inner Earth Season 3 Episode 4

Cosmic Disclosure; Revelations From The Inner Earth Season 3, Episode 4

28 Jan 2016

DW: All right. Welcome to Cosmic Disclosure. I'm your host, David Wilcock. I'm here with Corey Goode.

So where we left off was that you see a group of people come towards you, and apparently one of them is Gonzales. And he's now wearing the same costume, if you want to call it that, that everybody else is.

CG: Yeah.

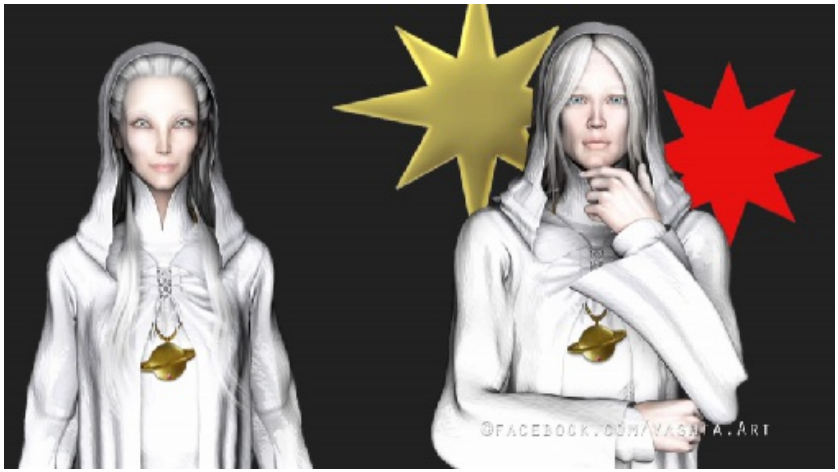
DW: OK. So let's start there. What happens next? How many people came towards you?

CG: Including Gonzales, there were five.

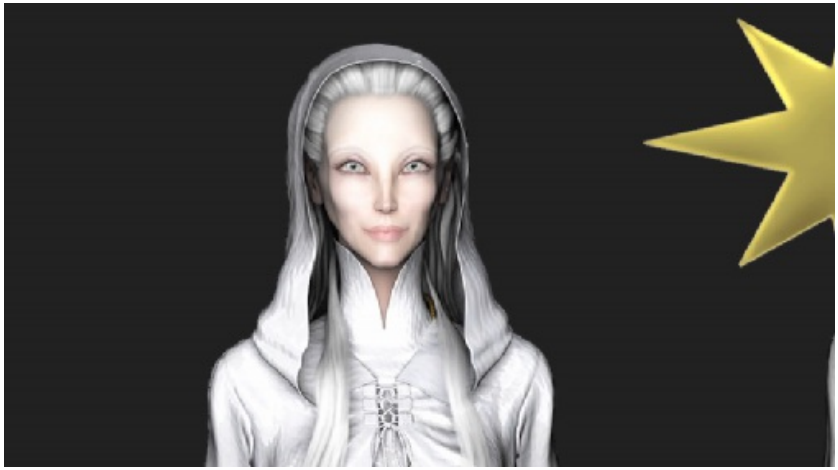
DW: OK.

CG: And about halfway to where I was standing, the four-- four of the five stopped. One being-- the one of the five, being Gonzales, continued, walked towards me, greeted me. I stuck my hand out to shake his hand. He put his hands up and told me that he didn't want to have to go through the cleansing ceremony again. Basically, he couldn't touch me.

So-- and then he told me that I was gonna have to go through a cleansing ceremony, and we started heading in the other direction. There was a woman and three men that were all together with their-- they had hoods up.



CG: And she had white hair, eyes that are just slightly larger than ours that were blue.



DW: OK.

CG: And very pale skin, and I could see white hair under the--

DW: So would she be--

CG: And she was my-- I'm just a hair under 6' 1", and she was my height, and they were wearing flat-footed sandal shoes.

DW: Was she disturbing or unpleasant to look at?

CG: No. She was stunning.

DW: OK. So she's a very beautiful woman.

CG: She was attractive. Different looking, but attractive.

DW: What was different about her?

CG: She had narrow features. I mean, she was just narrow-- narrow features, the larger--

DW: So her face was narrower?

CG: Yes. And the larger eyes. She's pale. The white hair. I mean, she obviously looked different.

DW: So if you saw somebody like this walking around, you'd be, like, whoa what's going on with that lady?

CG: She would get your attention, yeah. She's not going to walk among us without being noticed.

DW: Right. So-- and the other people that you saw, what did they look like?

CG: In her group they had white hair, blond hair. Some of them had brown hair, and some of them had black hair. They weren't all exactly the same with the white hair. Some of them had different-- she was real tall and not really frail looking, but very thin. Her hands were real thin. I mean, she was just real thin.

DW: Was the narrower face also consistent among them, or was that more just her particular look?

CG: Most of them. There was some of them that were somewhat-- a little bit shorter, closer to our height, and a little bit different body, a little bit more meat to them, that wore the same symbol.

DW: And what was the symbol they were wearing?

CG: Saturn symbol that was gold. There were three different ones. The people that were obviously hosting it had a stone that was kind of a red roseish look at the six o'clock.

CG: One group at the three o'clock position had a black stone.

CG: And the other group had a stone that was jade.

CG: And they were-- all three of these groups were genetically cousins, related, and worked together-- were a group. Some sort of related group beyond all the other groups.

DW: So did you walk through one of these four doors to get out of that room?

CG: Yes. At that point, the woman and two of the men had already left, leaving one man standing. And--

DW: And nobody spoke to you other than Gonzales?

CG: No.

DW: So it's this weird quiet kind of vibe.

CG: There was a lot of that.

DW: Like a meditative, monastic silence or something.

CG: Yeah. This was a temple complex.

DW: OK.

CG: So they were-- this was a very ceremonial kind of thing.

DW: Right.

CG: We go through the door, and it looks like the tunnel ends at a certain point, but it actually continues going down.

DW: So there's a tunnel after the door?

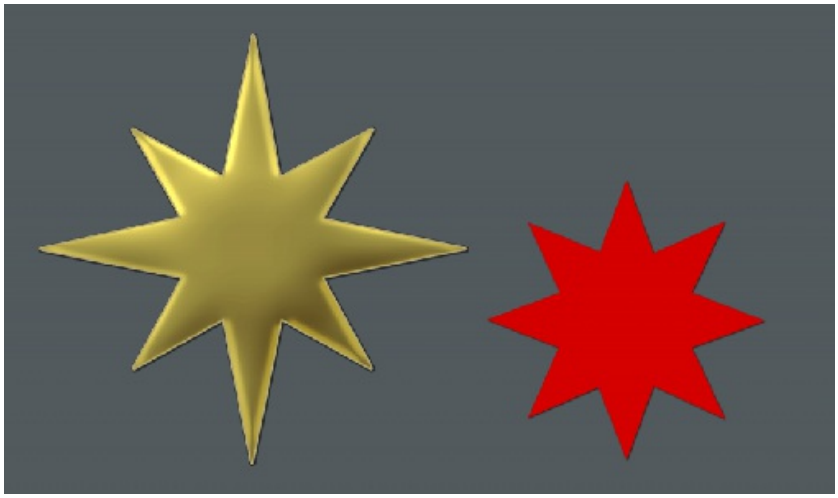
CG: Right. It's a carved corridor, as if it's molded or laser cut, just like the room was.

DW: All granite, polished.

CG: There's light, and I'll talk about the source later. There's light coming-- there's light everywhere. No shadows. It's just lit. It's perfectly lit. So anyway, I could hear the sound of water, and kind of the smell of wet stone and minerals and that kind of a smell.

DW: Like you're in a cave.

CG: Right. And as we were heading down the hall, there was apparently-- there was a door there. And on each side of the door was an eight pointed star. One was gold and about the size of a hand outstretched like this. And slightly smaller on the right side of the opening of the door was a red eight pointed star, slightly lower.



CG:As we're heading in, I immediately-- I mean, you can feel like a-- there's a slight

breeze in the room.

DW: As you go through this door? Was it on the left or the right?

CG: Left.

DW: OK.

CG: And the room's lit up just like all the other rooms. It looks the same.

DW: So with the same size ceiling, the very tall ceiling?

CG: No. It's not as tall.

DW: OK.

CG: But it's domed. And out of the-- as it comes close to the area of where it goes flat up to the dome, there was a port that water was flowing out of like a waterfall.

DW: Like a hole.

CG: Probably a good three, four feet wide. And there was water pouring out of it. The water was almost pure milk-white. There were also stalactites about, like, this big that were building underneath the little port.

DW: Okay.

CG: And they were off white. And they were falling onto-- the water was falling onto the back of a statue that was a woman-- I guess, a goddess of some sort, that was holding something in her arm-- I couldn't tell what it was-- and had her hand out like this. And she was--

DW: Did she have a hairstyle? Did she have her hair done a certain way?

CG: Her hair was up, kind of stylized up. But she was completely encrusted in, like, mineral deposits like calcium-- almost like calcium deposits.

DW: Was it like a life size human effigy?

CG: It was life size, yes. The water filled a pool up really-- she was up kind of high.

CG: There was stone that came around in a circle, and then a kind of a cut in the stone, and then the water was flowing out, and then down into a larger pool. And then the larger pool was about this high off the ground and was large and wide.

DW: So this dais that she's on must be raised up pretty high, then.

CG: Yes. At that point, the guy turned around-- the Inner Earth guy that was with Gonzales and I but was staying several paces back, turned and walked outside the room and stood outside the room. And Gonzales told me to take off my clothes and

put them over on a pillar next to his. And that's when he really told me much more about their Venus worship. They're real big about their cleansing ceremonies.

DW: What is the cleansing ceremony?

CG: Before you enter into certain temples, you have to wear proper clothing and you have to cleanse your body in this-- in certain pools.

DW: So is it similar to the rite of baptism or something?

CG: It's cleansing yourself before you go into a holy place.

DW: OK. Similar to people saying that you've gotta take your shoes off.

CG: Yeah, except--

DW: You had to take everything off.

CG: I had to take everything off. And I was already cold. And it was already a little breezy in that room. I was cold already. Not long after I had taken my clothes off and he's kind of snickering a little bit, the woman who had somewhat greeted us when we arrived comes walking in with folded up-- one of the robes, a couple of towels, and the sandals on it. She comes walking in the room.

DW: While you're standing there just like the day you were born.

CG: Yes. And Gonzales sticks one foot behind and slides and steps back. So she has a clear path to me. I just went [SIGH]. And I was not pleased. But she walked right up to me. She handed it-- handed me the pile of linens and went like this, and turned and nodded at Gonzales, and turned around left the room. But yeah, Gonzales guided me through the cleaning in the pool and using one rag for one part of your body, one towel for the other.

DW: OK. So you're now in the robe. Did other people show up at the room once you'd gotten the robe on?

CG: Yes. We exit the room. We are then brought down the hall, which starts to slope down the hall. And it starts to curve to the right and going down and down as it curves to the right. Then it starts to open up. The ceiling starts to open up. And it comes to a room that is probably getting around 90 feet tall, like that other room.

DW: Okay.

CG: But it's a giant-- like a rectangle, kind of. It was very big. And then there was a large door, and we all stopped and were obviously waiting.

And that was-- we were obviously getting ready to go down to the big meeting. We were standing around in that room just briefly, and that's when I was looking around thinking to myself about the light. And the woman that greeted us and that walked in and carried the items to me, turned to me and with a very strange accent in English said, the light is created by frequency. And I was kind of shocked that she spoke to me.

CG: And before I got a chance to say anything, another woman came walking in wearing the same symbol that she wears, the Saturn symbol, and looked at each of us.

CG: And for some reason, I just knew, and all of us, everybody at once, we all put our hoods on and walked down a half-- like, semicircle kind of stairs that were cut into the rock-- just like everything else, out of the granite.

And then we were down on the next floor, and then there was another room. And inside that room were all of these different groups, who we were there to meet, and that was the meeting hall.

DW: Is this is also a very large room with a high ceiling and the domed roof?

CG: It was kind of a medium sized room. There weren't a whole lot of people in. There was approximately three people for every group, plus Gonzales and I, so--

DW: OK.

CG: There were seven groups.

DW: Was there something to sit on in this room?

CG: Yes.

DW: What did it look like? What did you sit on?

CG: They were just-- not really pews because there was no back to it. But stone benches.

DW: OK. That makes sense.

CG: Where several people would sit.

And there was-- this was not a semicircle, but kind of like a oval-- not a full oval room because it flattened where you walked in. The door where you walked in, it was a flat wall, and then there was kind of an oval. The room was kind of an oval, and the ceiling was domed.

And there were the-- there were people standing and people sitting on the pew kind of benches. And up at the front was a group of people sitting around a stone table. And we were walked up towards the front, and when I got up to the front, I could see on the stone table, it had some carvings on it, I don't-- I couldn't make out what they were, but I saw the gold star and the red star, eight pointed stars on the table.

Gonzales and I sat down, and that's when I started seeing all the different groups sitting around the table and in the room with all the different symbols. There was a silver star.

CG: There was a stylized swastika.

CG: There was a horseshoe or omega symbol with a eight pointed gold star in it.

CG: There were three different types of the Saturn symbol that I've described in detail.

DW: Right, with the jewels.

CG: And then there was the one that looks kind of like an hourglass, or it could be a symbol of Orion. I'm not really sure.

DW: But it's like triangles.

CG: Right. It's like two triangles meeting together.

DW: And each of these amulets represent one of the seven major--

CG: Groups.

DW: --differentiations of groups down there?

CG: That was the symbol of each group that was present. And when we walked in, each of the different groups had their amulets, and they were tapping and doing like this on their amulets, and there were these little holograms coming off. So these were a technology and not just their-- a piece of jewelry or symbols.

DW: And that goes back to what this insider once told me, the more technology you have, the less technology you need. Right? The amulet could potentially do everything they need.

CG: Right. And they're different-- there were different looking groups. I briefly described the people already with the Saturn.

DW: Now, a swastika. Were these folks Nazis? Were they--

CG: They had nothing to do with anything Nazi.

And there were different looking groups. There was an African looking group that had bronze skin that were stocky. Not real tall, but about the same height, about the six foot height. There was sort of an Asian looking group, but their body type wouldn't match quite what you would picture on the surface.

CG: And people that looked like from India with a very pale blue skin color, almost like you see a vein under your skin, pale blue.

CG: And there was a shorter, Mediterranean looking group.

CG: And then there was a group-- the group that wore the omega symbol-- that looked very much like they could walk among us on the surface.

DW: So you basically just described some variation of all the major races that are on earth.

CG: Right.

DW: OK.

CG: And they were all coming together to meet, to discuss all of the events that were going on that had pretty much caused them to form this council. There what had been a lot of battles and attacks and a lot of things going on underground that were very troubling to them that had caused casualties among their people.

So they're very much purists of their culture and genetics. The omega group mentioned that they were worshippers of Venus, and they mentioned a couple times the Prince of Venus, the Morning Star.

DW: The eight pointed star apparently is a symbol of Venus.

CG: OK. And there might be other meanings for it as well. Because there was a gold one and a red one. I have not had all these symbols deciphered for me, I don't know what they mean. So--

DW: Gonzales ends up speaking at some point. You said that was a pretty big part of it.

CG: Right. They had their conversation. They were asked to speak in English for their guests. That really didn't happen much. They started speaking this what Gonzales whispered to me was a pre-Akkadian, pre-Ancient Sumerian language that they were speaking. And then there was another language that was-- that they were kind of all speaking around each other. Speaking some English, as they would realize. And we were able-- it was pretty confusing, but we were able to pick up the gist of what was going on.

They were talking about the surface population becoming more of a threat to them with their advanced weapons, the skirmishes that they'd been having with other subterranean groups, non-human groups. They were also discussing the return of what they called the Guardians, and we'll get into that more later. And a couple other things, bits and pieces we were picking up.

And when they were done, the guy from the group with the omega symbol and the star motioned to Gonzales and asked him to deliver his message.

CG: And we could feel all the other groups there didn't really seem to like them or feel comfortable with them. It was the only group that was all men. All the other groups were either two or one woman in the group.

DW: You said in the writeup that him throwing it to Gonzales was a breach in the normal protocol.

CG: Right. So Gonzales stood up and looked over--

DW: What was the normal protocol?

CG: The host of the area we were at was supposed to invite.

DW: So he would ask the host to ask Gonzales, but not go directly?

CG: Right. He basically just--

DW: So he's just being arrogant?

CG: Right. So Gonzales looked to the proper person. They nodded. And he got up, and he delivered his typical short but to the point message that he appreciated some of them visiting one of our bases out in the Kuiper Belt at great personal risk to themselves in previous weeks.

DW: This is an Alliance space program base?

CG: Right. And that we had to start working together more and really had to stop any type of deception, to be open and honest with each other. And that in the future they wanted them to quit deceiving people on the surface, telling them that they were ETs and other types of beings--

DW: Or gods.

CG: --or gods, which they had done mainly in the past before we were sophisticated. And it was real short. And Gonzales finished and sat down, and they-- immediately the energy went up in the room. They were not real comfortable with what he had said, and they started speaking amongst themselves, past ourselves, motioning at us like this as they were talking.

DW: So what was their counterattack? What did they say in response?

CG: They stood up and basically told us that they had been on the earth for nearly 20 million years, that they were the original humans that developed on the planet, and that over oceans of time there had been major and minor cataclysms that had changed the Earth's tilt, its place in the solar system, its orbit. The earth has been through quite a lot. And through it all, they have lasted.

And they have-- they formed, basically, in the beginning and prior-- this happened through many cycles-- they had moved underground their elites and priestess castes, left the less sophisticated part of their civilization on the surface to fend for itself, and then come back after some time and appeared to those people as gods or elders, and helped kickstart civilization again-- give them agriculture, medicine, help them with language, arts, and all that kind of thing, to get them kickstarted again. And this is something that has happened in cycles over eons and eons of time.

DW: In the aftermath of these conflagrations and cataclysms?

CG: This has happened in cycles and cycles before our accepted time, our history, our accepted history.

DW: Right.

CG: And they decided to allow the people to believe they were gods for what they said was operational security, so the people wouldn't be a threat to them. And this continued on for eons.

And they stated that there were other planets in our solar system that were inhabited by similar types of life forms.

DW: Humans?

CG: Human-like life forms. But they were also going through cataclysms, but they were much more aggressive and warlike. And they were destroying their worlds and their societies, and eventually they caused some major problems, and other races that came into our solar system started to move them to the earth as refugees. And once they were moved to the earth as refugees, they started their aggressiveness here and started to take over the surface of the planet and mixed their genetics with each other and the surface humans-- original humans-- to create a mixed breed human group that is what they consider us on the surface.

DW: I can see why you think this is going to be controversial.

CG: Yeah. So-- and they were-- they scolded us and said they knew that the Secret Space Program had been involved in some atrocities, and they were withholding judgment on us, and they expect us to do the same because we have very little understanding of our own existence, let alone theirs.

DW: So it's almost like an Aryan ideology kind of thing. Like, they're the pure bloodline and we're the dirty, mixed bloodline that has all this aggressive genetics in it that they don't want to get dirtied by.

CG: Right, right.

DW: So that's certainly not going to go well with Gonzales, I'm sure.

CG: Oh, it didn't go with me either.

DW: Yeah.

CG: I was-- when all of this was being said, I was sitting down next to Gonzales. And when they were just about done, he leaned over and he said, that went well, didn't it? And I was still just-- had all this going through my head, so I didn't even really here as it was all coming to a close-- the meeting was coming to a close.

Everyone started standing up and put their hoods on, and so I did the same. And we're standing there and everyone's forming a line and shuffling to go back out the way we came. So everyone's quiet. We shuffle our way all the way back up, back through the corridor that goes to the cleansing room.

CG: And I'm wondering if we're about to go through a more large public cleansing, but everyone's going past. I see everyone's going past the cleansing room, and I'm seeing flashes down off in the big room that I appeared in originally.

DW: Like they're portalling out or something.

CG: Right.

And I'm still walking, and I feel a tap on my left arm. And I took a couple more steps and I looked back, and Gonzales is standing back like this with two of the females from the host clan that was there. And I quickly stepped next to him, and I found out that they had a personal request for me.

The woman that had greeted us, that I mentioned before with the white hair, had found out about a experience I had in the MILAB program when I was a youth, and that had something to do with this favor. And I said I would hear her out. And she said walk with me, and she started walking. Gonzales and the other lady walked about five or so paces behind us.

I expected her to start talking. She was totally quiet. We walked completely through the giant room where the portalling happened, walked across into the next tunnel, corridor. There were doorways all up and down that had a light barrier across them, a white light barrier on the doorway. And--

DW: You couldn't see through it.

CG: No. And we went a ways, and she touched her amulet, and the light went down, and I could see in the room. And it looked like a real simple lounge or-- I don't think it was like a bed-- it seemed like a lounge kind of room. She walked in and said come

with me. And I looked at Gonzales and he was like, you know. He kind of had that look on his face. And I walked in. She closed the barrier.

And I was feeling very anxious. I'm kind of an introvert, anyway, so being in the room with a lady I don't know, and-- I just didn't know what to expect. And then she interfaced with me mentally and told me to relax.

DW: Now the other people were speaking with their mouths most the time?

CG: Right. There was interfacing going on one to one, but when they're communicating, like, more than one on one, they were speaking.

To bring a long story short, she told me that she knew of a place that I had been brought in my adolescence, you know, a crystal cave.

DW: Right.

CG: And it was a cave that we were brought into. Beautiful crystals that we were told to try to connect to mentally-- not to touch because we could damage them or they could damage us-- that the crystals were living beings, and--

DW: You had said they glowed?

CG: Well, once you started trying-- not until you try to interface with them. And if-- and I was able to successfully interface. Other kids were in the chamber, the cave, and they had a aura around them, a pink, purple aura. They had different auras.

And I sent her a quick mental picture of it. And she just beamed with happiness and tears welled up in--

DW: Why would you be able to access something that she and her people couldn't have accessed on their own?

CG: She explained to me that there was a group that had hundreds of years ago taken over that area. And it was a-- basically, the word in their language-- I can't remember it right now-- it means feathered serpent. But it was-- she sent me mental pictures-- it was an image of this raptor group.

DW: Right.

CG: And I got a better image. I got to see how they move, instead of just what I'd seen on the glass--

DW: These very creepy reptilian bird-like species you described that'll eat human beings.

CG: Right.

DW: Very nasty.

CG: They had control of the area. And without getting too detailed, they require a flesh sacrifice from their allies on the surface for access to certain areas below.

DW: Which I'm sure the Cabal have no trouble providing them with.

CG: Right.

So she said, would you be willing to share that full experience with me? I didn't know what that meant. I asked her. She told me about the process, that we would hold hands. She would open my mind to her. And I let her know that I was not comfortable with that for a number of reasons-- security reasons, personal sovereignty reasons.

She started giving the hard sell. It was important. She was saying that basically we

don't really have that much more to offer them, that this was really important to her people. I was kind of pacing around, thinking about how this--

DW: What did they think was going to be in the crystal? What was so important to them about the crystal?

CG: Don't know at that point. I asked her if I could speak to Gonzales. She-- I'm abbreviating this. It's all in the report. She quickly went to the door, released the field, left. He came in. And he was like, what's going on in here? I told him what was going on.

He said that he understood my concerns, that unless there was Sphere Being Alliance or information that happened between Tear-Eir and I that I didn't want her to know about that there was nothing to worry about because the SSP Council-- Alliance Council-- hadn't shared anything with me that-- they basically hadn't trusted me with a lot of different information that was actionable data to worry about. So he said that I didn't work for him. He couldn't order me to do it. But it might be a bidirectional exchange of information.

DW: So since you were already on the skids with them before, and you'd had this aggressiveness and yelling, you were worried that if you just arbitrarily took her offer that potentially intel could be extracted out of you that could get you in even more trouble or get you booted out of the Alliance or something like that.

CG: Or they wouldn't give me data in the future. They would cut me off from intel, which it sounds like they already had done quite a bit. Or I was concerned about personal sovereignty type-- I didn't know what could happen.

DW: Exactly.

CG: So--

DW: So he gives you the go-ahead, basically?

CG: Yeah. I said all right, go ahead. Tell her to come back in.

And she came in, and she came but just went and just looked right at me in the eyes, like it just like--

DW: Like she's on the edge of her seat.

CG: Yeah. And I told her I would do it, and she was just-- started buzzing around. And she went over to a wall. There was nothing there but a wall. She walks over to a

wall, and then she turns around and she has a goblet, a crystal goblet, in her hand. There wasn't a door or anything there, but she has a crystal goblet in her hand with this amber liquid.

DW: Uh-oh.

CG: Yeah. And she walks over to me and offers it to me. And I look at it. I ask her what it is, and she said it's the Elixir of Essos. And she explains that it's basically a wine that's made out of a rare flower that grows beneath the ground. And I told her, I wasn't--

DW: So you could be tripping brains if you drink this thing.

CG: I didn't know. I told her I wasn't comfortable taking it, drinking it. Is it a necessary step? And she said no, it's customary, basically. So--

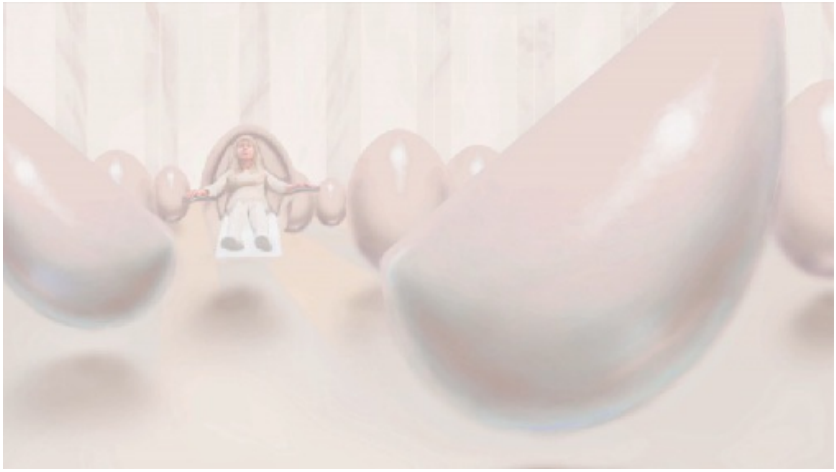
DW: Yeah, I wouldn't have drank it.

CG: She took it, and she took several drinks of it. And her-- immediately, she changed. I don't know if it was inebriation, but she immediately was just different, changed, relaxed. And she sat the drink down.

She had me sit down in a chair that looked like if you have an egg and it was cut this way. She had me sit down, and it was barely off the floor, hovering.

DW: It hovered?

CG: Yeah. It was not on the floor. And she, like, with two fingers guided another one of the chairs right in front of me. Then she sat down just right across from me, and--



DW: Closer than we are now?

CG: Oh, yeah. Yeah. Just got real close and asked for my hands. I gave her my hands. She turned my hands up like this and put her hands like this.

DW: So this kind of deal.

CG: Yeah. Like this.

DW: On top of her knees?

CG: On top of both of our knees, like this. And we were leaning like this.

CG: And her hands were bony, and her skin was very warm. There was-- body temperature was different. And she looked at me in the eyes, and she said I needed to relax, and I needed to open my mind up. And I started to use some of my techniques to lower my consciousness a little bit, get relaxed. And there's no way to describe what happened next.

I felt like my light body or astral body was being pulled in her-- towards hers-- and they were just kind of coming together. And I started having-- she was obviously very more advanced than I was mentally. She was honing in on time periods of my life. And when I was getting all these random flashes of what I perceived to be 130 years of time of her life.

And I got flashes of her as a child, as her in priestess training, as her meeting with different people from the surface-- meeting with secret society groups, meeting with

different military and groups from different political systems, from Europe and the United States--

DW: Presenting herself as an extraterrestrial?

CG: Presenting herself as an extraterrestrial, with other people with her from her group.

DW: Wow.

CG: And this was through-- I could see the clothes they were wearing. They were-- it was through all these different time periods that she had been meeting with them.

DW: So this is sort of like the life flashes before your eyes thing, except it was, like, her life?

CG: Yeah. It was real random. I couldn't hold onto them. But when she locked on to the memory of mine, of in the cave, I got a memory of her at the same age. It was a memory of her losing someone in some sort of a skirmish or attack, to some insectoid type attack. But she-- then I was pulled back into the experience in the cave, crystal cave. And it was very vivid. We relived it.

Then after it was over, we both sat back and were-- I was just shaking, quivering, and my brain was releasing all these pleasurable endorphins. Nothing in any type of sexual or weird way at all, but it was just-- it was very overwhelming.

And I had-- I've-- since then, I've been very different. I've been just up in my head a lot, thinking, thinking about a lot of stuff. And it's affected me to where I've been a lot more intuitive about things. It's been very weird.

And so we composed ourselves, and we--

DW: She had a similar reaction to you?

CG: Oh. Yeah. She was doing the same thing. We had tears just-- that were just coming down out of our eyes.

DW: Both of you.

CG: Yeah. It was extremely emotional. It's unlike any type of connection I've ever had with another person.

DW: Is this something that any of her people could do, or was it something she

specifically trained for as the priestess?

CG: I think that's something that all of their people can do, because when we were done she said that there's going to be some people that are not going to approve of her doing this with a mixed surface person, but there's going to be a lot of other people that are going to be extremely happy with the information she was able to pull from the crystals that I interfaced that I have no conscious-- I don't know what information that was pulled.

DW: Well, you told me they blank slated you. They wiped your memory after you got the crystal data, right?

CG: Right. But--

DW: But she somehow could get it.

CG: Right. But, you know, memories exist on your physical hard drive, but also in your light body in that virtual hard drive as well.

DW: So this is sort of like the Vulcan mind meld.

CG: And that's what I referred it. When I talked to her, I said I will go through with your Vulcan mind meld, kind of as a joke. But it wasn't funny to her.

And then after this, we kind of got our composure together, and we went back out to the hallway where Gonzales and his hostess was waiting. And she was very pleased. And at that point she was basically offering, if we had the time she'd like to give us a tour.

And Gonzales had been wanting a tour of the other places he'd been on, so he just snapped and accepted the offer. And, well, I'm sure that we can go into the very interesting tour I had.

DW: All right. So we got a lot more coming up in the next episode as we continue this fascinating story here on Cosmic Disclosure. I'm your host, David Wilcock, and we thank you for watching.

The Grand Tour of Inner Earth Season 3, Episode 5

Cosmic Disclosure; The Grand Tour of Inner Earth Season 3, Episode 5

03 Feb 2016

DW: All right, welcome back to "Cosmic Disclosure." I'm your host, David Wilcock. I'm here with Corey Goode. And it is a really fascinating story, something that when he wrote this up, it went nuts on the internet, right? I mean this, blew out all the records of viewership and user engagement. The type of feedback you've been getting on this was just phenomenal.
CG: Yes
DW: So we had a discussion about this Alliance, and some of the things we zipped through kind of quickly because we wanted to chunk in a lot of narrative into a half an hour. So some of the inevitable questions that are going to come up when people watch the previous episode who haven't read the paper, and we've got to assume that they haven't, would be, for example, you said that these groups have a roughly 20 million year history. Are they all 20 million years old?
CG: The group with the Saturn symbol claimed to be 17 to 18 million years old. And the youngest of the groups-- they said they didn't give a date, but they said a few ice ages previous.
DW: The youngest of the groups. And which one was that?
CG: I thought to myself it was the group that looked most like us, the human.
DW: I see.
CG: I mean, to me that seemed to make sense.
DW: Now, these people were all wearing the robes and sandals?
CG: Yes.
DW: And that's a ceremonial clothing that they all have to wear to be there?
CG: It's not what they would normally wear. It was to wear-- where we were at was a, I guess you would say holy ground, temple complex. And I don't know if that was just for that group, what was their custom, or if that's what they wear whenever they meet at other people's locations.
DW: Did you didn't notice anything specific on these holograms that you said were coming out of the amulets? Like was it-- what was the scenes? Did it look like a heads-up display, or?
CG: Yeah, it looked like some sort of heads up, but I could not-- from my perspective, I couldn't see what it was. I could just see it was light coming up. And they were looking at it, messing with their pendants. I couldn't see what it was. I guess it's kind of like you have to be right in front of it. You know, viewing from my angle, I couldn't see what it was, other than it was light.
DW: What was the weirdest thing that you saw from this woman's life that surprised you the most when you're getting this flash? Something that really was unexpected?
CG: Well, the fact that she was a virgin, that she was the priestess. She was in a

priestess class. She was over 130 years old, and she was well, a virgin-- had not been with a man, or had not been involved in any type of sexual activity in her life.
DW: When the Japanese were contacted by their gods, they described what they called Ame-no-torifune, which they said was bird boat universe, or flying boats from the universe. These people came down, gave them written language, taught them a tea ceremony, taught them to make silk and kimonos. And I'm wondering if you think it's possible that one of these Inner Earth groups-- because the swastika is associated with the Shinto gods as well-- do you think there may be a connection between Shinto and some of these Inner Earth folks?
CG: Most likely. They claim to have done it cycle after cycle after cycle, that they brought these types of technologies to struggling and recovering civilizations time after time after time. And really curtailed that and slowed it down more after these ET races from outside started coming in.
DW: So you have this exchange with this woman. Gonzales must be wondering, what the heck was going on in that room? Because you were in there for a while, right? It didn't happen right away.
CG: Yeah, that's the first thing he said. He said, what's going on in here?
DW: You're with Gonzales. What happens next?
CG: We've been invited to go and take a tour. She's much more relaxed. A lot-- real happy about the experience.
DW: You both had a cigarette.
[LAUGHTER]
CG: She was elated that the experience that I shared with her she was going to be able to share with others. So she was feeling generous, wanting to show us around. And so we walked down the hall, went to a small, domed room and stood in the center. She rubbed and tapped on her dial-- flash of light. We're in another room-- another big room. This area, the stone is slightly darker. It's a different area. And so we start walking through some different passages and rooms.

DW: The overall look is the same, just that the stone is darker.
CG: Right. And we're working our way. She wants to take us to see their gardens. We came out into-- out kind of like-- we were in the wall of like a cavern coming out, and there is a cavernous area that is so huge. And there are pillars that go all the way up to the ceiling, that I couldn't even begin to estimate how tall the ceiling was.
DW: Wow.
CG: I mean this cavern was the size of a state in Texas. It was absolutely huge. And built into the pillar were some structures that were built into the pillars.
CG: Like where people live?
CG: Where people lived or worked or did something. And they were bigger around than any skyscrapers I've seen, these pillars. And there were all these--
DW: Did you feel like vertigo-- like you're like, whoa, you can't even stand up?
CG: When you looked up, there was a-- not really a vertigo feeling, but a forced perspective feeling of-- did not expect to come out into such a large area.
DW: Was it the same type of diffuse lighting, where it's just bright everywhere, and--
CG: Not up high. Down low there was-- the lighting was everywhere.
DW: OK.
CG: But there were people walking all around. We got to see just this one little area of this big city. And there were people walking around in one-piece clothing, different age people-- young people, older people.
DW: One piece like jumpsuits?
CG: Yeah, kind of jumpsuits, one-piece suits.
DW: And what were the colors?
CG: They were red, green-- I mean, all these different colors. And they were just walking about doing their business.
DW: Did this represent all the different types of people in the Inner Earth Alliance, or

was this just one of the groups?
CG: This is just her-- this is one of her cities of her group.
DW: So the people with the Saturn amulet.
CG: Right
DW: OK.
CG: And those people were not wearing amulets that were walking around. And as we were walking along, still staying close to the cavern wall, we've seen a very small part of the city.

CG: There were some buildings that were built up in domes-- some in kind of like oval domes that seemed to emanate light from themselves, kind of a white light. A lot of the buildings that were built out of the stone, like they were just molded out of the stone.

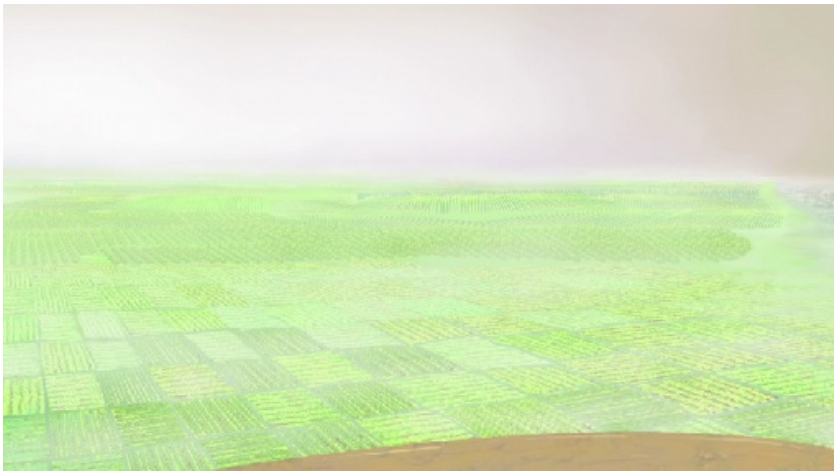
DW: Right.

CG: And we were looking around, and Gonzales bumped me again, and I looked up and there were all these craft flying around on the inside.

CG: And it looked like a 1950s movie. There were classic UFO saucer-shaped saucers flying around and large cigars and egg-- almost perfect egg shaped.

DW: So these craft are zipping around inside this huge, huge room.
CG: Not only that, they're flying through the side of the cavern at full speed. Not slowing down, flying right through the rock, right through the walls. And I mean, as if they're water or air. Just flying right through them.
DW: So clearly they can go out of phase with the rock and just zip through it.
CG: So we got to see just very briefly, we got to see this as she walked us down into-- back and towards the wall of the cavern.
DW: About how many craft were airborne at any one time that you could see?
CG: There were over 30.
DW: Wow.
CG: I don't-- there were a bunch. She brought us down into what were obviously like more service-type corridors. They weren't quite like the corridors before. They were a little bit more narrow. They were I guess kind of like city works or service corridors.

She brought us to this area to where we walk out and we're out on somewhat of a ledge. And you walk out the door, and then there's like a staging kind of platform. And then you walk to the edge of the staging platform. There's no rails. And then there's like a cliff down, and then you're looking out into this huge cavern area.



CG: And there are segmented crops and vineyards as far as you can see. And I couldn't really make out exactly what was what, but you could just see segmented-off crops, trees off in the distance, vineyard areas, and there was water that was rushing in and then coming out on another side that you could hear.
DW: Like a hydroponic system.
CG: It was a hydroponic system. And she said the light-- the full-spectrum light is produced in the same way described before.
DW: Did you ever get an estimate of how many people were in her population? Is it like 30 million, or--
CG: I don't know how many people. But that was--
DW: But that's enough food for a lot of people.
CG: It was-- yes.
DW: I mean, we can grow most of the food for America in California, and you're saying that this one room that you were in was as big as a state.
CG: This-- yeah, the garden area was--
DW: Just colossal.
CG: Like hectare.
DW: Wow.
CG: I mean, it's huge. And she pulled up a bunch of different types of rocks and crystals that were crushed up. And she said, this is the medium that the roots grow in. And she said the water has natural minerals in it, and we have a-- we recycle everything. And on the other side of the wall, where the water flows through, it flows through some composting and other materials to give it nutrients. It flows through the rocks, and then the rocks filter the water, and the water returns back to its source clean.

And the nutrients go to the plants, and the crystals and the type of light create a very high-yield and high-vibratory food for them. And when she said high vibratory, she kind of looked at me and smiled because she knew that I had-- I guess she knew I'd been talking about high-vibratory food after our little mind meld thing.
DW: OK, so you go through a few places, and where's the next major thing that you end up going to?
CG: We exit out of this into the park, and it had a larger opening doorway that the four of us walked out into. And there are-- we could smell all kinds of pollens, and just so many smells. Sensory overload of-- and then sounds of-- I mean, it was just sensory overload. And we walked in--
DW: Was it warmer?
CG: Yeah, there was-- when you walked in there was an atmospheric change, like atmospheric pressure change. And there was an artificial ecosystem in this giant cavern that was as big if not bigger than the garden.
DW: Wow.
CG: And there were stairs that went up almost all the way to the very top that you could walk up. And the trees were so tall that we had to climb up the stairs to be able to see over the trees.
DW: You said before that the natural caverns inside the Earth only had vegetation that went up to like knee height. So how are they getting trees down in the Earth?
CG: This is-- they terraformed. They created this environment.
DW: Wow.
CG: And they created-- I mean, it had a pale blue sky.
DW: Really?
CG: And not full clouds, but misty kind of clouds.
DW: These trees are bigger than the redwoods in Northern California?
CG: I would assume so. I haven't seen a redwood since I was a kid.
DW: Well, they're pretty darn big.
CG: But we had to climb really, really tall up the stairs. And we were looking out over all these trees. We were seeing some birds flying around with long tail feathers-- blue, red, and yellow. Very beautiful birds. She said, don't be alarmed.

CG: There are some animals from our era that we've preserved down here. They're not dangerous in their current stage of development. She didn't say anything other than that.
DW: Did these birds look like anything we would normally see on Earth?
CG: Not too terribly unusual. I mean, there could be birds like that. I'm not that well traveled on the surface of the Earth. There could be birds like that that I haven't seen.
DW: So they could look tropical, with the colors you described?
CG: Yeah, I guess they could be tropical. But I haven't seen birds like that.
DW: OK.
CG: But there weren't like pterodactyls or anything like that.
DW: OK.
CG: So when we were up to where we could see over the trees and towards what I would think is the middle, because we couldn't see all the way because of the mist, there was a giant obelisk that went up that was stone and weathered. And then up even higher above it, up at the top of the cavern, was a huge plasma ball that I guess was supposed to represent the sun or an imitation of the sun. And it was a part of this, I guess, fake ecosystem that they created.

DW: Now, let's just stop right there because this is one of the very bizarre things. You had this experience, you said, the beginning of September. I can prove that I sent the design, I got a sudden intuitive flash of what the cover of my new book, "The Ascension Mysteries," is supposed to look like, and I asked for an obelisk that had a star type of light source at the top. And I just showed it to you today, and you darn near fell over backwards.
CG: Yeah, and there was Saturn in the background.
DW: And Saturn in the background, like the amulet.
CG: I don't know how to explain that.
DW: And I was having what appears to be the mind of this priestess trying to contact me this morning telepathically as I was waking up, and she kept saying, "do you recognize me, do you recognize me?" So this is very much an evolving story. It makes me wonder if she has been working on us already. This is very bizarre. When you told me that-- when I read that part of your story, and then I'm looking at the book cover, I'm going, wow, OK, this is nuts.
CG: People will have a hard time not believing we collaborated together to make this happen. I mean, I couldn't-- it's strange, but--
DW: So what's this obelisk for?
CG: I don't know.
DW: It's the biggest thing there?
CG: Yeah, it was the biggest thing, right in the middle. And it looked worn, like weather worn.
DW: Wow.
CG: From what I could see. It was way off. And we stayed real close--
DW: Was that like the star, like the sun, like the light source of the whole place?
CG: It was below the light source.

DW: Oh.
CG: So we walked back down the stairs and started walking towards the tree line, having conversations. And we could hear in the background, we heard at one point some elephant kind of sounds. And we were hearing different things. But we weren't seeing them.
DW: I'm dying to know, were there anything in this area besides trees? Did they have paths that were made out? Did they have little buildings? Did it look like Stonehenge or anything like that?
CG: No. It was--
DW: Just all nature preserve.
CG: All nature.
DW: OK.
CG: And I started walking with my hostess towards a clearing. So I wanted to see something. I wanted to see one of these animals. And we stopped, and we were talking, and Gonzales was talking with a girl, and they were talking about-- Gonzales was talking about, we'd love to have things on the surface this peaceful and have everybody openly working together, and talking about a great future for humanity. And the lady he was with said kind of a derogatory statement, that she didn't see that being a possibility for the surface, the mixed surface race, that we had--
DW: With our aggressive Draco genes.
CG: Or not just the Draco genes, the mixed genes of the beings from the other planets from our solar system.
DW: The survivors.
CG: Right, that mixed. But she said that she thought it would take forever. This is something that would not occur very quickly. And they started conversating about it.

And I started talking with the hostess, and I said, Gonzales said that the language y'all speak is pre-Akkadian or Sumerian. Do y'all have anything to do with the Sumerians? And she told me yes. She said very much so. She said after one of the minor cataclysms-- and she talked about many different minor cataclysms again, and what the Earth had been through, that they had brought agriculture and different things to the Sumerians, and had brought them written language and that kind of thing. And then I started bringing up philosophical questions and mentioned that on the surface, more and more people are believing in ancient aliens and genetic manipulation and us being created by the Anunnaki, and you know, was starting to lead questions with her that way. And that's when she said, maybe our next stop should be the library. And--
DW: Real quick though, these cataclysms, I want to point something out, because I've done some new research, which I did not know you were having this experience while this was going on. I've been led to study the etymology of the word cataclysm, and cataclismos, which is Greek, and it means destruction by water. But there's another word, conflagration, which means destruction by fire.

And there's a very widespread, as I've now discovered-- it's going to be in the new

book-- a very widespread ancient tradition through Greek and Roman, Stoicism, Akkadian, Babylonian, Sumerian, where they all say that at the end of the big cycle, there's a conflagration. There's a solar flash. And so they differentiate by fire or by water. Now, these people had to have something to do with that message coming in. So I'm wondering if they ever got into the idea of a flash, of a solar flash, as one of the seeds of these catastrophic changes?
CG: We spent a lot of time in the library talking about a lot of very in-depth things like this.
DW: OK, this is the part I haven't heard yet.
CG: Yeah.
DW: Good.
CG: A lot of very, very controversial things for most people came up. But once she suggested this, about this time we heard the sound of a very loud, large cat.
DW: Oh, my god.
CG: That wasn't that far away, and you could feel it in your chest. It was very deep, loud.
DW: And we know that sabertooth tigers were all over the Earth up until 50,000 years ago.
CG: Yeah. So, we didn't get to see it, but--
DW: They said they were all safe, right? Like, the animals are not going to attack you?
CG: Well, yeah, they said they were not dangerous in their current state of development, whatever that means.
DW: I don't know if that would make me feel all that comfortable if I heard that.
CG: It didn't make me feel all that comfortable. But we were already talking about the library, and we started to head back towards the big entrance. And after the cat sound, we looked back, and Gonzales was still in the same area with the lady he was talking to. And they had looked in the direction of the cat. And he was looking back and saw now that we were headed back up towards the door, and then they headed our direction.
DW: So is this like the typical creepy lion roar?
[ROAR]
CG: Yeah, it was--
DW: Wow, OK. And you felt it in your chest? It was that close?
CG: Well, it was that powerful, that deep. It, like, rattled your insides.
DW: Did you see any other beasts? Elephants or anything like that?
CG: No, I didn't see any other-- anything other than the birds and the plants.
DW: OK.
CG: We were headed out. She seemed to know that Gonzales already had a-- it seemed prearranged situation to where in one of their craft, they were going to fly him back to one of the bases.
DW: Okay.
CG: And she said, if it was okay, she wanted to take me to the library. And Gonzales

was visibly disappointed. And he wanted to talk to me before he left. And he mentioned to me, he said, this isn't going to go over well. He goes, I wish we would have went to the library first. He goes, I really would like to have been there. But when I report back to the council, Secret Space Program council, you know, I'll report that you got to go to the library. Just make sure you remember as much as possible, and give me a briefing within 48 hours, so you don't forget what you've learned.
DW: I thought Gonzales, from what you described, and I don't know how much we really covered this here, but you said that he had been through several meetings with these people already.
CG: He'd never gotten a tour.
DW: So he was seeing all this for the first time too.
CG: Yes. He jumped--
DW: What did he look-- what was the look on his face as he's seeing all these things, the gardens and the saucers flying through the air?
CG: Well, he was looking like he was in awe a couple times, like with the saucer thing, but I really wasn't watching him that closely. I was looking around. But I imagine he was taking it in as much as I was.
And I had forgotten a lot of the protocols about remember how many paces this way, you know-- you're supposed to, when you go into a new environment, you're supposed to mentally map it out and that kind of thing. I wasn't doing any of that. And I imagine he probably was. He had a lot more going on up here tactically, strategically.
DW: You've seen a lot of heavy stuff that most people would probably do anything to see. You've seen bases on other planets. You've been inside spacecraft of very advanced faster-than-light travel, portal travel. Is there anything else that you've ever seen that was as amazing as what this stuff looked like?
CG: No. This was a truly amazing experience in a positive, awe-inspiring kind of way.
DW: Very interesting indeed. So what was the reason why Gonzales was so concerned about this library? Did he know there was something in there that was very valuable?
CG: Intel. Library, information, intelligence. And he got to see a garden and a park.

[LAUGHTER]

So he wanted to see the intelligence. And he was about to be walked to one of their vessels and flown to a base, and I was about to be walked to see and have a discussion in the library.
DW: All right. Well, coming up next time here on "Cosmic Disclosure," you're going to be getting my authentic reactions, stuff I've never heard him say before, the journey to the library. And we thank you for watching. We'll see you next time.

Inner Earth – The Library Season 3, Episode 6

Cosmic Disclosure; Inner Earth – The Library Season 3, Episode 6

12 Feb 2016

DW: Are you ready? This is "Cosmic Disclosure." I'm your host, David Wilcock. I'm here with Corey Goode. And for the first time ever in the history of this show, I'm going to be getting information that I am dying to know about from you, in real time, on camera, stuff that's very significant for both of our lives.

Because you've gotten pulled into this, and I'm obviously on this journey with you. But up until now, I have no conscious recollection of having any experiences off-planet or in the planet, even though maybe I have had them. If that is happening, I'm being blank-slated. I'm not remembering anything yet.

So there's something going on here. These people are very intimately connected to us. And this information is eventually going to bridge the gap and lead to a family reunion, if they can get past the idea that we're mixed-blood and inferior to them.

But the other thing that I just wanted to point out is they're acting as if we're not going to have such a sudden leap. But if you read the Law of One, which I've scientifically validated, it very clearly says that the 25,000-year cycles of third density-- there's three of them-- that we're at the end of all three, that there was a very massive sudden quantum upgrade of the human condition at the end of that cycle. They call it a quantum leap. So the idea that it's going to take generations and generations for us to grow up isn't necessarily true.

CG: Everybody has their own belief systems. And that's one of the things that we need to put into perspective for this part of the discussion. Because a lot of this information is going to be difficult for a lot of people's established belief systems.

And I took time out--

DW: "Difficult."

CG: Yes. I took time out to write an article about keeping your reality bubble permeable. Just because after this meeting-- because my brain has been so overwhelmed with all of this information. And it's-- people will need to sit back, buckle up your seat belts, open up your minds a little bit. Everything that you're certain that you know, just be ready to open your mind to other possibilities.

DW: Some people are going to believe what you're saying. Other people are just going to go right on thinking whatever they already thought is true, so.

CG: Right.

DW: You don't need to be too worried.

CG: OK.

DW: But it is going to-- I know you've been preparing us for this. It's going to rattle people. So I'm really interested. So let's not play around with the amulet. Let's just--

CG: Get on with it.

DW: Get into that library. What happens next? Gonzales is pissed.

CG: Yes.

DW: He can't-- he can't believe--

CG: He's missing out on the library.

DW: That they've chosen you and he doesn't get to go in himself.

CG: Well, and I think the library thing happened just because the priestess and I connected, and I got assigned to the conversation. And things just led that way. I don't think they just said, we're going to pick Corey and send Gonzales on his way.

DW: So, what happens to Gonzales? How does he end up leaving?

CG: We leave together. So you hear the lion, or whatever it is, the cat, roaring.

DW: Yeah. We leave, and then we go through another one of the kind of small, little corridor areas, out-of-the-way corridor areas. We come out into another domed room that's kind of, I guess, a portal-type room. We're all four standing there. Sorry, tapping happens on the little amulets. Flash of light.

And now it's just the priestess and myself. And we're now in a completely different environment, to where it is white, polished stone, and beautiful.

DW: Like white marble?

CG: Like white marble.

DW: Were there marblings in the stone?

CG: Yes.

DW: Cool.

CG: It was beautiful.

DW: Wow. How big?

CG: And all one piece. It was not a super large room. It was about the same size of the smaller portal rooms. And I looked straight up to see a gold bar come out of the ceiling with a hand and a crystal ball inside the hand.

DW: Was there any other stuff like that? Or was it kind of a unique distinguishing feature in the room?

CG: There were other things like that in another part of the library.

DW: OK. And it's a normal human-size hand?

CG: No, it was smaller.

DW: Oh, it was smaller.

CG: Yeah.

DW: OK.

CG: It was a smaller-- and a smaller globe, smaller hand.

DW: Interesting. OK. What are you feeling at this point? Are you excited about it? Are you nervous? Are you--

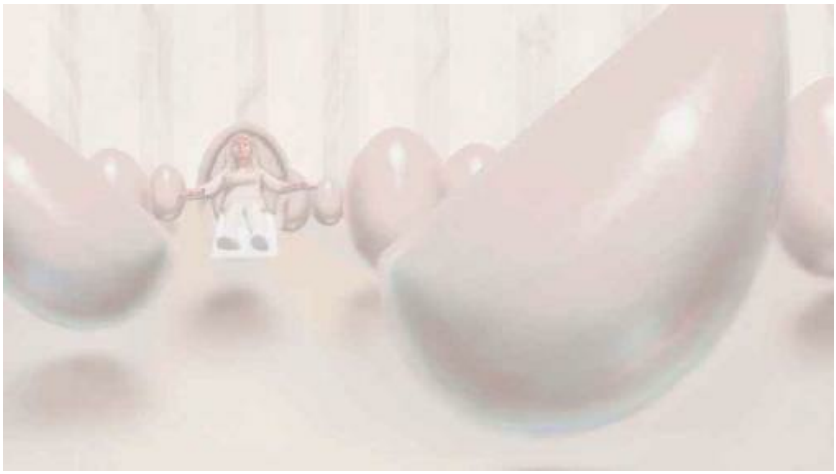
CG: I'm excited because I know that we're about to go talk about what we had initially started to talk about, which was the ancient aliens, the genetic programs, the "meaning of life" kind of stuff that we were starting to discuss. Their belief systems that I was curious about.

DW: OK.

CG: So this whole library complex was made of this white marble.

DW: Now you say library. Are you seeing book stacks, like a library?

CG: We do, at one point. But when we first walk out, there's a big, largely uninhabited area of those same kind of seats, and some of them were reclined back.



DW: The egg-shaped thing that you sat in when you interfaced with her? OK. And they're anti-gravity, right?

CG: Right.

DW: OK.

CG: And there were three levels of the library. There was the library proper that had actual shelves in it, that as we walked through it, there were scrolls sitting on kind of an angled shelf. They were just setting there. There were-- as we went along, there were tablets that were on different types of stone.

DW: Wow.

CG: And then some that looked like they were molded tablets, that were molded out of some type of composite material that were not stone. And then as we moved, they started to look more like books. Some were bound in leather, and some were bound in hemp, or something like that.

DW: Now, if you go to the Louvre and you see the "Mona Lisa" or things like that, they're going to be behind glass. Was there any protective stuff around these scrolls and things, the tablets?

CG: Not unless it was energetic.

DW: Wow.

CG: It looked like you could just reach and touch it.

DW: Wow. OK.

CG: So she was just-- it was like we were walking through, almost like a time capsule. It was changing. And then we started getting to an area that looked like books from 1500s, 1600s, all the way up to-- we got to an area that looked like books could have arrived from Amazon.com. They had the ISBN number kind of things on them that looked--

DW: Really.

CG: Yes, that were on a bookshelf.

DW: UPS? FedEx?

CG: I don't know how--

DW: Who drives down there?

CG: I don't know. But--

DW: Maybe the drones, right? The Amazon drone.

CG: Right. And I asked her, I said, are all of your books in physical form? And she said, no. She said, we keep certain books in physical form that are on subjects that we find intriguing. She said most of them are in a format that we can pull up and read and look at.

DW: And I suppose they're not so interested in underwater basket-weaving and Betty Crocker's "Guide to Home Cooking."

CG: Right.

DW: This is more of what kind of stuff that they're interested in.

CG: Well, where she'd stopped me was at a place that had a whole bunch of books on the subject of ancient aliens.

DW: Did you see any books that you recognized from the surface?

CG: Yes.

DW: Could you give some examples?

CG: Yes. Zecharia Sitchin's books.

DW: Really?

CG: And some books of some authors-- I-- I really can't remember their names. Erich von Doniken--

DW: Von Daniken? OK.

CG: Some other ones. And there were a lot of books in German and Fren-- other languages on the subjects that were there.

DW: Well now, if they can get books, that would also imply they can read anything that's on the internet.

CG: Yes. They-- they have complete access and follow the internet very closely.

DW: Wow. Very interesting. So this is crazy. They're-- but if they could portal you out of the room, then they could potentially be portaling these books out of a warehouse or something as well, right? They don't need FedEx to be driving down into the cavern.

CG: Right.

DW: Yeah, OK.

CG: So I-- I really was not looking at all the logistics of, you know, how exactly they got the books.

DW: Right.

CG: Very quickly, we started to talk about the ancient Sumerian culture, the ancient pre-Akkadian Sumerian language that her people spoke.

DW: Right.

CG: And she brought out a-- she went and then came back with a book that was a dictionary, that was an ancient Sumerian dictionary. She says we have one very similar. It was-- she said, ours has-- it's a dictionary, a complete Sumerian dictionary that has two different languages-- I think Akkadian and Sumerian, or I can't exactly remember-- that is a dictionary for every ancient Sumerian word, what it means. They tell us, the scribes tell us in their own words.

Their book--

DW: This is sort of similar to the Rosetta Stone, which is what allowed people to crack a lot of these ancient languages in the first place. Because it was the same words in, like, three or four different languages.

CG: Right. And we've had this, supposedly, on the surface for I don't know how long, that our mainstream scholars use.

DW: OK.

CG: But her book had three languages. The dictionary had three languages. It included her language, the proto or pre-language.

DW: So she brings out this dictionary. Was it an unusually large book?

CG: It was a very large book.

DW: OK.

CG: And we didn't really-- she just showed it to me. And I looked at it, looked at some of the symbols, the writing. We really didn't flip around it because I didn't understand what it said anyway.

DW: OK.

CG: And she began to tell me a story that made me a little uncomfortable in the beginning, about the story of the Anunnaki, the ancient Sumeria, and the current narrative that many in Ufology and believers in ancient aliens subscribe to. And she went on to talk about how all of the information-- and she pointed up to Zecharia Sitchin's books. She said all of the information in those books is pretty much contrived. She said, you cannot take those books, and you cannot go into a ancient Sumerian tablet, to the tablets and texts, and do translations and get what is said in those books.

And she asked me-- she said, do you know what Anunnaki means? And I said, well, I've been told, and I've read, that it's a catchall term that just means "extraterrestrial." It can mean any group that comes from the sky.

And she said, the root of the word means "royal seed." And I was like, OK, I can't dispute that. I can't-- how do you argue or dispute that? I was like, OK, I'll just listen.

And she went on to describe that there was a secret society that had put out this narrative, very cleverly, to make an elitist religion, to take an elitist religion from the surface and put it into the esoteric community.

DW: Wow. This is really mind-blowing, and I feel like I gotta add something here. When I went to college, I had a buddy who ended up living in a boarding house with me after I graduated. And we'll call him Antonio. It's not his real name.

He was from Spain. Here's the thing I have never said before, OK? He was personal friends with Zecharia Sitchin. He told me that he talked to Zecharia in person, and

Zecharia told him that he was told what to write in the books by these Illuminati. None of it was really based on research. It was all contrived. Now, I've never shared that before, and this is blowing my mind, that she's telling you the same things. Very interesting.

CG: Well, she said that the writer had three people that were giving him the narrative to write. And that these three people gave him the narrative that he wrote, that was a very clever infiltration of these, I guess, Illuminati into the Ufology esoteric community to make their religion, our, or their religion.

So this opened up all kinds of questions for me.

DW: Wow.

CG: You know. Because I-- before-- I never would have entertained this before. Because I had seen a lot of information in the glass pads that led me to believe that the ancient Sumerian texts' translations were not accurate. But I stayed away from it because a lot of people have made a religion out of it.

DW: Well, and at the Conscious Life Expo a few years ago, before he died, I ended up in the elevator was Zecharia Sitchin, and he was scared to death of being in the same elevator with me. He did not want to acknowledge that he knew who I was, but it was obvious that he did. He was highly uncomfortable. He didn't want to look me in the eye.

In fact, he actually kind of turned his whole body towards the wall of the elevator, because he didn't want to be in it. It was a weird synchronicity that we ended up, just the two of us, in this elevator for a ride going up, I guess, seven stories or something. Wow.

CG: So for me--

DW: But people see Zechariah Sitchin-- it's like you can't question-- it's, like, sacrosanct.

CG: Yeah.

DW: The stone tablets.

CG: It's like a prophet. Yeah.

DW: Here it is. Boom.

CG: So. But I was very-- you know, I was considering the source. I had a connection with her. But at the same time I wasn't sensing, intuitive empath, any deception. Skipping later on, over weeks, I started studying online, looking at ancient Sumerian websites for mainstream science, looking, trying to verify what she said. And I-- I was shocked.

DW: So you're looking at words in Sitchin's books and what he says they mean, and then looking at the actual online translations of Sumerian.

CG: And actually, story lines that just don't exist.

DW: Wow.

CG: And just don't exist. And--

DW: So if that's true, then that means that we've been sold a bill of goods, if we combine what Antonio said, it's the Cabal, the secret Earth government syndicates, just like with the William Shakespeare plays, where they're actually leaking royal scandals from that era in the British Royalty, into these plays. And Shakespeare was illiterate. He could only sign his name with an X. It was actually probably Francis Bacon and a bunch of others.

CG: Right.

DW: Queen Elizabeth's illegitimate son. This is like the same thing again. Sitchin is just the front man for a team of writers.

CG: This was just a little way to open up a huge conversation that just has blown my mind, with her.

DW: So this is still just the beginning?

CG: Just the beginning.

DW: Wow. OK.

CG: Because we got into--

DW: Well, we got time. We'll do more episodes here.

CG: We got into which came first, the chicken or the egg, kind of thing. Because I asked her, I was like, we've talked. You've talked about how many, many hundreds of thousands of years ago, a group came into our solar system and started messing with

our genetics. And your people called them a genetic farmer group. So doesn't that match what these texts are saying?

How-- you know, how can you be the first humans on the planet? Who created you? You know, who genetically developed you? Were you brought here from another planet?

And that opened up a whole other area. And she says, well, doesn't that get you to start asking questions, who engineered the engineer of the engineer of the engineer? At some point, there has to be some sort of an original being that wasn't engineered genetically. And how did they come about being?

So I'm sitting here, my mind's just-- my grapes just went, tt, tt, tt, tt, tt, you know?

DW: OK, but a couple basics. Sitchin's saying Anunnaki were extraterrestrials. Came to Earth mining gold and created a primitive worker called the Adamu, which becomes Adam in the Bible. True or not true, according to her?

CG: Not true according to her.

DW: Really.

CG: No.

DW: That whole narrative?

CG: The whole narrative.

DW: Oh! That's a big adjustment.

CG: Yeah, it's a major adjustment that-- out there, don't take my word for it. There's plenty of information to go out there. I had to go and do the research for myself. There's a website, Sitchin is Wrong, that has a whole bunch of information. The person that has the site definitely is biased in certain areas. But there's a lot of other information out by mainstream academics that are professionals on Akkadian and Sumerian, that have looked at all of these tablets. And the information, when I looked at it myself, I had to come-- I had to come to the conclusion that they were correct.

I'd started to ask, what did your people first think, before you all became an advanced civilization-- how did you all come about? And she said that we believe that the Earth is sentient, is a sentient life form. The sun is a sentient life form, and that everything in the cosmos is a sentient life form. And that the Earth was a sentient life form, and that each of us are an expression or a sentient life form that comes from the Earth, and

that we would live and die and return to the consciousness of the Earth. And that's what our root belief system was when we were developing civilization. And I was like, that's interesting.

DW: Yeah, that's cool.

CG: And then she started talking about how the solar system and the galaxy are sentient. And they are a creative, sentient life force.

DW: Just like the Law of One says.

CG: Well, if I haven't read all of that. But I told her that I've heard the term "logos" used. Is that an accurate term? And I'm not exactly sure the full ramifications of what the word "logos" mean, but I've heard that used similarly to what she was saying.

DW: Right.

CG: And she smiled and said, that's as good a word as any.

DW: And that word is all over in the Law of One, describing that intelligence of the cosmos, intelligence of the sun. In fact, they say the One Infinite Creator, the intelligence of the universe, is the logos, that there's a galactic logos, which is the mind of the galaxy, that designs an evolutionary curriculum for all intelligent civilizations in the galaxy.

CG: OK, so this goes onto what she says. To get to the point of how life comes up and how not everything is genetically engineered by a genetic engineering race that travels all over the cosmos, creating and seeding, you know, bipedal creatures.

DW: Right.

CG: She said that each solar system-- I mean each sentient galaxy and each sentient solar system have a resonant or vibratory template that drive the life form that they will create. And that depending on where the planet is in the solar system, it will determine what type of sentient life form it will try to create. And that throughout the many cycles on Earth, the Earth and the sun have kept on and kept on and kept on creating sentient bipedal life forms, and that there have been many, many, many, and that some of them have died off in cataclysms. And many of them had been killed off by us, the mixed race, on the surface, they're so aggressive. And the ones that exist now exist in solitude in regions of the Earth hiding from us.

DW: Well, I guess if you're actually not going to read the Law of One, that the Sphere Beings will introduce you to people who will explain it to you.

CG: Yeah.

DW: Because that's all in there. And you haven't read these books yet, but that is exactly what it's saying. There's subtle differences. They don't really go into detail about previous human civilizations on Earth. But the bulk of what you just said is what the Law of One teaches, that the human form is the logos. That it's the embodiment of the logos. The logos made flesh, the word made flesh. Logos and word are the same thing.

So you look in the book of Genesis. In the beginning, there was logos. And the logos was God, and the logos was with God. And in the Law of One, that seems to be implying the logos is the mind of the cosmos and the mind of the galaxy, and they're one, but they're also distinct from each other. It's very interesting stuff.

CG: We had a little bit more of a conversation. We were sitting at a table, at a corner of a table. She was sitting and I was sitting, having this conversation. And then after this, we finished the rest of the tour, to where we were done with the library level. She took me down to the second level to where people were reaching out with their minds to people on the surface and having communications with each other in group sessions. And then below that was what they called their Hall of Records.

DW: Cool. So let's get back to this logos thing for a moment in the short time we have remaining. Because I want to point out a couple of things the Law of One said that are really interesting.

First of all, they say that the sun is indistinguishable from the consciousness of the galaxy, that the sun is the logos. Then they say that the planet Earth is a sub-logos. And then they say that we, as human beings, are sub-sub-logoi, meaning that we are also-- it's like the principle of a fractal, where you can zoom in on it, and you keep seeing the same image repeated as you go in more and more. You just zoom in, and you keep seeing the same pattern.

And so in the Law of One, they explain the universe is like that, that it's the same embodiment of the same cosmic mind that ultimately made everything, and that we are that mind, that any one of us has enough power within ourselves to reconstruct the entire universe. And I think we've been greatly disempowered. The degree to which we are wired into the cosmos has been very carefully occulted from us.

Now, did these people say that there was any truth to the Sumerian tablets at all? Were they the Anunnaki, in fact?

CG: She said that the Sumerian tablets were an extremely accurate scribe history of the time and should be taken fairly literally. She said that some of the Sanskrit writings had some of the more interesting information about some of the things that happened above the Earth and in the stars.

DW: So that would be, like, the Hindu "Vedas," the "Vendidad," the "Mahbharata?"

CG: Right.

DW: OK. That makes sense.

CG: She said some of that information had a lot more-- we had a conversation about ancient myths, and then how the surface people, how we are with our myths, that we create our current myths. We have our ancient myths. And some of the myths are very historical.

DW: Well, and you see images of Krishna and he's got blue-tinted skin, and you're saying one of the groups that you saw down there had blue-tinted skin.

CG: Mm-hm.

DW: So those wars that we read about in the "Mahabharata," in the "Vimanas"-- which it does say, in the "Mahabharata," they can fly right through the side of a mountain, just like you saw-- this could have been the same people at that time warring it out on the surface.

CG: And she-- the council, their group, had talked about, they had open conflict with these ET races in the skies that all of the Earth humanity saw through different cycles, including our current accepted Earth history cycle.

DW: And this gets into blond-haired, blue-eyed Greek gods on Mount Olympus which could apparently lift off the surface of the Earth and disappear.

CG: Right.

DW: Wow. So we're going to come back next time, because obviously there's more to discuss with this. We're going to get into the rest of his experience with the tour-- including, as you were saying, this very bizarre scene that you kind of alluded to in the write-up, about people sitting in chairs and telepathically influencing folks on the surface. And the Hall of Records, which I have never heard you describe before, so I'm very interested. I am on the edge of my seat. That's coming up next time here on "Cosmic Disclosure." I am your host, David Wilcock, and I thank you for watching.

Inner Earth - Into the Hall of Records Season 3 Episode 7

Cosmic Disclosure; Inner Earth - Into the Hall of Records Season 3, Episode 7

17 Feb 2016

DW: Welcome back to "Cosmic Disclosure." I'm your host, David Wilcock, and I'm here with Corey Goode. This is a pretty big set of things to drop on people. There are certain, as we've said, UFO religions that involve people, first of all, taking Zecharia Sitchin as if he's like the prophet and revelator of Jesus Christ, so to speak, except he's a prophet revelator of the Anunnaki as being extraterrestrials that mined gold on Earth, may be a primitive worker of the Adamu that the Epic of Gilgamesh is actually the story of Genesis of Noah's Ark just kind of shortened down. And people, now, then take that as absolute truth.

Now, you said you actually looked up the words that Sitchin was saying meant certain things on your own. You did your own homework.

CG: I did.

DW: And what happened?

CG: Over three weeks.

DW: What happened?

CG: It was not matching up, and it was working out exactly like the scholars were saying on the internet it would. And there was no talk at all of mining gold.

DW: Really?

CG: There was no their there.

DW: All right. Well, one of the other things Sitchin says-- let's just get our hands dirty here. He said that he surmised that there was a super Earth that he said the Sumerian tablets called Tiamat that was destroyed and became the asteroid belt. And you did say that this priestess told you, and others in the Alliance told you, that there were surviving human civilizations from planets that were destroyed in our solar system.

CG: Or made uninhabitable.

DW: OK. And you also said in the previous episode that the priestess said that the actual data in the Sumerian cuneiform is remarkably accurate if it's translated

properly.

CG: And looked at literally and not looked at and made into what you want it to be.

DW: Tiamat. Was that a planet that was destroyed and the survivors came here? Is that part correct?

CG: Yes. There was a planet, according to also them, at one time, that was a super Earth that existed in the area of the asteroid belt.

DW: OK.

CG: Well, let me get back to the conversation I had with her.

DW: Sure. Sure.

CG: She talked about-- she went into deeper context about billions of years ago--

DW: Billions with a B. OK.

CG: B. There was an ancient race called the Guardians that had long since left our frequency. And according to her, them, this was the same race that the Secret Space Program calls the Ancient Builder race.

She said that the Guardian-- it's hard to call it what they call it, but she said this Guardian race were extremely advanced and powerful, and protected this region of the galaxy, these local star clusters. And there wasn't any different ET or other groups that would think of violating their territory, their space, and that even after they had left this frequency, they had types of energetic barriers that protected their zone that was theirs.

Inadvertently, these groups on these other planets in our solar system that were native to our solar system, they didn't come from somewhere else. They grew and developed on these planets here. They were very aggressive, very technologically advanced. Somehow, their weaponry, or whatever they did something very cataclysmic that destroyed, did massive destruction to a planet, and also energetically brought down this massive protective field.

And in doing so, it sent out a beacon across the cosmos that, at that time, all of these ET races then started rushing in to their space.

DW: Now, you had given an estimate from the smart glass pads before about when the Draco arrived, and I think you said it was 375,000 years ago, roughly, that they

told you.

CG: I've heard 340,000 and 370,000 years.

DW: 370. OK. So that fits in with the timeline in the Law of One about when this super Earth was destroyed.

CG: Right. And also around 500,000 years ago, there were other groups that came here before the Draco. The Draco weren't the first.

DW: OK.

CG: Then these groups came started coming in that her people referred to as genetic farmer-type groups, and they came in and started taking survivors from these other planets and moving them to Earth as refugees, and that's what started to cause all the massive problems here on our planet and in our solar system. That was the beginning of all of these huge genetic and other experiments that are not just genetic. The spiritual. All kinds of experiments that they're doing.

DW: So mass immigration was able to occur once this protective quarantine went down.

CG: Right.

DW: And everybody starts playing around, farming, moving folks around, experimenting on them. So some of these Super Federation folks got here all the way back then?

CG: Right.

DW: And this great experiment that they're doing. That's where this all started?

CG: Right. According to these people.

DW: This is connecting a lot of dots. It's very interesting.

CG: It was connecting a lot of dots in the smart glass pads too, but you know, this was coming from people that had admitted to deceiving people on the surface, to believing they were ETs and gods. So I was keeping my critical thinking cap on, but so much was matching, so many dots were coming together, it was just blowing my mind.

And she then said that everything changed after the return of the Guardians.

DW: What are we talking about?

CG: They call the Sphere Being Alliance the Guardians. They refer to the Sphere Being Alliance as the Guardians.

DW: Well, that's huge, too.

CG: She wanted to know why they have been reaching out with their minds to the Guardians, and the Guardians have not reciprocated the communication. And their people wanted to know why-- why they wanted an audience with the Guardians.

DW: Their people? I don't understand what you're saying.

CG: The Inner Earth people wanted an audience with the Guardians.

DW: OK? They wanted to know why they were being rejected.

CG: Well, yeah, or not acknowledged. Not even acknowledged.

DW: Yeah, that's got to hurt.

CG: The same thing that was happening to the different ETs, and the Secret Space Program, and the secret Earth governments.

DW: And then along comes, in Harry Potter terms, this mudblood mixed guy, and he's the only one they're going to talk through.

CG: Right. And then I told her that they had said that there are many ET groups here that are positive, but they are still a certain percent service to self because they have agendas. And that didn't set well with her, and she said, well, wouldn't that make the Guardians service to self? I said, what do you mean?

She said, they are here on an agenda. They are here on their own agenda.

DW: In Law of One terms, they have direct access to the Logos like you're accessing the internet, and they're following its will.

CG: Well, I didn't have an answer for her. And I said, in what way? And she said, those of the higher frequency are being-- they have residual connections with those of us back in the lower frequencies, and they cannot progress back to source. We're like a parachute holding them back, and that they have to come back and help us progress before they can move forward. So they have an agenda too.

DW: It says in the Law of One that they cannot go from sixth density to seventh density, the group doing the channeling, until every person on Earth has transitioned into fourth density because of the mistakes that they made building the Great Pyramid, thinking it was going to be a tool for ascension, and then having that object and the religions associated with it getting co-opted by the elite and turning into what most people call the Illuminati.

CG: So I didn't know how to respond to her to that.

DW: Well, next time, bring me down there, bro. If they'll let you, I'd be happy to explain.

CG: We talked about a few other things. I didn't understand. We talked about the wheel of karma and about how her people have not fully accepted karma. And I thought that that was kind of an oxymoron.

DW: They don't acknowledge that it works?

CG: Right.

DW: Really?

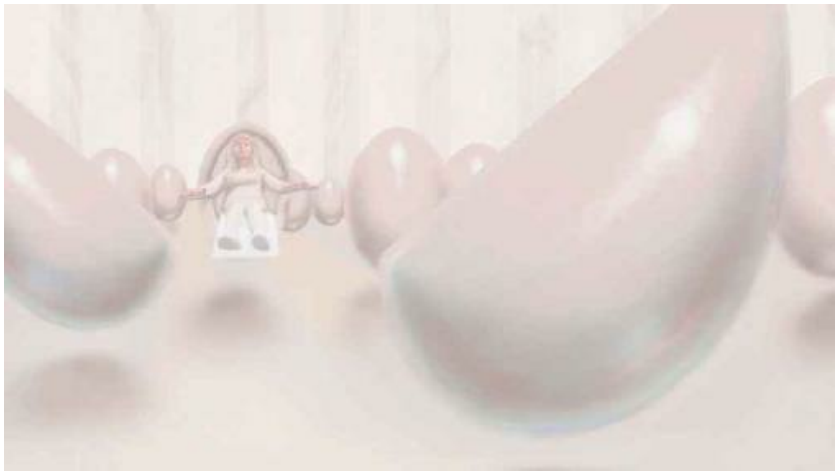
CG: And we kind of got into a conversation about that. You know, how could you not understand karma? You should kind of see karma in your life right now.

DW: Well, now these people sound more in Law of One terms, more like fourth density than third density.

CG: They claim to be fourth density.

DW: OK. So then that would mean that, like, in Law of One terms, third density's 100 times more intense karma and suffering than fourth. So you could go a lot longer in fourth without actually seeing the results of your karma, whereas in our reality, like John Lennon said, instant karma's going to get you. So they might not be experiencing that. It's very interesting.

CG: Yeah. So pretty much, we had gotten to the end of our conversation, and we got up and we were leaving, and she said she wanted to show me the next two floors of this library area. And we walked downstairs for this. The next floor was this huge area of those egg-shaped chairs, and there were a lot of people sitting in them. Some people reclined, some people sitting in circles.



DW: As in hundreds of people all together, maybe?

CG: A lot.

DW: OK. Many hundreds.

CG: Yeah. There were a lot.

DW: Was it noisy? Were people talking?

CG: No. It was completely silent.

DW: Really?

CG: And we walked right from one end to the room right down the middle to the other end of the room.

DW: Was it all open, or were people in little rooms?

CG: It was all open.

DW: Really? Just one big, huge room and everybody sitting in these--

CG: Right.

DW: OK. Wow.

CG: And she was telling me-- we were communicating telepathically. We're interfaced. We're not verbally talking. She was telling me that all of these people are sitting and waiting to receive communications from humans on the surface that are reaching out with their mind, or they are reaching out to people or are having an active communication with people on the surface.

DW: So you're talking about channeling.

CG: Right.

DW: Wow.

CG: Telepathic communication. And then there was another area to where there were people sitting around, and she said that they were having a shared experience to where they were viewing information from either the library's Hall of Records and having kind of a telepathic teleconference together, viewing information and discussing it while in a reclined state.

DW: Something that we rushed through before on this show, but people who read your report of part 1 would have remembered seeing is that when Gonzales gave his little speech to the Inner Earth Alliance, and then they came up and all started taking shots at him, one of the things you said they said was that they were going to deliberately disinform the contacts they were in touch with on the surface telepathically because of you guys learning this information and them being forced to give it to you by these Guardians that have showed up.

CG: Yeah. They said that they've had a lot of the people they're in contact with starting to question them, and that they were coming up-- they were going to have steps communicating with those people, telling them they were special. Other people were communicating with tricksters. They were not happy about us exposing them.

They think that that program that they're doing is essential for helping humanity spiritually to overcome certain programming, and it is essential for also them strategically.

DW: So it's like operational security, same thing that Cabal does with seeding disinformation to try to protect their secrets. Wow. Now, anybody who's been following you online knows that it seems like every weekend you and I are exchanging e-mails about this all the time.

We're definitely not going to name names, but there's a flavor of the week channeler

who keeps popping up trying to co-opt all the stuff you've been telling me on the show. But then they wildly change it all around, and rearrange everything, and try to blend it into their story. It seems like every week somebody's doing this.

So are they telling you that these people, or at least some of them, are actually being influenced by them to make up these stories? To try to cloud the truth with disinformation?

CG: Yeah. I'm not saying that all channeling is corrupt by any means, but the vast majority is interference and people feeling that they're special, overconfident in their spiritual strength and abilities that are connecting with the subterranean beings.

DW: Well, it's also--

CG: And these subterranean beings, they have quite a bit to offer if they just communicate with people as who they are and give a lot of the spiritual information. They just don't want to give up that they're below the surface and have us come down there looking for them.

DW: So what are these groups telling people? What is the-- if they're talking to people on the surface, they're not necessarily giving them truthful information.

CG: Well, they're approaching them as ascended masters, ETs from different star systems, sometimes as religious icons from the people's belief systems, and passing on positive information.

They're not giving them negative information that's trying to hurt them, they're trying to help people overcome what they see as our negative genetic and environmental programming to become better and to help start changing society from afar, remotely. Remotely influencing.

DW: Do they have the ability to create, for some folks, like a holographic apport, or image of their form or the form they choose to project?

CG: They can create all that in your mind.

DW: Right. Because you read some of these books, people say they've seen ascended masters, and they're describing what appear to be in-person contacts or apparitions, so they do have that technology.

CG: Right. And a lot of times, it's a shared thing to where people are contributing to the experience. The people are contributing a star system that they're communicating with, they're contributing a religious icon that they're talking to. It's bi-directional

communication. So the people on the surface that they're talking to are also contributing to this shared illusion.

DW: So these folks feel like they're seeding a more spiritual perspective into humanity.

CG: Remotely, yeah.

DW: And that the good outweighs the bad in terms of the ultimate goal of what this is all about, to reduce our aggressiveness, to sort of vibe up the planet.

CG: Yeah. And to protect operational security, to protect their cultures, and keep us from coming after them.

DW: OK.

CG: Now. So basically, that's pretty much all to report other than the last floor, the Hall of Records. And this is going to tie-in something very important.

DW: Great. Let's get right into it.

CG: When we went down to the bottom floor, we couldn't go in. It was very bright.

DW: What do you mean you couldn't go in? Was there a barrier?

CG: We couldn't go in. It was a complete, like, dome all the way down to the bottom. Nothing flat. It was a complete dome, and you could see in through, like, a window, but there was no glass. But there was some sort of field there.

DW: So the floor of the dome was below where you were standing?

CG: No. We walked up to the dome on the bottom floor, but we couldn't go inside because it was extremely hot, and almost like a clean room, they had it totally regulated. People couldn't go in and out. And inside the room was a single crystal just like the crystal from the crystal cavern.

DW: That you talked to when you were 11 years old?

CG: Right.

DW: Wow.

CG: They had it in a state of trying to get it to grow.

DW: To grow?

CG: Yeah.

DW: Wow.

CG: And the information that was in that crystal, people were telepathically connecting to in the floor above as well.

DW: Isn't that something? What was she saying they were getting out of it? Did she tell you what was the information inside the crystal?

CG: No.

DW: Ah.

CG: No. She showed it to me, told me that it was in the process of growing in the chamber, that they were drawing information from it, and now I see why my experience was so important to them to share, and that experience is going to be shared with all of the people.

DW: It's also very interesting just that the raptor is-- it's like the archetype of the dragon guarding the virgin and the treasure. The raptor, these nasty, bird-like reptilian are like the dragon, and the treasure is like the crystal, and you happen to get in and see the treasure, and this is all they wanted.

You said that they told you this is like the only thing that we mixed bloods have to offer them was your experience interfacing with this crystal that they can't get to because these dragon-like raptors are guarding it.

CG: And Gonzales told me that that wasn't true, that they needed us or they wouldn't have approached us.

DW: Well, if they can't talk to the Guardians themselves, then obviously, they need help.

CG: So after this, it's fairly easy to wrap up. She said that the others were returning from their different realms, that we needed to return for the cleansing ceremony again. This one was much more embarrassing.

DW: Much more embarrassing?

CG: Much more embarrassing. Each person-- there were people standing in the water this time and cleansing you.

DW: Really?

CG: Yeah. You'd stepped up into the water, and they cleansed you.

DW: Sort of like flying through the TSA.

CG: Right. So I was--

DW: Except with no clothes.

CG: Yeah. I disrobed, stepped up, was cleansed, and stepped down, dried off, put on my original clothes.

DW: Was it all done in a very ritual, ceremonial? OK, I figured. Yeah.

CG: Put my clothes back on and walked back out, the room where the priestess was, and she walked me to about 20, 30 feet away from the center of the room. We said our goodbyes, and I walked to the center, flash, I'm back in the living room.

DW: Wow.

CG: And there was a time dilation effect involved with there, too, in that situation as well.

DW: So you left and come back pretty much spliced in side by side.

CG: And I was gone a long time.

DW: Where do you think this is heading? Have you had any further contact,

telepathically or otherwise, with this priestess or with these Inner Earth people since this first meeting?

CG: I've been spending so much time up in my head with this information. A lot of this stuff, I was looking up on the internet trying to verify, especially a lot of this ancient Sumerian Zecharia Sitchin stuff. Very little of this stuff that's on the internet that you can verify, but I wanted to verify what I could. And the rest, I've just been-- I sit around and I've just been blown away, and thinking and thinking about it, and it's changed me. It's been a very life altering experience.

DW: You also reported off-camera-- maybe on camera, I don't remember-- that you've had a lot more intuitive things happening since this occurred.

CG: Yeah. Just about everyone I've been hanging around, I feel their emotions, and what they're thinking, and what they're feeling, you know, and it's been very strong. I don't know if that's something that was enhanced from my connection, that mind meld with the priestess and is something that will wear off over time, or if that is just some new change.

DW: Phew. Well, this has been quite something.

CG: Yeah.

DW: We have a lot more coming up here. I've actually gone through and looked at all the things that he and I have talked about, and there's a lot more content still to come here on "Cosmic Disclosure." I'm your host, David Wilcock, and I thank you for watching.

Inner Earth - Debriefing with the Alliance Season 3, Episode 8

Cosmic Disclosure; Inner Earth - Debriefing with the Alliance

Season 3, Episode 8

25 Feb 2016

DW: All right, welcome to "Cosmic Disclosure." I'm your host, David Wilcock, and I'm here with Corey Goode. And we are following up where we left off in the previous episode with this astonishing journey that he had to the Inner Earth. Now, Corey, after in the last episode, we described that you were portaled out from the Inner Earth and you end up back in your living room. But obviously, Gonzales wanted to know what the heck was going on in that library that he didn't get access to but you did.

CG: Right.

DW: So what happens next? You said that you got spliced back in to the time that you left when you ended up back in the room.

CG:: Right. Within probably less than 24 hours, I was contacted by Gonzales. And we met locally.

DW: In person.

CG:: In person. And had one of our discussions over a beer and talked tentatively over a lot of the stuff that went on. He was giving me some new intel finally about a lot of the things that were happening in the Earth Alliance, a lot of things that were not going so well, things that were falling apart, and that there was going to be a big SSP Alliance Council meeting and briefing that I was going to need to be a part of to discuss the part of the meeting that he wasn't at, which involved the library.

DW: I'm curious on a personal level and also for the show, what is the problem with the Earth-based alliance? We know that there's a significant Eastern component to it, right?

CG:: Very much.

DW: It's coming out of China and Russia. So does it have to do with China in some way? Or what are we dealing with here?

CG:: The Earth Alliance is made up of many dozens of small groups. Some of them are even militia groups. But the vast majority of them are some Eastern secret societies and groups that have a lot of clout and access to a lot of physical treasure and

information.

DW: Now, one of the things that a lot of people don't seem to realize is the Chinese alone are holding $4 trillion in US bonds. And if they decided that they got a wild hare and wanted to trash the US economy, they totally could. And that apparently has been one of the threats that they've been using to try to get things to change. They don't want to destroy the US economy because that's where their economy lives off of. We're the ones buying their products.

But at the same time, they're holding a very powerful card there with that $4 trillion of our asset base, which is more than we have. They basically now control the wealth. It's just that they're not getting representation in the World Bank and the IMF for voting rights.

CG:: A lot of the same people from IMF are now power brokers in BRICS.

DW: OK. That's what happened after the AIIB, the Asian Investment Infrastructure Bank, got started.

CG:: Exactly. So what has happened with the Earth Alliance and the Space Program Alliance don't have the exact same agenda. They have the same overall goal.

DW: Do the people in the Earth Alliance know that there's a Space Program Alliance?

CG:: Not all-- some, yes. And they've met. There's been a sharing of information. All of the data from the data dumps, the high level Earth Alliance have the same data to be able to dump it as well. It's like redundancy to have the information with both parties. The thing that's occurred is that the Earth Alliance has been heavily infiltrated, which is what these so-called Illuminati groups, they're masters at infiltration and then causing groups to split apart.

DW: When the Asian Infrastructure Investment Bank was first announced, which was July 29, 2014, or June 29, 2014, nobody expected like 30 of the top Western countries were going to suddenly jump in. But that's what occurred. So you're saying this is where some of this penetration from the IMF into the Alliance started, the BRICS alliance part started to take place.

CG:: It's occurring on all levels. The West had the 100 year Federal Reserve System. Now the East, they want their 100 years of a new financial system that they say is going to be more fair and more representative of the entire global economy.

DW: But if we release what you were calling replicators, we're not going to need money. So why do they want to have a financial system?

CG:: They do not want what the Secret Space Program wants to occur yet. They want it to happen down the road. They do not want-- they have seen all of the data from these data dumps. They have shared it with some of the Cabal people who have freaked out.

DW: They shared it with them?

CG:: Yes.

DW: That's high treason, man.

CG:: It's infiltration. And some of these heavy duty Cabal groups want World War III more than ever now.

DW: As a deterrent to this coming out.

CG:: Right. A lot of these other groups have been convinced that the data in these data dumps is irresponsible to drop on humanity all at once, that it should be spread out a 100 year time period, and that we should move to a new, more ard-- fairer financial system, Babylonian, that will still be a Babylonian money magic system, but more fair that'll be run by the East. During this, they'll release some of these technologies and some information, some disclosure about ETs, some disclosure about certain things but not let the full genie out of the bottle somehow.

DW: Well, I don't mean to insult the Earth Alliance, but this sounds a lot like when my brother and I would fight over a piece of pie. No yours is bigger, no yours is bigger-- I want. And fight over who gets to sit in the front seat in the car. That's not really the mentality that's going to get us through this planetary crisis where our ecology is threatened and where the oceans only have a few years left, the air only has a few years left. We can't go on using fossil fuel burning technology if we are going to survive.

CG:: Well, that's the problem. They're not a full united entity. They're a bunch of rogue groups that are loosely working together for world liberation.

DW: So they agree on that the Cabal has to be stopped. But after that, there's a lot of variance.

CG:: Disagreement on what comes next. Some of the Earth Alliance do want what the Secret Space Program wants, which is a full disclosure event, tribunals, and then full release of technology to all of humanity and then a transitional civilization to move forward.

DW: Well, there's going to be upsetting information, but everybody wins if that technology comes out. It's like forget about 100 years. Everybody wins.

CG:: Not everybody.

DW: What do you mean?

CG:: Those in control or who want to remain in control don't win.

DW: Yeah, I guess if you could look at it where in a transparent system, there's no reason why all the different aspects of government and where the money goes and how decisions are made, it could all be transparent and put on the internet. There's no reason for it to be hidden, although democratic rule sometimes could lead to bureaucratic inefficiency. Nothing ever would get done because any one person who's got a vociferous opinion could try to sway the whole thing, and it gets bogged down by committee. I was on a board of directors for an interfaith church where that happened. Everybody wanted to have a unanimous vote. You never get that. So nothing ever gets done.

CG:: So there's a huge fragmentation problem with the Earth Alliance, and a lot of people that once who we thought were united with one goal who are now kind of pulling apart saying, well, we're kind of liking this idea of a prolonged change in society and a slow release of information. It sounds more healthy. It sounds like a more responsible thing to do. They're rationalizing.

DW: Are there Islamic aspects of this alliance, like the Sufi Mystery School, things like that?

CG:: There are members of every part of society involved in the Earth Alliance.

DW: All right, so Gonzales is telling you that there's fragmentation in the Earth Alliance. And then what?

CG:: And that there has been some fragmentation in the SSP Alliance.

DW: Really?

CG:: The Alliances have been suffering. A lot of it has to do with these energetic changes that are occurring in our solar system. People are having problems acclimating. A lot of it depends on your spirituality, your polarity, what type of person you are, how you're going to handle these energetic changes.

DW: Well, to use Richard Hoagland's oft-quoted quote, "the good are getting better

and the bad are getting worse."

CG:: And the crazy are getting crazier. So we covered that. They said this is going to be a topic in the debrief or the briefing, and that they wanted to hear from me, and that there are some people that were upset that I was alone at the library, and they have to rely on what I say is truth about what happened.

DW: Couldn't they inject you with scopolamine or something then try to extract the truth out of you?

CG:: That kind of stuff is what caused a major rift between us to begin with. No, that was not an option of them to do. But they have intuitive empaths there that are supposed to be able to read any type of deception on my part. But a lot of it is just ego, elbow throwing kind of stuff.

DW: Well, and their goose would be cooked if it wasn't for the Sphere Beings giving them logistics and the intel to make this possible in the first place. So if the Sphere Beings are having you and Gonzales as their delegate, then sorry if you don't like it, but the alternative is they're not getting the support that they need to be able to make this happen.

CG:: And they've been told to stop all offensive activity. No more bombing, no more shooting, no more attacking.

DW: Because these facilities that have been built are going to be turned over to humanity.

CG:: This infrastructure, this huge infrastructure that the ICC Secret Space Program component built is planned to turn that over to humanity at some point, to be the foundation of our new "Star Trek" type transitional civilization.

DW: So they didn't like the fact that you got this information and they got to rely on you to tell the truth. They don't know whether you're going to be lying.

CG:: Once again.

DW: Same story.

CG:: Same old story. So long story short, predetermined time comes, I'm brought to a different base.

DW: This is the Blue Sphere method again.

CG:: Blue Sphere method, brought to a different base, one of the--

DW: Off-planet base?

CG:: Mm-hm, one of the Kuiper Belt bases. And the room is full of the SSP Alliance Council.

DW: Just give us a brief sketch of what this room's going to look like if we were there with you. What would we be seeing? Is it dark? Is it bright?

CG:: It's well-- it wasn't a hugely bright room. It wasn't dim. It's somewhat like the lighting in here. It was not an amphitheater, but it was flat in the front and kind of like a piece of pie going this way around it in the back. And that was the only room I was in.

DW: Like a college lecture hall?

CG:: Right. But it was all flat. It wasn't angled down. And they were all sitting.

DW: How many people?

CG:: Over 60.

DW: Did you recognize anybody from some of the other meetings?

CG:: Yeah. Yeah. Some that I had gotten into it with, and we had kind of awkward forced apologies and shaking hand makeup kind of situations.

DW: And once again, you get the full spectrum of races on Earth in these folks.

CG:: Right.

DW: Indians, blacks, whites, Asians.

CG:: Just like in all the other meetings. I'm brought there, Gonzales was already there and waiting for me.

DW: And you're put in the front while everybody else is sitting and looking at you.

CG:: Front to the side. Nobody's in the front. And I sit down and a few people talk. They're talking about the different fragmentation and the Alliance, different things going on. Some of the things I shouldn't really talk about. And then they wanted to have the debrief of me and what happened at the library and the hall records and all

that. So I get up, and then I give them my debrief, my briefing, and immediately I start getting asked questions or comments start coming out. Isn't it interesting that all of a sudden these subterranean groups are wanting to talk to these Sphere Beings and that makes you all of a sudden more valuable?

Like, I was creating a narrative that made me valuable.

DW: But they've got intuitive impasse that could tell if you're confabulating a story.

CG:: They were being jerks.

DW: They're trying to pose you as if you're trying to write yourself back into the storyline where they're trying to edge you out.

CG:: Being opportunists.

DW: And these are some of the same people you had words with before that were saying this stuff?

CG:: Right.

DW: Interesting. Well, it's the way they think. They're all coming out of a Cabal background. They've always got-- they think everybody's got an angle, everybody's got a service to self-agenda.

CG:: Like what I said, you can tell a lot by a person when they accuse you of something. They're showing you what they would do in the exact same situation, because people overlay the way they think and feel and what they would do unto others. So basically, I gave the full report that I gave in the last episode. And they brought Gonzales to the front, and they talked with him about him making contact with the Sphere Alliance.

DW: Did know that the Sumerian story was altered by the Cabal, that Sitchin was given false information?

CG:: They were not shocked.

DW: Oh, really?

CG:: None of them seemed to slide around on their chairs or shocked at all.

DW: Did they understand that Inner Earth beings were posing as ascended masters and influencing people's channeling?

CG:: They knew that this is something that I've talked about for over year a now. I looked back on my forum postings, and I saw the first time I start talking about it was December of 2013.

DW: Were they aware of these Inner Earth folks had books from the surface of the Earth that they were studying?

CG:: No, but they weren't surprised.

DW: So you didn't really give them anything they didn't already know then?

CG:: Right.

DW: But somebody like Gonzales maybe would have gotten more out of the library than you could have based on his background and training, which probably pissed them off.

CG:: Right. He would have gleaned more intelligence out of the situation than I did. The information about the Guardians being the Ancient Builders, being the Sphere Being Alliance was new to them and made them sit up straight and got their attention though.

DW: Well, and you got the Blue Avians when they say, when those people from the Space Program Alliance asked them, are you the Ra that channeled Law of One. The answer was, I am Ra, and then the rest of their name, which is exactly how Ra introduces themselves after every question in the Law of One. So this all threads together beautifully.

CG:: The Secret Space Program Alliance, a lot of them are not buying into the becoming more loving, forgiveness, and all that message. And a lot of them are having difficulty with the natural law, Law of One type of concepts. And certain groups of them that don't like the idea that there are an indigo or blue bird-type of being that's communicating. There's some issues going on within the SSP Alliance about what's happening with--

DW: Since they have, on the smart glass pads, access to this information that later groups came in and scratched off all the written descriptions of Ancient Builder race, and we know that these groups that came in later were more negative. They were making war, they were genetic farmers-- wouldn't it stand to reason that they would be obscuring the records that would show that this original Ancient Builder race was far more positive than they were? Isn't that a logical conclusion?

CG:: Yes.

DW: So you gotta just use logic.

CG:: And just on Earth, kings come in, and they scratch off the names of previous kings or rulers or people that owned or had dominion over the land that they now control. Like, monuments may still stand, but they'll be scraped off glyphs and script.

DW: So what happens after that? They're interested in the fact that the Ancient Builder race might be the same as these Guardians, i.e. Sphere Beings.

CG:: So they talk to Gonzales, and they want Gonzales to confab with the Sphere Being Alliance and do what they can to arrange some sort of meeting or exchange between this new Inner Earth Council and the Sphere Being Alliance because this new council was seen as a very positive thing, a positive new spin or change to the SSP Council.

DW: When the people from Inner Earth Alliance went to the Kuiper Belt SSP Alliance base, did the Inner Earth Alliance Council end up meeting with the same people that were in this room with you now?

CG:: Yes.

DW: OK, so they'd already met the Inner Earth folks. So now they're trying to facilitate and broker a deal using Gonzales to get the Sphere Beings directly in contact with the Inner Earth people and thereby eliminating you as the middle man, which they seem to be very keen on doing.

CG:: Well, they looked past me and ignored me and immediately started talking with Gonzales about how they wanted to proceed next.

DW: Interesting.

CG:: And leaving me out of the conversation. So you can extrapolate from that what you want.

DW: What did Gonzales say?

CG:: Well, he said as much of it that is in his control. He would get rolling or see what he could do. But as usual, very little is up to him.

DW: Anything else happen after that? Or was that pretty much the end of the meeting?

CG:: That was pretty much the end of the meeting. I received a few more details

about some of the fracturing that had been going on in both the SSP and ground-based alliances, the concerns they had, the worry about a premature release of the data dump information or it being released in chunks, and the Cabal finding a way to corrupt the data that's trying to be released. They were very concerned about what was going on with the infiltration of the Earth Alliance, who had this information, and they knew that they had been sharing this data dump information with the Cabal.

DW: Now, you said that the Cabal is desperately trying to get World War III started to throw off the effect of this data dump happening.

CG:: What was said about that was that there are several different occult sects within the secret Earth government syndicates that have prophecies that they were trying to create in Syria, of Damascus going up in smoke or in flames or something like that, that they wanted to create that they thought would send us on a new timeline or a catalyst to bring about World War III.

DW: Is that like a Biblical prophecy?

CG:: It's a prophecy that they are-- it's a prophecy that several of these groups subscribe to. I don't know if it's a biblical prophecy either, as well.

DW: Why Damascus?

CG:: I don't know. But Damascus going up in a column of smoke or flames or something seems to be something that they were working towards. And then very recently, all of a sudden, Russia comes striding into Syria. I found that very interesting timing.

DW: And it appears from all the stuff that we're seeing from insider sources and just making logical deductions that Russia is actually striking against Cabal proxy armies allegedly called ISIS. Is that consistent with data you're receiving?

CG:: Right.

DW: ISIS is not Islamic at all, or that it's just a proxy army for the Cabal in some way.

CG:: Right. Created by.

DW: Now, you said the Earth-Based Alliance is trying to withhold a full disclosure, or at least some elements of it, so that maybe the Eastern Bloc could stay in control of financial system for 100 years. But not all parts of the Earth Alliance are on board with that plan? There's others that want to see this document dump come out?

CG:: Right.

DW: Isn't it true that somebody could just do it? We have the internet, right? Anybody can post, and they can release information.

CG:: It has to be done at the right time. There has to be a catalyzing event to where all of the rest of the people on the planet are willing to look at the information. If it's dumped and then all of mainstream media says, oh, a whole bunch of crazy conspiracy theory crap hit the internet. And then they're able to shut off access to a lot of these different-- it can be managed.

DW: But that didn't work with Snowden, because you got documents that have TS//SI//ORCON, all these code numbers on them. And you got insiders coming forward and saying, yeah, we know what this is. And you got guys like Greenwald and The Guardian out of London that are endorsing these documents. I would assume a plan like that must be in place for this document dump as well.

CG:: You don't think all those people learned a lesson from that?

DW: Yeah, I mean I was told by Pete Peterson, maybe you've heard the same thing, that--

CG:: You can shut down the grids, shut down, shut down, shut down.

DW: Well, he was also told that journalists en masse were contacted by the Cabal and said, you pursue these stories any further, and we're going to hold you upside down, knock the earwax out of your ears, and that's if you get lucky. And one of the big stories that Peterson said that they had, the journalists were about to come forward with, was that the reason why they stopped sending so much power from the whole western half of the United States up these big cables into the HAARP facility in Alaska and rerouted it into Bluffdale, Utah in this new computer facility, was that those computers-- they had data, these journalists-- that the computers were crunching everybody's phone calls and transcribing it just like Siri does on the iPhone. So they had transcripts of everybody speaking. And that story did leak quietly more recently, didn't really get much press. But apparently, they were going to come out with that in a big way, and the Cabal shut them down.

So you're saying that the Cabal has tried to make it impossible for another Snowden type thing to happen again?

CG:: Right.

DW: It doesn't seem like this is going to work out for them, though. It seems like

events are going to just start to snowball and take place that are well beyond their ability to control. So could there also be perhaps some sort of extraterrestrial chess move, where they just decide to decloak a ship and everybody's gotta deal with the fact that there's this big sighting going on. You think that might happen?

CG:: There is a defense grid still on the planet. If the Secret Space Program decided to try to fly around decloaked, they would be shot down and destroyed.

DW: Oh, really?

CG:: Yeah. So this is going to have to be-- a lot of this also has to do with humanity, a lot of us waking up. And it has to do with what we've been talking about, our co-creative consciousness creating a new future and not allowing our co-creative consciousness to be manipulated by these Cabal-type powers that use our co-creative consciousness as the root of their magic.

DW: Absolutely. There's a whole lot of other stuff we haven't covered yet. So come back next time here for "Cosmic Disclosure." I'm your host, David Wilcock, and I thank you for watching.

Ubuntu & Blue Avian Message 2 Season 3 Episode 9

Cosmic Disclosure; Ubuntu and the Blue Avians' Message Part 2

Season 3, Episode 9

04 Mar 2016

DW: All right. Welcome to "Cosmic Disclosure." I'm your host, David Wilcock. And I'm here with the insider's insider, Corey Goode, who has claimed to be working with the Secret Space Program, which has a very interesting view about our future. They have technology that could eliminate the need for us to have a financial system because if you need anything, you can just hit a button, and you manifest it right out of these replicators.

The interesting thing now is with this special edition episode, we've also brought in Michael Tellinger, who was specifically named by the Space Program Alliance because his Ubuntu contributionism system, they said, is a blueprint for an entirely new way of living on Earth that will be in much greater harmony, where the goods and services that we need can come about in a loving, co-creative fashion rather than in one that involves destructive competition. So Michael, welcome to the show.

MT: Thank you, David, for that wonderful introduction.

DW: All right. Well, I want to play the lawyer for a second.

MT: Please do.

DW: I want to fan away these clouds of love that you all have been smoking.

MT: Yes.

DW: And I want to deal with some things that the haters are going to come at you with because you're going to be on trial.

MT: Oh, yeah. And David, I can say to you that I've heard this for 11 years now.

DW: Well, I got to give these guys their voice.

MT: Welcome to the trial.

DW: They can't speak through the camera. I got to do their voice for you.

MT: Yeah, of course. Yeah.

DW: Every kid in America is indoctrinated with Jamestown. The first people that came to America had this idea where everybody's going to just-- we're going to grow food, and it's going to be amazing. And what you had happened was that all these wealthy landowners came over here, and they refused to work the land. And they starved to death because, well, somebody else is going to do the work. I don't want to do the work.

So this is the rationale that we've all been brainwashed with, indoctrinated with. But people believe it, that if you don't have a competitive, capitalist system, that the need for money, the need to earn money and to procure money or else you will starve, is the only thing that lances the boil of human selfishness and greed that would otherwise make people want to live off of others and not contribute to the system. How do you address that?

MT: Well, once again, that statement comes from within a capitalist system. The moment you don't have money, where that doesn't even enter the equation, everything changes. When you start working in a structure of collaboration and cooperation, and not in competition--

CG: Or entitlement.

MT: Or entitlement, exactly. I'm entitled to people work for me and all that. This all comes-- this is thousands of years of indoctrination. This is why to deprogram the average person from the way that we think-- we're all born into the capitalist system. We're all born into what we think democracy is the savior. No, democracy is just a bullying tactic. It's not the saving grace. Democracy is part of the problem. We all believe, oh, I live in a democratic country. It's going to--

No, it's part of the problem. It's part of the lie. Capitalism, democracy, competition, the money system-- all that needs to go. Until we get rid of that, we can't level the playing field and create a united community that actually works towards a benefit of all. So to do this has taken quite a number of years, as I mentioned. I've now been doing this for 11 years. And it's been, for me personally, the most liberating journey of self-discovery. And then sharing this with others, some resonate with it instantly. Some take a little while longer. And some just constantly want to reject it.

But once people just open themselves up and absorb some of the ideas, and it starts to resonate with them, there is no turning back. It's like opening that--

DW: Oh, Michael. Hang on a second. People are going to be sitting around with their phones. They're not even going to look you in the eye. They're not going to want to do any work. They're going to just be sitting there twiddling their thumbs. This doesn't sound practical.

CG: There's going to have to be a transitional period. And a-- what's the opposite of indoctrinating a person?

MT: Liberating a person.

CG: Liberating people's minds.

DW: You can't make somebody want to do this stuff, right? I mean, they're going to do what they do. And you look at the number of people that are buried in their phones. They can't even have a conversation, look you in the eye.

CG: There's going to have to be a catalyzing event that has been talked about in the Secret Space Program, something like you talked about, a global economic collapse. People are going to be very upset. They're going to realize this has been a giant Ponzi scheme run by criminals. And all of these people that are supposedly in the democratic system that they voted for have been in the pockets of these people the whole time. It's just been a big scam.

When the sleeping masses realize this, that's going to be a catalyst for them to want to know more. And then this is when a lot of document dumps are going to happen. A lot more information is going to come out. And don't you think that's going to stimulate people to be open to new ideas?

DW: Yeah. And the Jamestown model-- let's just address that for a second, Michael. They admittedly were coming into a foreign land that they knew nothing about with a very small number of people who were all essentially unskilled, who didn't want to get their hands dirty, and who would've needed to do hard work in order to survive because there was no other way. But we're not living in that society anymore, are we?

MT: No, we're not.

CG: And a slave labor mentality era also.

MT: Exactly.

DW: Right.

MT: When slaves were being sold on the open market. Exactly. So we're living in very interesting times right now where pretty much everyone alive on this planet knows that something is wrong. If you ask the average person out on the street, are you happy with the way the world is going? Are you happy with what the government is doing for us? Are you happy with your life? Do you think this is the perfect life that you were born for? Are you living out your dreams? The answer is 100% no,

guaranteed. 100%.

DW: Absolutely.

MT: People tell you no, they're not happy with any of that stuff. So clearly, something is dramatically wrong. So the platform for departure to finding a new system has already been laid. And now we just got to present a new system. And I think we've done that reasonably successfully.

And this is why the Ubuntu movement is growing so quickly, way beyond my wildest expectations or imagination. I never wanted to start a movement or a global movement. That was not my plan. My plan was just to share some information. And this is what happened.

DW: I'm hearing a lot of beads and sandals, feel-good platitudes. I'm not hearing practical things, though. I'm just hearing a lot of philosophy right now.

MT: The practical things is what we need to get to really quickly because that's important. That's exactly what people want to hear. Great. It's great. But how do we get there? How do we get from here to there? This is why it's so important to share those practical steps with people, so they internalize it. They feel confident. It's not just yeah-sure-wow kind of stuff. Right?

So we need to recognize that the communities out there already exist. We're not going to change the system in the big cities and the metropolitan areas. That's a difficult thing to do. I believe that the way to do this is to go into the small towns and small villages where you can reach all the people. You can share new ideas with them and basically just change the way that people think about their own future and how they can start working together, and then become the model for this new way of thinking and the new way of acting and the new way of creating abundance for themselves, thriving.

How do you do this? Well, you can do this by bringing a lot of money into a small town. The other important thing is to say, we're going to have to use money to free ourselves from the money. There's no other way around it. So people that are out there and saying, oh, Tellinger, you're a fraud. You want money to create this thing. Why don't you practice what you preach and do all this without money? Stop being delusional.

The system has been enslaving us for at least 6,000 years with money. We've got to now take the system and change it so that it works for us. And I just need to come back to what Corey said earlier because I'm probably going to forget. The whole philosophy of the Ubuntu movement and the contributionism philosophy is not to

oppose anyone, not to fight anyone, not to create a bloody revolution or anything like that. Those days off violence and physical opposition are over.

We are creating a new reality for ourselves. We're taking the existing system and the energies that are being used-- the negative energies are being used against humanity-- taking it and channeling it for our own benefit and just gently converting it so that actually benefits humanity. And before you know it, it'll be serving us in ways that we can't even imagine. And I'm going to show you how. It's so simple and so quick here we can transition this.

So we need to recognize that we can create as many community projects-- and the whole Ubuntu contributionism system is based on establishing a number of diverse community projects within small communities that benefit that town. When I say community, it's either a town or a village or a community of people. And each one of those community projects is then worked. Everybody works for a few hours a week on one of those community projects.

Well, how do you do this? The thing is-- and maybe you get a town that does this successfully, and you start creating all kinds of things, from growing food to technology to anything you can imagine. But as soon as you become a threat to the establishment, they'll send the men with guns, and they'll shut you down. So that is not a solution.

And the other important thing for us to realize is that there are many self-sustaining communities around the world. Have they had an impact on the rest of the world? No. They're just running self-sustaining communities. So a self-sustaining community is really just a bigger version of me, me, me. Now it's us, us, us. So don't climb over our walls. Don't come in unless you're invited. And we're not going to share anything that we do with you because you're on the outside. We're on the inside.

And that's not a solution. This is why I stress always, we are not creating self-sustaining communities. We're creating a whole new way of thinking. We create so much of what we do that we can make it available to everyone around us, either by selling it or making it available for free.

DW: If the Space Program releases technology where you can create any material item or good or food that you want-- you just hit the button and you got it-- how would that factor in? If these people already know they have this and they're using it-- I mean, he said he loved the pot roast button when he was on the ship that he was on. How would that factor in?

Let's say we have that technology. It's given to us. There's a big disclosure. We get that technology. How would this model work with that?

MT: That's a really good question. It's something I've thought about quite extensively. And this is where individual humanness actually comes in. While I might want to use the replicator to make me a pot of whatever, I actually enjoy the art of cooking. I enjoy making a wooden cabinet because I love the smell of wood. Or I love fishing. Or I love the things or the talents and the gifts that I'm born with, to express those things. Otherwise, I might as well put a gun to my head because what am I going to do?

I believe that we are living these lives on this planet to appreciate all the density, the oxygen, the water, the gravity, to experience this planet for what it is, with all the beautiful things imbued on this. That's what we should be doing. And we are each born with very specific and unique talents. And this is what we should be doing.

So you can choose to use a replicator to make you a pair of pants. But I think you're getting a lot more joy by talking to your mother or your granny or the tailor to make a beautiful new sets of clothes for you out of a material that you helped make yourself from hemp and other materials that are biodegradable, that are nontoxic, that are recyclable, that we have created with this density, this reality, on this planet because that's why we're here, to experience this as our reality.

And then when we've had enough, then you decide what to do with yourself after that.

CG: And this technology-- he was talking about the larger metropolitan areas. A lot of this technology might help bridge the gap.

MT: Yeah. So there are some very interesting things that can happen. And so I was leading up to the fact that the community projects is the model that we're using with the Ubuntu movement and-- the critical thing-- with the Ubuntu Party. It's become very obvious to me that unless you give this philosophy of unifying people and creating a new system of abundance, a new social structure, you have to support that on a political level because right now our lives are being controlled and destroyed by politics.

And people say, oh, Tellinger, you're selling out. You're going into politics. You're becoming just like them. No. We're going into politics because we want to turn this disgusting, dishonorable, crooked, filthy part of our human-- our lives that's destroying our lives. We need to change it. By sitting on the sideline and ignoring politics, is not going to do anything. It's not a solution.

So what do we do? We have to do something about it. So we create a political party that actually says something completely different. We're going to decentralize government. We're going to shut down the Federal Reserve System and create a People's Bank as an interim that issues money for the people, tax free and interest

free. So there's no taxes, no inflation, none of that. So it actually starts serving the people to put into place, in the interim phase, all the community projects and the public works that we need so that you can release the people from their prisons in their metropolitan areas.

And they can go back to their little towns and villages because now they know they're going to find something to do because the money is provided for by the People's Bank. That's just an interim phase.

DW: Doesn't it seem like things are already kind of leading this way? Look at the number of people who will make their own YouTube videos. They know they're never going to make money on it. They'll write articles. They know they're never going to make money on it. They're writing software that's free.

And why are they doing it? Because they want to be seen as socially valuable. They want to have a social status. So do you think that this social competition or social collaboration is going to be part of it?

MT: Absolutely. Really, what you just said there, David, is critical. When you start working in your community-- and again, we're still leading up to the practical steps because I think it's critical that we get there. But when you start-- when you wake up in the morning, and you know, as Corey said, everything you need is provided for. Why? Because that's what we do as a community. There's too much food, too much technology, too much fabric, too much anything.

Everything is available in abundance. All you have to do is contribute a few hours a week towards the community projects, and the rest of the time is yours. How that will evolve, I don't know yet. But the communities will decide how that's going to evolve. But what it results in, that most of the time you have in the week is your own. And you can then express your own talents, whether you're a painter or a sculptor or a musician or a horse breeder or an engineer or a scientist.

It doesn't matter what you do. You've got the absolute ability to do--

CG: Things that make you happy?

MT: Things that make you happy.

CG: Wow.

MT: Exactly.

CG: What a world.

MT: So when you wake up in the morning with a smile on your face because you know you don't have to get up, get dressed in a suit and a tie, and sit on a train or a bus or ride a bicycle in the rain or the cold or the wind to go to a stinking job that you earn a few lousy dollars every month to pay off your mortgage, to pay the electricity, the milk, the bread, pay for your children's education so they can be enslaved in the same system, and then you start the thing over again next month.

DW: And as Graham Hancock would say, keep your brain pickled with alcohol so that you can tolerate and keep doing it.

MT: Exactly. So now you don't have to do this. So you choose which community you live in. You don't have to-- you're not forced to do anything you want. You get everything for free because you contribute a few hours a week towards one of the community projects. And that collectively makes us a very powerful labor force. I use that as a word, although that will fall off the edge very soon.

But very, very quickly-- overnight-- your community becomes a powerful labor force that no corporation, no municipality, no government can compete with. And now I've actually given you the steps. How we go from here, from today, into a community that is living in abundance and creating all this abundance for itself--

DW: What if some guy goes around raping women at knifepoint? What are you going to do with him?

MT: Well, that's one of the frequently asked questions. So thank you for bringing it up. And what I find interesting, just on that subject, is that the questions that people have been coming up with over the last 11 years shows me how equally wired we are, how the current system has wired us to think equally about the problems and coming up with the same problems, the same hurdles. It's beautiful. So now we know what problems to solve.

But the good thing about this is remember, part of the whole model, the Ubuntu model, is to move away from a centralized government. Communities govern themselves. So I don't know what my community or the community that I'm going to be in-- the community will decide. They'll set up a new legal system, guidelines as to the behavior, starting with the basic, the common law system-- do not kill, do not steal, and conduct yourself honorably.

CG: So you're not talking about, like, a centralized government ideological system in that aspect. Different regions that have their own moral compasses and--

MT: In many ways, going back to like the city-states where every community has its own set of rules and guidelines. And there's a lot to discuss, obviously. But in the

Ubuntu model, we go back to the tribal council, where the people of the community elect. And it's an open election. Everyone knows that I voted for David Wilcock to be on the council of elders. And if David Wilcock--

CG: Maybe our elders will become respected again.

MT: Well, that's what it's supposed to be. This is why they sideline our elders, and they put them in old-age homes. And we try and get rid of our elders because by the time--

CG: Out of sight, out of mind.

MT: Exactly. And you don't use the wisdom anymore. And so the community will elect its own council of elders that will then be the guides for the community. And they'll decide daily and hourly and minute-by-minute what is best for the community, not what's best for me. Although what I do is, I call this a minority-run system, not a majority-run system. And this freaks some people out. They go, what do you mean?

Because we're so poisoned by democracy and majority rule. So this is a minority-rule system. How can you say that? It's because there are far more minorities than there are majorities. There are an infinite number of minorities. There are those that look after butterflies and those that care about peach trees and the soil and the clouds and whatever, people that make sure the genetically modified stuff doesn't enter our food and all-- there are so many different minorities.

And in a contributionism system, every minority will be taken care of. Every minority will get all the tools, all the technology, all the support, all the labs, all the research, everything you need to do what you're supposed to be doing for your community. That's why you can call this a minority-driven system and not a majority-driven system, where 51 people tell the 49 people that they can't have it their way.

DW: So the cesspool gets clogged up, right? The sewers are clogged. Nobody wants to go into the sewer. What do you do then?

MT: Great. I love it. It's just beautiful, where it's just one of the frequently asked questions. It's beautiful. Who's going to shovel the crap? And the answer to that is-- normally when I do the workshops and I bring up this as a question, guess what happens? There are always two or three people that put up their hands. I'll shovel the crap. So we already have our answer.

But it goes a lot further than that. Remember, we're no longer doing this for money. We're doing this for our community, which means we're doing it for ourselves. I don't want to have my sewer clogged. So if the sewer is clogged in my community, it

means that my sewer is clogged because it's my community.

So whoever is on duty for that week to look after the sewers will go and unclog the sewers. So let's get back to what the community projects are all about.

CG: And there's people that specialize in all these different types of things that can pool all their resources together.

MT: Correct. So this is the-- we also recognize the diversity in our humanness and our community, but the unity within that diversity and the diversity within the unity. There are as many skills and talents and wishes and wants that people have as there are people. Each and every one is completely unique. Each and every one of us is completely unique.

CG: And equally as important.

MT: Exactly. Every one of those trillions of cells in your body plays a critical role in the makeup of your body. And that's what I keep reminding people. Don't think that because you think you're nobody and you're insignificant-- and that's what people do. Oh, I'm nobody. I'm insignificant.

No, you're not. In a Ubuntu or a contributionism system or a contributionist community, you are a critical part of your community. You play, everyone plays an equally critical part in the community. Doesn't matter if you're the local doctor or the scientist or the engineer or baker. Everyone's role is equally, critically important, just like the trillions of cells in your body.

So the amazing thing is that for every crazy Michelangelo or Leonardo da Vinci, there are 1,000 crazy young chemical engineers who are passionate about solving the sewage problem. And they will come up with systems to solve the sewage problem.

DW: When I was in high school, there was probably about 20 jocks who were always on the morning announcements because they'd won this or they'd won that. They were the fastest runner. They shot the most number of baskets in the basketball team. And then there was maybe 10 or 15 eggheads who kept winning all these academic things. That's the only folks you ever heard about.

Everybody else, hundreds and hundreds of kids, all marginalized. Never got any recognition, never got their name on the announcements. How do you avoid cliques and good ol' boy clubs, where the same thing starts to happen and just a few names are getting all the attention?

MT: OK. We've got to go back to-- most of the questions that people ask about how

will this work, the questions actually come from a capitalist society. What you talk about is a consequence of capitalism. Laziness is not human nature. It's one of the frequently asked questions. Oh, human nature is to be lazy. No. Wrong.

Human nature is to create. It's to give expression to your divine-- the talent that you're born with. And that gets beaten out of us in the school system. So when you change your schooling system-- which obviously we're going to have to do completely. We're not going to have a schooling system the way we have today. This is an indoctrination, brainwashing, manipulation prison camps that we send our children to.

CG: I couldn't have put it better myself.

MT: That's going to change dramatically. So when you grow up in a united community, where everything is available to everyone all the time, you're not worried about who-- you love those people around you that are coming up with new technology and new signs and a new way of making bread and a new way of mixing dough or a new way of making shoes or dyeing clothes or new materials that they-- graphene mixed with hemp. Oh, my goodness. What a great new combination.

So because you've taken the lid off, money is not a hurdle to progress. Anything and everything is possible. It's about what you do as an individual that drives you, that you'll be respected and loved for by your community. They'll love you, David, because of what you do and who you are. The moment you start driving your ego, guess what your community is going to do? They're going to say, oh. And you're going to know about it very quickly because it's all about whatever you do will benefit the whole community.

And this is where it gets really interesting, when you start understanding the impact of who we become in our communities.

DW: When I came over here from the airport, there was a lady driving the shuttle bus named Teresa for Alamo. She's got two jobs. She works at Delta, she works at Alamo. She's working 16 hours a day.

MT: Oh, boy.

DW: The only way she gets enough sleep is if she does the overnight shift, and she's sleeping from 2 o'clock to 4 o'clock in the morning.

MT: That's disgusting.

DW: She sleeps six hours at home. But when I talked to Teresa, it turns out that she went to Haiti. She had an incredible time there. The fruit was amazing. The climate

was amazing. And if she could afford it, she wants to go back to Haiti and create something like a business for all-terrain vehicles where people can drive around, enjoy themselves, do something that contributes to the common good. Anytime you find somebody in one of these dead-end jobs, if you to them about their dream, they got a dream.

MT: Yes.

DW: Everybody has a dream.

MT: It's fascinating. Everybody has a dream. But what I've found, as well, is when you start talking to people in high-level businesses-- guys that have made a lot of money in corporations and the CEOs and all that-- and ask them, so what was your childhood dream? And this is actually one of the saddest things that I've experienced, is many of the people have forgotten what their childhood dreams were. And they really have to think hard about this.

This is what the system has done to us. That's how bad it is. It has beaten us down so deeply and so badly that many of us have forgotten what our childhood dreams are. So I've started a process of probing these individuals, saying, so where did you live? And you have to take them back on their own journey. It's like a bit of a therapy session.

So you take them back. Where did you live? And where'd you go to school? And what did your mom do? And your friends? Did you ride a bicycle? And you take them back, regress them, in a way. And then they start remembering what their childhood dreams were. And you suddenly see how their life-- their whole body language and their energy changes from starting to talk to you very rigid and guarding themselves-- you're talking about a world without money. You're trying to take everything away from me.

No, no, no. I'm actually trying to give your life back to you. I'm trying to give you your childhood dreams back so you can live them out without the fear of somebody shutting your childhood dreams down and hijacking your whole life doing something else.

CG: I'm sorry--is this something that people can begin to practically implement in whatever country they are right now on a small scale? And is there a place where they can learn more about it and start communities and start to do these-- not really focus groups, but these social experiments and show others?

MT: Well, Corey, thanks for bringing that up because it comes back to the implementation. How do we do this?

CG: Proof of concept.

MT: Proof of concept is critical. But this brings me back to what happens in community projects. First of all, to set up a community project costs money. So we need money to set up community projects. And trust me, I've tried. I've tried with the limited amount of income that I make to set up these community projects in my town.

And we've set them up. But then to manage them and actually let them become successful so they bring an income, so that they start bringing abundance into the town, first with money, and then that money keeps upgrading and improving. That is where it normally falls down because as an individual like myself, I end up running out of money every time we start to get out of the starting blocks.

So this is why I need to bring it back to the political platform. And it became very clear to me because in 2014, the Ubuntu Party ran as a political party, and I ran for president in South Africa. We ended up with a million followers. That is a large number of followers.

DW: That is a large number.

MT: I know this because I have 800,000 names and cellphone numbers on my laptop of people that responded with SMS messages saying, we love Ubuntu. We support Ubuntu. So I'm not just making this number up. I can show this.

DW: What's the total population of South Africa?

MT: Well, it's about 55 million, about 20 million voters. So we had about a million followers into the elections. But this is when we learned how crooked and predetermined the outcome is. But it was very important for us to go that route, to learn and become wise from the process, to see what the next step is going to be. And that's exactly what we found.

And I found the following-- we didn't even smell the inside of Parliament, although we should have had at least four seats or five seats. And so we ended up with about 5,300 votes. So you need 50,000 votes to get a seat in Parliament.

But what that made me realize is that where the real power lies is at municipal level, at community level, in the towns. And one mayor, one elected Ubuntu mayor, will be infinitely more effective and powerful than one elected member of Parliament. Because if I win and get elected as mayor, I can implement all these philosophies in my town virtually overnight.

Why? Because I get money from government. And I can put the money that comes

into the municipality-- I can put that money into all these community projects. They'll then spark the growth of the community projects, and it just expands very, very quickly, from there. So what we're now--

DW: What if you have this big factory that's dumping industrial emissions into your river? And they got lobbyists and lawyers and all this money behind them. And this community is getting some money. But they want to stop the pollution from flowing down their river. What are they going to do about that?

MT: OK. I'm going to come to that. I'm going to come to that because you'll actually get the answer yourself once I've taken you through this little process.

DW: OK.

MT: You'll be able to answer that yourself. So we basically now are going-- in 2016, we have the South African local municipal elections. And I'm using this as the catalyst, the spearhead for the global Ubuntu movement. Now, we've got members in more than 200 countries. I didn't even know there were 200 countries. But when I read the list of where people have signed up from, I'm like, what? It's amazing.

So we need to raise enough funds to contest successfully the local municipal election. Our aim, our strategy is to go after the 12 smallest municipalities. It's the Achilles heel approach. Because if we win one municipality and the four or five towns who make up that municipality, we will shut down the capitalist system and implement this Ubuntu system, contributionism system, virtually overnight. It will be the first domino to fall because once you start implementing this, it is impossible for a capitalist model to function any way within the proximity of this kind of model.

And the whole philosophy is based on win one small town. And this is why I say we can bring down the global money banking Cabal with one small town. Doesn't matter what country it is. One little town can bring down the whole banking and money control system of humanity and free us all.

That's how critical and simple it is. Win one small town, implement these philosophies, implement the community projects. And our main promise to the people for this election is free electricity for all. You all know that free electricity is available. Alternative electricity devices and supplies are available. That's part of the control system of capitalism has kept that away from us.

We will implement a very simple electricity supply for our town. And that will be the foundation to unite the people. Everybody gets free electricity in return for giving three hours a week to one of the community projects. And this way, everybody has three hours a week. You don't have to give up your job. You can still carry on the

system as it is today while we start creating this abundance.

What we did in Australia just recently, in Byron Bay, there was a statistician there. And he did a calculation. And this is what he said. A small town-- because I use our town of 5,000 people as an example. 5,000 people, three hours a week, it's 15,000 hours of labor a week. Right? Need I say more?

That's just working collaborative. No more competition. Let's unite and collaborate and cooperate. 15,000 hours of labor a week. He did the numbers, and he said one year of people contributing three hours a week in this system, one year of this is equivalent to 31 years of people working eight hours a day as slaves in the current system. One year to 31 years. Those are the ratios.

So within a very short space of time, we'll turn out community into a community of unimaginable abundance. We'll have so much food. And then you decide how this unfolds. So we've got a plan of action that then creates a supply. So what we've done, in essence, the moment you start creating all this food and whatever-- furniture, clothes, bread, shoes, whatever, technology, computers-- you open up your science laboratories to researchers and medical people to come and find the cure for all disease and share it with the world.

So you invite the scientists to develop ways to get rid of the pollution in the river. So there's your answer for how you're going to deal with the pollution. You know that we can deal with a nuclear fallout within a week if you get the right minds in there. Right?

DW: Well in America, something like this happened after the Depression, and again after World War II and during World War II, where these large social causes mobilized the public, and they got involved in public works projects. And people were really inspired. And that was the last time that America really had a manufacturing boom. And then when we expect everybody else to do all the work for us and we're going to import everything, it crumbles from the inside.

MT: What it does to our town and our community, instantly turns into an attraction for anyone who wants to create, invent, and use their skills to serve themselves and the rest of the people. So it'll invite everybody. And it also shows how this contributionism model is an inclusive model. It doesn't exclude anyone. All you have to do is make your business, your company part of the community projects. What is the benefit to you? Free labor, free electricity, free components-- because if we don't have the components, we set up a community project to make the components. So this is how it grows.

And you retain one third of whatever we produce and sell. And the other two thirds go

to the community. So the answer to every time I approach an industrialist or a farmer, it works on all levels-- with farmers, with industrialists, manufacturing, anything. One third goes to the business, and the other two thirds go to the community. The answer is not, let's negotiate. The answer is, when can we start. Really.

CG: Well, I can tell you, everything you've said pretty much interweaves with what the Alliance has been saying, what the Blue Avians said in their message. And what they've said is that this is the wave of the future. And this is something that I strongly feel-- from these sources pointing your movement out directly, I think this is something that we all need to look deeply into, educate ourselves about, and in whatever way we can contribute, contribute to.

And I've really enjoyed hearing this deeper explanation. I've learned a lot more about the movement. I'd just heard little bits and pieces through my sources. And this is incredible. And I really do see it as no other alternative but the wave of the future.

MT: Well, thanks, Corey. And I just want to come back, what I said right upfront. The transition from where we are now to living in this world of abundance is so simple. It is so much simpler than most of us could have ever imagined. But most of us keep tripping ourselves up because that's how we've been brought up.

Things are difficult. You've got to work hard. No. Put that out of your mind. We're going to rid ourselves of the money. We're going to create a beautiful future of abundance for ourselves. Let's start visualizing it, and let's see this as a solution. It's so simple.

I'm not in charge of it. Every community's in charge of their own lot, their own future, their own abundance.

DW: Let's challenge the viewer out there to get involved somehow. How does the person watching this, if they're inspired by what you've said, how would they get involved, take this to the next level?

MT: Thanks, David. Well, first of all, go onto the website. Join us. Go to ubuntuparty.org.za and join us there where it says "Join Us." And then read as much as you can. Get a copy of the Ubuntu book because that's a means of funding for us. That'll help us.

And then if you have a way of funding, it you're a closet multimillionaire and you want to help this because it resonates with you, we need your help. We're not going to do this without money. Because remember, the system has been set up so that money keeps destroying any opposition. And I feel it month in, month out. It's a constant struggle. So we need financial support.

So if you can help us financially to get into the selection and make it a success, that's what we need from you. You can do that on the website, and there's a donate button there.

DW: Now, are those grants? Or would the investor be able to get a return on the investment?

MT: Unfortunately, this is not a return. The return will be in the result of the election, where they will know in their heart that they did something that benefits humanity into the future. There's very little I can offer them other than my gratitude.

DW: But there are also tax write-offs. I mean, people would either give the money to the government in taxes, or they could do something like this as a nonprofit.

MT: Yeah. And we do have a nonprofit company that will be receiving this money. We've just set it up. It's called Ubuntu Planets.

DW: So there's people that have all this money that they would need to give to the government unless they can put it in a nonprofit. So that'd be perfect.

CG: And it's also an investment in the future, an investment in humanity and changing the world.

DW: Absolutely.

MT: And like I said, it's one small town. Just see this as your support of this spearhead that's going to pierce the veil of control of humanity for thousands of years. We're going to burst through that and open it up.

DW: So you were saying Ubuntu Planet?

MT: Ubuntu Planet is the new nonprofit company that we created for this. So Ubuntu Planet will be the vehicle that gets the funds and from there will then distribute it to the Ubuntu Party, the political party, where it needs it. I know that in the USA, apparently, nonprofit companies aren't allowed to fund political parties. But that doesn't apply in South Africa.

DW: All right. So that's been some pretty mind-blowing information. I'm looking forward to hearing a lot more from Michael Tellinger coming up. I think this is very exciting. And as always, I thank you for watching "Cosmic Disclosure." We're co-creating a new future together.

Cosmic Disclosure Season 4

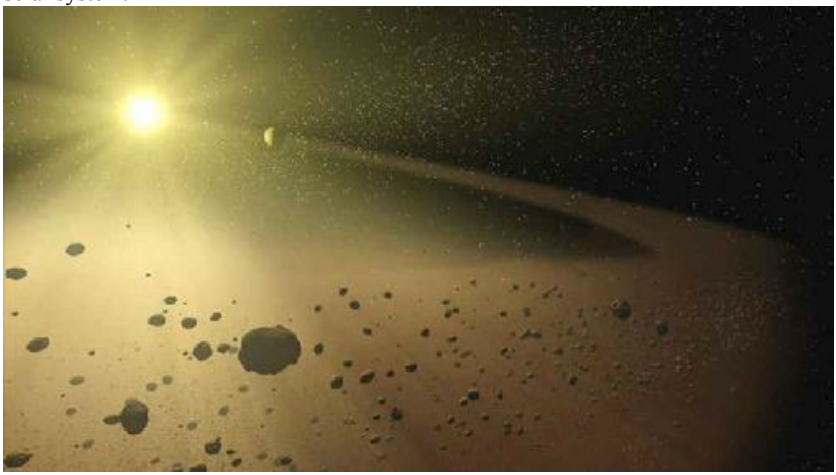
Corey Goode, David Wilcock, et al

Super Earth
Season 4 Episode 1

Super Earth Season 4, Episode 1

28 Mar 2016

David Wilcock: All right. Welcome to “Cosmic Disclosure.” I'm your host, David Wilcock and I'm here with Corey Goode. And in this episode, we're going to start exploring some of the cosmic history of our solar system. So Corey, welcome to the show.
Corey Goode: Thank you.
David: So, I had heard about this Super Earth well before you ever had anything to say about it. It is mentioned in “The Law of One” as the planet Maldek. And way back when I first got into all this stuff, Richard C. Hoagland, and all the years I spent studying his material from 1993, when I read “Monuments of Mars”, he was very big on the idea that the Asteroid Belt was not something that would normally appear in a solar system.



So when we see these asteroids, your direct knowledge is that we're seeing a debris field of a ruined planet?
Corey: Yes.
David: And Hoagland's top insider told me about something called Brilliant Pebbles. And when you and I started talking, there was audible shock from you on Skype . . .
Corey: Yes.
David: . . . when I mentioned Brilliant Pebbles to you.

Corey: Right.
David: And why was that?
Corey: Because I had heard of that program.
David: So I can kick in some of what I heard about it, but this is mostly about getting you to talk, so what did you hear about Brilliant Pebbles.
Corey: A computer and mathematical program that was rebuilding, from what they've studied of orbits in the Asteroid Belt, to calculate back the size and density of what it used to be.
David: What did it used to be?
Corey: The Asteroid Belt.
David: And what was the conclusion of this program?
Corey: That it was a planet at one time.
David: Okay. Now, I got this information from Hoagland's top insider, who I refer to as Bruce. It's not his real name. And one of the things he said was that they were releasing rocks in space, and then charting how they moved, and using that to build very advanced computer models of how this would work.
Corey: The Asteroid Belt has been studied for a long time. It's been mined, and they know it very well. So they took all of that telemetry and found a way to trace back what it would have looked like at a certain time period.
David: I think you've mentioned this before on the show, but it's good to repeat it right now. They were able to find different aspects of a planet in the asteroids?
Corey: Different strata. Yes.
David: So like the mantle, the core, the crust - these different things. They were able to see those different parts?
Corey: Right. And find different parts of the crust that had different mineral deposits that were even easier to get to than mineral deposits here on Earth.
David: When they went out and looked at these asteroids, they weren't just fresh asteroids, right? They had been, in some cases, mined thoroughly?
Corey: Right.
David: And there was a lot of ancient stuff on them?
Corey: Right.
David: Okay. So one of the other things that we have to talk about with the Super Earth is Hoagland's original guy, Dr. Thomas Van Flandern, who created what he called the Exploded Planet Hypothesis, or EPH. And this is very complex scientific data, which doesn't just include the asteroids. It also includes orbital perturbations in the solar system. And it includes all the comets.

So he was of the belief that the comets were the pieces of ocean from the planet that froze and turned into ice – water ice. And Van Flandern traced back all these comets and showed that they all actually . . . you dial it back, they all come to a single point of origin – like that was where the oceans went to.

So did you hear anything like that about the comets in Brilliant Pebbles?

Corey: There was ice in a certain region that came from the failed planet.
David: Hm. So that would've been the oceans that freeze-dried in space?
Corey: Right. The water from the planet.
David: Yeah. He was coming out of the military faction of the space program. And we're going to do a whole episode just on that. But he said that there's no extraterrestrials, that everything out there is ours, and it's just all advanced stuff that we know about. And that was another thing that was consistent with what you had heard.
Corey: Right.
David: So from this military perspective, they created a narrative about ancient extraterrestrials that came and went and are not here now, but then they had this whole story line built around it.

He didn't use the term "Ancient Builder race" that I remember. That was something I heard from you.
Corey: I was wondering if he was talking about the same.
David: But he did basically give me the same information. Now, this was a weird thing because when I first started talking to you, I had taken his testimony at face value as being accurate. And what he was told, for whatever level of compartmentalization he was in, was that this Ancient Builder race – and we'll just use that term, even though he didn't – the Ancient Builder race was five million years ago that all this stuff happened.

But your data on the Ancient Builder race is actually much order than that.
Corey: Right.
David: What was the actual data that you were given for when these Ancient Builder race artifacts appeared?
Corey: They were many tens of millions of years old – further back than any other type or signs of civilization or the newer ET groups that moved in - way past.
David: Did they have any ability to try to get a specific time or was it just that it was countless millions of years old?
Corey: There is so very little that was known about them. When they would find their structures, every time they would find the structures that were especially exposed, there were places that obviously had glyphs on them, but had been wiped clean by other races that had come.

So there was a lot of mythology among all the different groups that were creating a lot of mythology about them. But when it came down to brass tacks, very little was known about them - a lot of mystery.
David: Well, you had mentioned before, a technology of chronological timing that had been used for apparent Nazi remains on the moon and Mars, that they apparently had traveled back in time to create.
Corey: Right.

David: Does that technology work if you go back many millions of years or does it start to become a lot less accurate?
Corey: It works. It starts to become less accurate, and you get wider time frames.
David: Okay, so what Bruce had originally said, this was something very interesting because he told me it was an authorized disclosure from the United States government. That they didn't want to openly tell us this in like a major way, but that they were going to reach certain people who were seeding things into the UFO community and give them this information so that it became part of the public consciousness, and this was the first step.
Corey: This is how partial disclosure is going to work. They're going to tell people there's an atmosphere, a thin atmosphere on Pluto, that it has blue skies.
David: I just saw that last night.
Corey: Ha, ha.
David: And water.
Corey: There is liquid water on different planets. And then they're going to finally get to a point to where they get to do their narrative of disclosure, this slow, partial disclosure narrative. And then they're going to try that narrative to talk about this ancient ET race that used to be here that disappeared, that's very ancient. And that'll be probably the first bit of information people will get.
David: What kind of an effect are they thinking will happen if they say that there was an Ancient Builder race?
Corey: Well, they're prepping people for that already, with a lot of the ancient alien narrative that's going on.
David: So the polls are showing that even in the most traditional parts of America, the parts that would not be open to new information, we're looking at a 57% rate of acceptance of the existence of extraterrestrial life. So the old idea that, “Oh, 'War of the Worlds', it's all going to come crashing down. People will go into a panic.” It's not going to happen if they tried to push out this narrative that some weird and interesting ancient race was here a long time ago.
Corey: Right. That's what they believe.
David: Is this Super Earth, do you think, is it going to be a major part of that first wave - talking about what the Asteroid Belt actually was before?
Corey: Yes. We'll probably hear some version of the history of our solar system that they 'learned'.
David: The idea that Hoagland put forward also included the notion that Mars was a watery planet that was actually a captured moon around this Super Earth – that both of them had oceans – and that this explosion that created the asteroids smashed into the side of Mars and caused excessive damage.

Was that consistent with what you heard from the smart glass pads, or however was that you came in contact with this information?
Corey: Yes, it was. It was postulated that Mars was most likely a moon of that Super Earth, and that it was damaged heavily on one side by massive impacts. And that most

likely also stripped away its main atmosphere at the time, and it never recovered.

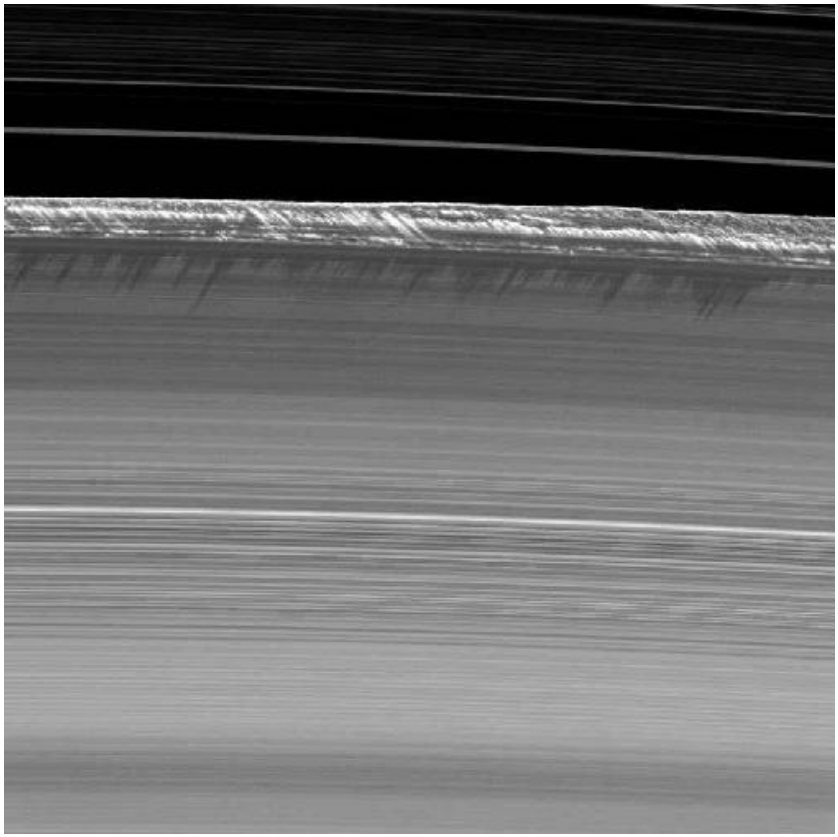
David: Never recovered?
Corey: Yeah. Never fully recovered to what it was before.
David: So these people that settled on the Super Earth . . . What we heard from Bruce was that he was told they don't know for sure, there's a lot of mystery, but that it was between 3 and 10 different extraterrestrial groups that came passing through and settled in our solar system.

He seemed to be thinking that whoever built all these ruins on all the different moons throughout our solar system was the same civilization that was on the Super Earth. But in light of what you shared from this Inner Earth Alliance, these people that were on the Super Earth do not appear to be the Ancient Builder race.
Corey: No. They're not the Ancient Builder race.
David: Okay.
Corey: And it seems that more recent information that I've gotten is telling us that the Earth received refugees, at different points in history, from a couple of different planets, at least, in our solar system where the planets failed and inhabitants left and came to Earth as refugees.
David: And that would be Mars and the Super Earth?
Corey: Yes.
David: And, again, that's completely consistent with what “The Law of One” actually says. They described the Super Earth - they call it Maldek – and they say that it blew up, I believe the figure they give was 800,000 years ago.

So it's not exactly the same as the data that Brilliant Pebbles calculated, because when I spoke to this guy, Bruce, they were having it as about 500,000 years ago.
Corey: Right.
David: So is that what you saw in the Brilliant Pebbles data as well?
Corey: Right.
David: Okay. So another thing that was a big part of what Bruce shared with me, was that the people on the Super Earth were starting to build a ring around Saturn that was made of some sort of transparent aluminum alloy, and that if the ring had completed, they would have a pulse weapon that they could use to destroy other worlds.

He said that this weapon was attacked and destroyed at the same time the Super Earth was destroyed, and that the shattered remnants of it formed the rings of Saturn, and that they would go out there and study these pieces of these habitable . . . There were actual rooms people could live in inside this shattered ring that you could still go out and look at.

Did you encounter any of that information?
Corey: I encountered information about the rings being full of artifacts similar to that . . .
David: Oh.
Corey: . . . but I had not heard the information about it being a giant weapon.
David: What was the specific data that you got about that?
Corey: That it had the transparent alloy in it.
David: Really?
Corey: Yeah. But it had debris that looked like it was a part of structures.
David: Wow. Broken structures?
Corey: Yeah.
David: Very interesting.
Corey: Yeah. Destroyed.
David: Okay. Now I also want to point out that Bruce said that on the edge of the B-ring were the biggest chunks of the ring and that that's where it originally was. So let's take a look right now at a couple of images of these alleged ice crystals on the B-ring.



So if you're looking at this image, what you're seeing now is shadows that are cast, and as we zoom in on that, you see there are actually some pretty big chunks there. And those shadows actually cast on to the rings.

So what we heard from Bruce is that those alleged ice crystals are actually large pieces of rooms that people could live in, but these are people of an extreme height.

Now, this is another area where our data correlated. Bruce told me that these rooms were build for people who would be like 70 feet tall. Now, did you hear about there being ruins that were built for people of that type of size and stature?
Corey: Right. Yeah. We've talked about the different ruins being found with huge stone chairs and ceilings and doorways and table-type platforms that were obviously built for people much, much taller.

A lot of this ancient stuff that's found is also from the age of when there was a Super Earth and that kind of thing.
David: Okay. So there's a lot of cross-over.
Corey: Yeah, there's some crossover. Like the slabs that they have found of the Ancient Builder race, that are obviously not sarcophagus, but that people lay on for healing . . . When the humans would lay on them, they were a lot bigger than what was needed for a human to lay on.
David: Did they still work for healing?
Corey: Yes.
David: Really?
Corey: Uh hm.
David: Wow! The ring you never heard about, but you did hear about the shattered remains of something that was there?
Corey: Something, yeah.
David: Okay. So to continue with Bruce's story then, he said that whoever was on this Super Earth had been a very warlike species, and that they had gone out and they had really pissed off some people in other star systems. Did you hear that the people on the Super Earth had a technology that would allow them to have left the solar system and made war on other planets in other solar systems?
Corey: I was with scientific people that were looking at brass tacks, mostly scientific data. A lot of the information that is pouring out in this manner comes from different groups postulating from their root beliefs. There are different groups – secret Earth government syndicate groups that have different occulted beliefs that are trying all these different narratives. And there's really not that much known – I mean, fully known. But there are a lot of people trying to tie theirselves to bloodlines from these planets or tie their mythology to these narratives, somehow.

So I just basically saw a lot of the scientific data and information and was not exposed to a whole lot of the theoretical.
David: Well, let's just extrapolate off of what you do know. Clearly, the people on the Super Earth had technology vastly in excess of what we have now.
Corey: Right.
David: Clearly, they had the ability to travel to another planet in the solar system, Saturn, and build this massive, massive, massive structure - I mean, the size of Saturn. To actually build a ring that's going to go two-thirds of the way around it is almost an unthinkable architectural achievement.
Corey: And the people in the Inner Earth Council stated that the different inhabitants of the planets in our solar system were extremely advanced technologically and extremely aggressive, and that they destroyed their civilizations and had to be relocated here as refugees by other ET races that came in.
David: And again, that's remarkably precisely what “The Law of One” says, which you hadn't read when this happened to you.

Corey: And still haven't. Ha, ha.
David: Ha, ha. So did this civilization that was on the Super Earth also settle Mars at the same time, if it had oceans and water?
Corey: The freshest information that I have is that these were two different groups that independently arose on these different planets, even though one may be considered a moon.
David: My personal speculation, based on trying to connect the dots and "The Law of One", has been that Mars was heavily damaged by the explosion, but it wasn't completely damaged past the point where some type of life couldn't cling to it, even if maybe it involved a lot of underground bases that might have already been built before this happened.
Corey: Right.
David: Do you think that's possible?
Corey: Right. Right.
David: Okay.
Corey: But the surface, the previous ecosystem, was gone.
David: Right, but they could have had a vast underground infrastructure still in place.
Corey: Right. They were both advanced civilizations. Then, yeah, that would make sense.
David: Okay. So then the next thing was . . . and this is going to start to segue into what we're going to keep talking about in the next episode, the moon.

Instead of me blabbing my big mouth, let's keep it simple and have you tell us. Where did the moon come from? What the heck is going on with the moon - our Earth's moon?
Corey: Okay. According to the smart glass pads and what was reported, is that – and this is very controversial – that the moon arrived right around that also 500,000 year time period.
David: Arrived?
Corey: Arrived.
David: Okay. We're going to have to clarify what that means. Ha, ha.
Corey: Well, it arrived and formed some sort of tidal lock with the core of the Earth.
David: Oh. It arrived to the Earth.
Corey: To the Earth.
David: Okay.
Corey: And into an orbit that changes very little over time. And it came here from the explosion from the Super Earth.
David: It came here?
Corey: Right.
David: So it drifted over from the . . . As the Super Earth blasted, that the moon drifted and somehow got gravitationally captured by the Earth?
Corey: Some of the information was that it was under intelligent control, that it was artificial, and that it was bringing refugees here.

David: Some of the information?
Corey: Yeah.
David: So not all the information said the same thing?
Corey: Right. There was always opposing . . . Every time you had information, you had peer review type information – opposing view, why this could also mean this. That was always present. But you always had to read the bottom, and also, see that there were other views even though that was accepted by most of the peers.
David: Who were the peers?
Corey: Other scientists.
David: Which faction are we talking about? ICC?
Corey: Well, that would be most likely a joint . . . They all speak the same language, you know, agree on the same kind of stuff, but I don't know what standard it was, but they had a peer review process. It wasn't just . . . One scientist couldn't just do an experiment and come to a conclusion and then put it in the database as fact. It had to go through a process as well.
David: And I think it's interesting for people to understand that they don't have all the answers. They're doing research, and they're trying to connect the dots with an archaeological expedition the same way that we would find an ancient city and dig it out, and then have to study the dots and study the writing and see if we can decipher the writing and all this kind of stuff.
Corey: Right. And they try to stay away from a lot of the mythology from the different groups. There's different groups that have a lot of different ideas about who all the different people were. There's different narratives from different groups.
David: Different extraterrestrial groups, you're saying?
Corey: The people that came from these planets that were destroyed, or lost their viability, that brought the refugees here, to the surface of our planet. Different groups have different descriptions of who these people are – different narratives that fit their belief systems.
David: Right. So there is no absolute standard of what actually happened that anybody can agree on at this point?
Corey: Right.
David: Well, that's frustrating, but I guess that's the result of if different people are saying different things, they can't all be right.
Corey: Right.
David: It's just like with religion.
Corey: Right.
David: And these are probably like religions, right?
Corey: Yes.
David: They are religious beliefs, in a sense.
Corey: Well, they are. All these different Earth government syndicates have different occultic roots. And they try to tie everything to their root occult beliefs and try to fit everything into the narrative of their beliefs.
David: So you were told by the people in the Inner Earth, based on their information –

and they're right here in our backyard, so if they've been around as . . .
Corey: Under our backyard. Ha, ha.
David: Yeah, ha, ha. Some of them have been around for, as you were told, 17 to 19 million years.
Corey: 17 to 18 million.
David: 17 to 18. That's a long time.
Corey: Right.
David: That would mean that whatever happened to this Super Earth was long after they were here to witness whatever was taking place.
Corey: Correct.
David: So that's a very interesting perspective that they would have had. And you said in the previous episode that they were quite upset when refugees from the destroyed planets, both the Super Earth and Mars, were eventually transplanted and put on Earth.
Corey: Yes.
David: Why were they so unhappy about that?
Corey: Because this race was very aggressive and immediately began to assert itself on this planet and interbreed with the surface humans that were naturally from this planet – interbreed with each other, the other groups. And all ended up mixing together into a largely mixed race. They consider us a mixed human race on the surface.
David: And that aggressiveness is what makes us, to them, very dangerous.
Corey: Yes. Very unpredictable, dangerous.
David: One of the other things that Bruce said that I want to run by you is how . . . People are going to be saying – and we're going to get back to you talking about refugees, but how did this ring built around Saturn become a weapon? So I just want to explain what he said. What their intel told them.

Apparently, it's like Tesla's earthquake machine. If you go back and look at the Roman soldiers marching across a bridge, they had to march out of step. And if all the soldiers march at the same speed, the bridge starts to shake up and down and will eventually come apart.

Tesla's earthquake machine apparently involved a similar concept, where there's a rhythmic series of thumps and it builds up a resonance wave that eventually creates a massive earthquake.

So what he said was that the ring was designed to send pulses into Saturn, and those pulses would reflect back out to the ring and then back into the planet. And it would just build up this incredible charge. And then the ring could actually direct the beam to any location in three dimensional space that it wanted to go. They could triangulate the beam to basically any location.

Now, this sounds an awful lot like a movie that we all know and love, doesn't it?
Corey: Yeah.
David: One of the other things that Bruce said was that “Star Wars” was actually not just fiction - that it was a disclosure film. And when we start talking about a ring around Saturn that can be a planet-killing weapon, that sounds pretty familiar, doesn't it?
Corey: Right. There are a lot of different little caveats in “Star Wars”. Some of the ships from the Empire look very similar to the Dark Fleet vessels. Some of the concepts of The Force and the Dark Lord Siths, I've found to be consistent with some of these syndicate cults that Illuminati groups believe very strongly in. The dark part of the 'Source field': “May the Source be with you.” Ha, ha.
David: So in the next episode, these two definitely go together. We're going to get into what exactly happened with the moon and really delve into that story.

That's coming up next time here on “Cosmic Disclosure”. I'm your host, David Wilcock, and I thank you for watching.

Who Built the Moon Season 4, Episode 2

Cosmic Disclosure; Who Built the Moon? Season 4, Episode 2

2

8 Mar 2016

David Wilcock: Welcome to “Cosmic Disclosure”. I'm your host, David Wilcock and I'm here with Corey Goode. And in this episode, we're going to continue our discussion about the Super Earth and specifically the survivors of this terrible cataclysm that, according to multiple insiders who I've been in contact with and the information that Corey has gotten directly, was destroyed, and the fragments are now what we call the Asteroid Belt, which is parked between the planets Mars and Jupiter.

So this is going to be some very interesting information, stuff that many of us have wanted to know for so long, answering so many mysteries.

So, Corey, welcome back to the show.

Corey Goode: Thank you.

David: Now, I want to get into what Richard C. Hoagland's top insider, Bruce, was telling me about the nature of the civilization on the Super Earth. There are far too many correlations between what you saw on the smart glass pads and what he told me for it to be an accident that these things line up so well, in my opinion, and it was utterly mind-blowing for me when we first started talking in October of 2014 in detail how much of the stuff that he had said that you independently could verify from your own firsthand reports.

And, again, it's difficult to explain to people how much this happens when you start talking to different insiders. I was holding onto so much information that I had never put online so that people would trust me, so that I would continue to hear more.

Also, if it's going to get me killed, if it's going to get me in trouble, then I'm not going to put it out, whereas now that we've done this, it's time to just open the floodgates and let this stuff come out.

I want to go back now to what Bruce revealed about the actual race that was on the Super Earth in the first place.

First of all, he said that their height was 70 feet. Maybe this is because the planet is

larger, so, therefore, the gravity is different, and the beings will be larger in correspondence with a larger planet. Would you say that's possible?

Corey: Yeah, different barometric pressure, all kinds of stuff. Yeah.

David: He said that this race was extremely technologically advanced. That was the data that they had concluded, and apparently they were playing around with transhumanism, which is the idea of integrating their human form – because it was a human form, it was just a giant human, 70 foot tall, 70 to 90 foot tall – integrating their human form into some kind of computer, Internet type of mainframe.

Corey: If they were tinkering around with something like that, I could see how that would lead to major problems.

David: Another piece of data that he seemed to be very convinced was solid, which I then got validated independently by the space program insider, Jacob, was that these people had long since evolved past the need to use verbal communication, that the idea of speaking with their mouths was terribly slow. And he was specifically told that they developed some type of Internet, Wi-Fi-type of method of communication . . .

Corey: Light.

David: . . . that involved microfluctuations in the light that was on their faces, the skin pigment or something.

Corey: Micro . . . Like, we have micro-facial expressions. They would have micro-facial auric light. It was kind of like a light show.

David: So you did hear that?

Corey: Yeah, and they're not the only beings that do that. Some that communicate telepathically, there is a light, kind of an auric kind of play of light as well.

David: So you can confirm that some people are actually having cyborg-type of integration with their brain and the voltage on their skin so it's like a broadband Internet of data passing between two people when they look at each other?

Corey: I'm talking about . . . There are some advanced beings that, when they communicate, they have auric discharges in their body when they're connecting telepathically. There is more information. There is a huge exchange of information going on.

David: Is it possible that what Bruce said is true, that it could be entirely cybernetic, that it could be based on computer technology that wires into the brain, but then it triggers these fluctuations on the face?

Corey: Sure. If they were unwise enough to start wiring things into their neurological system, then, of course.

David: Well, that's exactly what he said they were doing, and he said that they had developed the ability to upload their actual consciousness.

Corey: Did they find bodies? Did they find bodies with this type of implants?

David: Apparently, that is part of it, and I'll get to that in a minute.

Corey: Okay.

David: But it's interesting, right, because he's hearing things for the first time, too. Nobody gets the full picture, right?

Corey: No.

David: That's part of the thing that's so frustrating about this is even at the level you were at, it's compartmentalized, and you don't get to hear all the data that's available.

Corey: Right, yeah. There are certain areas of the Lunar Operation Command I haven't been allowed past.

David: Okay, so we'll get to the bodies that they found in a little bit.

Corey: Okay.

David: Continuing the Bruce narrative, he said that they had a technology to be able to build bases inside these moons, and the technology involved something that was only the size of a baseball. And I guess the smaller size made it easier, and they could send this into the past, and then it would go into the past, and it would build out with little nanite robots. They would dig their way through the moon and build the base.

And they would send it to the right time so that the base would be ready when they wanted it in their time. Have you heard of anything like that going on, anything like that being done?

Corey: Not sending, like, some sort of cube back . . . or some sort of sphere back in time that has nanites. That sounds like, you know, a lot of this AI kind of stuff.

David: Right, but it could be possible that a technology like that would have existed.

Corey: With all the things I have seen, I can't say that it's not.

David: Okay, so there actually is a little video that I want to show you right now of a robot that is just a piece of foil that they've already made that has a little processor chip on it, and it can carry things around. Let's take a look at this right now.

David: This video creeps me out because if you have these little guys that can just kind of flutter around and carry things and move things and build things, and if they then can develop a replicating ability where they can eat material – and this is what we already have right now. Imagine if our technology is 100 years more advanced, 1,000 years, 10,000 years more advanced. These type of nanites could go crazy, couldn't they?

Corey: Yeah, like I said. When it comes to nanites and artificial intelligence, there is a major red flag and issue that everyone in the Secret Space Program and also members of the Super Federation . . . there's a major problem, a major red flag with that technology.

David: Let's get into the moon now because that's the focus of this episode. What did you hear about the moon before they moved it to the Earth?

Corey: There were reports of them building bases so far deep that it came to this artificial material that made up the surface, or the fuselage, of what the moon was.

David: So are you saying that there is a fuselage in the center of the moon, and that they dug all the way down to it?

Corey: Personally, I don't know. There were two different reports, one of them saying that it was a hollowed-out moon that was used hastily, and another one that stated that it was a giant station that was built.

David: Did you ever personally hear anything suggesting that the Earth's moon is older than any of the other objects in the solar system?

Corey: I heard something along the lines either that it most likely didn't come from our solar system, or that it was too old for the items on the inner solar system, or something along those lines. I don't recall exactly the details, but there was something that didn't match about the geological age.

David: Okay. For what it's worth, the insider, Jacob, who we're not ever going to get on camera, what he told me was that the moon was portalled in to our solar system,

that it's older than the planets in the solar system, from somewhere else, that these people on the Super Earth portalled it in at the last minute after having sent – and this now gets back to what Bruce said – that they sent this baseball-sized chunk of nanites to this old solar system somewhere way out where their enemies weren't looking, because they knew now that the enemies were coming in to destroy them.

They knew that their ring was gong to be destroyed, and their planet was going to be destroyed. They had very little time. So the story that I heard, for what it's worth, is that this little baseball of nanites was sent to this other ancient solar system, that the moon was over there, that it went way back in time so their enemies wouldn't find it.

They built out the moon with the nanites, portalled it in, and then the elites of this planetary civilization on the Super Earth, at the very last minute, right before the planet blew up, they portalled themselves into what we call the moon. And this is where it gets really strange because what Bruce said is it was 12 to 16 billion of these people, 70 to 90 feet tall, that all portalled in to the moon.

And he said that they had firsthand knowledge that it was 20 to 40 miles deep of all built out intelligent habitations, rooms, the entire circumference, the entire sphericity of the moon on the inside, 20 to 40 miles deep, all just endless amounts of corridors that you could go through.

So it doesn't mean it's not true, . . .

Corey: Right.

David: . . . it just means that you personally didn't encounter it.

Corey: No.

David: But you did say that you heard that there were some kind of refugees from this catastrophic event, the destruction of the Super Earth, that were associated with the moon somehow.

Corey: Right, that arrived on the moon and came down to the Earth as refugees from one of the great cataclysms.

David: In Bruce's timeline, they spend a long time inside the moon before they actually go to the Earth, so let's just talk about this now. Did you hear that the people were inside the moon or on the surface of the moon when they fled the catastrophe?

Corey: They said they came in the moon.

David: In the moon?

Corey: Yeah.

David: That's consistent with what I heard, which was that the moon was getting battered by asteroids. Nobody would have been able to be safe or survive on the surface, so they had to be inside, and that they created a very highly advanced computer course to guide the moon into orbit around the Earth, specifically also because if they didn't find a planet to go around, they were going to get gravitationally captured by the sun, and they would be burned up in the sun.

And they programmed the orbit around the Earth to create tides and make the Earth into a much more habitable place to live, eventually. It wouldn't happen right away. So did you also hear that the moon going around the Earth led to the tides and made it a better place to live?

Corey: I know that it definitely brought a lot of changes, but there was life before.

David: Yeah, and he said that, too.

Corey: Right.

David: But the tides obviously could be causing a much more dynamic and diverse amount of life on Earth and make it so the oceans can get a lot larger, that kind of stuff.

Corey: Right.

David: What he was told was that the Earth was like a swamp, and that it was really hot, and that there were only shallow seas prior to this happening. Is that also something that you heard?

Corey: Well, I mean, I've heard basically the whole basic timeline geology, timeline of the Earth, that everyone else has heard. It's fairly consistent, except they leave out major and minor cataclysms that happened throughout the history of the Earth.

David: So did you hear that at one time the Earth was swampy and hot and only had shallow seas and wasn't very nice to live on?

Corey: It was much different. I didn't hear that it wasn't nice to live on.

David: Okay. So the next thing is he said that these people, these 12 to 16 billion people that portalled into the moon, which were like the elites of their society . . . I

guess first of all, that little part of the story, that's consistent with the very common breakaway civilization narrative that you've encountered, right?

Corey: Right.

David: If you have a population of well over a trillion people, 12 to 16 billion is a very small number of them, and those people are going to save their own necks when they know that everybody else is doomed.

Corey: Right.

David: So what he said was that their intel was that the moon was pounded and that most of these people inside the moon all died in that initial event. So by the time the moon got to the Earth, it was very heavily damaged. Is that at all consistent with what you heard, that the moon took severe damage on the way in here?

Corey: Yes, and it's consistent with the way the damage is lined up on the moon when you look at it.

David: That I don't understand. Could you explain that?

Corey: There is one side of the moon that has quite a bit more damage, and it's kind of like what happened to Mars a little bit. One side of the moon has had quite a bit more damage to it compared to the other side. It's more pristine.

David: Well, now, right at the time that he was telling me this and saying it was an authorized disclosure, we start to see all these news reports where what they did is they take the moon, and they turn it on a slightly different angle and these seas, the mares as they're called, these dark areas, all form a square – a big giant square that covers almost the whole face of the moon. You just tilt it a little bit and you look at it, and it's a big giant square.

Corey, this stuff is mind-blowing. A geometric square should not exist on a natural satellite like that. What do you think we're seeing there? Why would they be telling us this?

Corey: It's a soft disclosure because at some point, if they're going to do a partial disclosure and let us know that there used to be ancient ETs in our solar system like we discussed before, then one of the things they're going to want to show us are there are a lot of surface ruins on the moon. And there are a lot of images we can show. There's a giant tower that's twisted and shattered, or twisted and bent over as though it was hit with a blast wave.

There are a lot of different artifacts from a wide range of ages. The moon is actually kind of a time capsule of an ancient time back when that Super Earth exploded and also of a time when there were battles between non-terrestrials and possibly even the Inner Earth groups that had been battling it out after these large changes occurred and these new refugees were brought to Earth. That was a very traumatic and huge time of change on our planet, and it happened in waves, these refugees that came.

David: When we go back to the movie “Alien” with Ridley Scott, there's this weird spaceman creature thing that's a giant in an extraterrestrial ancient ruin that they find, and then that story is followed up with “Prometheus”, the movie, where you have these giant, bald, very pale-skinned ETs with these black eyes.

I had a horrible time watching the movie. Some people really like it. I thought it was very traumatic to watch.

Corey: Yeah, yeah.

David: But do you think that this aggressive, angry entity – the giant - treating humanity as it is now, as an aberration, that we must be killed, that we were an accident, that this one guy from their civilization made us because he came to the Earth – and remember, he dissolves at the beginning – do you think that that is a statement of Cabal belief system about this Ancient Builder race and stuff?

Corey: Very much so. Yes.

David: Okay. Could you talk a little more about that for a second? What is the belief system?

Corey: Well, I've heard several different versions of their belief system, but basically their belief system is that this Ancient Builder race is their – one person called it a progenitor or their ancient bloodline. They are an elite. Their bloodline can be traced back to these ancient ET gods.

David: Why do the gods hate us then? Why are they trying to kill us?

Corey: Well, that fits in with their narrative of removing a certain amount of the population off the Earth because we're useless eaters or genetically impure. That fits into their mythos and sick religious dreams of the future of mankind. That's as they would like to see it.

David: So does a movie like “Prometheus”, where they go and find these very ancient ruins, is that like a religious sacrament for these people, that it's the closest they feel like they can get to seeing ruins, that maybe because they're in the Cabal on Earth

they're not actually allowed to see? Are they told that these movies are showing them something that's very close to what it really looks like?

Corey: It depends. A lot of these people are out there doing scientific work, and then some of the people that are a part of these syndicate-type cults are going to come out there on, I guess, a pilgrimage kind of visit if they have a certain belief that this structure or this location means something more.

David: So they can go and take a trip out into the solar system and see this stuff in some cases?

Corey: Well, it depends on who it is.

David: Yeah. So they could take a tour of what for them would be like a religious pilgrimage site of their gods.

Corey: Well, yeah. Some of the people I described that have showed up to some of these meetings, they have off-world access, yes.

David: And if Jesus only happens 2,000 years ago, then for them that's just nothing, because this is much older and, for them, probably a lot more interesting.

Corey: Yeah, more . . . It's just tens and tens and tens of millions of years ago, some of it, . . .

David: Right.

Corey: . . . which is so far back that they can't accurately date it.

David: So you would agree then with Bruce's statement that . . . well, you didn't get the number, but 12 to 16 billion people, and that a lot of them died inside these caverns in the course of the moon coming to the Earth, . . .

Corey: I . . . I don't . . .

David: . . . that there was a massive damage.

Corey: There was a massive damage to the structure.

David: He also said that it was barely functional anymore at that point, that it made it to the Earth, but that a lot of it was really severely damaged, and it was nowhere near what it was built to do originally.

Corey: Yeah. All I know is that it made some sort of tidal lock orbit with the Earth, and now all sorts of ETs have bases there, including us. And there's a lot of mysteries inside the moon that I haven't been made privy to, and I'm told that it was some sort of escape pod-type thing or ark that brought refugees here from a huge cataclysm that made life on their planet impossible.

David: Okay. Have you heard that there is any type of AI in the moon or that there's a computer in the moon that could be artificially intelligent?

Corey: I know that they use holography, holograms, and other trickery to hide certain things on the moon.

David: What do you mean by that?

Corey: Holograms over certain areas of the surface . . .

David: Really?

Corey: . . . so it can't be seen with telescopes or when they're doing certain things, but I don't know of any type of AI or super type of computer that's being used at the core of the moon.

David: Well, this is something that several different other insiders independently confirmed, so I feel like it's pretty solid and likely.

So the next thing was he said that some of these people that were inside did manage to migrate to the surface, and at that time, they began building crystal domes out of this transparent aluminum stuff and having trees and civilization on the surface by having that pressurized area. So is that consistent with anything you heard, that there were actual crystal domes on the surface.

Corey: Right. There were plenty of ruins of that type of structure.

David: Did you personally witness those ruins?

Corey: Yes.

David: So what did you personally see as you flew around the moon?

Corey: There were domes, square buildings, towers, a lot of the stuff that was buried in, I guess, like, the regolith sand, the lunar sand.

David: Yeah.

Corey: But all that stuff is off limits to people who visit it, and they're of different eras, too, there is damage from different conflicts, and it's off limits to visit. It's held as a reminder of a different time when there was a certain amount of open war before they created these federations and treaties and before they had all of the diplomatic zones on the moon and all these diplomatic agreements that have prevented most of them from being in open war with each other, even though they have competing programs.

David: Well, let's real quickly take a look at some footage from the Disclosure Project – it's public domain, open source – of this particular witness who was shown pictures of what he called mushroom-shaped buildings and domes on the moon.

[Clip transcript]

Sgt. Wolfe: So he was showing me how all of this worked, and we walked over to one side of the lab, and he said, "By the way, we've discovered a base on the backside of the moon." And I said, "Whose? What do you mean, whose?"

He said, "Yes, we've discovered a base on the back side of the moon." And at that point, I became frightened, and I was a little terrified, thinking to myself that if anybody walks in the room now, I know we're in jeopardy. We're in trouble because he shouldn't be giving me this information.

I was fascinated by it, but I also knew that he was overstepping a boundary that he shouldn't be stepping over. And then he pulled out one of these mosaics and showed this base which had geometric shapes. There were towers. There were spherical buildings. There were very tall towers and things that looked somewhat like radar dishes, but they were large structures.

So I didn't say any more to him because I was concerned, again, that somebody was going to come in at any moment, would catch us having this conversation, and we would be in real trouble.

So that was the end of it right there. I didn't take it any further than that. You know, I just filed it away, but the interesting thing – every day that I went home, I would think to myself, "I can't wait to hear about this on the news", you know? So I'd turn on the TV, and I'd look at the news to see if they were going to announce, "We've discovered a base on the back side of the moon", being really naïve, you know? And, of course, here it is, thirty-some years later, and we still haven't heard about it.

[End of clip]

David: So when we include that testimony, we have independent verification of

photographs of these things on the moon, and it's a very fascinating piece of collaborative data. But I just want to ask you a couple questions really quickly.

First of all, you said you saw glass-looking domes?

Corey: Yes.

David: Were they smashed? Was, like, part of the glass smashed out?

Corey: Yeah, they were not intact.

David: Okay. How thoroughly damaged did they look?

Corey: They looked very ancient and very damaged, very damaged.

David: How transparent were they still?

Corey: They weren't completely transparent.

David: So they were covered with some degree of dirt and sand or something?

Corey: Right.

David: You mentioned square buildings. Were the square buildings also made of this transparent material?

Corey: No, some of them looked like they were made of . . . They looked like they were made of some sort of either stone or concrete type of, like, created material.

David: What about the towers? Were the towers made of that glass-like stuff?

Corey: Yes, like tall, narrow, and then bending back and twisting, like they got hit with a blast wave.

David: Well, there's a lot more to discuss with this story, obviously, but I think the key here is that you did see that whatever this civilization was that built domes and developed on the surface of the moon, that they were very heavily attacked, right, because this damage was not something that would happen naturally. This was catastrophic damage.

Corey: It was catastrophic, but I did hear that there were a lot of smaller catastrophes that were happening. I mean, if you have a planet explode in your solar system, it's going to knock things around for a while, so there's going to be problems for a while.

David: That's a good point.

Corey: You know, there were problems going on for a while.

David: All right. Well, this has been a truly fascinating discussion. That's all the time we have for in this episode of “Cosmic Disclosure”. My mind has been totally blown yet again, and I hope you're having the same experience there as you watch this. My name is David Wilcock, and, as always, we thank you for watching.

Age Regression and Time Travel Technology Season 4, Episode 3

Cosmic Disclosure; Age Regression and Time Travel Technology
Season 4, Episode 3

31 Mar 2016

David Wilcock: Okay, welcome to “Cosmic Disclosure”. I'm your host, David Wilcock and I'm here with Corey Goode. And in this episode, we're going to get into some of the very interesting controversial material that has come up consistently in the feedback that you've given us in the discussion forums here on the Gaia website. And that is specifically this very bizarre notion of the elasticity of time and how it relates to age regression. So Corey, welcome back.
Corey Goode: Thank you.
David: So one of the things that people have stumbled over when they first look at your website is that you explain that you had a 20-year service record in the Space Program beginning In 1987, which would then lead them to believe that you would have been working until 2007, and at that time you came back to Earth.

But then the timeline doesn't seem to line up based on the other things that you said you did and when you said you did them.
Corey: Right.
David: So are we dealing with a technology that is more advanced than people are aware of in the conventional world?
Corey: Oh, absolutely. Ha. I mean, all of the technology that we're talking about in the Secret Space Program is far more advanced than most of them can imagine. The 20 and Back Program is a program that thousands of people have partaken in. And some of them have been people in the military . . .
David: What does 20 and Back mean, exactly?
Corey: You serve 20 years and come back to the original point in time you left. And there's plenty of people in the military that do this as well. They'll think they served their normal four or eight years in the military, when they volunteered and served in one of these above top secret programs for 20 years and were brought back to the point they agreed to do the program and then served out the rest of their agreement with whichever branch of the service they were in.
David: So what do you say to the person who believes that the technology that they can see in Internet searches represents the farthest that humanity has ever gone? How do you answer that person who just can't believe that there's anything more advanced than what they are aware of now?
Corey: They just have to look back at history. There's been so many times that we've been pretty sure that we knew everything, and then the government released information or a new technology, new space or aircraft, or a whistleblower comes forward like Snowden and releases information that people had talked about before

and no one believed.

So if you think that everything that exists is on the Internet and all you've got to do is Google and find it, then you're living under a pretty large misconception.
David: Sure. Absolutely. Why would someone in the government want to keep the knowledge of a time travel-type technology secret? What's the reason for why they wouldn't just come out in the open and tell us that this is out there?
Corey: You can't talk about one advanced technology without revealing all the other advanced technologies. Well, that's letting the genie out of the bottle. And the major genie that they've been trying to keep in the bottle is not 'Yes, there are ETs', is 'Yes, there is free energy'. And free energy alone will collapse the global economy overnight – free energy devices.
David: Or maybe transform it. It would collapse the existing infrastructure or power structure.
Corey: Right. It would collapse their economic system, their Babylonian money-magic-control system overnight.
David: So let's just deal with some of the basics, and then we'll get a little more detailed and technical. And I remember when I first started talking to you about this, it really tripped me out, and I had a lot of questions to ask. So here's the first question: You go out for 20 years. They time travel you back to the point that you left. You return 20 years older than what you were when you left? Your body is 20 years older?
Corey: No. Your body . . . You're age regressed and time regressed.
David: Before that. Like let's say you're out in space, and you do your 20 years, and then they fly you back to the . . . Is it like the same room that you were in when it starts? They actually put you back in the exact same room?
Corey: They take you back to . . . Yes, you're taken back to the same point.
David: Okay. At first, when you return to that room, are you going to look 20 years older than you were when you left just a few minutes before?
Corey: No. No. When you're at the point to where they're delivering you back to your point of origin, you've already gone through the entire process of being age regressed, debriefed, blank slated, had a screen memory added if necessary, and then time regressed back to the point. And then they usually give you . . . The largest number of people have screen memories of portaling in and out of their bedrooms. And that was one of the screen memories that they had given me. But what they had done is used a technology to tell me to leave my house, and they picked me up in a van. So a lot of people still have that screen memory of thinking that a light opened up in their room, and they were portaled out of their room.
David: We discussed Voice of God technology. Is that the technology that would be used to get somebody to leave their house to go get picked up in the van, in this case?
Corey: Right. Right.
David: Okay. Okay, so you're saying that before you get returned to the room that you left from, you've already been through some sort of age regression procedure.
Corey: Right.

David: Let's just talk for a moment about what's happening there. So you're saying . . . Let's just walk through a hypothetical 20-year term of service. Did you only do one thing in your 20-year term of service in the Space Program?
Corey: No, I worked on several programs. I was transferred around to work on several programs during the . . . It was just a little over 20 years. And at the end of that 20 years, I was told, "You're time's up. It's time to go back home." Then they took . . . In my case, I was taken back to the LOC . . .
David: Wait a minute. Is it normal for people to have different transfers and not just all have the same job for the 20 years?
Corey: Yeah. Usually they work different . . . It's just like if you are in the service, you're going to be transferred around. You're going to develop skill sets. Their skill sets are going to evolve. And you're not usually going to be assigned the same duty on the same vessel for the entire time.
David: That makes sense, because otherwise people would get tired, burned out. So changing things up keeps it interesting.
Corey: Right. Things get boring and it's not as exciting as people think. It gets boring a lot, anyway.
David: Okay. So now you're saying that eventually they came to you and said that it was time to go back.
Corey: Right.
David: What was the last job that you had? What was your last assignment prior to them saying that?
Corey: It was one of the darker assignments that they had me working on that I don't like talking about very much.
David: Okay. So by that point you're probably quite happy to be getting a reprieve from it.
Corey: Yes.
David: Were you counting the years? Were you well aware of the 20 years and looking forward to it?
Corey: Yes.
David: Do people ask to get discharged early? Do they want to get out and see if there's a way they can get out?
Corey: That's not an option.
David: It's not an option. So people know not to even bother to ask.
Corey: Right. And if people were released for different reasons, I don't know about it.
David: If you tried to ask, if you say, "I really don't want to do this anymore," what's going to happen?
Corey: You were to follow orders. I never saw anyone that defied orders. It was very rigid, regimental situation to where you were seeing things done to other people that were unpleasant. You wanted to be not on the receiving side of unpleasant things. So you didn't rock the boat, so to speak. You just did what you were told.
David: But you said that it was a little more than 20 years before they told you your time was up. So was there . . .

Corey: Just barely.
David: Was there a period of time where you were like, “Oh, my god, it's been 20 years, and now they're not letting me go yet?”
Corey: No. There was a little delay before I started. I knew all about it ahead of time.
David: Oh, okay.
Corey: There was a little delay before I was assigned to the research vessel that they had me doing some other things.
David: So people have had trouble understanding what this age regression is. So let's walk through it now. They tell you you're done. You feel incredible relief. And what is the process? What is your discharge process? Let's just walk through that.
Corey: You sign papers.
David: First of all, can you tell us where you were? You were out in space somewhere, right?
Corey: Right. Well, they take you to the LOC – Lunar Operation Command – and you sign papers that you will not talk about anything, non-disclosures.
David: Non-disclosures.
Corey: You sign a bunch of papers. Then you go through a debrief that is an enhanced debrief to where they put you in an altered state and then debrief you over your entire service.
David: Is that some way that they're pulling information out of you almost like a computer hard drive, where they're hacking your thoughts? Or is this more of them getting you to verbally disclose your whole career history?
Corey: You're verbally disclosing and confirming information they already know while you're also hooked up to electronics that are monitoring and recording telemetry.
David: What's the telemetry that they're getting? Why would they need to do that?
Corey: I don't know.
David: Is it like lie detecting?
Corey: I don't know. It was for their use.
David: Okay, so you kind of do a life review, and how extensive does it have to be? Do you have to talk through year by year, experience by experience, or just highlights?
Corey: It was fairly detailed unless they saw something they wanted to focus on and talk about. It was at the discretion of the person doing the debrief.
David: In your own case, was there anything that they felt the need to focus on and spend more time talking about?
Corey: Yes.
David: Stuff that you don't want to tell us?
Corey: Yeah.
David: Okay. So you go through this debrief process. How long does it take? In psychological time, how long did it feel like it took?
Corey: The debrief . . . They were also doing blood tests, doing different things like that. It was probably two or three days spent at the LOC throughout the debrief and

waiting process. There were other people going through it as well.
David: Were you in the same room each time? Was it all in one room while you were actually going through the debriefing?
Corey: The debriefing happened in one room, yes.
David: Okay.
Corey: But there were other people going through the same process at the same time you were.
David: In the room with you?
Corey: No.
David: So you had a private room.
Corey: Let's say there were 100 people that their time was up as well.
David: Okay.
Corey: We were all there as a group, and one at a time we were all going through the process of rotating through being debriefed, going through getting shots, blood samples, that kind of thing, going through the process.
David: So when you say the whole process was two or three days, that includes the social time talking to these 100 people while they're going through it one at a time?
Corey: Right.
David: And then the others are all hanging out?
Corey: Right. We were all kept on the base for that time period, and we were instructed not to talk to each other about logistical stuff. And when you're doing debriefs, you're not supposed to cross-pollinate or talk about . . .
David: How do you make conversation and small talk with somebody . . . you spend 20 years in space?
Corey: You get very good at it. You get very good at small talk.
David: Well, what would you talk about? Like stuff from before you went into space, like cultural stuff from when you were still on Earth?
Corey: No. You could talk about small talk stuff that happened in your daily life out there, but not operational information.
David: Nothing specific about your mission or what you were doing?
Corey: Right.
David: Were you in a private room at this point, or did you have to bunk with other people when you were sleeping?
Corey: In the LOC at one point, I was in a room with four people, but most of the time I was by myself.
David: What would this room look like? How big was it? Did it have any furniture?
Corey: Well, just four bunks. Four bunks. All the rooms were real small.

David: Oh.
Corey: It's not like apartments or anything like that.
David: Any decor or anything that made it look nice? Or was it just very spartan?
Corey: No. Just four bunks, one above the other, real small, just big enough to get in,

walk past each other sideways.
David: And you said it's not like “Star Trek: The Next Generation”. It's conventional-looking doors, conventional rooms, conventional hallways.
Corey: Right.
David: No windows, I assume.
Corey: No.
David: Okay. So then you go through this debrief, and what happens next? What's the next part of the discharge?
Corey: The next part . . . They take you down to the lower floors where all the medical is, where they have a huge science and medical area to where they can repair injuries and just do all kinds of things. And they take you to the area to where they do the age regression.
David: After they've cleaned up your injuries or healed a bad knee or things like that?
Corey: No. They don't . . . No, that's . . . They don't do any of that.
David: But you had mentioned that they can do that.
Corey: Yes. That's where it's done.
David: But they're not doing that for you as part of the discharge?
Corey: Well, it's not needed because you're about to be regressed, age regressed, to where you were.
David: Okay.
Corey: Any scars you have, any tattoos you have, are gone.
David: Okay. Let's walk through this step by step. Do you go into a separate room? Is there like an age regression room?
Corey: Yes.
David: Okay. And so let's see what that looks like now. So you say it's a lower floor. You go in there, and is there a large area where you see all these different medical things happening? Are there like hallways with doors and rooms?
Corey: It's like your typical pre-op room. You go into . . . Like if you go into a hospital.
David: Okay.
Corey: You go in. You're sitting in a gurney. They come in. They talk to you, put you at ease. They tell you what's going to happen, that they're going to put you under anesthesia, that you're going to have to be kept totally static and in an induced coma for, I believe it was, nearly a two-week period.
David: My goodness.
Corey: And while you went through the process of them age regressing your body.
David: So you're in a private room now with a door that's closed?
Corey: No, this is like with the curtains.
David: Oh, wow! So there could be others from that group of 100 . . .
Corey: Right.
David: . . . that you're going to actually be only separated by curtains in this larger operating room-type looking area.
Corey: Right.

David: So there's like heart monitors and beeping machines and technology like that around?
Corey: No, they don't have to hook you up to that. Your telemetry's read remotely without having to touch you.
David: When you say you're on a gurney, it just looks like a hospital bed? It's not like some cool-looking tube or anything they stick you in?
Corey: No, it's just a hospital bed. Just a regular gurney.
David: Really?
Corey: Yeah.
David: But they say they're going to immobilize you?
Corey: Yes.
David: And did they give you a reason for why? Like, what happens if you're not immobilized?
Corey: They say that you have to be kept totally immobile during the process. You can't have any twitching or any moving throughout the entire process for it to happen.
David: Wouldn't your whole body go into atrophy if that happens?
Corey: No.
David: Wow! Okay. Did they let you know this is going to be told to you in advance, or do they save it until right before it's going to be done so you don't get paranoid about it?
Corey: No, you don't know anything about how the process works. I mean, they don't even tell you the details about how the process works. They just tell you, “Okay, we're about to administer medication. You'll start feeling sleepy. You'll be able to respond to our commands. Then we'll administer more medication. And then the next thing you know, you'll wake up, and it will all be over.” And once they had administered the medication to where . . .
David: Do they have you catheterized so you can pee during these two weeks?
Corey: I was not catheterized.
David: Really?
Corey: Right.
David: Wow!
Corey: I was . . . Once they had me . . . I guess it was some sort of anti-anxiety or something that got you . . .
David: That makes sense.
Corey: You know, that got you real . . . just calm and kind of loopy. And then they flattened out the bed. They come in and they start bringing these foam, like a frame thing around your body. And they slide your arm in them and close things around your arm that will keep you from moving around.

David: Like nylon straps or something?
Corey: Yeah, Velcro.
David: Yeah.

Corey: And they move you into another room. And this is where things really are hazy for me because I'm already . . .
David: Heavily drugged.
Corey: Heavily drugged. And they say that they're going to push the medication, the sleepy med, as they were putting up these white panels around my body. And I'm pretty sure they moved me over onto another bed from the gurney.
David: Did the panels look like they might be some type of technology, like an energy-beaming technology or something?
Corey: They just looked like white, maybe acrylic or plastic-looking panels around.
David: Okay. So nothing that special-looking.
Corey: Right. They start sticking needles and things in different parts of you for whatever reason, like in your thighs and in your body. And I faded out. And then at the end, you wake up, and you are now the age you were when you first arrived.
David: What did that feel like? When you first wake up, I mean, did you feel like you were coming out of a terrible, terrible hangover? Were you very groggy, sick?
Corey: It was just like coming out of . . . pretty much out of anesthesia when your surgery . . . You're just nauseated and disoriented, groggy, achy. You feel different. You're in a different body. At this point that they wanted to do another debrief.
David: How soon do you get to see a mirror?
Corey: I don't remember how soon after it was. I was in a . . . It seemed like they kept me kind of drugged up for a while. They immediately brought me into, like, another debriefing when I was still . . . when I was able to be more interactive and reminded me of all the things that I had signed. And it seemed like the environment and the people were different.
David: Were you aware of being on the LOC still? Is that what it seemed to be?
Corey: Yes.
David: Okay.
Corey: I was at the LOC still, but it was different. Everything was different.
David: Like just a different wing – a different part of the facility?
Corey: Everything just seemed . . . everything seemed different. Different people.
David: Do you think that possibly you were not in a different time?
Corey: Yes.
David: Okay.
Corey: Yeah. That's when they . . . Since you were already drugged, they wanted to do another debriefing, and then they would try to go through the blank slating and the screen memories. And they would try to do levels of screen memories to make you . . . They would wipe you to try to make you forget about the experience, and then give you screen memories to make you have conflicting memories about where you were and what happened, like give you memories of portaling to your room when you really walked back into your room. And it was just kind of a real kind of a mind screw.
David: So did it appear that they used the information that you gave in the first debrief where you sort of verbally talked through your whole experience? Does that become,

like, their laundry list of things that they're going to now confabulate every one of those with fake memories and alternate stories so that nothing really lines up anymore? Is that the idea?
Corey: I'm not sure if they used that for that purpose. They keep a very detailed file on every person. So part of the debrief is they're verifying information and compiling information on their files, making sure they have correct information on personality profiles. And I'm sure that the first debrief was for several different reasons. But the whole part of them getting you back home is meant to be a whole groggy kind of process. I mean, if you've had major surgery and been driven home shortly after, like if you had a knee replacement or something like that, the whole thing is kind of a groggy kind of experience going back. And when the blank slating started to wear off, as it always did on me, the screen memories were there kind of at first. And I had memories of being portaled in and out of my room, but I had also memories of walking out to the car, out to the van, so I had kind of conflicting memories. And then the memories started kind of rushing back, immediately back, when I was that age.
David: Do you remember . . . I mean, obviously, if you're working out there for 20 years, you're going to be seeing yourself in the mirror.
Corey: Right.
David: Were there changes in your appearance over the course of 20 years? Was there a natural aging progression?
Corey: Yeah.
David: So if you're all drugged out and just out of it, when is the first chance that you have to really notice what this procedure has done to you, or the change that has occurred?
Corey: When you're back home the next morning, and you get up out of bed and you're still groggy, and you walk into the bathroom at your home and you look at yourself in the mirror, and you're confused.
David: What were the most notable changes to you in your appearance? What did you notice that was different? Or did the blank slating work so well at first that you thought that nothing had happened?
Corey: At first I was just really confused. And over weeks, the blank slating started to wear off, and I just immediately started having a lot of . . . The disturbing memories started coming back first, a lot of the very upsetting stuff. I was having a lot of problems with the memories. And then more of the organized, contiguous memories started to come flowing back.
David: When you say you were confused at first waking up, could you describe in a little more detail what you mean by the confusion? What was confusing?
Corey: I just didn't feel . . . I was confused. Something didn't feel right. I felt . . . Something felt out of place. I was nauseated. It felt like something had happened.
David: So something isn't connecting in your story here, which is, you're in the LOC. You wake up after the regression. You say that people and the facility looked different. So maybe it's 20 years back in the past now that you're in?
Corey: Right.

David: Okay. And you're all drugged out, and they give you another debrief. But then you're not amnesiac yet, right? You still remember what happened before? Or when you're under these drugs, are you just totally disoriented now?
Corey: I'm totally disoriented, but I still know where I am.
David: Okay.
Corey: And I basically know . . . I know everything, but I am blitzed out on drugs like they give you for surgery, anesthesia.
David: So what happens between the second debriefing, when you're blitzed out on drugs, and then you being at home? How do they get you home? You're on the LOC, and then what happens?
Corey: Well, I have a memory of walking back into my house, climbing back into bed and going to sleep. And then I had a separate memory of being portaled into my room, climbing into bed and going to sleep.
David: Ah.
Corey: And so there was a conflict there in the screen memory, and then the memory of walking up the front of the grass of my house and in through the front door and into my house, and then going straight to bed, climbing into bed. And then the other memory that I walked in through a portal into my room.
David: What happened . . . What's the last thing you remember in the second debrief? Did you end up losing consciousness again in the second debrief?
Corey: Yes. I remember going into the debrief and them starting to re-go over information, and then that's all I remembered.
David: So they may have given you more injections or some energetic something?
Corey: They did something.
David: Okay.
Corey: Yeah.
David: So by the time you then . . . So you have this very foggy memory that they confabulated. Maybe it was a portal or maybe you just walked into the house. But then it's when you wake up in bed that the procedure has now kind of run its full course, and you're waking up out of another very heavily drugged amnesia.
Corey: Wait. This is when I'm home now, right?
David: Yeah.
Corey: Yeah. Okay. I think I was confused there. Yeah. So when I wake up at home, I wake up and . . . you know, I'm at home. And I don't immediately have a memory of those other 20 years, but I am still kind of confused, and something feels not right. And something just didn't feel right from the beginning.
David: Now, you've said this in other episodes, but I think it's really important to mention it again in this one. They promise you, when you do this 20 and Back, that when you come back, you're going to have a real cushy salary and all these benefits for all this service that you've done.
Corey: Yeah, that you'll get free college, you'll have six figures a year, you'll live comfortably for the rest of your life. But they don't plan on honoring that, because they plan on erasing your memory and then just putting you off on your own and

keeping you under observation.
David: Did you receive some form of payment while you were in the Space Program?
Corey: No.
David: Do various people have more money than others?
Corey: No, there's no money.
David: There's no money. So it's kind of like being a slave, or similar to, I guess, military service, where everybody basically just lives in the same bunks and has the same food. And you don't really get to have any possessions.
Corey: Everything's provided. No one even has photos from home. You don't have anything.
David: Are there any sentimental items you're allowed to have during the Space Program that you can bring from assignment to assignment? Like if there's an object that you decide you like, that you were able to maybe whittle something out of wood or something that you have for yourself? Are you able to keep that with you from assignment to assignment?
Corey: People had little things that they kept, but usually you just . . . you didn't have much room. You had a small little area to keep your couple changes of clothes, underwear, and the things that you needed, and that's all the room you really had.
David: That's your whole personal space other than the bed.
Corey: Space came at a premium, and there wasn't a whole lot of space for personal stuff. And there was no way to smuggle stuff from home, so people didn't have a secret deck of cards. They didn't have a picture of their mom and dad.
David: Can you remember a specific example of someone you knew who had a sentimental item?
Corey: There was, like, notes, letters written between people that ended up forming bonds and relationships, that kind of thing, that were in the program, but not any type of whittling or object like that.
David: Okay. So it wasn't like somebody would sculpt something or have an art project or anything like that.
Corey: Right.
David: No musical instruments.
Corey: No.
David: Okay. So if they're not honoring these contracts and not giving people free college and tuition and six-figure a year jobs, then it must be that this technology works really well on most people.
Corey: Yes. Yeah, it's like 3~5% of people that the blank slating memory wiping and screen memory technology just will not work on. They try and try and try and the technology will not work on [those people]. A lot of the other people, the technology will work on for many, many years and then start to break down. And it usually will not start to break down until after that 20-year period they served. Like let's say that I didn't regain my memories. I wasn't an intuitive empath. I was an engineer of some sort. Around 2008, after that 20-year period that I would have served, people all of a sudden will start . . . it'll start breaking down a little bit – some of the blank slating.

David: Is everyone kept on surveillance so that they can monitor if that starts to happen?
Corey: People are monitored, yeah. And as I said, when you're up there, as well, you're completely cut off from all information from the planet. So, you know no Internet, no radio, no TV. You can't come back with who won the basketball or football game information, who won the elections. You don't know any of that information when you come back.
David: You're totally isolated from any information on Earth.
Corey: Right.
David: Do they feel that would cause, like, a time paradox - some kind of problem - if that were to happen?
Corey: I would assume that is why. When you're in this type of service, you know, they will just tell you the rule. You don't get any type of communications from home. You don't get any type of news updates, and you don't get to say, "Why? Explain to me why. Give me the details. Please break it down for me." It's not that kind of a relationship you have with these people.
David: What is the year that you remember coming back? Or the splice point?
Corey: The splice point was just before I turned 17. So I was 16, just before I turned 17. And they returned me back . . . it was within a six minute or so window. So I was right close to 17 years old, right around 17-year-old mark.
David: Did you start to remember what you looked like when you were older?
Corey: When I started to get into my 20s, I started to really have . . . I really knew what I was going to look like at later ages. I mean, I had seen myself. As I was getting older, I had seen myself at that age before.
David: If someone forgets, what is going to be their subjective experience at the splice point? Is it going to be like they got sick and they're in bed for a few days, and like, man, I just feel horrible? What's their experience of the splice point?
Corey: They may think they have had a very strange dream or they had some night terrors. They may think they had a little bit of a flu or something and been nauseated, and something just didn't feel right.
David: How long does it take the body to recover from being two weeks in a coma immobile?
Corey: I was fine and ready to return to my life within, you know . . . the next couple of days. I was able to get my energy level back up and I was fine.
David: Are there any health complications from them doing this, or is it a really cool technology that just works great?
Corey: The people that have had this technology used on them report a lot of different neurological issues in their arms, in their hands, in their legs. Some of the people that spent a lot of time out will have issues with their eyes – cataracts, retina issues. But a lot of neurological issues.
David: And have you suffered those issues as well?
Corey: Yes.
David: So there's really no way to have a government program that you can appeal for

medical benefits because this is all off the books and . . .
Corey: Yeah, you can't just go to the VA.
David: Unacknowledged. All right. Well, this has been really fascinating. I hope you've enjoyed it too. I wanted to get through the whole thing, so this is going to be extra length compared to a typical episode, but I think it was worth it to cover all of this at once. This is “Cosmic Disclosure”. I'm your host, David Wilcock, and I thank you for watching.

Government Troll Data Center Season 4 Episode 4

Cosmic Disclosure; Government Troll Data Center Season 4, Episode 4

31 Mar 2016

David Wilcock: Hello, I'm David Wilcock, and welcome to another episode of "Cosmic Disclosure". I'm here with Corey Goode, and in this episode we're going to get into government trolls, our friends we love to hate online who always are so willing to share their very, very negative and depraved opinions. But are they really just ordinary folks, or is there something more going on? So Corey, welcome to the program.

Corey Goode: Thank you.

David: I want to open this up by talking about a very, very bizarre television show that is now available. Anybody can watch it if they have a basic Netflix subscription. It's called "Ascension". In the show "Ascension", they describe a honeypot situation where, when people started to find out about this program that they're describing in the show, that there are places online that they designed where you will find that information. And they make it out like it's just a website, but then they're looking for people who actually are leaking real information. And that leads to a government hit job.

So is that aspect of what they say in the television show "Ascension", is that real? Will they hang out information to see if a whistleblower shows up, and try to make them think that it's a trustworthy place to disclose data, only to find out that the trap is going to snap on them?

Corey: Yes. They use websites. They use people posting in forums, and they use established researchers who have been compromised by informants of their own. They've got the infiltration of this field down to a fine art, and they've had the infiltration of ufology in the esoteric community down from the beginning, since the early '50s.

David: How much of the information that people who are studying up on UFOs and reading online may be part of this type of program? Is this a fairly isolated phenomenon, or is it a fairly widespread phenomenon? How prevalent is disinformation in the UFO community?

Corey: It's incredible. It's heavily controlled, heavily manipulated information.

David: So what are we really looking at here? Does this mean that the average person, who feels like they've done a lot of homework and has really studied up and learned what there is to know about UFOs, are they polluted with an incredible amount of disinformation?

Corey: Oh, yes. I mean, I've talked to people who have angrily said, “I've done this for 40 years, 45 years, you know, 10, 15 years I've been studying this. I've been in the middle of it.” Their egos can't let them for a moment to believe that they have been tricked by information by these infiltrators.

David: Let's talk about the abduction issue for a moment. It's a very strange counterpoint between, for example, Dr. John Mack, who was a PhD psychiatrist from Harvard University – or it might have been MIT. I'm trying to remember. It's one of those two - the big Ivy Leagues in Massachusetts. Anyway, I think it's Harvard. Dr. John Mack, straight ahead mainstream psychiatrist with all kinds of published papers behind him, is interviewing people in a therapeutic context using hypnotherapy.

People get hypnotized, and they start to report extraterrestrial contact. And he writes a big, thick book just like mine – 500 page monster. You read John Mack's “Abduction”, and there's innumerable reports of people have been benevolent contact, spiritual experiences, mind-expanding experiences, prophecies of some sort of very positive change for humanity. And he said this seems to be a very consistent element of the contact experience.

Then, he allegedly slips on the ice and falls and hits his head, and he dies, right as UFOs are really starting to take off. But then you have almost every other alien abduction researcher completely divergent from what John Mack was saying – that abduction is this terrifying thing. It's only negative. They're bringing you up, they're taking genetic samples, they're terrorizing you, then they mind wipe you and send you back down.

So let's talk for a moment about the abduction narrative. Are these certain folks that are putting out very consistently negative information about abduction possibly on some sort of government payroll?

Corey: Not necessarily on a payroll, but are buying into a certain narrative that has been meticulously seeded with very believable information, and information that they know that a certain person is predisposed to want to accept.

David: Is it possible that there are people who are actually being paid to write books and pose as normal researchers?

Corey: Oh, yeah. That's definitely true.

David: Okay. I'm not going to name names, but I'm thinking of one very strongly right now.

Corey: Yeah, the most important tool to have is a psychological profile on a person. If you have a psychological profile on a person, you're able to then find ways to get into their life and manipulate them, manipulate their belief systems. You know what they're looking for, what their field of study, their interests are, and then you can put in people that have that information with the caveats that you've put on it, disinformation caveats, and then they jump on – or if they bite that information, then you are in with them and then they are now, I guess, parroting that information for you if you're a disinfo agent.

David: Well, let's talk about that psychological profile. You obviously know what you're talking about, but we don't. So let's just say you have someone on the Internet who has been targeted. What do you actually see, and what are they doing? What are they looking for?

Corey: Well, they have different types. They're going to break down your personality type.

David: What does that mean?

Corey: There are 16 main personality types. If you go and you take the test and you find out what you are, they have pages of pages that will describe your personality. Science has developed this personality typing over a long period of time.

David: I remember in college, I majored in psychology, there was something called the MMPI or the Minnesota Multiphasic Personality Inventory. It was a very, very complex, multiple choice test that did crank out something like you're describing at the end.

Corey: Right. This is very similar.

David: Yeah, okay.

Corey: They've had a lot of these that have evolved over time.

David: Okay.

Corey: So they want to find out your personality type. and most people think that everybody thinks the same way that you, that they, do, but we all approach things, think through things, differently. They want to get into your head and figure out how you think. Then, they're going to . . .

David: Is neuro linguistic programming part of this?

Corey: Yeah.

David: Okay. Then how does that factor in? Because I've heard that some people are more visual, some people are more auditory, some people are more . . . and you'll see people the way they look, like they'll move their hands, and where they look when they're talking about something has to do with what part of the brain they're accessing, that kind of thing.

Corey: Right. And they're going to need to know that type of information to know how best to target you. And then they're going to get as much information about the type of friends you keep, the type of content you watch on television, the type of information you follow on the Internet, the type of comments you make on social media – any and all information - they take, they put it together, and they have these different array of different types of psychiatrists that then pour over it and come out with a final psychological profile that says . . . It's a profile that an operative can look at and use to say: "This person will most likely behave this way in this scenario. Or if I want this person to behave this way, this scenario will most likely elicit this response."

David: Well, I got pulled into jury duty a few times, and these attorneys end up asking everybody certain questions. And when they're trying to select a jury, obviously they want to pick jurors that they think are going to be more likely to win.

Corey: They're profiling you.

David: Yeah. So what is this . . . Is there a document? And is it like a stapled series of 8½ by 11 pages that you can flip through? How many . . .

Corey: Well, if you print it out.

David: Okay. So it's a written document.

Corey: Right. It's a typed document. It depends on what type of information they've been able to . . . If they've gotten into your medical records, they'll have medications that you're on. Sometimes if they want to get in and switch out your medications, that's handy to have. They want to know absolutely everything about you. So there will be medical information that's supposed to be HIPAA safe – everything that you can think of.

David: Well, one of the things we've heard over the years - I've been in this field a long time – when people are actually contacted by agents, which used to happen a lot

more than it does now, and they actually do want to intimidate you, they will say things to you where you're like, “Wait a minute. I didn't tell anybody that. How the hell did you know that?”

Corey: Right.

David: So that gives them a lot of power. So they'll use all kinds of surveillance, and they want to have all these invasive personal details. So is it like an analysis of vulnerability? Is there a tactical breakdown of where somebody's vulnerabilities are? If you hit this button, you'll get them to break. If you hit this button, you can take away their money. If you hit this button, their relationship is going to fall apart. If you hit this button, their family's going to turn on them. If you hit this button, then this is where they go shopping and you could target their car while they're in the shopping mall?

Corey: Pretty much.

David: Wow! What's the tone in these documents? Is it sarcastic and mocking, or is it just very clinical and scientific?

Corey: It's clinical, scientific, matter-of-fact.

David: So it doesn't have a lot of nasty talking-down language or anything?

Corey: No.

David: Okay. So let's get into the core of what I wanted to speak about in this episode, which is people online are in discussion forums and we've been watching this happen for a long time. I first started to go online with a 14.4 kilobytes-per-second modem dial up, which I didn't even realize went that high. I only did it at 4.4, 4,400. “Oh, my gosh, it goes up to 14.4.”

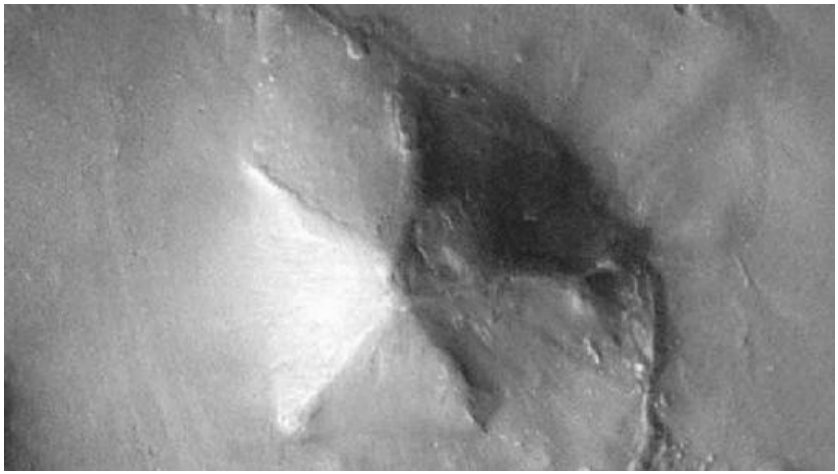
Corey: I remember.

David: And one of the first things I did is I went to Richard C. Hoagland's discussion forum on EnterpriseMission.com. And I'm saying, here's this guy coming out with this incredible stuff, that there's a monument on Mars.

David: It looks like a face, obviously artificial, with pyramids right nearby and a five-sided pyramid down at the bottom. NASA's got it on these photographs. There's all these geometric alignments that lead to a new physics of a tetrahedron inside a sphere. And this is where the Great Red Spot is on Jupiter, and this is where Hawaii is on Earth, et cetera, et cetera, et cetera. Wow!

And then I start reading this stuff, and why would these people be so angry and so aggressive? And over the years I started to notice, when you really get these nasty skeptics, they will never acknowledge that you made a point. They never change their mind. Their opinions never flex even slightly, and they just will constantly be on the attack.

And any rational, normal person, if you win a point, they will acknowledge and concede, “Yeah, yeah, that's true. Maybe I ought to be looking at this differently.” But these folks are like little fundamentalists, and all they do is they just caw and caw, like a raven, and they never get past their own opinion.



Corey: Yeah.

David: When people see folks like this online, are you saying that these people actually are being paid?

Corey: Not all. I mean, there's a phenomenon of anonymity, power. People feel powerful in anonymity on the Internet. They feel like, especially if they don't feel empowered in real life to stand up to people, they will overcompensate with the anonymity of the Internet. There are people that are narcissists and sociopaths that just get off on getting into circular debates.

David: Right.

Corey: So there is that. But I'm absolutely positive because I helped set up a government data center for, basically, government trolls.

David: You helped set it up?

Corey: Right, as an IT (I) set up a virtual data center to where each station had a post coming up, six monitors branching off, one computer station that ran VMWare workstation. And they'd pull up VMWare workstation, and they would pull up a virtual computer screen. It would be just like when you log on to your computer. You pull up a virtual machine, a virtual computer, but this computer could be on a server anywhere in the world and the IP address is anywhere, wherever that server is in the world.

So you can be sitting at this station and be pulling up these virtual machines from servers all over the world and make it look like you're in those locations from the IP address. And these people would have over a dozen different personalities that were created online, and had back stories, back information, have social media tied to them – very complex personalities set up with them.

And these operatives were normally what we call the “personality metamorph types”. It's a program of people that were sociopaths, really good liars and infiltrators, and were really sociopaths and were really good at this job.

And they would sit down. Some of them would just troll around looking for information. Some of them would be given targets, go to certain Internet forums – esoteric Internet forums – log on with three or four user IDs, and sit there and cause a huge disruption if they saw a topic that was legit or something they didn't want to be talked about, cause a big disruption and sit there and have an argument with their self. And it looks like it's three or four people, problem people, having an argument, when it's really the same person sitting at a computer using virtual machines from all over

the world and using fake personalities with user IDs.

David: Well, you have people that show up on my site and you get a whole bunch of them that all appear at once, and they start making all these anti-semitic comments. And then if we allow those to go through, somebody could then say, “Well, David is hosting anti-semitic content on his website.”

Corey: I delete those immediately off my site.

David: Yeah. What is the modus operandi of these attacks? I think what people are having a hard time understanding is, this is not a free, open debate. Are they trying to get people to doubt any of this information? Is that basically what it is? They want to make it seem like it's not credible?

Corey: They'll put out misinformation to cloudy the water and make people doubt or make people think there's been inconsistencies. They'll put out full disinformation contrary to it, or they will just make . . . they will sit there and bait people into debates that turn into circular debates that frustrate people to where people are triggered and don't want to come back, or they just say “pfft to the whole thing”. I mean, there's a whole bunch of different scenarios and tactics that they use to manipulate and play with people's minds.

And they even go as far.... If there are certain people that are strong supporters of a certain topic that they don't like, they'll begin to harass people, stalk them online, and even form alliances with real people and manipulate them into causing problems for the person as well. So they will manipulate other people that are of a similar mind to cause problems, as well.

So they're not just manipulating the people they disagree with. They'll find other skeptics, feed them information for them to say, “Oh, okay. I knew it.” And then they will take that misinformation and feed it further down the line. And I've seen a lot of that happening with bloggers that may have good intentions, but just have a certain point of view and then they receive information that they don't take the time to verify, and they just pass it along.

These days, honestly, anyone can open a blog or self-publish a book and or a YouTube channel. So a lot of these types of people can be compromised, as well.

David: Is it more useful to the Cabal if somebody gets into a highly charged emotional state, as opposed to if they're calm and rational?

Corey: Yes. Their goal is to throw you off. If you're calm, cool and collective and having a discussion in that matter, they'll try to get you into a circular debate until

they trigger you and you lose it. And then they can say, “See, look at this person.”

David: Well, and now you can ruin your whole career with one tweet.

Corey: Right.

David: Less than 140 characters can just destroy somebody.

Corey: Right. You can ruin your reputation.

David: And there's always a digital footprint of everything you say online, no matter how charged you are, if you get blind with rage or whatever.

Corey: Right. These people are very clever. A lot of them will approach you and be real friendly even, and you will feel an affinity towards them and then pfft, they'll turn on you and something will post some information you shared with them.

David: So like will they feed your ego and boost you up and make you feel really important?

Corey: Right. You've got to be very careful with people that are telling you you're special and boosting your ego, telling you how important your work is, and that kind of thing. It's nice to hear, but you've got to be careful.

David: I noticed at the very beginning of my career that some of the people who wrote me the most complex and complimentary emails, if I then answered them, that they could turn very quickly and go from really, really praising me to being extremely angry and upset and negative.

Corey: I have been shocked at the number of people that I thought were friendlies that turned on me [snaps fingers] because I didn't answer their Skype. I got busy and didn't answer their Skype in a certain amount of weeks or whatever, and then poof.

David: Right.

Corey: So, you know, some of it is just personality, people out there that are just being people, but the data centers that we set up were absolutely for the purpose of targeting people out there that were putting out information, and also to locate these people and report them up the chain so action could be taken against them.

David: Well, let's remind the viewer that Glenn Greenwald, after leaving “The Guardian”, made his own website called 'The Intercept”. And there's a very complex series of Snowden documents that he's released on “The Intercept” documenting how

they do this and showing flow charts and action plans of how these agents would attack this stuff, what things to say. And there were even examples in the documents, the Snowden documents, of like a seagull that's taken as it's flying fast so there's motion blur on the image of the body, and it kind of looks like a saucer.

Now, that picture is in there without any commentary, but it seems pretty clear, if you kind of connect the dots, that UFO forums were one of the things they were infiltrating.

Corey: Oh, yeah. The esoteric UFO forums and political and different non-governmental organization forums are their main targets.

David: Right before the Snowden documents came out, people might remember that there were other things starting to leak, and one of them was – this was just a few days before Snowden – that folks from the Tea Party were getting unnaturally audited at a much higher rate from the IRS than people that were not. Did they have the power to do stuff like that? Can they go after you through various corporate means, including taxes or maybe health insurance or your job?

Corey: Once you're reported up the chain and you're put on any number of lists, then you're open game to be targeted in any number of ways. If you're seen as a threat and you're put on one of these government threat lists, which undoubtedly you and I are definitely on, and a lot of people are on [the lists] that follow a lot of this information, especially if they're outspoken, they're definitely on lists, and things like that can occur.

David: When I first tried to open a bank account for my website as a company, I was told I had to create an LLC for tax purposes.

Corey: Yeah, I did too.

David: The bank, there was people that did a review before they'd give me the bank account, and this is just a simple bank account, nothing special. And the lady thought she was all smart and types in "David Wilcock" on Google, and the first thing that comes up below my name is "David Wilcock fraud" on Google. "Oh, well, he must be a fraud."

And then I went back to them and I said, "Do you realize that I've written two New York Times bestselling books, and I'm on the number-one rated show on History Channel?" "Ohh!"

And I said, "Look, tell her that everybody in my field . . . this is what happens. There's a lot of people out there that don't like controversial information." I just left it at that.

So this stuff is real. People need to be aware. And were you just brought in for a week as a consultant for this job or was this just something you had for a longer period of time?

Corey: You're usually brought in to do virtualization. I was brought in to set up the virtual environment, to help the people with their workstations, get set up learning how to navigate their new virtual environment that was set up that me and some other people set up. And then after that, we moved on.

David: So you have a matrix of six screens, probably three on top, three on the bottom?

Corey: Right.

David: And then with the VMWare, each screen is a virtual machine in some different part . . .

Corey: Right.

David: . . . of the world so the IP address looks like they live in a different area?

Corey: Right.

David: And then they're working all these screens at the same time to have arguments with each other?

Corey: At times, yes. They'll sit there and argue with their self – with these alternate ego personalities – or they'll just be into multiple forums at the same time, causing problems, waiting for other people to respond, go to this one, say a few things, you know, kick the hornet's nest over here, go back to the other forum, hit refresh, see what happened – that kind of thing.

David: This is probably going to upset and annoy some people, make them pissed off. What can be done about this? Is maybe spreading the awareness and you coming forward with this, validating what the Snowden documents said on “The Intercept”, Glenn Greenwald's website? Is that part of the process?

And also, I guess, what's the best way to handle this if you think somebody is doing this online? Should you argue with them? Should you try to expose them?

Corey: Just being aware that that is occurring is the first step. Second step – and I've been guilty of it myself; it's hard not to sometimes – do not engage them. Ignore them. Pretend you didn't even see what they said. That drives them crazy. But just don't get

into a circular debate. If you talk to a person and it looks like it's going into a circular debate, they're stuck. They're going to just reargue, reargue, reargue a moot point, then just move on.

David: What did they see that it is in the human psyche that makes us . . . We could get 100 positive emails, but we'll go for the one that's negative and focus in on that, or we'll see 100 positive discussions on a forum, and one person is a hater and we've got to attack that person? What is the vulnerability in us, and how can we heal that vulnerability so that we're not wanting to engage in these conflicts?

Corey: It is a part of human nature that we always focus on the negative. But also, it goes back to the personality profiles, and them knowing your weak spot. If they found that you don't like . . . If you're uncomfortable with the way your chin looks, they'll focus on your chin kind of a thing.

David: Do you think it's advisable for people to spend more time cultivating real friendships in the real world?

Corey: Yes.

David: Because I've never had somebody talk to me in person, in all the years I've done this, over 20 years . . . In all the years I've been doing this, I've never had somebody speak to me in person with anywhere near the degree of disrespect that . . . If I read all the comments and emails that are out there per day, I could probably find 10 or 20 that are like that.

Corey: No one is the way they are in person when they're on the Internet. Even if they say, “I'm always this gruff. I don't care.” Some of the people, yeah, I guess that's true, but for the most part, even the nicest old lady, when they have the anonymity of the Internet and their power to say whatever they want, they're going to bang out some stuff here and there. And the power of the anonymity of being on the Internet and being able to make comments that you wouldn't do face-to-face normally, it's not the best way to meet people.

I've known a lot of people that have met their soulmates on dating sites. I'm not going to knock that, but Internet forums are heavily, heavily, heavily compromised by both troubled people and paid government trolls. So I don't even go to them any more. They are extremely compromised.

David: If somebody does want to try to spread the truth and they feel like some people are not listening to the truth, what are some positive things people can do to help spread this message? Should they be fighting somebody if that person just doesn't get it? Should they try a little bit and then back off? What are some positive ways to try to

combat this influence and get the truth out?

Corey: Well, speak to those who are willing to listen. You're not going to be able to convince someone, so move to those who seem interested and want to know more. Don't waste your time on the person that's going to just want to argue with you. It's a waste of time.

David: I think that's a good point for us to end this episode on. This is “Cosmic Disclosure”. I'm your host, David Wilcock. We'll see you next time, and I thank you for watching.

Voice of God Technology Season 4, Episode 5

Cosmic Disclosure; Voice of God Technology Season 4, Episode 5

05 Apr 2016

David Wilcock: All right. Welcome to “Cosmic Disclosure”. I'm your host, David Wilcock. We're here with Corey Goode, and in this episode we're going to explore various aspects of a highly controversial topic, one that may be unsettling to you - the Voice of God. And as we've been sitting here meditating, getting ready to do this, I've been thinking about both the historic aspect of how some of these things have been done and then we're also going to tie in some very strange modern technology as well. So this is going to be controversial. It may be upsetting, so viewer discretion is advised.

All right, Corey, welcome to the show.
Corey Goode: Thank you.
David: Now, when we go back to the history of the Cabal, it appears that we are dealing with the Egyptian mystery schools, Babylonian mystery schools, that were absorbed into the Roman Empire when Rome eventually conquered Egypt when they were quite weak. They absorbed the Library of Alexandria, they brought it to the Vatican, they relocated to England. And that is documented that Romans were coming to England around the beginning of the first millennium AD. They created Bath, which is a town in England, that still has the Roman baths in it. And it seems like that became their new base of operations for Europe.

Now, the religious wars that we know as the Crusades began around 1,000 A.D., and the Cabal begins to deal with a group known as the Assassins. Now, have you heard from your own background of any . . . Did you get any information about the idea of the use of drugs like hashish to train these men to become assassins?
Corey: The groups that we consider the Illuminati, or the occult syndicates, have been into mind control for millennia. And they use drugs, trauma, positive-negative reinforcement, all different types of methods that they've been doing for literally millennia.
David: Did you encounter any information suggesting that drugs and trauma were used all the way back, perhaps, to the Order of the Assassins so that someone could be brought into a state where they would be given verbal suggestions that they would not remember hearing later on but would then carry out what those commands were?
Corey: Yes. Using drugs, sexual abuse and other trauma on people when they were young to cause them to have segmented personalities is a very ancient way of creating people that they can create trigger words, or gateway words, or gatekeeper words, that can send them back into one personality or back to a docile personality and them

having no memory of what they did - like “Manchurian Candidate” kind of thing. That's a very ancient type of tactic.
David: Well, right there you said something that a lot of people might not be aware of. They might think that MKULTRA was only developed by Nazi Germany and is a recent thing that's only been a factor in world politics for maybe the last half century or so.
Corey: No.
David: So this is a very ancient technology.
Corey: Yeah. The root of everything that they did in MKULTRA was very ancient and stuff that these Illuminati groups have been doing on their own family members for many, many hundreds of years. They were very familiar with them, knew they worked and decided to implement them in programs.
David: I met with a guy who was part of a family that had a great deal of money, and I was taken into a Masonic lodge that had many different lodges within it – a very large building. What you find out is that these guys are having to memorize incredibly long amounts of verbal information that they regurgitate, and they have to do it verbatim – incredibly complex, incredibly long.

Does someone need to be able to learn how to go into a state of hypnosis in order to have that type of performance of memory?
Corey: Well, yeah. They need to be able to affect your state of consciousness. That's a key factor.
David: So talk us through what you know about some of these secret societies and the ceremonies that are taking place. Is it intended to put you into a state of hypnosis? Do they do things that traumatize people and throw you into an altered consciousness?
Corey: Other than attempted recruitment of me by various members of secret societies, I have not been in these ceremonies. Where I come in, the knowledge I have, is the technologies they used to affect people remotely with technology – a kind of like radio technology or microwave-type technology.

They were flat panels, and they could focus on one person in a crowded room and send a signal that would vibrate their skull and the wet tissue of their brain. And the people would hear sounds or voices, not necessarily through their ear, but in their mind. And they called it the Voice of God technology.
David: What do you mean by a flat panel? What did it look like?
Corey: It looked like . . . Well, I mean, if you hand me that laptop.
David: Sure. Don't let the Cabal see the serial number, though. Ha, ha.
Corey: It would be not much different than that. It would be on a stand and have a cable coming from it that would go to a box. And then the box would have something that . . . a microphone that you would speak into, or there would be a preprogrammed audio signal that you would send.

And there was a third function. And this panel right here would be aimed at the

person and it would shoot and focus on the single person. And it wasn't that much different in size than this.

Corey: And there was also what they called a data download function that would have a complex data download program that was created. The people that created them were called 'programmers', and they could create scenarios to give people visual, audio, and olfactory . . . They could smell, taste what they were programmed through what they were experiencing being stimulated in their brain through the technology. so they could give the people full auditory, visual and olfactory hallucinations.
David: Well, the high-level Illuminati insider, Jacob, who I had contact with for a long time . . . The reason why I brought up the Masonic stuff is he went into great detail with me about this. And he said that forcing people to memorize these very long passages of text is an excellent way to create wonderful hypnotic subjects where people will store incredible amounts of information that they're not consciously aware of.

So that technology involves a great deal of time, a lot of these ceremonies, but it also involves hypnosis and a lot of work. Now, this technology . . .
Corey: And a willing participant.
David: Sure. This technology you're describing . . . do you have to be in an altered state of consciousness for it to work?
Corey: No.
David: So it could theoretically be used on anybody.
Corey: It can be used on anybody. Yes. Early on, the technology they had worked only on extremely low frequency waves – ELF waves. And there's something called the blooming effect with both . . . It works like with your flashlight. When you turn on . . . Even with a narrow beam, you turn on a flashlight. The further away you stand

from a wall, the wider the circle is on the wall. That's called the blooming effect, and that occurs with radio signals, and it occurs with even particle beams, light beams, lasers, you name it.

And also changes in the atmosphere can affect the blooming effect of different technologies.
David: Well, if Pete Peterson was here, he would immediately start talking about what he always calls phase conjugation and says that if you have two beams, that you can have the bloom be in a certain area, but that the beams will converge back into a point later on by aiming two or even three at the same source.
Corey: I know they moved to a different type of technology. This technology, depending on the model, was only useful . . . It's a line of sight technology. You had to be looking at the person and had to be within a certain amount of meters from the person to use.

The newer technology they can use from aircraft, low Earth orbit satellites and drones. And it's still line of sight, but it will penetrate certain materials like the roof of a house, depending on the materials used in the house.

Some people have used this certain type of insulation and stuff like that that have made it harder, but a person can be sleeping in their bed, a drone can be flying around, and they can focus in on this person, seeing their heat signature, flip a switch on the data download, give the person a dream, give the person a complete false experience with . . .
David: I can understand the idea of you having a microphone and being able to speak into it and having that translate into auditory waves. Could you tell us a little more about how this data download actually works? You're saying people could get a dream that's beamed into them by Voice of God technology?
Corey: Not only that, but you could be sitting right here in front of me right now, and if you were to be targeted and they wanted you to see someone appear in the room and start talking to you, you would . . . and for the person to have a certain smell, you would see it. And this is not only used to target people, it was used to contact operatives in the field. Like if someone was behind enemy lines, they would send them information, send them a data download information about which escape route they should take to meet up with a rescue team, spies in the field to send them operational information on the fly.

It has a whole bunch of applications, but as this technology became very prevalent, a lot of black ops federal types, they started using them on their ex-wives' new boyfriends. They started targeting individuals, and it became an off-the-shelf technology for a lot of these groups.
David: Before I actually got my first insider disclosure and I knew that UFOs were real, there was a very creepy story from my family, because one of my mother's

friends was friends with someone who had lived in Nevada, started to see flying craft or something - some points of light in the sky that were zipping around making non-Newtonian movements. And they think that because they were using binoculars that the glint of the lens was picked up by the craft.

But what ended up happening was shortly after this guy starts looking at these craft in the middle of nowhere with binoculars in the daytime, he starts hearing voices in his head, he starts feeling extreme senses of evil – like there's sounds of a monster or a large beast or footsteps or chains dragging, growls.

He would feel bizarre temperature changes in the room like it would get cold. And he started to have what appeared to be visual hallucinations in the room. We thought that they might have dosed him with LSD or something. We didn't really know what was going on, but this man became so scared that he just literally one day, not long after it started, just got into the car and drove away from the house and never came back – didn't try to take any of his stuff with him, just fled in a total panic. And this is before I knew anything about UFOs.

That is just one example from my own history of a family story. So do you think it's possible that he was targeted? Does that sound consistent?
Corey: It sounds consistent. And the technology . . . They call it bioneural interfacing. And this is used often to contact people to convince them that they are in contact with a religious icon from their belief system, ascended masters, different ETs that they're channeling. And they're used to connect with these people and send them voice communication information, and also the download feature is used on them.

Now, the thing is that the download feature . . . If it's a prolonged use of the download feature, [it] absolutely causes paranoid schizophrenia in people who would otherwise never develop that disorder or have any type of chemical imbalance in their brains.

A person that would be totally normal, never has any problems, heavy exposure to this technology absolutely will cause paranoid schizophrenia in them.
David: Well, you've dropped kind of a bombshell here because this implies that some people out there who are representing themselves as channeling positive divine beings, could, in fact, be essentially remote controlled, and the messages that they are giving are straight out of the propaganda Rolodex of various alphabet soup agencies.
Corey: I know that is an absolute truth. That is happening. And this technology has also been used in warfare on the enemy, people being shown religious icons, being told the Great Caliphate or Allah is returning, throw down your weapons and give up. And it worked quite well.

It was developed to be used in tandem with some of the Blue Beam-type technology.
David: And for those who don't know what that is, why don't you say what that is.

Corey: Some of it was holographic, but a lot of technology, most of it . . . Some of it was ground-based, some space-based, to create visuals in the sky that would be seen by masses of people that would look three-dimensional and solid. And it's been used in small test cases with some of that technology.

Most of the Blue Beam technology has been taken out and is not in use. But the Voice of God technology is very prevalent and used by a lot of different black ops groups.
David: Well, getting back to this Order of the Assassins thing for just a moment, it seems like the power of the drug to alter people's consciousness is key in getting people to do things that would be outside their normal ethical boundaries. Does this Voice of God technology also simplify that process? Is it possible to create various mental conditions in people that might in some cases resemble a drug-like state or intoxication?
Corey: Yes. They can trigger different parts of the brain to release different chemicals, cause depression. They can sometimes . . . It depends on how strong the person's will is, as well. If they want a person to do a bad act, they can just work on them over time with the technology.

If it then causes them to become chemically imbalanced, then so much the better for them and their goal. And if they start taking medications for depression or anxiety - a lot of these types of medications – that makes the technology more effective as well.
David: So you saw this technology being used in the field?
Corey: Yes.
David: What were some of the uses that you personally witnessed? What were some of the things that were done?
Corey: Contacting people that were getting in . . . splitting up groups, causing fragmentation in groups of people getting together to cause infighting.
David: Groups of people getting together for what?
Corey: To bring out information that they don't want or people that were getting together to talk about information they didn't want talked about. Being proactive to get in and cause the people to turn on each other – become paranoid.

Also, I saw it used to make people believe that they were in contact with ascended masters and ETs.
David: So you personally witnessed that being done.
Corey: Yes.
David: We have a list here of some of the names of this stuff that was on an article on www.prepareforchange.net that quoted from you recently. Obviously, one of them is the Voice of God, which you just mentioned. There's also V2K or Voice to Skull devices. Have you heard that term?
Corey: Right. It's the same stuff.
David: So how does the skull relate? Does it make the skull vibrate?
Corey: Right.

David: And that creates an acoustic frequency that people can hear?
Corey: Right. It causes an acoustic frequency and also they call it Voice to Skull. Some of them will cause the skull to vibrate and the small bones in the ear to vibrate.
David: Okay. There's also on this list remote behavioral influence technology. Is that a term that you are familiar with?
Corey: That's kind of an overall term that's like behavioral modification.
David: Okay. And then we have LRAD – Long-Range Acoustic Device.
Corey: Yeah.
David: So is that the panel that you were describing? Is that what it was called?
Corey: Right. It was just referred to as Voice of God, because people thought that they were hearing the voice of God or a divine voice.
David: And then the last one on the list is DARPA's sonic projectors.
Corey: I'm not familiar with that sound, but DARPA was . . . much of this technology was DARPA.
David: And for those who don't know, it's Defense Advanced Research Projects Agency?
Corey: Right.
David: Okay. Now, you may or may not be familiar with this. I know this is going to be very unnerving to some people, so I want to kick in something that you may or may not know, that if we had Pete Peterson here, he'd gladly go on in detail about. And I think it's important for some balance.

A couple of things: First of all, he said that approximately 18% to 25% of the people out there have extraterrestrial DNA in larger amounts and that those people . . . hardly any of this mind control technology works on them at all. Did you ever . . . You mentioned something about will. Did you encounter anything suggesting that certain people are less susceptible to this or that they could train themselves to be less susceptible to this somehow?
Corey: There were people that . . . We were told they had a stronger will, and they were less susceptible to it. And also because I knew – being intuitively empath trained – that people who have a more spiritual connection, they can be resistant to it, but at the same time, they can also be tricked a lot easier because a lot of them are overconfident, feeling that they're spiritually protected or that this couldn't happen to them.

And everyone that was involved in using this technology had to have the technology used on you so you would feel what it felt like in your skull. You'd feel it on your skull. Sometimes your skull would warm up, or you would feel it in your brain matter. But the sounds, you would hear it in your head as if you were thinking it yourself, but it would be a different voice.

So you had to be trained to know when the technology was being used on you.
David: What year do you think this was starting to be developed and actually

implemented?
Corey: I know it was being used in the early '80s. I know.
David: Okay.
Corey: So I don't know how far back . . .
David: But it could definitely be maybe even 20, 30 years older than that?
Corey: Yeah, definitely. Yeah, it could be.
David: If a person watched this episode and thinks that what you described means that somebody could be beaming beams at people and turning them into remote controlled robots that will just do assassinations and kill on command, without any veto from their conscious mind, are those people correct, or do we always possess the power to veto these signals that are being beamed in? Do we have the free will to offset the message that is being offered to us?
Corey: We have the free will to offset the message. We have the power to reach out for help from people around us to ask for help. There is a group of people that call themselves 'targeted individuals' that I receive emails . . . that's why I'm being careful about how I answer this. They receive emails saying, "I'm a targeted individual. I'm being attacked by this type of technology all the time. I'm being told this information. I'm being led to do this or that. How do I make it stop? How do I make them stop targeting me? How, how, how . . ."

I don't know how to make them stop. I don't know how to make it stop.
David: Well, and the odd thing is that people that suffer from paranoid schizophrenia, it's these same symptoms that they're reporting.
Corey: Right. And this technology also, after prolonged exposure, absolutely causes paranoid schizophrenia.
David: But just to be clear again, I want to reiterate this: This cannot just turn the person sleeping next to you in bed into somebody who grabs a knife and plunges it into your heart.
Corey: No. No, you have . . .
David: It's not going to make somebody into an automated killer like MKULTRA.
Corey: No. That takes years of conditioning and going through those types of programs. If you're a negative person and the type of person that's out to kill someone already, that's what's in your heart, then you can probably be triggered to do something like that.

If you're a good person, if you wouldn't normally do that kind of thing, then they're not going to be able to turn you against your values and make you do something like that.
David: So ultimately, this is only a suggestion. It's an influence that we can choose to listen to or to ignore.
Corey: Right.
David: Cool. All right. Well, that's some very intense stuff, but we're here to spread the truth, even if it's painful. And I hope that you can put this to good use in your own

life.
This is “Cosmic Disclosure”. I'm your host, David Wilcock, and I thank you for watching.

The Dark Fleet Season 4 Episode 6

Cosmic Disclosure; The Dark Fleet Season 4, Episode 6

13 Apr 2016

David Wilcock: Welcome to “Cosmic Disclosure”. I'm your host, David Wilcock, and we're here with Corey Goode. In previous episodes of this show, we have gone through the various factions of the Secret Space Program (SSP). We've covered this very extensive body of information, but one thing that we haven't gotten into that much, which we're going to do in this episode, is the faction called The Dark Fleet and the very shadowy humanoid reptilian extraterrestrial forces who are behind this.

Before we get into the bad guys, let's just talk about the benevolent forces that have stopped what seemed to be a train wreck in slow motion that was going on.

Who's out there that's got our back?

Corey Goode: Well, of course, we have the group that we've been talking about a lot, the Sphere Being Alliance, and they've moved in, and they've been here for quite some time, some number of decades at least. [They] started to come in at least in the '80s, but built up their numbers.

David: And why would you call them Sphere Beings?

Corey: They do not call themselves the Sphere Being Alliance. This is a term that the Secret Space Program and some of the secret Earth governments gave them. They call them the Sphere Being Alliance, because they were able to gather, through intelligence, that it was a group of beings that were associated with these giant spheres of three different sizes – the moon, Neptune and Jupiter, that were now in our solar system for reasons they were not sure . . . why they were there.

But this group was not making contact with them. They were ignoring their hailing attempts to communicate with them. So this is just what they named them early on.

David: You mentioned that there was a group called Solar Warden, which was the first real faction of the space program, and they acted sort of like the interplanetary police force . . .

Corey: Right.

David: . . . tracking any unauthorized entry or exits. You also mentioned the Interplanetary Corporate Conglomerate (ICC) is another faction that arose out of the

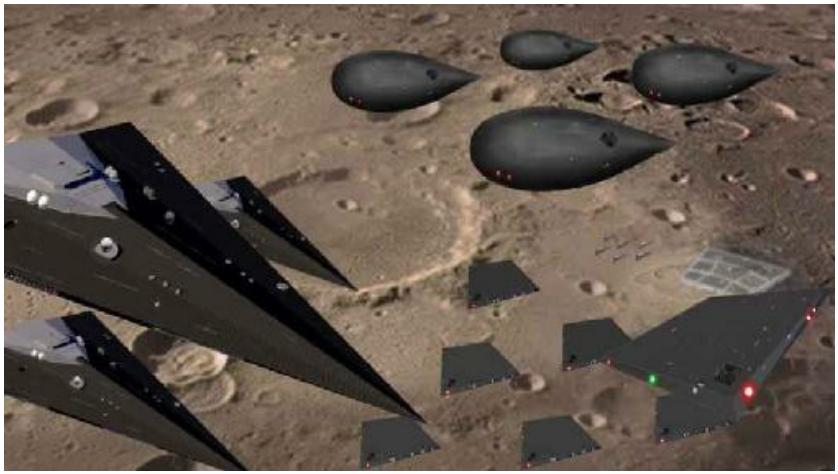
military defense contractors. We've discussed Global Galactic League of Nations (GGLN), which was sort of a United Nations type of thing, maybe a carrot that was offered to various countries to stay quiet and feel like they're part of something really cool, and they're in this war against negative extraterrestrials.

You also mentioned a military faction, the Dark Fleet. Now, what is it about the Dark Fleet that earns the name “dark”?

Corey: A number of reasons. Well, in Black Ops, when there is a dark program, it is completely compartmentalized to where no one receives any intelligence. The other Secret Space Programs received very little information about the Dark Fleet's mandate, what they were doing, what they were up to.

David: Really?

Corey: Their bases were completely autonomous. Other Secret Space Programs did not get to go to their bases. Their craft were of a different design usually.



Corey: They had several different types of vessels that you would see that you would associate with them.

David: Well, could you describe some of what made these vessels different? What were their characteristics?

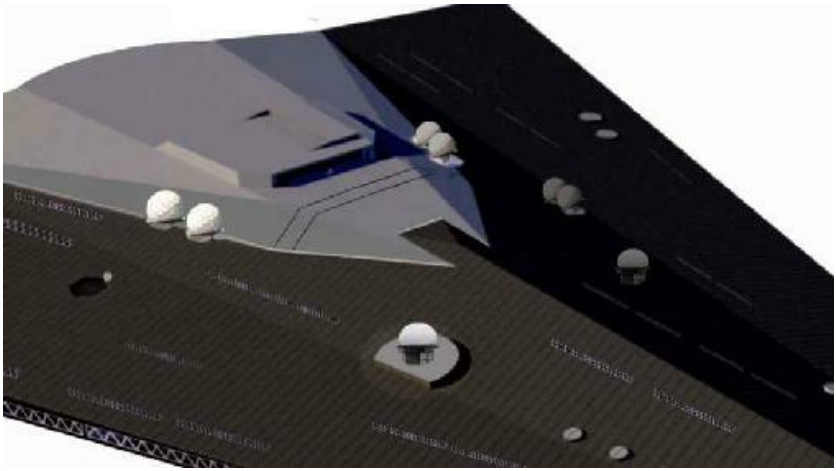
Corey: Yeah. And one of them is a very large wedge-shaped that is very much like Star Wars – the Destroyers, I guess, very much like those, but they're a little bit more sleek.

David: What about the little thing on top? Is that there?

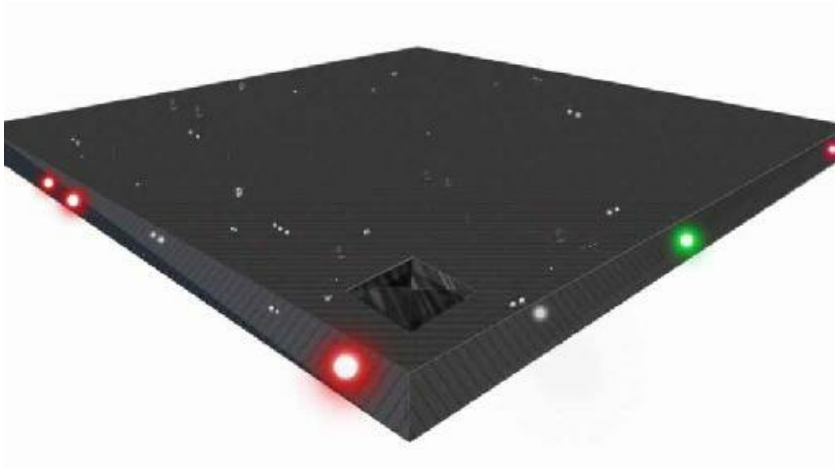
Corey: Similar.

David: Really?

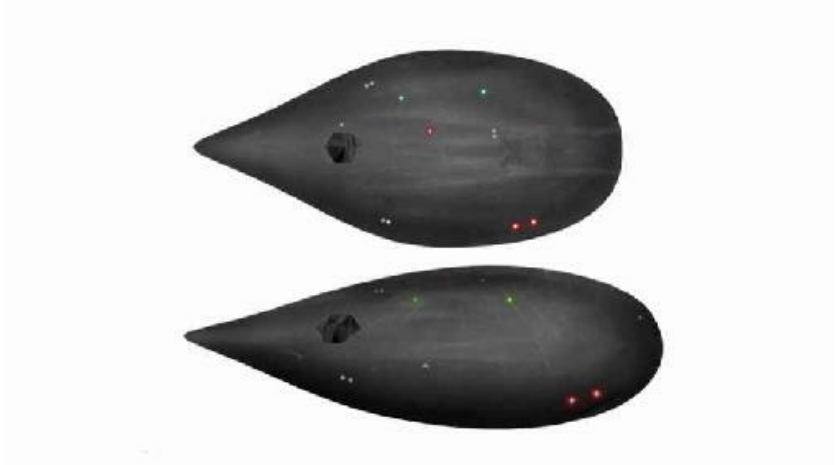
Corey: Similar, but not as high.



Corey: There's also a very large diamond-shaped vessel that they have.



Corey: They have a very large pumpkin seed-shaped vessel.



David: When you say 'very large', now, what are we talking?

Corey: Over 600 feet [183 meters] across.

David: Okay.

Corey: But those are smaller than the large wedge-shaped vessels.

David: Right.

Corey: And all we've really known about them is that they fight . . . They're an offensive force. They are for going and doing offensive type of work alongside the Draco. They go outside the solar system on, I guess, conquests or defending Draco territory, helping the Draco on military expeditions.

David: Let's go into the Draco, and then we'll go back to the human support that they get from the Dark Fleet.

Corey: There are a wide range of different types of reptilian beings that are involved with this Draco Alliance, but there are also some insectoid-type beings that are involved in this alliance and some very strange Nordic-type beings. There's been a little bit of information that they are a conquered race that was forced into servitude, but that are also a part of this federation.

David: Well, let's start with some of the basics, which would be if somebody were unfortunate enough to see a Draco, what are they going to see? What are we talking about here?

Corey: There's many different types.

David: Okay.

Corey: Yes, but they're bipedal. They have different types of reptilian beings, some that are quite short in the 4 ½ to 5 feet tall that look very much like Greys. They have reptilians that are of the Draco-type that are . . . they range from 9 to 14 feet plus tall. And there's a whole range of them.

They have different castes within their system. They have like a warrior caste. They have engineers, scientists, almost like a hive. And then they have their royalty up at the top that control and direct everything.

David: So let's start with the top and work our way down then. If you were to see a Draco royal, what are you going to see? What's the height? What are the characteristics? What do the eyes look like? What does the skin look like? Let's just get into that.

Corey: Well, I met, unfortunately, a Draco royal, and it's something that I've refused

to repeat and so has Lt. Col. Gonzales. This one was around the 14 foot [4.26 meter] range, which is incredibly tall. They are incredibly muscular.

David: They couldn't even stand up in a typical room that any of us would have.

Corey: No. Very reptile looking, had vestigial wings and a vestigial short tail.

David: What do you mean by 'vestigial'? What are you saying it is?

Corey: Like the wings at one time would have been able to support them in flight, but now they are just a remnant.

David: So they're just stubby little . . .?

Corey: Right. They're kind of a remnant of what I was able to see unless they were triple-folded in a way to where they could have opened up wide. I mean, it just looked like vestigial wings.

David: Okay, so we're seeing a reddish or gold colored eye. Is that right?

Corey: When it was interfacing with me, its eyes were morphing the whole time. It was a very psychically powerful being. And it penetrated the frontal lobe. It was almost like there was microwaves or something shooting into the front of your frontal lobe. It was very invasive. And both Gonzales and I, for several days, at least three days, we had headaches. We were nauseated. As we found out later on, it turns out that a lot of these reptilian higher castes are highly infected with nanites – artificial intelligence-type of nanites.

David: And you said they worship the AI as their god.

Corey: That may not . . . They may be working parallel with, but they have an overlord. I'm not sure exactly what that is.

David: But they're both like afraid of it and in reverence to it somehow.

Corey: Right. So this group is working alongside a human group that has all of this technology that has been enhanced by . . . the ICC has helped them build out a lot of this - these vessels and weaponry. And then the Draco group has helped them enhance it even more so for offensive duties outside of the solar system. And they spend almost all of their time completely outside the solar system. And we knew of . . . There's one of their bases on the moon that is quite a ways from the Lunar Operation Command that is shaped like a pyramid with the top chopped off.

David: Yeah, and you have an illustration of that we can bring up here.

"Approaching The Trapazoid Lunar Building" ~ rendition by Carolyn Hamlett
The above picture is my rendition of what I have seen with physical eyes while aboard a lunar bound craft. The trapezoid shaped building was our destination.

Corey: That's not my illustration. She needs full credit for this image. She had been abducted and taken to this facility. I was very surprised when people wrote me, and someone else had described this same facility on the moon.

David: And it looked exactly like what you saw.

Corey: It looked almost exactly, pretty close, but it's a very good representation. And it's been almost impossible to get good intelligence about what's going on there.

David: Let's go back to the command structure of the Draco, because we gotta map this all out as if people have never heard any of this before. When you see this white being, does it wear any clothes, or is it basically just naked with its scales – white scales?

Corey: Yeah. It was not wearing clothing.

David: Okay. And you have said before it has a very ripped muscular look to it?

Corey: Yeah.

David: Now, my other insider said they weigh 3,000 lbs. [1,360 kg.] and have a 5-foot-wide shoulder span. Would you say that's correct?

Corey: The weight . . . I would say, yes. That's probably close. 5 feet for the shoulder span – I don't know if that's even enough.

David: Really?

Corey: Yeah. Very broad, very intimidating.

David: And they have claws on the ends of their hands and the feet?

Corey: Mm-hmm.

David: What does this vestigial tail look like?

Corey: It was very short. It was about this long [3 feet/1 meter] compared to how tall it was.

David: That's not very short.

Corey: Well, compared to how long it is in perspective to how tall . . . but it was wide, and it went into a kind of a stub.

David: Right. Are they all white? Or is this just one type?

Corey: No. There's another type that people describe as red, but it's a real weird brown that makes it look red that also has wings. They're smaller, and they're less muscular, but they're . . .

David: Now, these folks have the vertical slit pupil, right?

Corey: Mm-Hmm.

David: And the eyes are kind of large on the face like a Grey, or is that not so much this type?

Corey: No. It's in proportion to its skull as you would picture a reptile.

David: And there's just two holes for the nostrils or not really a nose?

Corey: Well, it depends on which ones you're talking about. Yeah, they have nostrils that will sink in and go up, and then there are some of them that have sort of a nose that goes up . . .

David: Like a snout.

Corey: Kind of like a little snout.

David: So what is the role of the Dark Fleet with regards to the Draco? What are they doing? Do the Draco run these ships themselves? Are they the pilots?

Corey: No. And I've seen a little bit of misunderstanding about this. The Draco have their own vessels, and the humans pilot control, command control, their own fleet. The Dark Fleet is commanded and controlled by humans.

David: What do the Draco vessels look like if they're not like these Dark Fleet vessels you're describing?

Corey: There's a whole lot of different types of Draco vessels, and a lot of them are shaped like triangles and large deltas. The Dark Fleet is completely human ran. They do answer to and work alongside the Draco Alliance. They're allies, and they go out and they do offensive battles and offensive expeditions together outside the solar system.

David: What are they going for? What is the offense about? What is the goal or the objective?

Corey: We assume that it's conquest or keeping certain areas secure or reined in in their empire, but we really don't know. It's been very difficult to get information and intelligence about the Dark Fleet. And there's been a few defectors from the Dark Fleet that were stuck inside of the outer barrier that was erected. Most of the Dark Fleet was stuck outside. And whatever information has been gleaned from those defectors, I have not heard. So they have been a very large mystery to a lot of people.

David: Why would anybody want to cooperate? Why would any humans from here want to cooperate with these reptilians that are basically like biblical demons or devils?

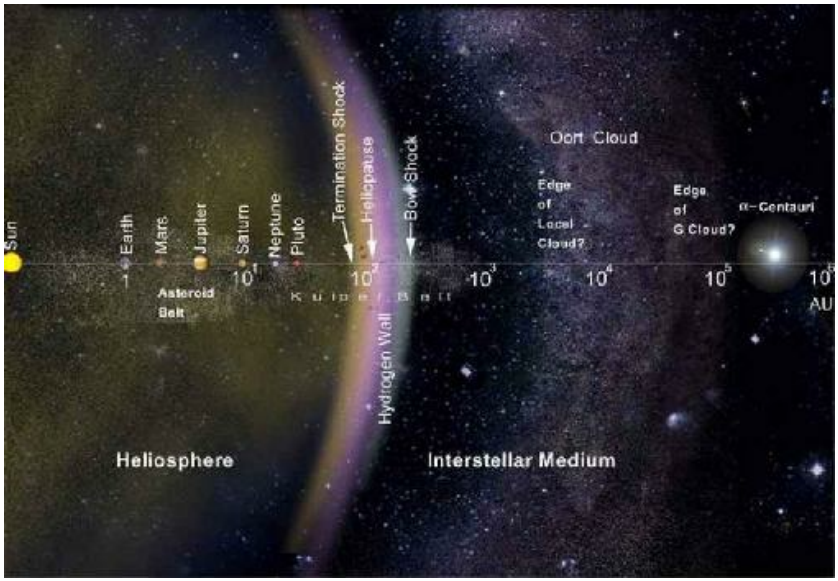
Corey: Well, one person's demon and devil is another person's god.

David: Sure. So we don't really know exactly what they're doing out there, but you said that when this outer barrier went up, a lot of them got locked out of our solar system.

Corey: Yes.

David: But it appears that a significant portion of their command structure, their elite, were actually in our solar system when the barrier went up?

Corey: Yes. Yeah. Command control and communications were still here, and a lot of their operational forces were outside doing what they do when this outer barrier was raised. So they became stuck outside of this field around our entire solar system that is way, way out past where the heliosphere is - out past the Oort cloud. It's huge. And they can't come back.



Corey: So the structure that was here has somewhat been cannibalized into the ICC and defected to the Alliance.

David: You mentioned this before, but let's go over it again. If you saw somebody from the Dark Fleet, what are they going to be dressed in? What do they look like?

Corey: They were very distinctive. A lot of the times they usually . . . It's almost out of Star Wars again. They wore . . . They had a very . . . They looked very stern, very arrogant, like they felt very elite. They wore black stormtrooper kind of clothes, just very stern like. Very totalitarian acting. And a lot of the people that ended up going

into this program came from a lot of the German secret society Nazi kind of programs.

A lot of them and their ancestors or people that were born later on after these breakaway civilizations occurred have joined the Dark Fleet.

David: One of the things that I heard from the other space program insider, who we could call Jacob, was that . . . and this is going to be hard for people to accept. And I'm interested to see what you're going to say about this. He said that the Draco had a very vast AI system that was monitoring the consciousness of everyone on Earth. So that if we start thinking in the direction that they don't want us to think, that we'll start feeling tired, exhausted. We'll get distracted. We'll want to do something else.

We might have a panic attack. We might suddenly become sexually aroused and say, "Well, enough of this. I want to go look at hot models on the Internet." And that everybody has what they call a "file", which is the electronic record of all the thoughts and how these various strategies work, and that that was one of the things that they built this vast NSA facility for in Bluffdale, Utah. It is to store the files.

And, apparently, it was not just the files for people on Earth, but there's enough computer power there, he said, the Draco were storing files on several other planets in our vicinity. Does any of that sound like anything you ever heard?

Corey: Partial.

David: Okay.

Corey: Partial. I've been talking openly about the ET, extradimensional/extraterrestrial AI threat since at least June of last year [2015]. And I've been talking about how extensive the threat is and how different ET races and the Secret Space Program are very worried about it.

They're very upset that certain factions of secret Earth government syndicates are very heavily using this AI, this ET/ED AI that is prevalent in multiple galaxies. And they've become what we call AI prophets. They've switched over to where they see this AI as a god.

And this AI helps predict probable futures and has helped them a lot, but it's disturbed a lot of people that people on Earth are using it. And it's been a pretty big revelation to find out that the higher caste reptilians seem to be AI prophets in a way themselves, and when they were able to create a dampening field around one of the bodies after they killed one – because usually when they would kill one, something would happen to where the bodies would disintegrate – they were able to autopsy a body and found

it and it was quote “infested with nanites” - artificial intelligence nanites.

David: We covered the AI, those kind of topics. I'm curious if you heard about this Draco mainframe that nudges people into becoming really tired and starting to pass out if they encounter this information . . .

Corey: Well, this Draco mainframe . . . What I'm tying together here is if they're AI prophets, they're working with this ET/extradimensional AI threat, then this could be the same thing. And it is a major threat.

David: Yeah.

Corey: And this could also be a major component with the Dark Fleet, because the Dark Fleet people . . . these guys could be AI prophets if the Draco are AI prophets.

David: I've sat with Jacob and with Pete Peterson. I've asked these guys certain questions, and they will literally pass out in the middle of answering the question. They lose consciousness. And what Jacob told me was that this technology is intended to make it very difficult for you to continue thinking when you start getting into the truth and the information.

Corey: This also has to do if you have an AI signal infection. There are different types of things that will keep you . . . like, I had certain knowledge that they were unable to blank slate me with, but through different entity attachments or if they have AI attachments, they can manage people to where if they try to talk about something, they have anxiety attacks, or they get really sleepy – that kind of thing. So they have ways of managing people that they can't totally shut up or blank slate their memories.

David: So do these Dark Fleet personnel actually . . . Do they have homes here on Earth? Do they go out to work? Do they drive into a local military base and portal out?

Corey: I would assume that they are 100% vested off world.

David: The way you're describing, it sounds very military. I'm wondering is it all men, or are there women in the Dark Fleet, too?

Corey: I'm sure there are women, but I personally only saw men.

David: Hmm.

Corey: Yes, they're very regimental, very totalitarian, very . . . the energy you feel from them is very unnerving. They don't feel like pleasant people at all.

David: Are there different races of normal humans that we'd see on Earth in the Dark Fleet?

Corey: Yeah. It's not a Caucasian purity kind of . . .

David: Really. Okay. You mentioned that the Draco have different reptilian types, and you said there's insectoids as well. Did they co-mingle with these humans in the Dark Fleet, or is the Dark Fleet simply a human fleet that is a support crew for the Draco Alliance?

Corey: They are . . . It's a human, completely human, fleet that flies in support of and alongside the Draco fleet.

David: So you don't . . . You're not going to see extraterrestrials on these ships.

Corey: I don't think so. I've heard people talk about advisers, maybe one or . . . some advisers being on board, but this is like second, third-hand information that I've heard people talking about. There's a lot of mystery about . . . that has been so compartmentalized about the Dark Fleet. That is one of the biggest secrets still remaining even with those in the SSP Alliance unless there's information they haven't shared with me recently that they have found out.

The Dark Fleet had a lot of secrets.

David: Would it be possible for somebody to get brought into the space program and be kept compartmentalized enough that they wouldn't even know about the factions or they'd never have heard about the Dark Fleet at all?

Corey: Oh, yeah. If they were not in a position to where they had a need to know, they had no need to know. And whatever position you're put in, you're told basically you're at the top of the totem pole. Your ego is boosted up. You're told you're special. You're told you have open access to all the information that is. That works from the military projects that are pretty far down on the totem pole to all the way . . . levels above the totem pole that I don't even know exist – above what I knew.

There's people up there that think they know. They've been given the full clearance, and they don't have it all. So that's the way it's all designed so that the lie or the story can be different on every level and in every compartment of every level.

David: What kind of technology are we seeing in the Dark Fleet? Is it the same as what you'd see in other factions of the Space Program?

Corey: The offensive technology is very similar to the ICC with caveats and

enhancements given to them from the Draco, I'm told. I don't know exactly what all that would be.

David: Do they have a kind of situation like what one of the insiders told me, which is the more technology you have, the less technology you need? Or you'll have, like, one device that just does so many different things that you don't need a bunch of different devices anymore?

Corey: Right. Like the same type of technology that would create a torsion field that would cause your vessel to move through time and space could also cause a local torsion field where a craft is and contort the space around a ship and cause a ship to break up. And that's beyond using particle beams and all of these things that a lot of people are talking about – different types of energetic weapons. They've got types of weapons that are way beyond what a lot of people are describing.

David: Do we know anything about how the Dark Fleet are recruiting these humans? Are these humans that grew up in space? Are they people that served in the military here on Earth? Are they from the so-called Illuminati? Where are they coming from?

Corey: They were being drafted from some of the MILAB programs, but most of them are bred for what they do. They come from a lot of these, I guess, Illuminati or secret Earth government syndicates and off-planet colonies. And they're very much vested off planet.

David: So you could be born on Earth in a so-called Illuminati family and get pulled into this if that was your desire, potentially?

Corey: Not necessarily desire. It has to do with . . . They find out what your talents are, what your proclivities are, what you're best in, and then they groom you to later on draft you into what they think you're going to serve them best as.

David: So if you're high on the scale of being a sociopath and having no conscience, no concern about torture and death of another person, then you're going to get fast tracked into this Dark Fleet? Is that kind of the idea?

Corey: That's a possibility.

David: That's the 'talent' that they're looking for?

Corey: Possibly. Like I said, we really don't know. There's a lot we don't know about the Dark Fleet. They're somewhat of an enigma. I think the Secret Space Program Alliance has received a lot more information very recently about them. I have not been briefed on anything other than what we knew before.

David: Do we know how many bases the Dark Fleet has? Do they pretty much stay in their own bases? They don't even intermingle with the other bases?

Corey: At times, they've mingled at the LOC, but, yeah, they have their own bases – extremely restricted – and, yeah, they have quite a few. There's a lot going on in the Oort Cloud with a lot of different groups, including the Alliance. The Oort Cloud has quite a few large bodies in it that have bases in it.

David: Like moon-sized spheres?

Corey: Very large moon-sized spheres. There's quite a few.

David: So then they'll dig inside like we've talked about before and build bases in there?

Corey: Right. There's quite a few objects out there that really haven't been discovered or talked about in mainstream that . . . There's a lot of activity going on in the Oort Cloud.

David: Would you say that the Dark Fleet would sort of be like the military wing of the Draco operation? They're not involved necessarily in this trade that the ICC is doing of manufacturing products and having people come to the showroom?

Corey: No. They are the business end, the tip of the spear, offensive, pretty much like sending in the SEAL team to go kick butt, take names. They're purely offensive. When they're leaving, they're leaving to do battle or some sort of tactical action.

David: These guys clearly seem to be the most negative of all the factions.

Corey: Yeah. You can feel it.

David: So what is being done that will enable this to all lead to healing for our planet? What is being done to stop the Draco?

Corey: Eventually, what's going to occur is basically going to be us saving ourselves. The Sphere Alliance is not here to save us. They're basically equalizing the playing field a little bit in some ways, but they have made it very clear that we've got to come up with our own solutions to these problems.

We've got to step up to the plate, do our own inner work and fix these problems. And a lot of this isn't going to happen until after there is some sort of catalyzing event where everyone on the Earth, to where everyone on the Earth, figures out that basically they're slaves, free range slaves, and that there's a lot going on that they

didn't know about.

And then these data dumps that I've been talking about will occur that have just so many terabytes of information it will take people forever to go through, that's going to talk about all the crimes against humanity, all the different stuff going on with different ET groups, different secret Earth government syndicates, and different Secret Space Program groups.

David: All right. I'm David Wilcock. This is Cosmic Disclosure. And as always, we thank you for watching.

Viewer Questions Part 3 Season 4, Episode 7

Cosmic Disclosure; Viewer Questions Part 3 Season 4, Episode 7

20 Apr 2016

David Wilcock: All right. Welcome to “Cosmic Disclosure”. I'm your host, David Wilcock, and in this episode, we're taking your questions, so that I will become the embodiment of you asking your questions to Corey so we can hopefully get some different perspectives on this besides what I might come up with on my own.

So Corey, welcome to the show.

Corey Goode: Thank you.

David: All right, let's get right started on this. I noticed a couple people asked in reference to the binary star system possibility, including the presence of a large planet. I know it's been talked about since the '80s. Do you or the Inner Earth people have any info regarding Planet X, etc., and a possible timeline?

Corey: My timeline of a Planet X. There is information about large bodies within the Kuiper Belt on the ecliptic plane and outside the ecliptic plane.

David: When you say large, how large are we talking?

Corey: Larger than Earth.

David: Really?

Corey: Yes. And because of gravitational forces, they've become spheres. And there's been information presented about them entering in the same way long period comets do into our solar system. But I was given no information, saw any information, about there being a Planet X as I have seen presented on the Internet.

David: Well, this is, of course . . . The root of the question would be the classic Zecharia Sitchin model, which is that he interprets the Sumerian cuneiform tablets as saying that there is a Nibiru, which is a planet that he believes has the 3,600 year orbit. It's very elliptical. And his hypothesis was that when it swoops into our solar system that it's causing catastrophic events on Earth.

Corey: And they did mention the binary star hypothesis, which some call the nemesis star, which is they say that we're a failed binary star system and that there is a brown dwarf further out towards the heliopause.

David: And you say, “They say . . .” They who?

Corey: They being those in the upper Secret Space Program and the information that was on the smart-glass pads. And that's really all the information I have on anything Planet X related.

David: So are you refuting Zecharia Sitchin's model of a 3,600 year orbit for Nibiru?

Corey: In the recent Inner Earth meeting I had, I was provided information that was stating that the Zecharia Sitchin narrative was not accurate, that it was a narrative put forth by some of these syndicate groups.

David: What you said, though, is very open-ended.

Corey: Yes, but . . .

David: There are obviously Annunaki. You've seen the Draco.

Corey: Right. Right.

David: So there's got to be some truth to it.

Corey: Right. Yeah, there's always truth. Like I said, the Ancient Alien Hypothesis is true, and there's nuggets of information in there that are a part of a certain secret Earth syndicate's belief system that they've brought in to make a part of our belief system.

David: Sure.

Corey: And this is according to the Inner Earth civilization. And I did follow up studies of my own trying to break through the Zecharia Sitchin information. And I'm not a scholar on linguistics, ancient Sumerian or anything like that. I couldn't find anything in all of the translations that scholars use that was in his books.

David: So are you saying that the translations of Zecharia Sitchin claims to have made from certain scriptures do not actually appear to be accurate of what they really say?

Corey: That appears to be the case.

David: And how extensive is that?

Corey: Very extensive.

David: Really?

Corey: Yes.

David: So there is a kind of a confabulated psyop disinformation campaign going on with this.

Corey: Yes.

David: Okay. The second question deals with this subject as well, so I think it's good to just dive right into that. “Mainstream science is finally working toward admitting that there's a ninth planet in our solar system with a huge mass and a giant elliptical orbit.” Obviously, we just talked about that.

My question for Corey is this: “Is that planet inside the barrier that the Sphere Beings have put up around our solar system. And if not, what will have to happen for this planet to cross into our solar system?”

Corey: This barrier is where the heliopause is, where the electromagnetic influence of the sun ends. That's past the Oort Cloud – past the Kuiper Belt, the Oort Cloud. The heliopause is the end of what they consider where the sun's influence leaves off and other stars begin or open space is.

David: If you were going to look at the distance between the sun and Pluto as if it was, let's say, something you can put in between your fingers. How much farther than that is the boundary of the heliopause?

Corey: Probably several parking lots away.

David: Wow! So it's much, much, much larger than where the planets are.

Corey: Absolutely.

David: The other part of the question was admitting there is a ninth planet. Now, based on what you said before, it doesn't sound like it's just one planet, right? Is there more than one body out there that's large?

Corey: Yes, there are. And what was recently explained to me was that this super planet that many call- - I mean, it's called a lot of things, Maldek, Electra, Tiamat, but . . .

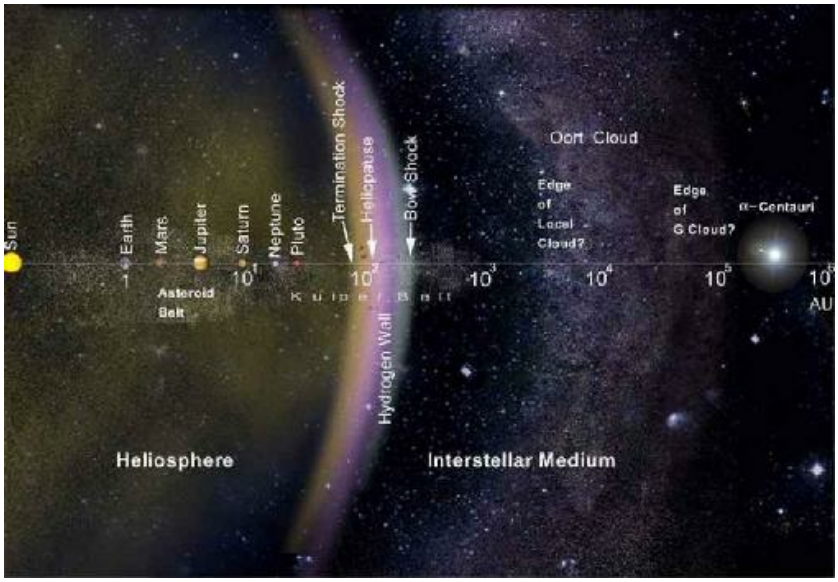
David: The destroyed Super Earth you're talking about.

Corey: Yes. That in the asteroid belt, there is just a very small fraction of a percentage of what was actually there at one time. It was such an energetic explosion that much

of the Kuiper Belt is actually what made up that planet – it's oceans, layers of its rocky core.

David: So just for viewers who don't track this, tell us the relationship between the asteroid belt, the Kuiper Belt and the Oort Cloud.

Corey: Okay. As you move out from the rocky planets to the gas planets, the first belt you run into is the asteroid belt.



And then you run into the gas giants. And then you reach the Kuiper Belt. And then further out, you reach the Oort Cloud. And the furtherest place that you reach that is considered the solar system is the heliopause.

David: Right. So do you think that these planets . . . You say that there's more than one planet out past the Kuiper Belt?

Corey: Yes, and a lot of these are made up of just ice. And they're bigger than the Earth, but they're ice planets.

David: Do they have Ancient Builder race settlements on them? Or were they the fragments from this exploded planet and they're new?

Corey: They were fragments from this exploded planet.

David: Okay.

Corey: And they're in the ecliptic plane, and as I said before, outside of the ecliptic plane as behaving like a long period.

David: I think some of the viewers might be a little frustrated though, because on the one hand you're admitting that there might be something like what the Sumerians called Nibiru out there, but you're not saying anything about whether anybody lives on it. Does it have any recent bases on it or anything like that?

Corey: Atmosphere? Like I said, I have not been presented any information or seen any evidence of there being another planet that's coming in every 3,600 years that has living beings on it that matches that narrative.

David: Okay. And you say some of these objects are larger than the Earth?

Corey: Yes.

David: Do you know approximately how many of them there are that are large?

Corey: No, but I was told that at one time there were three that were long-period comets that would come in and wreak havoc. It seems that . . . I was told that one of them eventually did have a collision with the sun or went into the sun a long time ago.

David: Do you think creating some kind of a UFO religion that's actually fraudulent helps to confuse the possibility of Disclosure when it eventually comes out? Because you're really probably going to be upsetting a lot of people with your answers to these questions.

Corey: I've become used to that.

David: Yeah.

Corey: But, yeah. This is going to upset a lot of people or challenge their paradigms, but all of us . . . I've had my paradigm changed many times. And we've got to be willing to grow and keep an open mind, but use discernment. And I'm reporting from my experiences – my involvement. There's obviously information . . . I could not have access to all the information available. So there's plenty of information that I didn't access during my time. So there could have been that information like you're talking about that I did not access. I just never accessed that information.

David: If you had to guesstimate the total number of hours you spent poking around the smart-glass pad, how many hours you think that it would be?

Corey: It's impossible to estimate. There were times to where I would sit there, and that's almost all I would do in a day.

David: So for the whole waking hours of the day, like 16 hours.

Corey: Right, on the research vessel especially.

David: How much of it was text, and how much of it was video?

Corey: It was presented quite a bit of text. There would be video and still photography. And there were areas kind of like at the end of papers, footnotes, different point of views from different scientific groups sponsored by different syndicate point of views – people that had different . . . Just like here in the regular community, we see everybody has all these different belief systems. It's no different in these syndicates or in the space programs. People have belief systems.

David: How were the different groups identified? Did they have names or were they coded?

Corey: No, they were just listed as different theses or different points of views.

David: Right.

Corey: But it was obvious which way they were leaning by the information they would bring in. And I didn't spend a whole lot of time in the footnotes reading because those were the things that were very thick in scientific information, and that was not my forte.

David: Okay. So we got another question for you now. “Why is it that the Sphere Alliance does not give a more direct sign to humanity about their existence? If it is in their interest for humankind to start shifting towards a higher consciousness, why are they holding back so much? Some people need a more powerful push in the right direction than others, but that doesn't mean that they don't have that spiritual quality to them. Is this some kind of a test?”

Corey: Absolutely. Already they're backing off from me wanting to report anything about them at all because so many people instead of focusing on their selves are focusing outwardly and trying to reach out to them with their minds. Some people are even praying to them. This is the genetic programming that they want us to break. They want us to get off our knees, quit looking to saviors and look inwardly – fix

what needs to be fixed and get on with it. They're not here to do it for us. They're not here to say “Peek a boo! Here I am. Now you know I'm here.” There is a Santa Claus, so decorate your tree.

They've made it very clear that we have just as much a role to play in our future timeline and how things unfold as any of the other beings that have been involved in this grand experiment.

David: Maybe people are having trouble understanding how you would be the only person publicly right now who seems to have been contacted by these beings directly. Why wouldn't they have cast a wider net at this point?

Corey: They have. There's people that just have not come forward. There are some people that have contacted us here and there, but these people are not being led to come forward. A lot of people that have given reports are people that have been taken up to the Lunar Operation Command in their pajamas, walking around. There's more going on. People maybe having more experiences than they realize. They could be having them . . .

When the Blue Avians approached me, they did it in a quasi-dream state first so not to freak me out too much. And usually that's one of the ways they first start approaching people. When they start showing an energetic or a sign that they're ready, they'll start approaching them in dreams. And then as they show that they're mature and ready, more can occur.

David: What about the phenomenon of orbs?

Corey: What I was about to say with myself, that one of the reasons I think that I've had the contact was because I am authorized to have the contact, because I had had contact with other beings as a part of the program when I was being raised to interface with these beings.

David: Right.

Corey: So for them to pop into someone's house right now while they're watching this show and say, “Yes, I'm real. Now get off your rear and change the world.” The people are not doing it for the right reasons. We've got to motivate ourselves and solve all of our own issues and not wait for all these different savior beings to come and do it, or savior groups, and overcome this genetic programming we have to look for a leader or a savior.

David: You had mentioned before about orbs that there are ways in which people are being contacted.

Corey: Yes. People are seeing the orbs. That's the largest way people are being contacted.

David: So what might happen to someone?

Corey: They will be in a room and they will see an orb zig-zag around and either disappear, or they will see it zig-zag around and stop and disappear. And they'll think, "Wow! That was a very interesting experience." Or some people have had conscious communications with these spheres.

A lot of people don't realize that when they see these spheres, sometimes they're having a communication. They're with their higher self, and they're not consciously perceiving the communication with the orb that they see.

David: So if the Cabal is following these rules where they can't be completely hidden, and they have to tell us what they're doing, then why do these positive beings follow rules where they are hiding?

Corey: Well, it's not so much that the Cabal has rules where they have to show us what they're doing. That is how they manipulate our mass consciousness, and our mass consciousness is their power and their magic. They're showing us what they're doing so we manifest what they want us to manifest.

David: Okay. It just seems that whatever negative energy these things that they're doing generate, that it doesn't generate the energy they need if they don't tell us what they're doing in some way. That's the Loosh principle, right?

Corey: To put it in perspective, these sphere beings are not contacting other ET beings that are in our solar system or ancient breakaway civilizations below the Earth either that are much more advanced than us. They're not answering their hails. They're not talking to them. They're ignoring them. So if you're out there and you're being ignored, join the club. There's many dozens of beings that are wanting to be incommunicado with them.

David: Okay, so the next question here is related. "Other than helping others to raise their consciousness, what else can we do to help bring about the process of Full Disclosure and to help usher in this change to society?" So they're saying other than helping others raise their consciousness – because that's been the main message – what else can we do to bring in Full Disclosure?

Corey: That's a very interesting question, very interesting time. Right now is . . . I mean, if you do not see the trickle of disclosure around you, you're in deep denial. There is a narrative that is being put forth of disclosure that we're going to have to live

with if we're not willing to get out and make it known that we want Full Disclosure.

How we do that - we're going to have to come together. We're going to have to get over all of these distortions, personal truths or just basically agree to disagree on all of our belief systems and do what the Cabal has done.

They have all different belief systems, but they found a common goal, and a very small number – less than 1% of the population – is doing what to 99% of the population?

Imagine what we could do as a community if we could get UNITY in the community and agree to disagree on certain things and focus on our common goals and our common enemy. Doing that . . . The mass meditations are great, but raising your own consciousness and raising the consciousness of others through the way you behave every day – that's the way to do it long term. But coming up in the short term, we're all going to have to put some skin in the game.

David: So we're talking about Full Disclosure, and it seems as if – to get back to the core of this question – that the individual watching this show right now is relatively powerless. You're saying these are geopolitical forces way beyond our control. They have EMPs. They could knock out power grids. They have Internet kill switch. Is there something that the audience could do, since I would imagine most of these people believe you, or they wouldn't continue to watch? They're not sitting here and laughing at you and getting off on being skeptics. They believe you. That's a powerful coalition. Is there something that could be done to help that Full Disclosure take place?

Corey: Yes. We talked earlier about the Cabal doing things out in the open to manipulate our mass consciousness. One of the major things they've done is strip any understanding or knowledge that we have of the power of our co-creative consciousness. That's the only way they rule us. We can use that co-creative consciousness to manifest this timeline to where we get this Full Disclosure.

David: That sounds like gobbledygook.

Corey: It does, but you've put forth in your shows and talks . . . How many times have you talked about mass meditations having a direct effect? You and I both have talked about scientists have proven that observing an experiment has an effect on its outcome. Consciousness has an effect on reality. And whether you believe it not, it occurs.

And what was communicated to me is that all of these – the Sphere Being Alliance, the Inner Earth and even the Secret Space Program Alliance – they have been sitting

back wondering why, with all this information we're receiving, we're still sitting back waiting for saviors and not taking to the streets?

And that's the initiative that people are going to start hearing us talk about – unity in our community, having people put aside their differences and focus on Full Disclosure, not only in the meditative way, but getting people presented to the mainstream type of people that are credentialed, that have information that isn't going to throw a wrench in their paradigm too much – just to get them thinking.

And then they'll branch out and start seeing more of our information and broaden their consciousness to get the consciousness of the sleeping masses on our side. And our consciousness is like a rudder for the boat. We can help guide which way we go. And this was made very clear by all three sources.

David: Okay, so let's have another question. "Many of us would like to be in first contact with both Inner Earth people and positive ETs as soon as possible so we can help the Earth and learn from them. We have been waiting a very long time for this to happen. Is there any way to speed up this process of first contact for those on the surface in small groups who are already prepared for it?"

Corey: I would say stop focusing on them and start focusing on yourself. When you are ready, it will be more likely to happen. But reaching out with your mind, going and looking for them when you're not ready can . . . A lot of times you think you're ready, but you're not. And you have to be careful when you're looking to make first contact, because like I said, be careful what you wish for, because everyone wants to have an amazing experience. They want to have an out-of-this-world experience, but it can quickly blow up into something that . . . and you can become a part of something a lot bigger than you really want to.

You can all of a sudden be an introverted person that doesn't like to be in front of people that ends up being in front of a camera every week. Ha, ha. You may be pulled out of your comfort zone and put in . . . You just don't know what's going to happen.

David: Let me ask you this. People seem to think that if they get this contact that it's just like a wonderful cosmic high. Do the rules of the universe allow the negative to counterpunch if somebody did receive a contact like this? And if so, what might the counterpunch start to be? What could happen to someone if they actually achieved this contact?

Corey: You could start receiving visits from the military – black ops groups, Special Access Programs groups. You can start getting attention from other groups. So when you get attention from one group.... You never get the attention of just one group.

David: Do the Cabal groups have the technology to know if someone has had a contact?

Corey: Yeah.

David: Is there ways they can detect it?

Corey: Oh, yeah.

David: There are?

Corey: Yeah.

David: So the people asking this question might think that they're in sort of a little Petri dish that's sterilized from its environment, and it's hermetically sealed, when in fact they're becoming part of a community when this happens – a community that's very aware of it.

Corey: Yes.

David: Is it possible that someone who received a contact like this could start to receive negative telepathic downloads that they think are positive?

Corey: Well, yeah. One of the things that the military Special Access Programs do is they'll come in with this Voice of God technology and then start harassing people and confusing them – giving them conflicting information from the other information they received. They'll do a psyop on them and make the person think they're crazy, or make their family think they're crazy and have them committed . . . the dirty tricks. There's volumes of books of their dirty tricks.

David: Okay, so we have one more question here in the short time we have remaining in this episode, which is different than the others. And it regards these people from the Inner Earth. “Are these Inner Earth people fourth-density people, or are they people who are from third density like us but are far more advanced?”

Corey: They are fourth density. That is what was directly communicated to me about the ones I visited in this Inner Earth council meeting, and also the Mayan breakaway civilization. I was told way before I knew about this group that I met recently . . . I knew about the Mayan breakaway group, and I had interacted with them briefly. And I had known that they were fourth density. And then I found these people also are fourth density.

David: I want to generalize a little more for the sake of focusing on this question and

the broader implications of it. If what you're telling us is true, there appear to be many, many beings out there that are solid looking.

Corey: This has to do with frequency. The density has to do with the frequency that everything about them oscillates at.

David: When you reached out and touched Kaari's hands like this, you're touching hands, right?

Corey: Right.

David: You're not just waving through a cloud.

Corey: No.

David: So this fourth density . . . They're solid in some way.

Corey: Right. And ourselves . . . From what I'm told, since at least the '20s, '30s, we're third-fourth density transitional.

David: Really?

Corey: So we're in a transitional state ourselves.

David: Extraterrestrials, as a general rule, are leaving behind bodies in crashes, Roswell only being the most popular example. Could a fourth-density being leave a dead corpse behind?

Corey: Yes.

David: It can?

Corey: Yeah.

David: So they are flesh and blood?

Corey: Yeah. Yes.

David: Are there beings that are third density that are appearing to us as extraterrestrials, or are most of the extraterrestrials at least fourth density – as far as what the Cabal and these groups are seeing?

Corey: Most of them are fourth density. They are like the merchant race – very, very,

very third-density type of beings.

David: This is the type you said kind of look like a horse – they have a horse-like or donkey-like face?

Corey: Like a dog. More like a . . .

David: A dog.

Corey: Yeah. Dog-ish, canine-ish look.

David: Right. So those are third density but very old or something?

Corey: A lot of these groups are . . . You have third density, you have fourth density, and you have fifth density groups. In the Super Federation, some of these groups . . . and a lot of these in the Super Federation refer to themselves as Guardians and are higher density – fourth and fifth density.

So we have a lot of preconceived ideas about what dimensions are, what densities are, in between densities what happens. Do things just phase out?

We going to have in the near future a lot of information that's going to change our point of views on a lot of these terms.

David: So just to summarize what you're saying, our traditional – let's say Judeo-Christian - viewpoint that you become this energy ball when you ascend to the next level of human evolution is a misconception compared to what we now know from boots on the ground observational data like what you're providing us with.

Corey: Right. It's more of a consciousness shift, and as the consciousness shift occurs, the vibratory consciousness shift occurs within an environment that has a higher vibrational energy shift as well. Your consciousness . . . You have more access to using that consciousness to manifest things in your reality.

David: So you could be a being of flesh and blood, but you might be able to walk on water, levitate, manifest objects – these kinds of things.

Corey: Do things that would be miraculous to us, yes.

David: That's really cool. That's all the time we have for this episode. I'm your host, David Wilcock. We got the one and only Corey Goode here. Totally exciting to talk to him about this stuff. I hope you're enjoying it. We'll see you next time.

Inner Earth Update Season 4, Episode 8

Cosmic Disclosure; Inner Earth Update Season 4, Episode 8

27 Apr 2016

David Wilcock: Welcome to “Cosmic Disclosure”. I'm your host, David Wilcock, and I'm here with Corey Goode. We're talking about the Inner Earth, a fascinating sequence of data that we have been covering on this show. So Corey, welcome back to the program.

Corey Goode: Thank you.

David: All right. So in the previous episodes, what we've gone through is the updates about the first meeting that you had with the people in the Inner Earth.

Corey: Correct.

David: But you have since been taken up there or taken down there again.

Corey: Correct, but before that happened, there was a meeting at a Secret Space Program base in the Kuiper Belt that I was brought to by the Secret Space Program Alliance.

David: When you say before that happened, you mean before you were brought into the underground . . .

Corey: Before I was brought back to . . .

David: The underground cities again?

Corey: Yes. Before that occurred. And this was a pretty significant meeting. The Inner Earth group that . . . The group I had talked to that I can now say they are named the Anshar, the group that had the Saturn amulet.

David: Ah.

Corey: The priestess, her name was Kaaree. And she was going to be present with a delegation of her group, so I was invited and was very excited as well.

Corey: And her delegation arrived on one of their vessels, I believe, because I didn't actually see them arrive. I just saw them coming in to the main area where we were to meet them, to then escort them through some passageways into an area for the meeting.

And Gonzales and I were . . . I mean, you could just feel the excitement. They were just beaming with excitement and anticipation.

David: So they hadn't been in contact with the Sphere Beings before?

Corey: Yeah, yeah. Per the discussion we had in the library, they hadn't had any contact, and this was their first contact with the Sphere Beings, which they referred to as the Guardians. So they were very excited, and when we got them in the room . . .

David: What did this base look like, though? Because you're seeing it, but the audience is not necessarily seeing it.

Corey: Yes.

David: How cool does this place look?

Corey: It's not a real cool, super high tech sophisticated place. It's more of . . . It's pretty spartan.

David: Okay.

Corey: You wouldn't . . . It's not like . . .

David: It could be a building on Earth?

Corey: If you were underground, maybe.

David: Okay.

Corey: Like an underground military base.

David: Okay.

Corey: Nothing super significant that you'd think would be sci-fi looking on the inside.

David: High ceilings?

Corey: About normal.

David: Okay.

Corey: Yeah. About . . . Except for the area that we went into that was a meeting area, a presentation hall. It looked like they stored stuff in their – back in one area. I wasn't really paying attention to what exactly it was, because I was anticipating the arrival of a Blue Avian.

David: Was it dark, or was it brightly lit like a typical hallway with lights?

Corey: It was well lit.

David: Okay.

Corey: Yeah. The Anshar delegation comes in.

David: To this meeting room?

Corey: Before we got into the meeting room, I greet Kaaree, and she's more in a business mode, or she's anticipating this meeting, but she's nice and greeting me.

Corey: But, you know, we immediately walk the path back to where we're going to have the meeting. And Gonzales knew where we were going. I didn't. So we get back, and we walk. It looks like we're walking . . . like this wall behind us. We walked as if the delegation is going to be facing this wall behind us. And Gonzales would be kind of like if you were standing right there in front of me, and I was standing about 12 feet away, maybe 15 feet away, facing him. And Kaaree and two others were up in the front, and there were several more with her in the delegation, but they were up to the front, and we were sitting there waiting for Raw-Tear-Eir to appear, and to our shock, a Triangle-Headed Being appeared.

David: This is the one that didn't even talk . . .

Corey: Right.

David: . . . when you met with him.

Corey: Right.

David: Yeah.

Corey: Yeah, it was completely silent.

David: He seemed like the most advanced out of all of them, right?

Corey: Maybe. I don't know, but it never communicated with me the first time or this

time.

David: Right.

Corey: So it was the most bizarre thing. I'm sitting there looking across . . . We're watching back and forth. It's completely silent.

Corey: The Triangle-Head Being, as I described before, was 10-feet, 11-feet tall.

David: Gosh.

Corey: And its head was as wide as its shoulders, if not just a little bit wider.

It was very thin.

Corey: Its arms and legs – very thin. And it seemed almost as if it was in . . . not really water, but it was just slowly, just waving its . . . I mean, it just barely . . . It was very strange. It's legs and its arms . . . And as last time . . . It has three fingers and three toes. And it was up on its toes like tripods, and they were doing like this.

And they had a completely silent exchange that went on for some time. It's really almost impossible to judge time accurately. It went on for some time. And they were just sitting there looking at each other, and you would . . . and the only movement was the slight movement of the Triangle-Head Being.

And Gonzales and I keep looking at each other and looking back and forth, and you would see some slight mannerisms here and there. And then it was over. The Triangle-Head Being . . .

David: How long did this silence last?

Corey: It may have been . . . anywhere from 30 to 40 minutes subjectively. I mean, it went on for awhile.

David: Subjectively.

Corey: . . . anywhere from 30 to 40 minutes subjectively.

David: Wow!

Corey: I mean, it went on for awhile.

David: And you didn't get any intuitive hits on what they were talking about?

Corey: The only intuitive hits I was getting . . . I wasn't feeling anything from the Triangle-Head Being, but I was feeling . . . I felt some anxiety come up. I felt excitement. I felt a little bit of confusion and different things, but I did not know what those emotions were associated with content-wise in the conversation, because we were not privy to the interface that was going on between the two.

After this had ended, and the Triangle-Head Being . . . just . . . It's like you change the radio channel. And it's gone.

David: It just winked out?

Corey: Mm-hm.

David: Was it a fade, or was it just a sudden disappearance?

Corey: Winked out. Gone.

David: Uh.

Corey: The delegation was excited, but at the same time, there was some trepidation and a little bit of . . . They were upset a little bit. And no time for small talk. They had a meeting with that same Inner Earth Council that I had originally met with for the first time with Gonzales that we spoke of in previous episodes. They had to rush back and meet with that group.

And as they were walking back . . .

David: Was it only the Anshar that actually were granted the meeting with the Triangle-Head Being?

Corey: The Anshar were there, and there was one other group there.

David: Which amulet did they wear?

Corey: The star.

David: Okay.

Corey: But they were very far in the back. They were moving quickly to get back, and as I was leaving, I was asking how it went and trying to make small talk. And Kaaree said that it went well, but they learned quite a bit of things they had wanted to know for a long time. And they were a little bit disturbed to hear from the Guardians that from the Guardians' perspective, they had not been “proper stewards of this planetary

sphere".

David: Hmm.

Corey: Whatever else information she had gleaned from that interface, she was taken back very quickly with her to this meeting.

David: I don't think anybody would be in a better position than you to speculate what that means. Why were they not good stewards of this planet?

Corey: Well, the Inner Earth groups that . . . I guess, their rationale for the way they have interacted with the surface population that we've discussed, the deception at times, using certain parts of the population as pawns. And not all of them, but certain other Inner Earth groups using surface population as pawns in this ongoing conflict with these what they refer to as genetic farmer races that had come in. And I assumed that there was quite a bit more on that topic that was shared with them.

David: So you're saying because these Inner Earth groups formed an alliance, some of them, from our perspective, were working with the Cabal and were what we would consider negative? And so this is part of why they were told they were not good stewards?

Corey: Right. And of these seven groups, when they were meeting, within the meeting, they were very uncomfortable meeting with each other. Some of them did not like each other very well, and some of them were leaning more towards the Service to Self negative, and some leaned more towards Service to Others, but still, were in self-preservation mode.

David: What about these Inner Earth beings posing as gods to populations on Earth? Is that improper stewardship? Should they not have been doing that, appearing that way, or is that part of their role to help guide us?

Corey: I don't . . . They believe that is their role, and many of the different beings that have called theirselves Guardians and have taken part in all these different things believe that's their role. Whether the Sphere Being Alliance agreed, I don't know.

When she left, Gonzales later contacted me and told me that when they left that meeting with the Guardians, the meeting that they had with the Inner Earth Council was the last one that those seven groups had together.

David: Was Gonzales part of that meeting?

Corey: No, no.

David: Gonzales must be freaking out, because you and he are essentially the delegates, THE only contact that they have in the space program, the Secret Space Program Alliance, at least, the only contact they have to this historic event where the Guardians are meeting with the Inner Earth Alliance. And you guys don't know anything about what happens?

Corey: Total silence. Nothing.

David: That's got to make the SSP Alliance really upset, I would think.

Corey: Well, yeah, but the meeting was not about us.

David: Why would you be brought in though? Why would you be brought into something that you can't see, something that you can't hear?

Corey: I don't know.

David: Okay.

Corey: I don't know. I really didn't see the reason for me being there, to be honest, . . .

David: Right.

Corey: . . . but this was an overture to the Anshar and their alliance. They've been having them out to these Kuiper Belt bases for some time. So there's been this political relationship developing for some time.

David: You're saying the SSP Alliance has been bringing out the Inner Earth beings to the Kuiper Belt for some time.

Corey: Right. There have been several meetings that Gonzales had with the Inner Earth groups and the SSP Council Alliance.

David: And you had said when you went into some of these underground caverns like the gardens, that you're seeing classic 1950s flying saucer-type shapes flying around and flying through rock.

Corey: Right. And in that trip, they had actually given Gonzales a ride back in one of their craft to this very base.

David: So my point of bringing that up is that even though we think of these people as living inside the Earth, they could easily travel throughout our solar system anywhere they want to go on their own.

Corey: Absolutely, yes.

David: And beyond, I assume.

Corey: And beyond.

David: Yeah.

Corey: Yeah. They have . . . There are colonies on other star systems.

David: That they have?

Corey: Yes.

David: We haven't heard about that.

Corey: Well, they have, and also the Mayan group, which is going to be . . . They're

becoming much more active, and we're going to be talking about them much more in the near future.

David: Do you have any specifics as to where these Inner Earth beings have colonized? Is there any identifiable stars that we would know of that they've actually settled on?

Corey: The only one that I've been told about is the Mayan group, and they are some worlds within the Pleiades.

David: Really?

Corey: Yeah. And they had taken like 40 million of their people with them, and they had done that from the Earth.

David: Why do you think these people were upset by what the Triangle-Head Being told them? What was the twist?

Corey: I guess I wouldn't call it them being a little self-righteous, but they had felt on their own for so long, and they felt like they had been doing the best they could and were doing the right thing. Every time there were cataclysms, they would do what they could to help humanity, even though . . . And a lot of times, it was in a dishonest or manipulative way. It was . . . I don't know. It was kind of a wake-up call for some of them.

David: I guess what I'm wondering is you've got this veil of secrecy, and you're not able to hear what's going on. And there's this kind of shock and depression to some degree after it's over. Do you think that if these people are being told they were improper stewards, that they were now given a directive that they're going to have to reveal themselves to us as a planet, and that they're actually terrified of this, because they could be killed?

Corey: Right. Yeah. And I was told exactly that in a later meeting by them.

David: Really?

Corey: Days after this meeting, Gonzales communicated that it had not gone well in the Inner Earth Council meeting, that three of the groups . . . And I've been asked not to say which ones, just for operational security reasons – a lot of people can guess one of them. The Omega group was one of them. They left the Inner Earth affiliation that they had.

David: Hmm.

Corey: They left the Inner Earth affiliation that they had.

David: But you said originally that the Inner Earth affiliation was due to lethal threats that they're facing from the Cabal, that the only way they could survive is to pool their resources.

Corey: Right.

David: So what could possibly make them want to break that off, because it seems like it's a choice between life and death at this point?

Corey: It is, but I can't really reveal too much of that without revealing who they are.

David: Okay. So they're just going to go it alone, and they're going to take their best chances with that at this point?

Corey: Let's just say one of the groups also is in contact with an off-world group that has a lot of interest and real estate in Africa. So there are other alliances that they have. They're not putting all their eggs in one basket.

David: Okay. So did anything else happen in this meeting where Kaaree and the delegation are with the Triangle-Head being? They go off. Then you see Gonzales. You have this brief conversation with him. Did anything else happen at that point, or did you just get returned?

Corey: We briefly had some discussions about what was going on in the different Secret Space Program Alliance – some of the scuttlebutt that was going on between the groups.

The Secret Space Program Alliance and the Earth Alliance, both alliances are made up of loosely knit groups, and there's a lot of politics. There's a lot of different agendas. So there's always quite a bit of interesting little scuttlebutt to hear. So we usually . . .

David: Is it something that you can't share with us?

Corey: It's somewhat off topic, but it had to do with military intelligence lower Secret Space Program recently broke away from the Secret Space Program Alliance, and now it appears that they're positioning themselves to be disclosed in a similar way that the stealth fighter was basically disclosed back in, what was it, the '80s. So they are no longer a part of the Council, and the . . . It wasn't . . . The whole group wasn't a part of the Council. There were some key people that were part of the Council keeping them under the narrative that they have been indoctrinated of, you know – that most of the stuff flying around is human, that there were ETs, but not anymore. It's distant past stuff, and that kind of narrative.

David: Okay, but you just dropped a bombshell, and so I want to make sure that we get this properly talked about. You're saying that the lower-level military Secret Space Program is going to be formally revealed to humanity, and that was part of what he told you?

Corey: Right – in stages. I was told that . . .

David: So are we just talking about the X-37B, the little space shuttle thing that flies up and then orbits the Earth in a year, and then lands again?

Corey: This will most likely be up to the level of the different space stations we have in near-Earth orbit that are probably about 30 to 50 years more advanced than the International Space Station, that they fly to a couple of times a month to service. And they'll probably start off with that type of information.

David: What else could it go into? Do they have the ability to fly around our solar system?

Corey: On that level, they do, but it's not in the short time period that the higher space program has.

David: But that could be disclosed. If this program is disclosed, then what you're

saying is that we could be told on a global level that the military has craft that in their own time, which is obviously not as fast as the SSP, that they could travel around the solar system.

Corey: Right. And I've basically been told . . . I was told that there are a number of lower SSP insiders that are being groomed and coached to be unofficially released from their 20-year non-disclosures.

David: Now, why would these people want to say that there are no extraterrestrials, and that it's all us? What's the game plan behind something like that?

Corey: It's a partial disclosure narrative that some of the groups are working to push, and it's already unfolding in front of our face. And, I mean, you can see it in the shows, the commercials.

David: Well, we've discussed - you and I, not on camera yet – but we discussed the shocking "X-Files" pilot episode of January 24th, which airs three days after the CIA does a limited hangout disclosure on their own website. And that "X-Files" episode is basically saying there's hardly any ETs, that it's all us. That's the big thing that Mulder keeps saying, "We've been deceived this whole time. It's man! It's man!"

So you're saying that that kind of content like the "X-Files" is part of a disclosure narrative that they're deliberately trying to put out there?

Corey: Yes. That "X-Files" . . . That narrative is the exact narrative that most of the space command people had given to them over decades.

David: How could somebody be naïve enough to believe that? I mean, I'm not trying to insult them, but seriously, how could they believe that there are no extraterrestrials?

Corey: I could walk out the door right now and find more people that don't believe them than do, just because of the conditioning from mainstream media.

David: Yeah, but these guys are flying . . . You said they have craft that can fly throughout the solar system.

Corey: Mm hmm.

David: There's pyramids on Mars. There's a face on Mars. What do they think that is?

Corey: Well, they're basically just like what they're putting out on "X-Files" that, yes, sporadic alien contact has occurred mainly in the ancient past, and everything that's occurring right now are alien reproduction vehicles. And that's all that's flying around.

David: Aren't they going to see Secret Space Program assets?

Corey: They do.

David: What do they think that is?

Corey: They're told that they are concept vehicles, not to speak about it, not to put them in the reports or logs.

David: How bizarre.

Corey: Yeah.

David: Well, I do know an insider, who's one of the top guys that worked with Richard Hoagland, and he believes this whole thing, absolutely. And it's kind of shocking.

Corey: I've had people ready to punch me in the face that they're at the top of the pyramid. That's as high as it goes, and yeah.

David: So you have this conversation with Gonzales before you leave, and this idea that the actual lower-level military Secret Space Program will be disclosed, that it's underway – the plan is underway, including these insiders getting ready to be coming forward.

Corey: Correct.

David: Is there anything else that you talked about with him before we get to the next meeting that you had?

Corey: That should pretty much button it up.

David: Okay. So your original meeting that we did a bunch of episodes about of seeing people in the Inner Earth, so said that took place in September. So when was the second meeting in the Kuiper Belt? When did that take place?

Corey: It was in late December, and then early January was the next meeting, where I actually was brought back down to have a meeting with the priestess.

David: All right. Well, let's go into that. So you have a third meeting now with people from the Inner Earth. So tell us about . . . Where does this meeting take place, first of all?

Corey: The meeting takes place in the same area - in the same underground location – but I didn't have to go through all the rituals and stuff.

David: You didn't have to disrobe and get into the little fountain?

Corey: Right.

David: Right. So you were able to wear your normal clothes, not the ceremonial robe?

Corey: Right. We were over in the city area. She was not as . . . She had a different energy about her. I guess quite a bit had happened in between with the alliance that they did have. And the three groups that left . . . I guess when they left, it was not a very smooth parting. There's a very large disagreement in how to proceed with relations between the surface population and their civilizations.

David: Sure.

Corey: The Anshar had decided that they were going to start slowly communicating with the people that they're communicating with remotely with their minds, reaching out to the people that they had been telling that they were from these different star systems or all these different scenarios. They were going to start telling them who they were.

And the other groups, the three other groups, did not like the idea one bit. They thought it was reckless and would end up in their demise. So they left, and not only did they leave, they stepped up their remote influencing counterintelligence program. They stepped up with the people they were communicating with, making them be suspicious of certain types of information they hear.

David: You're in this meeting with Inner Earth beings, and you're in their city, you said. It wasn't in the temple. And they're telling you now that they're being directed to tell the truth.

Corey: Right.

David: What else happened in this meeting besides just that one detail?

Corey: I didn't get any more tours or anything exciting like that, but we had some . . . it was mainly small talk, and she wanted to communicate how much information they had received from the Guardians and communicate how much of an impact it had made on their community.

David: Hmm.

Corey: It had . . . The way they share information is apparently the way we're going to share information in the future. They've got some sort of a . . . It's like an Internet, a mental Internet, that they're able to access.

David: Telepathically.

Corey: They share information this way. And imagine if you have a data dump like that, that comes . . . They got their data dump from the Guardians, and it hit the whole Inner Earth Internet. So since that time, she said that the various cities . . . It's been buzzing.

David: Well, you mentioned some negative things that they're not being good stewards.

Corey: Right.

David: And you've mentioned that they were told that they had to be more truthful with us.

Corey: Right.

David: So what are they excited about? What's the positive? What was the thing that got them buzzing? That I'm not sure I understand.

Corey: Apparently, they have a new mission or direction. It's appearing as though this new direction and mission is going to be more direct - maybe not more direct open contact, but more direct influence, and in a positive way with the surface population. We may have more open contact with them before we start having contact with non-terrestrials.

David: Was there another reason for these beings, the Inner Earth beings, to be so excited after this contact with the Triangle-Head Being took place in the Sphere Alliance? Do you think part of their excitement was just that they finally have reconnected after this long absence?

Corey: Well, this was a group that they revered, but the excitement was . . . They had received a lot of information, and receiving a lot of information from a group that they had not had contact with ever, but had revered. I mean, how excited would you be right now if you finally got to get face-to-face contact with some of these beings?

David: That's true. So it's the same thing.

Corey: Yeah.

David: So was there anything else of significance that happened in this particular meeting?

Corey: Not of real significance, other than what we were talking about. She did tell me that there's going to be a lot more contact between her and I, and that there was going to be more and more contact with this Mayan group.

And sure enough, this Mayan breakaway civilization group is showing up everywhere. The last time I was at a briefing at the Kuiper Belt – this Kuiper Belt base is one that I've been to a few times now – I had never seen them there. They were there. They were wandering around. And Gonzales says he's starting to see them all over the place. So I guess they are starting to take some sort of a larger role. And what that role is, I have not been totally briefed on yet.

David: Well, this is really fascinating, and I thank you for continuing to suffer through all the incredible stuff. You had helicopters circling your house five times. A black helicopter buzzed my house. And you're hanging tough. You're still here. You're still doing the show, so I really thank you for participating

Corey: Yeah. The day after I had a SSP meeting, about . . . it had to do directly with the Lower Secret Space Program, my house got orbited five times by a Chinook helicopter, and I got it all on video.

David: Yeah. Well, thank you, Corey, and thank you for watching. This is “Cosmic Disclosure”. Fascinating information as always, and we'll see you next time.

Personality Metamorph Program Season 4, Episode 9

Personality Metamorph Program Season 4, Episode 9

04 May 2016

David Wilcock: All right. Welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. We're here with Corey Goode. And in this episode, we're going to get into one of the most sensitive secrets of the Cabal, that known as the Personality Metamorph Program. This is an extremely important subject for everyone to understand because, well, I'll let him tell you the rest.

Corey, welcome to the show.

Corey Goode: Thank you.

David: So we know in the public lexicon that there are people out there that some people call sociopaths, some people call them psychopaths. There is a myth that a psychopath is violent, but that's not always true, is it?

Corey: No.

David: So what are some of the characteristics of the sociopath that we would see just in everyday life? If you have a sociopath that's part of your life, what are some of the characteristics that that person might display?

Corey: Well, usually it's not going to be any shock or mystery to you – a complete lack of empathy for any type of emotional or physical pain that you're going through. That's a major sign. The way they behave towards animals and children is a good indicator.

A lot of these people have learned to blend in pretty well. Sociopaths have learned to fake emotions or fake empathy. So some of them are not as easy for the average person to identify. Until you've spent time around them, a lot of them can be hard to identify.

David: Do you agree with the commonly held notion that these people tend to be glamorous and narcissistic, that they're kind of affable and personable, outgoing, extroverted?

Corey: Exactly. Yes.

David: Give us an example of a nonviolent everyday sociopath that would have those

kind of characteristics.

Corey: It would be your basic con artist that would get what they want from their mark without using physical violence, using manipulation, but having no empathy or care about what their successful con will do to the people emotionally or financially.

David: Do you think that society is starting to become more aware that these people exist?

Corey: Yeah. Well, it's been pretty obvious for some time, but with social media, the Internet, the topic is pretty heavy out there. People know about Internet trolls, they know about sociopaths and what they're doing to this world, usually from places of power.

David: I think it's interesting that the conventional statistics, in case you don't know watching the show, is that it's 4% of men, 2% of women, but when you get to sociopathic Internet trolls, different studies I've seen ranged between 5% to 8% of all people on the Internet are acting this way. Why do you think the Internet is such a marvelous breeding ground for trolls and for sociopaths? What is it about it that they like so much?

Corey: The illusion of anonymity. Very few of these people would behave that way in front of the people they're chastising or attacking. Most of them just don't have the guts or just couldn't deal with the consequences. So they feel empowered by the anonymity of the Internet. And we've, of course, done an episode on the government troll centers that I've helped set up, where paid government trolls get online and cause all kinds of problems.

David: Well, we also have Stockholm syndrome, right, where people that have been kidnapped in hostage situations end up agreeing with the philosophy of their kidnappers and thinking that it was a good thing that they're participating in a good cause by being hostages.

Corey: Yes. These programs that get lumped under the MILAB umbrella, or you hear the MKULTRA umbrella that people like to use, they don't realize that MKULTRA was a program that developed a lot of techniques that were later used in a wide range, hundreds of other programs. So all of these other programs are not MKULTRA, but MKULTRA developed a lot of tactics that are used.

The people that run these types of programs in the screening process, when they bring these children in, they separate them out based on the test results. And for some of the programs, they require people that are sociopaths, and they identify them as young as possible. And the program we're talking about today, they also want people who are

compulsive liars and also have intuitive empath abilities to where they can read people and manipulate people.

And then they take these people and they put them in the program that I always heard referred to as the Personality Metamorph Program. And they developed this Personality Metamorph Program to be a program that would train these children over a period of time, through their adolescence and into their young adulthood, to be the best manipulators and infiltrators ever trained on this planet.

David: Mainstream psychology says that the two main characteristics of the sociopath are fearlessness and dominance. So they use the term fearless dominance. How do you think fearless dominance . . . How do you think this characteristic of not having fear and this characteristic of being dominant, how is that useful in a program like the Personality Metamorph?

Corey: The whole purpose of these assets is to manipulate people, control people and infiltrate organizations. And not only that, have the people that they're manipulating and controlling develop a very strong bond with them to where if they don't talk to them for a few months, they're wanting to talk to them. They want to spend time with them. It's very odd.

One of the strangest things about it is that the people that were training these children, these children as they were getting into adolescence were getting so good that the trainers could not control them. The kids were manipulating them. They just could not totally handle them. So they brought in intuitive empaths to work behind glass and help them tell – they would wear an earwig – help them tell when the subject that was going through the Metamorph Program was being deceptive or truthful or manipulating the person that was doing the training or debriefing with them. So they were very, very difficult to manage and control.

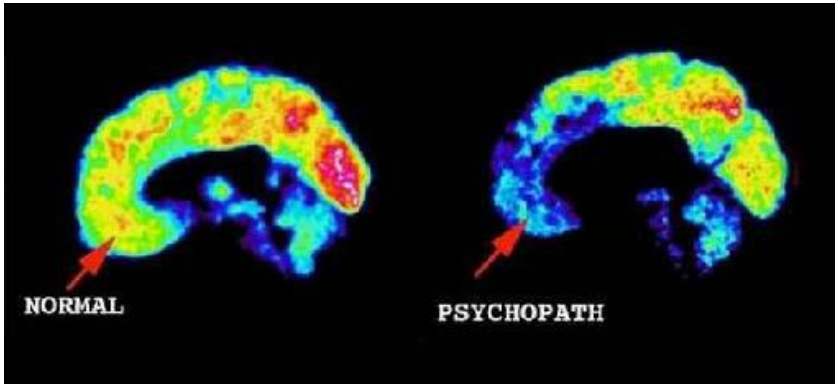
David: Why do you think these people are fearless? I mean, most people feel afraid about all kinds of things. How does a person actually get to this point where they don't have fear at all?

Corey: Well, a lot of times some of these children have been put through incredibly horrific experiences to where they shut off their feelings and emotions. Some of them are born that way. They're born just for some reason they don't have the right chemical balance, but for some reason they do not have the normal emotional response to situations that we do.

David: Well, just to bolster what you're saying, let's take a look right now at an A and B shot where the A shot, as you're seeing now, is a normal brain, and the B shot is the brain of a psychopath or sociopath. And what you're noticing as you look at this is

that all of that greenish-yellow color that's all over the brain of the normal person, that color is missing from the frontal lobes of the brain in the sociopath.

So why do you think the frontal lobes are not showing any electrical activity in these people's brains?



Corey: Well, that's where a lot of these emotions and thought processes occur.

David: So their brain literally does not have any, or very little, electrical activity.

Corey: Electrochemical activity in that region.

David: So it's literally as if they've shut down a whole area of their brain.

Corey: Right, and that can happen through psychological trauma or it can be a biochemical thing from birth.

David: So is that some kind of defense mechanism against further trauma, like the body adapts to the trauma so that you can just plow through it?

Corey: In the cases of people that had to disassociate so many times. This has happened in rape victims and other assault victims that have been repeat victims. They've disassociated, disassociated, disassociated to a point to where that part of the brain just shuts down and quits producing impulses. But that's just a certain portion.

David: Another thing that we hear about sociopaths when you read about it in pop psychology all the time is that they are invariably going to be thrill seekers. They're constantly in a fight against boredom, and they need adrenaline. They need thrills of

danger to make them not feel bored.

Corey: That definitely was a problem with these metamorph children. They would fight among theirselves. They would take crazy chances. I mean just to set it up for you, one of these tests that some of them were put through, they would dress a young man up and make him look very, I guess clean cut, put him in like a pink polo shirt and some blue jeans and make him look real preppy, drop him off at the roughest biker bar in town and leave him. And by the end of the night, he would leave riding a motorcycle with a lady on the back.

The situations they would put these people in and how they would turn them around was just absolutely amazing

David: But what are we actually seeing this guy do when he goes into the bar? Obviously, if he goes in dressed like a prep, people are going to want to beat him up or kill him.

Corey: Right.

David: So how the heck does he get out of that situation?

Corey: Well, they call them a personality metamorph for a reason. They can size up a situation and totally change their personality, the way they talk, have a backstory, I mean, everything very quickly. Probably come in and say, “I'm so glad to be here among my people. I got the wrong suitcase.” You know, whatever they have to do to socially engineer the situation. And they're very good at it. And these people they've used for infiltrating the military, intelligence, finances, all branches of government, every part of the economy with corporations, and within the very community that we work in right now, UFOlogy.

David: Most people when they lie, a good police officer can tell signs of lying. People will do the long blink while they're talking to you or they'll start to fidget with their hands or something like that. Are these people able to lie and beat a polygraph or beat a typical person who's trained to detect lying?

Corey: Yes. They had to poll an intuitive empath to be able to finish their last four to five years of training because they were so incredibly gifted at any type of lie detective technology that was in the programs, which was quite sophisticated. And the people debriefing them would just, after a while, they realized, “We can't trust what these people are telling us.” They had a lot of problems, and they had to have a solution of bringing IEs in to try to help them tell when these people were deceiving them in briefings or briefings after training, briefings after these little spot missions to test their skills.

And finally, they'll sit there with an earwig and if you sense deception, which was almost all the time, a tone would be sent to the person with the earwig, and the person would know to change his approach to the subject across the table that was in the program.

David: So when we hear the word “metamorph”, personality metamorph, why was that term chosen?

Corey: Because they can morph their personality to match any other clique or group that they're around, or even individual. I mean there's the typical thing that everybody knows that salesmen do, conmen do, emulate the person that you're trying to influence, sit like them, do body language with them, do subliminal things. This is way beyond that.

These people, their skills are way beyond that because they are intuitive. They're reading the people, so they're drawing off of the information that they're pulling from the people intuitively and all of the other things, reading body language and micro facial expressions, watching the eyes to know exactly how to approach them, as well as immediately size them up before even talking to them and know which accent to approach them with or what backstory to approach them with like that.

David: Do these people receive neuro-linguistic programming training?

Corey: They receive all types, all kinds of training when it comes to counterintelligence, intelligence, all the different types of ways of manipulating people. I mean everything from the simple things of reading body language in the context of also marrying that with your intuitive feedback, as well as there is some electromagnetic enhancements and training that I've talked about in other episodes that is more of the training that a lot of the rest of us used.

In these programs, these people would use a wide variety of other technologies that other programs used, like information or technology that would feed information directly to their neurology, sort of like an education. And also they would put them in virtual reality environments to train them in the skills they were trying to instill.

David: I can't help but feel like when you're describing personality metamorphs that you're describing politicians running in an election. And without getting into any specific names, there's fairly widespread knowledge about muckraking journalism where these politicians will go into different cities, and they are talking in the accent of the city that they're in. So how . . .

Corey: Those are old, old, well-known tactics, but those are very small caveats

compared to what these people are trained in.

David: Are politicians trained in the Personality Metamorph Program, or is this not really their specialty?

Corey: There are personality metamorphs in politics, but not all of them are trained in the Metamorph Program, no. They are just . . . I would assume that most of them are people that the Personality Metamorph Program wish they had gotten when they were younger because they would be perfect candidates.

David: So you mentioned something really quite incendiary, which is that these people have been trained very thoroughly with advanced technology and that they have infiltrated the UFO community.

Corey: Oh, absolutely.

David: Without getting into any names, because we don't want to attract that kind of karma and that kind of attacks from their fan bases, but what kinds of things might we see if this were happening?

Corey: Well, and it's not always getting in a limelight position. A lot of times they will become a friend of someone in the limelight position or a friend of a friend in the limelight position to get access without having the spotlight on them.

David: What good does that do?

Corey: Well, they have access to the person that they are sent to be a handler for and infiltrate their small little clique and put in a narrative or break up an organization, any number of directives that they're given. And that's just one small part. UFOlogy has been infiltrated since the beginning, in the '50s, by the intelligence organizations. But the Personality Metamorph Program has been deemed one of the most successful infiltrating programs ever. And I can't remember the name, but there was a Russian infiltration program, spy program, back in the '80s, I believe, that was known for being one of the best infiltrating programs. But this makes it look like child's play.

David: Was this part of the KGB?

Corey: Yes.

David: Okay.

Corey: Yeah.

David: You had tossed out a term that I think we ought to double click on for a moment. You said 'socially engineering'.

Corey: Social engineering.

David: What is that?

Corey: That's a term that's often used in data security, personal security. People will call you up on the phone, pretend to be the bank, and say, “I need your bank account number real quick, and, oh, what's your social?” That is a real quick of what social engineering is. In the context of the personality metamorph, social engineering is they come in and do the same thing on a much wider scale, and detailed scale, based on a personality profile they've developed on you in a very short period of time, a very specific tailored approach to influence you.

David: So there's all these people out there saying that the Earth is flat, and they feel like they have very compelling evidence and it's the biggest cover up of all time. Have they been socially engineered by personality metamorphs in some cases, the people that are coming out with this and believe this to be true?

Corey: Personality metamorphs will hop on a bandwagon and definitely help promote it. I've heard a couple of different people now say that that particular narrative came directly from NASA, I believe. So I don't think that was . . .

David: Not meaning that it's true.

Corey: Not meaning that it's true.

David: To thoroughly discredit people who are in the truth community . . .

Corey: Right.

David: . . . by making them seem so ignorant that they're pre-Columbus era, where Columbus sailed around the Earth and found new land, that they don't even believe that.

Corey: Right.

David: So it's like they've literally figured out a way to use this technology so much that they've made a total mockery of people to such an extent.

Corey: Right. And one of the main goals that the personality metamorphs and other infiltrators have done with the esoteric and UFO community is to try to fragment us as

much as possible through inner fighting and strong belief system differences.

David: You're saying that public figures in the UFO community would get a handler. They're not aware that it's a handler.

Corey: No.

David: What do they think they have?

Corey: They think they have a new friend that is very charismatic, that gives them insight into theirselves that they hadn't seen before and has a wisdom about them that is unusual for their young age. And they want to spend time with them, therefore giving the metamorph access to them and their psyche.

David: You had mentioned to me in private conversation before that personality profiles are made of people, psychological analysis that's extremely detailed. So if you don't mind, could you explain how the personality metamorphs use those and how are they created?

Corey: Well, the personality metamorphs are not looking at a dossier of a personality profile. They're taught to size up a person and profile them on the spot, and with their intuitive abilities and after they've been put through so many simulations and the technologies we talked about before, and then in the real world testing, they become very confident of their skills, and they're very accurate with their profiling.

David: In the case where psychological profiles are created on people, because you said that's one of the most important tools for an intelligence agent, what do they look for? What would be in a profile?

Corey: The baseline is personality types. There are 16 main personality types. And when you have these personality types, you can then build off of that by gleaning information about what magazines they get, gleaning information about where they go on the Internet, information dipping into their medical records. You gather all this information. If they talk to a psychiatrist, you gain information to that. And then it's compiled by behavioral psychologists that do nothing but put together personality profiles.

David: Is it common for personality metamorphs to betray the people they're handling at some point?

Corey: Absolutely.

David: And how does that manifest?

Corey: Usually at the pinnacle of when they have the person in the palm of their hand. And if that is there . . . If their job is to destroy that person or discredit that person, they get the target completely disarmed to where they completely trust the metamorph. They may tell secrets that they normally wouldn't tell to this metamorph. And they'll be like, I don't know why I'm telling you this stuff.

And so this metamorph now is getting more and more and more power over this other person. And the dynamics in the relationship are slowly changing. And once they reach a certain point, then the metamorph can either drop some information, drop a bomb, or step off the scale and let the target go through disillusionment and withdrawals from the personality metamorph leaving their life.

David: So is the personality metamorph going to come across to someone as like the best friend that they've ever had because they have this technology?

Corey: People become addicted to these people's personalities and friendship. They become addicted to them.

David: Will the information that they give that metamorph under the guise of this best friendship appear on the Internet in seemingly disconnected ways, where, “I don't know how this got out, but not there's all this stuff about me on the Internet?”

Corey: It depends on what the operational goals are for that metamorph. Usually they're penetrating, infiltrating to gain information to report back or to cause a rift in relationships or organizations.

David: Are these personality metamorphs also used in the Space Program, and if so, for what?

Corey: In the Space Program, I did not run into the personality metamorphs. They were used mainly for Special Access Programs down here on Earth. And as I said, they were inserted into just about every walk of life, every part of life from government to banking, everything.

David: What is the best way that you or anyone could identify that this is being done to them, and what kind of countermeasures can you take? What's our defense against people that are trained this way?

Corey: Well, the best defense is to know that you need to guard your inner information and guard information that could be harmful to you at all costs. If you're in a situation and you've met someone new through a friend, or a friend of a friend, and they like the same hard to get soft drink that you do, oddly. They happen to like this offbeat band that no one else has ever heard of that you do, and all these just little

coincidences occur and y'all become good friends, and you find yourself becoming somewhat addicted to wanting to be around them all the time, and you find yourself wanting to tell them things that you wouldn't normally tell anyone else, red flags should go up a little bit.

And it's only after you have really started to share information and made yourself vulnerable to these people that they then start the actual manipulation of you.

David: Are personality metamorphs being directed against people who are having spiritual contact with orbs or dreams and visions, synchronicity, and then talking about it on Facebook or on the Internet?

Corey: Yes. Yes. And any other number of targets, including financial people who need to be controlled or managed. A lot of times, they'll go in and control or manage people.

David: What is the greatest weakness that these personality metamorphs have that we could use to defend against them?

Corey: Their own hubris. They underestimate everyone. They are convinced that . . . They're very intelligent. They're convinced they're the smartest person in the room. They're always convinced that they're the smartest person in the room. The people that . . . If you learn to sit back and keep your ears open and keep your mouth closed, which is hard for a lot of people, you will learn a lot more, and you will look around and perceive a lot more, and you might start noticing these people.

David: Do you think there are always going to be little warning signs that the addictiveness of them being like your best friend causes you to overlook, that if you are really being careful, you'll find these little tells – these little giveaways – that something's really wrong?

Corey: If you didn't know that a personality metamorph existed, you wouldn't think to guard against it or to be careful of it.

David: Right.

Corey: It doesn't exist. It's just a person that apparently came into my circle somehow, was psychologically damaged, very intelligent, manipulated me and my friends, split up a business venture or a relationship, and then they disappeared from our lives. And that's how they may think of it, when actually it was an operation.

David: Well, my opinion is, too, that there's always going to be clues with the sociopath in general. You're always going to have things that don't feel good, but the

addictiveness kind of sucks you in.

Corey: Yes. And you need to learn to go with that inner voice, that feeling. When something doesn't feel right, usually in the beginning there's just a little bit of something that doesn't quite feel right that people don't listen to usually.

David: All right. Well, that's all the time we have for on this episode of “Cosmic Disclosure”. I'm your host, David Wilcock, and as always, I thank you for watching.

The Earth Alliance Season 4, Episode 10

The Earth Alliance Season 4, Episode 10

18 May 2016

David Wilcock: All right. Welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. We're here with Corey Goode, the insider's insider, and in this episode, I'm going to get into some very interesting stuff with him regarding the opposition to this Cabal, the Earth Alliance, the people who are on the front lines here on the ground trying to bring about a peaceful society or maybe not. So that's one of the things that we have to talk about.
Corey, welcome to the show.
Corey Goode: Thank you.
David: When people start to get into this subject about things like 9/11 online, there is such a widespread, pervasive sense of paranoia, despair, fear and hatred of the Cabal. Is there an opposition going on to the Cabal that goes beyond bloggers?
Corey: Absolutely. Every single enemy they've created over the hundreds of years, every group they've alienated, every atrocity they've done to these countries over these hundreds of years, has finally built up to a point to where they all came together, loosely came together.

All of them have their own cultural pains, and I guess some of them have different agendas on the retribution they would like to see exacted on the enemy, which we're calling the Cabal. Others would like to just maybe have a few changes. They think a world government is inevitable anyway, and the Cabal was wanting to do it in an evil way, so why don't they co-opt it and do it the right way?

Despite many of these alliance groups having different agendas and ideas about what should happen to the Cabal once they overcome them, they've put aside a lot of differences, and they've come together for a common goal, which is to defeat the Cabal.

And this is the key of why the Cabal had been so successful. They are made up of many different syndicates of people with many different belief systems and agendas, but somehow they found a way to work together. The 0.01% of them have found a way to work together, even though a lot of them really don't like each other, to exact control over the Earth.

Well, the Alliance is following the same playbook, getting together with people they wouldn't normally work with, forming a loose alliance, and trying to, or actually are in the midst of, overthrowing the financial system that this Cabal has set up for the last 100 years and want to replace it.

David: So I think people that are investigating this have felt that the Cabal control central banking in every country. They have bribed or compromised all of the leaders in every country. The leaders are blackmailed, and therefore even people who are fairly compassionate and reasonable folks, there's a widespread belief that this Cabal has just penetrated every country, all aspects of society. So what do you say to those people when they hear about the idea of an alliance and they, "I just don't believe it?"
Corey: Well, there is an alliance, and it is true that this Cabal is a master at infiltration, and, indeed, they have infiltrated elements of the Earth Alliance. And, you know, this is a problem, but, like the BRICS Alliance . . .
David: You're talking Brazil, Russia, India, China, South Africa is the BRICS.
Corey: Right, they've gotten together, and they've created pretty much a new world bank and financial system to compete with the Western or Cabal banking system.
David: And you're talking about the Asian Infrastructure Investment Bank, or AIIB.
Corey: Right. Over time, countries like China have been slowly purchasing the debt and also natural resources from countries owned by the Cabal as their financial Ponzi scheme has slowly, slowly started to collapse.
David: Now, we've heard that China is actually holding – the official numbers, I guess, are in the neighborhood of $2 to $3 trillion, but the unofficial numbers are $4 trillion of US bonds and US debt. That apparently is greatly superior to the wealth that's left in this Federal Reserve, Cabal-oriented, Western world.
Corey: Well, there's very little gold left here. There's a reason that all the big banks right now are buying silver like crazy and stockpiling it. There's very little gold left in any of the vaults that are supposed to have gold in them.
David: What about Fort Knox?
Corey: Same story. It's pretty well known that there is very little, if any, gold at Fort Knox.
David: Well, Germany asked for 3,000 metric tons of their gold back from the US, from the Federal Reserve.
Corey: Until we quietly told them we didn't have it.
David: And, yeah, the answer has been, "Oh, well, maybe in 100 years we'll be able to pay you back." So is it a Ponzi scheme that at this point is just based on printing money out of thin air? Is there any real collateral left?
Corey: It's all zeroes and ones and computers at this point. How all these different bubbles have not collapsed already is beyond me.
David: Are you the only one that feels this way or do others in the Alliance feel this way as well? What have you heard?
Corey: Well, I've heard that with the latest negotiations, members of the Alliance are now wanting to come in and not allow the Western dollar and the Western financial system to totally collapse, but to get to the brink of collapse and then move in and buy it at a cut rate and annex it into their new financial system. And, you know, everybody's been hearing for years and years now the promises of debt forgiveness, jubilee, and money that will be given to people specified on their age, how many dependents they have, and that kind of a thing.

And people have heard that so much now they scoff at it, but this is something that is openly discussed in these meetings. So it is a part of the discussion and the negotiation.

The revaluation of all the currency that is being discussed is very controversial, and most of the people do not like it. The poorer countries like it because a lot of them want to value all currency the same. Now that would put the US and even China and other countries at a major disadvantage in trade, but that is one of the things. Or when they're talking about equaling the playing field, they're talking about changing the value of all currency to being the same.

And even inside the Earth Alliance, there are groups that do not like that plan at all, and they want a sliding scale based on GDP and a bunch of other numbers and information that – I'm not an economist – I really don't understand. I was having all this information thrown at me, and I don't understand the economic jargon, but the bottom line I was understanding.
David: Are you aware of the Alliance being in possession of surveillance footage that's very compromising of the Cabal?
Corey: Yes.
David: And what forms does that come in that you're aware of?
Corey: Every form. They've got everything from emails, texts, phone conversations, videos, audio recording. They've got satellite imagery of things that different people have ordered and real time.... I mean, they've got everything.
David: So it's entirely possible that members of the US military could be hired to go through that footage and try to pick out the best of the best.
Corey: Yes, that would be quite a job. With all of the data mining they have done to accumulate all of that data, I can see why they would need the help. It's quite an undertaking to go through all of that.
David: Probably one of the most basic questions that people are going to be asking is, why in the heck is this whole thing so mysterious? Why can't the Alliance just say, "Hey. Here we are. We're going up against the Cabal. Here's our announcement. Here's what these guys are doing, and just start openly talking about it. Why are they having to keep everything so secret that people, even this late in the game, they are still doubting guys like you and me writing about this stuff online. Why won't they just come out and say what they're doing?
Corey: I would say they pretty much have been coming out and saying what they're doing. The question is, why isn't the Western media covering it?
David: Well, give me an example of how they're coming out and saying what they're doing.
Corey: Russian, alone, has been coming out with all kinds of information and openly threatening the US with releasing all different types of information that they have gathered, you know, including 9/11. They've threatened to bring forward proof that

9/11 was either an inside job or that the US knew it was going to happen and sat back and did nothing. There is quite a bit going on that the Western media is not reporting or they report in a tongue-in-cheek way.
David: Well, do you think that at this point, the Cabal still has such a control over world media? Since their television networks are worldwide, the movies go worldwide, do you think that they can both create propaganda very easily that defeats any Alliance initiative and that they can, furthermore, kill anyone who starts trying to speak out from the Alliance at this point?
Corey: They have a waning control. They used to have a complete control, but the Earth Alliance group . . . You're starting to see more and more interesting content pop up on television that normally the Cabal would not approve to be on television, you know, different movies. I mean, the list would go on and on. So, yes, they did at one time have full control of this media, but obviously that control is slipping. Their control over everything is slipping, so we're going to see more and more of this information coming out.

Now the big thing that has been going on in the secret negotiations between the Earth Alliance and various Cabal groups is how to release information, and they're pretty much in agreement to release information in a slow manner. The main reason they want to release information in a slow manner is that a lot of the data that has been accumulated, that we were just talking about, is damaging to both sides because both sides have done criminal things in the past. And there are no clean hands in these negotiations.
David: You told me in private conversation that Gonzales has said to you that in the future this struggle that we're in between the Cabal and the Alliance right now will be seen as World War III.
Corey: A stealth World War III.
David: A stealth World War III.
Corey: Yes.
David: So how do you get a world war without any open obvious invasions or major military conflicts going on?
Corey: Everything's being fought through digital means, through hacking, cyberwarfare. It's being fought through proxy armies such as the Cabal using organizations they created, like ISIS and al-Qaeda, and through a financial war that's going on. It's something that could very easily spike into an open, hot conflict in certain areas, but this has been an ongoing, stealth world war for a period now.

Gonzales basically said history will look back on this time as a different type of world war, and this will be a stealth World War III.
David: What about the idea of natural disasters and weather being involved in this war? Are there technologies that you're aware of where weather can be manipulated as part of fighting this war?
Corey: Both sides have weather modification, and it was heavily being used in open

warfare against each other. That's slowed down some. They're still using it, but it's slowed down during the negotiations.
David: What would that look like? What would we see in the news that would be an example of this war being fought?
Corey: Well, with the weather modification wars, you change air streams that pull the moisture out of your area, dries up the breadbasket of your region that grows all of your food. You know, that type of thing . . . or inundates you with hurricanes or heavy rain, which can then lead to other natural disasters that cause you to declare a national emergency and put all your assets and focus on that problem.
David: Well, one of my favorite ones was when the South American Alliance first convened, they declared that Chile was going to be where their headquarters would be, and on the day that Chile was supposed to start their role as the headquarters of the South American Alliance . . . It was never recorded in the Western media. The day that Chile starts as the headquarters, they have this massive, massive earthquake.

So are you aware of earthquake-making technology as well? Could these earthquakes be part of it?
Corey: It's the same technology, yeah.
David: Yeah. So you're saying both sides use this against each other?
Corey: Absolutely. And that's not the extent of it. US Navy, many years ago, discovered super volcanoes that are below the ocean, and those have been kept secret for some reason.
David: Similar to what we hear about with the whole Yellowstone caldera?
Corey: Exactly, and apparently they have placed some sort of charge or energetic device that could cause it to erupt. There are three of them that I saw documentation on, and that is one of the threats that the Cabal is making. You know, they're acting like a child. If we don't get our way, we're going to break all the toys and leave.

And so there are still a lot of really tricky negotiations going on down here, and these are going on right now. They've been going on for months and months, and they're working on a consensus of what they're going to release data-wise. And at this point, they agree that a partial disclosure is where we should go and that humanity should be slowly acclimated to the greater reality of our true existence and receive a slower roll out of some of these advanced technologies.
David: Is there a plan for a large number of people to be arrested at once? Does it have to be that way in order to prevent them from escaping? How do you think this whole thing is going to play out?
Corey: Well, right now, I don't know. There are going to be arrests and prosecutions, but the extent of which depends on these current negotiations. They are obviously going to go after the people they hate the worst in the Cabal. We use the analogy, how are they going to just let part of the genie out of the bottle? And I think they're trying to figure that out right now. They're not going to let these groups that have raped and murdered the planet get off scot-free, but elements within the Earth Alliance also do

not want to have people hanging from lamp posts from the street.

There are a lot of groups. There are a lot of different ideas among the groups in this Earth Alliance, and for them to reach a consensus is going to be difficult. And then for them to negotiate with members of the Secret Earth Government Syndicate that are coming to the table to negotiate because they want out too. They're ready for it to be over too. They have quite a distance to bridge before they get to where they want to be. And that's going to give us in the community time we need to get a grassroots effort going to demand Full Disclosure and the full truth.

David: Do you think that the controlled media could be given new marching instructions once this takes place? What will media look like in the aftermath of some kind of . . . if the mass arrest thing happens, as an example?

Corey: There will be a bunch of people that are just as shocked as us sitting in front of microphones. They do not know the extent. When they find out, I don't know if they're going to be able to speak on air, but, yes, eventually when the truth embargo is lifted and if the media is going to be the delivery mechanism, I can imagine they're going to have quite a different demeanor when they're given the news. Otherwise, it might just be the televisions. All stations might be taken over for a while, and the population be given a massive re-education about our true past.

David: Now some people who watch this show and are into this might be aware that laws have been openly passed in the US. They did it during Christmas while everybody was having dinner and happily with their families. It's openly now a law that the US government can seize all of your assets in the bank in the event of having a financial crisis.

Corey: Right. All deposits legally before that already were legally owned by the bank. When you take your money and deposit it at the bank, it is legally owned by the bank. That was before that even. When I worked at the Federal Reserve, that was explained to me, and that was in 2008.

David: But when you go into the bank, every bank usually has a little FDIC logo somewhere, Federal Deposit Insurance Corporation. And it used to be $100,000. Now it's up to $250,000. It says right on there, your deposits up to $100,000, or whatever it is, are backed by the good faith and credit of the United States government. Ha, ha.

Corey: Ha, ha. I didn't know we had that.

David: Yeah, so if the US government faction of the Cabal gets in trouble, are they going to actually try to do that? Are they going to try to take people's money out of the bank? Could there be a period of time where no one can access their money or their bank accounts have been basically deleted?

Corey: That's been their plan all along. Whether that actually occurs or not, I am not positive at this point. A lot of what I thought was going to happen is up in the air right now because of the current negotiations.

David: Let's just say, if people are watching this show, something like this ends up happening, that could cause a very great outrage, obviously. If an event like that takes place, does that mean that people's money is lost forever? Or does the Alliance have

contingencies in place in case the Cabal temporarily tries to say, “Oh, you don't actually have money in the bank. It's all ours.”?
Corey: Depending on the plan, some people would lose what they had, and some people would gain something that they didn't have. Like, maybe if they rented a home for 10 years that belonged to a person that was a real estate investor that had 50 homes, that home might be deeded to the person that had been renting it or a property. These are all the types of things that they are negotiating and discussing. It's incredible.

I mean, it's all up in the air, and every contingency they have a plan for, but how things play out are yet to be seen.
David: They Alliance is not as shaky as some people might like to believe, correct? I mean, if we have a significant part of the US military and intelligence apparatus involved in this, this is a very significant operation we're talking about.
Corey: It's a significant operation with a large coalition of loosely-knit groups, some of which are syndicates, secret societies from the East. Some of them are groups that the news here will tell you are foreign criminal organizations. So it's a very complex topic. The organizations are loose-knit, and not all of them have the same, I guess, values or agendas. And you can see how much of a mess it is in the midst of these negotiations right now.
David: Are we now talking about a majority of the world that is the Alliance compared to the Cabal? How much of the world do you think the Cabal still has some control over?
Corey: The majority of the world is not controlled by the Cabal any longer, but the Earth Alliance, quite a number of the groups have been infiltrated by this Cabal group. So there also is a very tricky question.
David: Do you think that 9/11 truth is going to be an element of what happens as the Alliance makes its move, one way or the other?
Corey: I do. I do.
David: What do you think people are going to hear? If you want to make a prophecy at this point, put it on camera before this has actually happened, what are some of the things that people might be told once this all unrolls?
Corey: Well, like I said, I have no inside knowledge of 9/11, but I think they will be told the details behind 9/11, the truth of who planned it, who executed it, and who knew the details of the operation after it was executed. And that would be shared, and the obvious outrage among the people would want us to be tracking these individuals down and hanging them from lamp posts.
David: Since we only have a couple minutes left now, someone watching this might feel like they want to help this process come about. We've had, for example, militia groups saying, just tell us what to do when the time comes. We'll go where we need to go, which obviously is kind of a violent thing that we don't want to be involved in. Should people be grabbing guns and trying to go shoot people? I mean, what can they do? What should be done? What shouldn't be done?

Corey: They've tried to foment racial tension.
David: They – the Cabal?
Corey: The Cabal. They've tried to foment racial tension. They've tried to foment tension between patriot groups and the government. They want that to happen so they can declare martial law.
David: Right.
Corey: Don't play into their hands. You cannot get, as I say, a positive from a negative. As we've stated over and over, it's going to take all of us coming together and forming a grassroots movement, having uncomfortable conversations with people that will look at us like we're crazy, and begin to educate people now.
David: All right. Well, you heard it here. I'm very much looking forward to this coming out in the open. I'm sure you are, too. This is “Cosmic Disclosure”. I'm your host, David Wilcock, and I think you for watching.

Viewer Questions Part 4 Season 4, Episode 11

Cosmic Disclosure; Viewer Questions Part 4 Season 4, Episode 11

18 May 2016

David Wilcock: All right. Welcome to "Cosmic Disclosure". I'm your host, David Wilcock. We're here with the insider's insider, Corey Goode. And in this episode, we're taking your questions. So this is the chance where, if you've been participating in the discussion forums, writing comments in the comments section, we go through and we find things that look interesting to discuss here on the show.

So Corey, welcome to the program.

Corey: Thank you.

David: The first question that we have is: "How can one find out if he or she has been infected by the AI?"

Corey: Well, that's not something that they're really going to know unless they get tested by a particular instrument that is used by the SSP. They use it . . . They put it close to your . . . by your electric field, and if it measures more than one signature, then they know you're infected. It's not something you can test for anywhere down here.

David: I think to double-click on that question a little bit, what they're really asking too is, how prevalent is this AI infection in regular humanity? Is this more of a Space Program problem? Is this something happening to people here on Earth?

Corey: People will have the infection, but if they're of no operational value to the AI, then it's not going to stay dormant in them. It's going to move on.

David: So the AI isn't just going to inhabit someone if it doesn't have a reason to?

Corey: Unless it's biding its time until . . . using them as a host . . . until it can get into some technology or another person that's its real target.

David: Why might a person on Earth be useful to the AI? What would be an example? Because some people are going to think they're involved in a huge cosmic drama, and that they're very important to this thing and the AI's going to be in them.

Corey: Well, the AI may use a person as a host just to hang out in their bio-neural field until they find a better host that's going to get them into the electronics that they

want to be in. Let's say an aborigine happened to find a piece of a ship, and they messed with it, and they got infected. Then it would hang out in their bio-neural field until they passed it along to other people. And eventually, it got into someone who uses technology, and then that person is their conduit into technology.

David: So it sounds like what you're saying is that the AI would only even be interested in people here on Earth if they could get into the right technology.

Corey: Right. You're more of a vehicle.

David: Is there going to ever be a case in which the AI could use someone other than to pass itself into technology here on Earth?

Corey: Well, if people have key positions, a lot of times they'll be infected with actual nanites. And these nanites can either be programmed, or they can be remote-controlled by the AI signal.

David: The next one we have is from Alsion Bell. A-L-S-I-O-N Bell. I think I'm pronouncing that right. Inner Earth peoples and the harvest. Now, just for the context of the question, if you haven't read "The Law of One", when they use the term 'harvest', they mean ascension. It's the term used in the Book of Matthew for ascension.

"If the Inner Earth people have been here for 17 to 18 million years, have they never been harvested? Have they escaped being harvested? Do they not also want to progress?"

Corey: Well, they are actually fourth density already. And they have remained on the planet to assist the planet and us.

David: So fourth density meaning they are ascended beings?

Corey: Right. And they're basically . . . They're supposed to be stewards of the planet and all of its inhabitants.

David: And given the fact that they've been here for this long, I just want to reconfirm that time changes when you go from density to density, right?

Corey: Yeah, they experience time differently than we do. They perceive and experience time differently.

David: What would that equate to in our conventional understanding?

Corey: Like, we may refer to time in decades, and a decade to us seems like quite a long time. In a decade, we'll see wrinkles and gray hairs appear.

David: Right.

Corey: That's not the case for them. So 100 years to them could be easily like maybe one to five years for us.

David: So you're saying that their lives, the way they actually perceive their life, 100 years could be like a year?

Corey: Right.

David: Isn't it strange, though, that they could talk to you and then the time of the conversation is the same?

Corey: Well, yeah. You'd think that maybe there would be a time dilation effect, but I guess with them being a higher density being, they're able to reach lower a lot easier than we can reach higher.

David: So they could alter their flow of time to be able to speak to you, potentially.

Corey: And possibly alter our flow of time, or our perception.

David: So it's possible that you could be going into an accelerated time field, but then you're just regressed back when you are returned.

Corey: Right. But that's speculating because I'm not exactly sure of the particulars of, you know, how they were phasing me in and out of time.

David: Now, part of the ascension is the solar flash, and I think another thing this person was asking about is how have they avoided these big solar flashes, these solar energy releases?

Corey: Well, I don't know if they have, necessarily. They're affected by all the same energies that we are, . . .

David: Right.

Corey: . . . and all of the beings that are trapped here in our solar system are going to be affected by them.

David: All right. Are you ready for another one?

Corey: I am.

David: Okay, this one's from Azgard123. “When Corey came back 20 years in time and was debriefed, did the authorities in charge get the full debriefing of his service that was yet to come?” And then the question goes on to basically say, “Did they know what was going to happen to you after they brought you back?” In other words, if you're up there in space, and you do 20 years into the future, do they also see the timeline of what's going to happen to your life once they bring you back to Earth for the ensuing 20 years?

Corey: Well, I know they have the capability, but logistically, for every single person, I don't know if that's practical to look . . . but you know, you'd think that this being such an important secret to keep, that they would. So I really don't know the answer to that. But when I did return, and after my debriefing, they did know that they were going to be observing me very closely, and they did call me back for recall work from time to time.

They would call me back and have me work with other people, blank slate me, and put me back in my normal life that I had built post 20-And-Back.

David: I think what this person is also just trying to find out is, how much is the Cabal aware of what's happening in the future? How much do they get to plan it all out, map it all out? In other words, why didn't they know, for example, that you're doing this show? Why couldn't they see that?

Corey: That's a good question, because they use a type of AI technology to look at probable futures. And that's . . . We've heard all these things about the Cabal's about to fall, the Cabal's about to fall, mass arrests are coming. Well, they've used this technology to stay one step ahead of all these programs that were meant to take them down.

So honestly, I don't know why they didn't intervene or see this previously, unless there was another intervention preventing them.

David: Is it possible that the mere act of trying to look at the future changes the future?

Corey: Yes. It's just like when scientists observe an experiment, they change the experiment. They affect the experiment by observing it.

David: So even if one or two people know that something might be happening, that could alter the outcome.

Corey: That's possible, yeah.

David: Right. Okay. That's a question we could do a whole episode on, but we're trying to get through your questions here. Let's go with Ron Mayor 2012. “Blank slating members of the 20-And-Back Program. What is the Guardian Alliance members' view on blank slating? Is this something that the Guardian races support, or is this something only the Illuminati space program controls, and possibly unenlightened yet highly technologically advanced ET races do? So, in short, what is this view on the blank slating process?” Is that allowed by the benevolent beings in the universe, or do they just have to kind of let it happen?

Corey: Yes. Their non-direct interventionist kind of policy that they follow so strongly prevents them from stepping in and preventing it from occurring. But I have never . . . When I've spoken with like the Sphere Beings, that's never been a topic. We've never talked about, you know, this is unethical, immoral, and it shouldn't be happening.

For the second part of the question, the negative ETs and their proxies, all these different Illuminati, all these different names that we use for them, they definitely are all about using the blank slate technologies. And for them, it's just a standard operating procedure.

David: Okay, we have another one now from Pastel Galaxy Z. These are some very colorful names. I can kind of imagine that as I see it. “Missing people off-world slave system. Are our people being pawns and slaves for Reptilians and maybe other human-like races?”

Corey: The interstellar or intergalactic slave trade, human slave trade is . . . it's very complicated. A portion of the people that are taken are handed over to Reptilian beings, but these people are a commodity, and they're traded off to many other civilizations as well who use us for many, many different purposes. The Reptilian beings use us for very dark purposes that most people know about.

David: What about the human-like races?

Corey: There are a lot of human-like races out there that do participate in the slave trade with the ICC (Interplanetary Corporate Conglomerate) and different factions of the Secret Space Program. But I don't normally . . . I don't think they're consuming the people, the slaves that they're receiving, like the Reptilians.

David: All right. Next question we have is from WM. “Were the primary inhabitants of Mars back then the same species as the one they warred with on Maldek, or a different species?” Now, I guess the first part of this question has an assumption in it,

which is that Mars and Maldek actually warred with each other. So let's just start with that first, and then we'll get into the rest of this. Did you have information saying that Mars and Maldek actually warred with each other?

Corey: That was a part of the conversation I had with Kaaree in the library, that she stated that, yes, there were two different groups, and one on Mars and one on Maldek, and they were in conflict with each other. Now, I may have assumed that they were different species. I don't recall that she specified that they were different species, but that was my assumption. I thought they were different sizes. I mean, that's just what . . . When we were interfacing, that was the imagery I was getting. But they very well could have been the same that were just . . . there was some sort of civil war. So I don't know the full answer to that. I know that they were doing battle with each other, but I do not know if they were the same people.

David: We could argue that if the Super Earth is very large and Mars is very small, almost a moon, that if they arose indigenously on those planets, they probably would be of very different sizes.

Corey: Yeah, different gravity, barometric pressures are going to dictate how large and the bone density, and all that.

David: Okay. So I think we got a good handle on the first part of this question. Let's go on to the second part. “What extrasolar species and/or organization arrived to destroy the empire built by those on Maldek? Did they settle our solar system too, or did they turn around and leave? Were they the precursors to what became the Draco empire, or were they a different group?”

Corey: Well, the information I received was that after these - the factions we were talking about, you know, Maldek and Mars, when they were having this war, they hacked into the defense grid and were trying to use these weapons against each other. And in doing so . . .

David: Wait, wait. What do you mean by the defense grid, first of all?

Corey: The defense grid that the Ancient Builder race had put into the local and entire local star cluster, like about as close as 50 or so stars.

David: And what form would that defense grid take if we were looking at it?

Corey: Well, many of them were spheres that were offensive/defensive weapons.

David: Like large metallic spheres?

Corey: Well, I don't know. I don't know if they were metallic. A lot of times, they would hollow out or use a moon, and then convert it.

David: Like with the Death Star.

Corey: Right.

David: Yeah.

Corey: I've seen information about some of the spherical moon-like structures out there having signs of . . . having a hole or external structure that's covered now in a lot of dust and regolith and stuff.

David: Okay. So then what you were saying was both Mars and Maldek were trying to hack into these death stars?

Corey: Yes, to use in battle against each other, and in doing so, this is how . . . One of these is what destroyed the Super Earth. And when they did this, they brought down the defense grid that the ancients had put up – the Ancient Builder race – that had protected these local star clusters.

David: You're saying the people of Mars destroyed the planet right next to them?

Corey: We don't know. Most likely, that's what happened, unless . . .

David: Wouldn't that be, like, an astonishingly ignorant thing considering the damage it would cause to them?

Corey: It would, yeah.

David: Destroyed their planet.

Corey: Hindsight's 20/20.

David: But you think that it was the people of Mars that struck against Maldek and ended up destroying it?

Corey: Right.

David: Interesting.

Corey: Well, I mean, it was the . . . both of those people, the information I received, were hacking in and trying to use that technology against each other. And that

technology is what destroyed Maldek. And I would assume that the enemy destroyed the planet, and they didn't destroy their own planet.

David: But this question also talks about out of our solar system groups.

Corey: Yeah, and that's what I was leading to. And once the defense grid dropped, that's when these, what they call genetic farmer races, began to come in. Some of them compromised the Super Federation, and also this is when the Draco Federation came in and really started to wreak havoc in not only our solar system, but the local star clusters.

David: So in your information, then, this war between Mars and Maldek did not involve any third parties, did not involve any outside groups?

Corey: I did not hear any third parties come in until after the defense grid dropped - after they hacked it. Yeah, they basically screwed up big time, and we're paying the price.

David: Is it possible that that did happen, but that you just didn't have access to that information?

Corey: Oh, yeah. Absolutely.

David: Because I have had other insiders say that the Maldek group, in particular, was widely trying to go around and conquer other worlds, and it was not just local.

Corey: Well, I'm talking about the local star cluster here. You know, this local star cluster of 50 stars was protected by the same defense grid, and there is travel within the local star cluster. You know, if they're warring with another planet within the local star cluster, I mean, that could have occurred. But I don't . . . I didn't see information on that personally.

David: Okay. Okay. I have had other people tell me that they were doing a lot of wars with local stars.

Corey: And I've heard information like that from other insiders. It's just that I didn't personally see or hear that.

David: Okay. Next question is coming from Gym Rat 89. “Do you know the truth about the Rh negative bloodline, specifically O negatives, or do you have any info on this?”

Corey: That was discussed when I was assigned to the research vessel. And the Rh

blood thing, they joked around that the elites brag and talk about the Rh bloodline, and they joked around that they actually had found that in monkeys.

David: Right.

Corey: So how evolved could it be if it's an alien bloodline type, our blood type? So the people in the SSP that were doing the genetic work and that kind of stuff really didn't put a whole lot of stock in it. They kind of pooh-poohed the idea. They kind of considered it more religious hyperbole kind of stuff that went on amongst the different religious beliefs in the different Illuminati occult groups.

David: Can you just clarify what the Illuminati religious belief about the Rh protein in the blood is exactly?

Corey: If I'm right . . . and most of what I've heard has been after I got out, of people constantly asking me about . . . you know, saying that it's from a royal ET bloodline or an engineered ET bloodline.

David: Okay. So when you have the protein, that means that you have the ET bloodline?

Corey: That's what a lot of people assume or believe.

David: Okay. So the next question we have is from Flyer. “A super planet with some trillion inhabitants. What is this disease of control, power, violence, and destruction, and where does it come from? I don't get it. Is all of this negative behavior the result of AI and/or these Archons or inorganic beings?”

Corey: Well, that is definitely a part of the equation. A lot of it, from what was explained to me by Kaaree from the Anshar group, the Inner Earth group, was that a lot of it is the social programming that we go through, but we also have genetics that were brought to this planet from these refugees from Maldek and Mars, in stages from like almost 500,000 years ago up until, I think, 60,000 years ago, more recent.

And as they interbred, that was a dominant gene, and this gene was an aggressive gene that is behind a lot of our problems of aggression, jealousy, greed. And it's something that a lot of groups are not sure we can overcome.

David: To get to the core, though, I think this person is just having trouble understanding why anyone who's a biological life form would have a desire to be negative, to dominate, to control, to kill. Maybe you could speak a little more to when you've had conversations with the most ascended beings like the Sphere Beings, what is the Sphere Beings' sense of why this negativity occurs? What are these beings

after? What do these negative beings actually want? Why are they doing this?

Corey: Well, I had to spend a lot of time with some of these negative people, and it seemed like they had some hole in them that they couldn't fill. And you could see the darkness in their eyes. There was a hole in their soul. They couldn't feel emotions like we do. Somehow by causing other people to feel the emotions that they couldn't, they were drawing energy and, like, sort of trying to fill this hole.

That doesn't really seem to make sense, but, I mean, these people are . . . I mean, they're sociopaths. They're extremely . . . I mean, they're alien to us. If we interact with them, they can put on a good face and pretend to be normal, but if you spend a lot of time with them, you get to learn very quickly that they're almost not human. It's really hard to try to compare a person who has empathy for other beings with a sociopath.

David: I think that's a pretty good answer. Let's go on now to Ced Guru, C-E-D G-U-R-U. "I'm interested in the giant people. I have to say I'm disappointed that these advanced people were fighting wars with each other. I've heard it over and over. We all have. But it's only sinking into my brain now as a truth. Is that just how it is with all people? They taught us wonderful things, but also the art of war by example? Did we inherit wars that have been fought since long ago, and are we still fighting through the original reasons that may have been forgotten by most people?"

Corey: Absolutely. We're still fighting battles from further back than 500,000 years. And we, the people on Earth, are sort of proxies for these refugees that came here and run things from the background. They cause us to fight proxy wars on their behalf against their enemies, and we're just pawns.

David: This person's disappointed that these wars are being fought. And they said, "I've heard this over and over. Is that just how it is with all people?"

Corey: With all people on the planet?

David: I think with people in the universe.

Corey: Many of them may have had this in their past. Many of them didn't have the aggression. It seems like there are some civilizations that progress very quickly because they got along. You know, they were communal, and they maybe were . . . They had a very similar look and species on the whole planet. They weren't divided and fighting each other. The Earth is a little bit different. I mean, we've got a very interesting genetic mix, and it's also what makes us coveted by a lot of these groups that are taking us into the slave trade.

David: Well, I just want to point out, and as you already know, my new book, "The Ascension Mysteries", the subtitle is "Revealing the Cosmic Battle Between Good and Evil". The whole book is about the wars that have taken place in our solar system. And combining what you said with all the other insiders I've spoken to, all the research that's available, from the research I've done, would you agree with me on this? Benevolent civilizations tend to be the norm once you get past a certain point. It's not like this is happening all over the place.

Corey: No, no. I mean, there are other planets like ours that have been tinkered with and didn't naturally progress that are in similar situations as us.

David: Right.

Corey: But it's not the norm.

David: Yeah. I think that's the core of the question. So we're not . . . It's not like it's this hostile, negative universe, and the only way you grow is through pain and torture. That's just something that might have happened here, but it's not by any means what usually occurs.

Corey: I think difficulty, a little bit of pain and torture is a catalyst for progress.

David: It does seem to be authorized by the universe that these things happen. "I'd like to ask Corey if he knows about the connection between the people in the Inner Earth and legends, histories, and mythologies about gods and angels on the surface."

Corey: Yes, that is definitely something that came up in my meeting with Kaaree down in the library. And myths are full of truth and carried through oral tradition. And different things will happen to change the narrative, but usually, there's a core truth in there somewhere. And Kaaree told me that the Inner Earth people over oceans of time had come to the surface after major and minor cataclysms and kick-started civilization again and provided laws, agriculture, and that kind of stuff.

But when they appeared, they would either let the people keep the assumption that they were gods, or some of them would actually say they were gods. And they did this, they say, for operational security, because they wanted the people to look up instead of below their feet for their location. So, definitely, they're not . . . I wouldn't say that these Inner Earth beings are the root of all of these myths, because some of these are non-terrestrials that have come down. So it's a mix.

These ancient gods, these myths that we hear, it's a mixture of the Inner Earth people and non-terrestrials that have also come down and done the same thing. And often, they're both visiting the same culture, the same civilization intermittently, giving them

information. So they'll have two different gods visiting them. One will be a non-terrestrial, and one will be an Inner Earth group that will come and visit them from time to time.

David: So let's just talk about one example that I can think of and that's Greek mythology. Now, some of the stories about people on Earth mating with these gods, their children do incredible stuff. I mean, like Hercules, this guy's able to life incredible amounts of weight. He has incredible running speed. He has superhuman powers. So when we start to hear about these superhuman capabilities, do these Inner Earth people have those kind of powers? Do they have superpowers?

Corey: Yeah. They have ascended abilities. It's not something that they demonstrate like parlor tricks for you when you visit.

David: I see.

Corey: That's kind of taboo. But they do have abilities that would be god-like if we were to observe them.

David: Did you see anything yourself that would be evidence of that?

Corey: Well, the mind meld with Kaaree was evidence enough for me.

Their technology alone seemed like magic. You're walking around – there are no lights – but you have full spectrum 360° lighting everywhere you go.

They have the huge gardens and caverns.

David: Well, you also saw that library where the chairs were levitating.

Corey: Right, right. And I mean, just your average person in the world right now, if they were to be pulled down there to the Inner Earth and saw someone sitting in a floating chair, they're probably going to think, “Oh. This is an angel.” Or whatever their religious background is, they're going to pull from that.

David: Right. That's a very fascinating answer. So we've had a lot of fun with this. I hope you've enjoyed it too. We'll be back next time here on “Cosmic Disclosure”. I'm your host, David Wilcock. We're here with Corey Goode, and thank you for watching.

Cosmic Disclosure Season 5

Corey Goode, David Wilcock, et al

Celestial Timeline Season 5 Episode 1

Cosmic Disclosure; Celestial Timeline Season 5, Episode 1

03 Jun 2016

David Wilcock: All right. Welcome to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with Corey Goode, and in this episode, we are going to get into the cosmic history of our solar system. We're going to go through the actual timeline of who settled here, and what are the pieces of information that we have, because we've had a lot of different things, but we've never really tied it all together before. And we're going to try to get you from the beginning to now, and fill in all the cracks of what Corey firsthand experienced in the Space Program.

So Corey, welcome to the show.

Corey Goode: Thank you.

David: So if the universe is 13.8 billion years old, the Earth formed four billion years ago. It cools down for liquid water 3.8 billion years ago. That's when microbes first appear. So we know that's going on.

We know the Earth was a watery planet 3.8 billion years ago. So theoretically, somebody could have landed on it that far back, but what do we know about the actual habitation of our solar system? What's the tangible evidence? What's the oldest stuff that we know about?

Corey: Well, according to the smart glass pads, the tangible evidence that is around is in the form of ancient ruins. And they begin to label these ruins as the Ancient Builder Race ruins. And they weren't able to accurately date them because they were so ancient that it was in the hundreds of millions, if not billions, years old.

David: So you're saying that these ruins appear, and you said they were excavated? They're digging stuff out from where? Where were they excavated from?

Corey: On different planetary bodies in our solar system anywhere from Venus all the way out to the Oort Cloud.

David: So they were sometimes underground. They'd been buried, and they had to be dug out.

Corey: Yes, sometimes they're deep. Sometimes they're on the surface covered in debris, and sometimes they're deep inside whatever planetoid or planetary body that they're excavating.

David: So what are we seeing with these ruins? What do they look like?

Corey: Well, they were finding a lot of the, what we described as, a transparent alloy, aluminum-type alloy. This was also a technology. They were finding that . . . I guess, they were impregnating this alloy with other small technologies that could make the glass go opaque or dark or maybe even display technology. So it was pretty advanced technology. And a lot of the times, they didn't know what they were finding at first. Sometimes they were finding stone-like artifacts that turned out to be technology, but they didn't understand what they were finding.

David: And what's the timeline when these were first being discovered?

Corey: I believe . . . Being discovered off world . . . They were the German breakaway groups that were beginning space travel before and during World War II were locating these things.

David: Okay. What are the buildings struc . . . We said they're made out of transparent aluminum, but what do they actually look like? Like if you're seeing something that might be billions of years old, what do we actually see when we fly over it or come up to it?

Corey: A lot of these that were on the surface looked like they had been through some major blast waves. They were twisted, bent back. They were not pristine by any stretch of the imagination. They were . . . I mean, they were a mess. The ones that they would find below ground or ones that had been covered prior to whenever this blast wave happened, or whatever occurred to cause the damage, would be more preserved.

But they were having . . . There was a lot of mystery. They didn't know who the Ancient Builder Race was - where they came from. They weren't able to find any writing.

David: Well, let's just get into . . . Were their domes? What do the structures look like – the ones that were not blasted?

Corey: Yeah, there would be all different . . . There would be collapsed domes, rectangular structures, that were . . . and towers, or what used to be towers standing. There were a lot of different shapes and sizes of structures.

David: And you'd mentioned before pyramids and obelisks.

Corey: Yes.

David: A lot of those?

Corey: Yes, and most of those were found underground.

David: Inside the Inner Earth stuff?

Corey: Inside not only the Earth, but on some of these planetary bodies, they were finding them inside, finding rectangular and pyramid kind of shaped facilities or outposts.

David: So the pyramid shape seems to have been important to these people?

Corey: Yeah, apparently. And when I was reading the smart glass pad, I really didn't understand sacred geometry and all of the stuff that I've learned since from watching "Wisdom Teachings" and other things. So I didn't understand the significance of it back then. And I don't think they did either. If they did, I didn't see it displayed.

David: Richard C. Hoagland's top insider, who I've been calling Bruce, told me that, "We live in a cosmic junkyard." That's the way he talked about it.

Corey: Yeah.

David: And I didn't really understand until what you're saying now why he phrased it that way. It's all really smashed up stuff on the surface, huh?

Corey: Yes.

David: It doesn't look very attractive.

Corey: They have to really search to find anything of use.

David: Wow! When we're seeing smashed transparent aluminum, it's glass-like, but when you say it has a burnt appearance, does it look like there's char marks on it, or what's the nature of the damage? Does it still look like glass but just all broken?

Corey: Some of it. Some of it will still look like glass, but it's so ancient that it looks . . . I mean, it's just very brittle. It's not transparent anymore.

David: If it's on a moon, does it get like regolith on it like moon dust?

Corey: Yeah, right.

David: So it's all covered in dust?

Corey: Right.

David: So you might not even know that you're seeing something that's twisted and turned over.

Corey: Your eye will pick out that it's not something natural, but you'll really have to look close to see the detail a lot of the time.

David: Okay. Now you had said something to me right when I was finishing the book, because this whole topic that we're discussing now, the whole second half of my new book, "The Ascension Mysteries", goes into this in great detail. And you blew my mind, because we've been talking about this, but I've never heard you say this until we were doing that briefing talk for the book. What happens when we go out of the solar system?

Corey: They find the exact same thing in what they call our local star cluster, which is a group of stars that is around 50 stars in our area that are connected by this cosmic web.

David: Right. And I'll just point out that when I did the research when you told me about this, I found some interesting things. So I want to ask you a couple questions on that.

Local cluster - because this is an important part of our history when we get into the Ancient Builder Race. These stars in our local cluster, they have some bizarre interaction, you were saying. So could we get into what that interaction is? What makes the local cluster different? How do those stars behave with each other as opposed to the stars that are further away from the local cluster?

Corey: They behave sort of like a . . . It's kind of weird to say this, but not really a group consciousness or hive kind of thing, but they're all connected on a deep energetic level with each other, and so are all of the beings that are residing in those star systems.

And apparently, all of these different star systems in this local star cluster were under protection of this Ancient Builder Race. And they had some sort of protective grid up, and they left. The Ancient Builder Race disappeared, and this protective grid was up for millions to billions of years.

David: Okay, but we're . . . I don't want to miss this one point because it's so significant. The local cluster is the stars that are nearest to us. When did our guys first have the ability to leave the solar system with a craft, first of all, that you know of?

Corey: They've had the ability since probably the '20s and '30s.

David: So even the German breakaway groups could leave the solar system. There was no barrier or technical problem stopping them from going elsewhere.

Corey: Right. Well, no technical problem, but it's not advisable to hop around to these different star systems without making the political connections first.

David: You could get shot down if you show up?

Corey: Yeah. The Germans were pioneering and making a lot of these connections.

David: Well, you had mentioned before the idea that there's a partial disclosure timeline that the Cabal was going to try.

Corey: Right.

David: And one of the elements of that partial disclosure timeline, from what I remember us talking about, is that they're going to try to sell us on the idea that they haven't left the solar system, that there's some problem. What's their idea? How are they going to try to sell us on space travel, but then you can't leave the solar system?

Corey: There's several scenarios I've heard, but yeah, one of the scenarios was that they were going to try to tell us about the Ancient Builder Race, tell us maybe that ETs existed at one time, but they never come around here anymore.

David: Right.

Corey: And we've developed technologies from reverse engineering, and that's about it.

David: So the bottom line is that in order for us to travel to other star systems all the way back in the '30s, there has to have been very early along an understanding, I assume, of the cosmic web, or are they portaling to these stars? Or are they traveling . . . Did they have super light speed travel? How were they doing it?

Corey: Well, it's a combination. They were traveling through portals in the beginning. That was the main travel. And when they developed craft, and they were developing these torsion drives, they then had superluminal travel.

David: Okay. And when did this superluminal travel come in?

Corey: They had superluminal travel back before World War II and through, but the

United States was behind the German secret society groups and some of these secret groups that had been developing these technologies. They were decades behind.

David: Okay. Well, I think this is an important context, because when we're talking about the solar system history, some of these partial disclosure timelines do apparently involve them trying to tell us there's an energetic barrier, or there's some kind of problem or radiation or something that prevents them from leaving the solar system.

So when we did leave the solar system, when we did get into star systems, and we were not shot down, how much of this Ancient Builder Race stuff did we find? Did we find it on planets, moons? Did we find it in satellites floating around? Exactly, what . . .?

Corey: They found . . . Almost identical to what they found here, they found in other star systems in our local star cluster.

David: And you said what they found here is all over the place – all the moons, all the planets that are solid. They're just loaded with stuff.

Corey: Right.

David: So this is huge to me, because what you're now saying is we have this star cluster, 50 stars or more. They all have planets, or most of them have planets. And everywhere you go, it's the same stuff. And is it all equally ancient?

Corey: Yes.

David: And it's all smashed like it was here? Or is it . . .

Corey: I don't know.

David: Or do we have more damage here? Okay, you don't know.

Corey: I don't know. I don't know a whole lot of the details about what was found in other star systems. I would not assume that it would be exactly in the same condition here because of what happened later.

David: All right. So you're saying that the planets in these star systems were governed by this ancient Builder Race. They were essentially protecting them. What form does this protection take place? Is there some sort of physically measurable technology or artifact associated with that protective grid that you'd mentioned?

Corey: Yes. The delivery system for whatever protection or weaponry that they had was in the form of giant spheres the size of moons, almost the size of planets. And they, in most cases, were moons that were hollowed out or carved out, excavated, and then they were used, built out as stations. And in some of them, they've shown signs of having outside holes, being giant moon-sized outside holes. I mean they're huge.

David: So you can actually see that it's metallic or some sort of structure . . .

Corey: Yes.

David: . . . just by looking at it?

Corey: Well, I've heard reports of it. I haven't seen the images myself, but . . . And I don't know exactly where those were.

David: How many of these would there be in a given star system within the cluster?

Corey: I don't know.

David: But it's more than one, right?

Corey: Oh, yeah.

David: There's multiple “Death Star” moons in any given cluster.

Corey: Right. Right.

David: So this is truly a staggering discovery. It goes so far beyond what I had thought I knew up until recently, and it just shows to me the power of asking you a question you already knew the answer to, but I just never thought to ask the question before. Because now, this Ancient Builder Race thing, it's much bigger than just something that happened here in our solar system. We're talking about a huge amount of development. And the size of that population . . . Do you have any idea how many people there were?

Corey: No idea. It was a very large civilization. There is so little known about it. It was a big question mark.

David: Right.

Corey: And they knew that it was an advanced technology. They really wanted to acquire the technology that in the beginning we didn't recognize as technology, but once we did, we started going out looking for it big time. But, yeah, whoever they

were, they disappeared, and then other groups came in. And any writing or any type of information that would give us history was removed, just like kings come in and wipe away the writing of the old king, the history.

David: Okay. Now, the next thing that I'm aware of from Hoagland's insider, Bruce, is he said the newest information is that Earth's moon was put into position around the Earth 60 million years ago after the fall of the dinosaurs, and that it is a gigantic civilization inside the moon.

Did you personally encounter information about the moon being 60 million years old?

Corey: The information . . .

David: That it was positioned 60 million years ago.

Corey: The information that I read on the smart glass pad, from what I remember, 500,000 years ago was the timeline that I seem to remember the best.

David: Right. Bruce said that was the prevailing theory up until recently, and now they've had new information that makes them say the moon is 60 million years old.

Corey: His information's probably updated from the information I was reading.

David: Yeah. Did you ever hear about the moon being called an ark?

Corey: Yes.

David: Okay. So do you think it's possible that this new interpretation of the moon's age, that perhaps, the dinosaurs were deliberately destroyed by the asteroid, and that life was seeded from the moon, that the moon had a whole bunch of life in it that they then put on Earth?

Corey: Yeah, that was a speculation that it was not an accident, that the asteroid that wiped out the dinosaurs was not happenstance. It was directed.

David: Do you think that that might have partially been because of the Raptors, that there was a nasty intelligent dinosaur that developed?

Corey: That's unknown, but from the experiences that I've read reported with the beings that moved underground that have developed into the Raptors or whatever, that wouldn't surprise me.

David: So if we go with the 60 million-year-old moon and that it was an ark, would you say that it was like a used car, that it was kind of old and broken down by the time they drove it over here?

Corey: Yes. This is technology that was hundreds of millions, if not billions, years old. And there were other civilizations that know about this technology. They really want to acquire it, and they're hijacking it all the time.

David: So the moon could be driven like a car through the cosmic web. Theoretically, when it's in its prime, you could drive around with it, take it where you want it to go.

Corey: That's consistent with what I read.

David: Do you think that there's enough space inside the moon that it could bring a whole planet worth of life from one place to another?

Corey: You know, it depends in what form they brought it. If they brought it in the form of DNA and then came here and cloned it, maybe.

David: Right.

Corey: Kind of like we have that DNA bank, ark that we're starting.

David: Sure. So if someone came in with the moon 60 million years ago, then that could account for some of these discoveries we read about in the Thompson and

Cremo's book, “Forbidden Archaeology”, like this chain that's found in 220-million-year-old rock, that kind of stuff.

Corey: Yeah, it could be. And then there's a lot of ancient civilizations that have risen and fallen on the Earth over millions of years that some of their artifacts could have found their way into some weird places over the years as the ebb and flow occurs on the surface through all these changes that happen.

David: So I guess the next thing in our timeline would be the Inner Earth civilizations, and that, you said, starts when?

Corey: Well, at the time, we really didn't have much information on them in the smart glass pads. It wasn't until more recently that the Inner Earth groups claimed to have been here almost 20 million years.

David: Right.

Corey: So that is more recent information.

David: And are they saying that they came from other stars within our local cluster?

Corey: They're saying that they developed on our planet, that our planet is . . . that all planets develop life. That's what they do, and that they are a product of our planet creating life.

David: Okay. So let's now go to the next big thing after Inner Earth civilizations. We have them showing up. They're telling you 18 million years ago at the oldest, but this didn't all happen at once. It wasn't like they all appeared at the same time, right?

Corey: Right. Yeah, there were different groups. Some of them were as recent as like 28~30,000 years ago.

David: Oh.

Corey: I mean very, very recent. And the different groups, they went back like 250,000 . . . I mean, they were different lengths in time. And they looked different.

David: Right. So do we have any information about when different groups showed up? Or does it not get that specific?

Corey: It doesn't get that specific until we move into the Super Earth and Maldek or Mars.

David: Okay.

Corey: And we're getting around 500,000 years ago. There was information that there was some sort of conflict going on. Looking back, it seems it was a conflict going on between Mars and the Super Earth. And one of the groups had hijacked or hacked into one of these, I guess you call them Death Stars, moons, and they were trying to use it as a weapon against the other side. And in doing so, this is when the Super Earth exploded, and it brought down the rest of the grid in the entire star cluster.

David: If the grid is down, what happens? What's the effect of that?

Corey: Well, when the grid came down, all of these other groups that had stayed away, because they were not going to come anywhere near this defense grid – it was very advanced. Once the grid came down, it was open range. They came in and started interfering with all the civilizations in the local star cluster.

David: So the explosion you say took place 500,000 years ago?

Corey: Approximately, yeah.

David: What's the first group that comes in?

Corey: We believe it's the Super Federation groups that came in, that started coming in first. And the Super Federation is made up of all kinds of groups. So members of the Super Federation, different members, started coming in about 500,000 years ago. Immediately . . .

David: So right after

Corey: Right after.

David: Right.

Corey: They were monitoring. They knew it happened. They came in. And then about 375,000, 365,000 years ago, don't really know, that's when they say the Draco came in. So the Draco came in at the same time that we have waves of what they call refugees coming here from survivors of this big catastrophe that brought down the grid, destroyed the planet. So we have a lot going on. So it starts to become pretty convoluted and confusing at one point.

David: So when did the earliest refugees from the exploded planet . . . because it's not just a planet, right? They had colonized our solar system.

Corey: Right.

David: They have stuff all over the place. So it can't be that all of them got wiped out when the planet blew up.

Corey: Right. And according to the information I had at the time, which now your new information calls into question, the moon arrived with survivors in it.

David: Right.

Corey: And the information I read said it was around 500,000 years ago, almost immediately after the catastrophe.

David: So we have these people living inside the Earth. We have refugees coming to the Earth. We have Mars destroyed and Maldek destroyed at the same time. When we get into "Law of One", it describes that the first third-density life on Earth was 75,000 years ago, and that it started with people that were reincarnating from the Mars destroyed civilization.

So "Law of One" describes three cycles of 25,000 years and that there's catastrophes at the end of each cycle. So we have a civilization rising and falling kind of scenario. So is that how you see it as well that there's . . .

Corey: Yes. And what was mentioned to me by the Inner Earth group, the Anshar, is that there were major and minor cataclysms that were occurring throughout these cycles.

And after the Super Earth exploded, for quite some time, there was debris flying all around our solar system. And debris from that super planet flew out all the way out toward the Oort Cloud, and then it was pulled back in by the sun. And we're in all these strange orbits, and the debris would end up hitting the Earth and other planets. This occurred for some time. It was crazy in our solar system for a while. It was like billiards.

David: So since we're doing a timeline here, I guess Lemuria might be another thing that everybody's going to want to know about. When did . . . Did you hear anything about a civilization in the Pacific Ocean thereabouts?

Corey: I'm sure the information was in there exactly where they were, but this was awhile ago that I was reading this. But it was telling pretty much the timelines and what they were finding.

David: Anything about a civilization in the Pacific?

Corey: Yeah, there were . . . On just about every continent, there were civilizations that they found traces of.

David: Okay. So in this timeline, if we're zipping through Lemuria, I guess that brings us up to Atlantis next. So let's talk about . . . Do we get more information? Does it get easier to trace what's going on once we get into the Atlantis period?

Corey: Well, a lot of the information . . . There were books that had a lot of information in them that were scribed back during this time period that these secret society types had access to. And this is information that was heavily guarded, and I think you've talked about some of the information like they even had bloodline information going back many years.

David: Right.

Corey: So a lot of this information was kept in these secret books that now are in the Vatican and some other secret places.

David: The amount of warring civilizations that we see in the Hindu Mahabharata is one interesting thing to look at. It appears that there were multiple groups on Earth at one time openly having advanced technology and warring with each other. Are you aware of a similar situation from what the smart glass pad said? Was there a time where you had various colonist groups all warring and interacting simultaneously on Earth?

Corey: Not only on Earth, but in the solar system.

David: Okay.

Corey: Yes. Even on the moon, there are areas where up until fairly recent times, in our current accepted history timeline, that there were wars. And those areas are left as a memorial or a reminder of the wars. And then some sort of deal was struck to keep those types of wars from occurring again.

David: Okay.

Corey: But there were open wars and conflicts even in the skies early in our current era.

David: So we're dealing with a very complex story. It's not something that can be easily condensed down into one thing. When we're talking about the civilization of Atlantis, is that a conglomerate group of different civilizations, actually, and not just one?

Corey: Yeah. That's what was explained to me is that we've kind of taken the name and overlaid it on a couple of civilizations. The civilization that was due to an asteroid that came in and caused the great flood and all of that, was, I think, the one that most people associate with actual Atlantis.

David: Right. When we're looking at Native American literature, and we're seeing these various benevolent gods showing up to people there, and this is obviously something that's going back to people rebuilding from Atlantis, having been destroyed, who are they and how do they factor in? Because this seems to be a worldwide thing that happens after Atlantis' flood.

Corey: And it seems that these gods that were coming back, bringing back civilization, were a combination of different non-terrestrials and people that we're calling Inner Earth groups.

David: Okay. All right. Well, I think we've got a pretty good view now of the history from how it started up until what most people are familiar with from conventional research sources. So Corey, I want to thank you for bringing all this information to our attention. And I want to thank you for watching. This is Cosmic Disclosure. I'm here with Corey Goode. I'm your host, David Wilcock.

Cosmic Disclosure; Remote Viewing and Influencing Season 5 Episode 2

Cosmic Disclosure; Remote Viewing and Influencing Season 5, Episode 2

03 Jun 2016

David Wilcock: All right. Welcome to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with Corey Goode. And in this episode, we are going to be exploring some of the technologies of consciousness that have been used in a variety of contexts, both here on Earth and in the Space Program. We're going to be talking about remote viewing and remote influencing.

All right, Corey, welcome to the program.

Corey Goode: Thank you.

David: So the conventional view of remote viewing that most people are familiar with started – at least, when I first heard about it - it was on the “Art Bell Show” in the late 1990s. That he had guys coming on there like Major Ed Dames, who was saying that he was training people in remote viewing. And you had Joe McMoneagle, who supposedly did documentaries in Japan where he reunited people with their kids and remote viewed the location of the kid, brought them together, and then they filmed it on camera.

So what is that basic type of remote viewing that most people are familiar with from those paranormal shows? What's happening there? What are they actually doing?

Corey: Well, everything in time and space is connected. And we can use our consciousness as a vehicle to travel and view whatever we like, whenever we like. Now, this is . . . The term “technical remote viewing”, all of this is pretty new to our lexicon, but it's something that we've been doing ever since we've been on this planet. We've had the ability to go into a deeper state of consciousness and remotely view and remotely influence other people and places.

Now, this is something that the military started looking into after they found out the Russians were having some success with it. In the public sector, people have been training in remote viewing to do exactly what you've mentioned, which is find lost children, lost items. So this is something that every person can use and train yourself in.

David: So it doesn't require any special gifts or special abilities?

Corey: No. They've proven that they can take just about anyone that's willing to learn

it and has an interest and teach it to them. And they can be successful.

David: So we have remote viewing as this category where people are obtaining information. And then we have other categories of channeling, where these elaborate UFO religions get started, and they don't have any reference point to anything else except their own internal cohesion. Then you see people that buy into that channeling, and they say, these beings are doing this in such and such place. This is absolutely the truth, but they have no validation outside of that.

So what's the difference between what you're talking about as remote viewing and maybe some of these channeled teachings that some people think are credible, but then they don't line up with anything else.

Corey: Well, remote viewing . . . When you get a target, they give you the information in the form of letters or numbers, something that's . . . that you're not going to associate with a person, place or thing.

David: The so-called "coordinates"?

Corey: Right. Coordinates. They're going to try their best not to front-load you with what the target is. So they'll go out of their way . . . The person that wrote the target on the piece of paper, a lot of times won't even know what the target is. They'll hand it to a person who will hand it to a person that will bring it to the remote viewer to prevent any psychic leakage or bleed-through.

With the remote viewing, you view the target, but it isn't considered a hit until it's been verified. So in channeling, you're opening yourself up and pulling information from an unknown source, and it's never verified. Or maybe bits and pieces will be verified, but it's never fully verified.

David: Do you think there is some essential flaw in the human psyche, where if a channeler gets a few things right, or halfway right, that people just automatically want to believe everything that's said?

Corey: Once a person gets a little bit of validation from a source, a lot of times, they quit validating. So they'll get a little bit of validation, open their minds, and accept everything that is given to them, instead of validating every data point, which is what is done in remote viewing. Everything has to be validated. It's not considered successful until it's been validated.

David: So even the best remote viewers have brought in a lot of garbage data on their path to perfecting that skill.

Corey: Right. There's going to be a certain amount of the data that's coming from your subconscious. So that has to be filtered out. And they're not going to have one person. At a minimum, they have three, so they can triangulate. And they'll have, usually, a group of people do a remote viewing, and then the people that go through the data know how to ferret out the stuff that pops up through the different people's psyches. And they have personality profiles on the people, and they're able to clear out that information.

David: I've noticed myself that I will sometimes hear a song in my mind, and it seems to come in very spontaneously, but then I'll listen to the lyrics of the song, and I'll discover that that song lyric is a message, a spiritual message, about what's going on.

Remote viewing does seem to involve all the different senses, correct? It's not like it's only happening one way.

Corey: Right.

David: So can you talk a little bit about the sensory experiences that happen when it's being done correctly? What is someone experiencing as they do it?

Corey: You won't know what the target is throughout almost the entire process. You'll be getting in all this sensory data, like wind, certain tastes, certain smells, smell of wet concrete, taste of minerals. And maybe you'll get some auditory input. The visual input is stronger in some people than in others. And the visual input is being fed also by this other sensory data. Your mind is putting together something visual out of all of this. So it depends on the individual how accurate of a picture they can put together from all this sensory input that they're getting from viewing a target.

David: So are there any protocols in terms of when you first sit down to do this? Are there things that you could have happening to you that would interrupt your ability to do this well?

Corey: Yes. You have to totally clear your mind. You have to make sure that you don't have any information on the target. If you're front-loaded, every bit of information that you give on the target's going to be corrupt in some way. I mean, that's . . . Preserving the integrity of the target is extremely important in the process. And also, the viewers need to have a clear state of mind while viewing, so that they don't feed in information from other feelings that they're bringing in from their personal lives.

David: In some of the remote viewing instructional books that I've read, it says that you can't be hungry, you can't be overly tired, and you can't need to go to the bathroom before you start. Would you agree with all that?

Corey: Absolutely. Yeah.

David: Why would that be a factor?

Corey: They're distractions. When they would train children in remote viewing, they would put them in deprivation chambers, so there was no other sensory input other than the target, the information coming in from the target. And as they got more proficient, they could sit at a table in a room with activity going on and be able to focus in on the target.

David: So the so-called average person obviously is not average. That's one of the things we're hearing here. We all have this ability. What kind of things could an "average person", quote unquote, be able to do if they were properly trained in this discipline? How far does this go?

Corey: It depends on the individual. And there's also remote influencing. They can train people to actually have an effect over great distances at a location. So you can influence people to behave a certain way. And there's also technological enhanced remote viewing and remote influencing that is used as a weapon system, that can be used to kill people.

David: Technological how?

Corey: Well, the systems I saw, there were basically two plates. It was like an anode and cathode that hooked up to a black box system, that then was hooked up to, basically, an antenna array. When the person was remote viewing or going into this deep theta state that these people in the Space Program were able to achieve, like a conscious theta state, it would enhance and boost their abilities and focus them through this technology.

Some of these people, they can make a persons' heart stop beating, make them have an aneurysm. They can do all kinds of things remotely.

David: And that's with the technology.

Corey: Right. Well, some of them that have used the technology so much are – they've become enhanced. They use these weapon systems a lot, and they can kill people and harm people without the technology.

David: So let's just talk back now about the "average person", quote unquote, doing this technique. If you get somebody who becomes really good at this, are they limited to seeing something in the present, or does this also involve the ability to look through time to see timelines, probable futures.

Corey: Probable futures, looking in the past. Yes, all of these are things that are possible with remote viewing. Looking into the future is very difficult, because free will comes in, and there's always things that change the future a little bit. So that's why they call it probable future.

David: When you're talking about the fact that people shouldn't know anything about the target, are there other protocols in place to prevent the mind from engaging with the information and trying to understand what it's seeing?

Corey: Yeah, that comes with practice. We were talking about the weapons systems that . . . I forgot to mention that they also used these to guard facilities, aircraft, spacecraft. They will shield them from being remote-viewed.

So remote viewers, if they try to . . . If you were trying to view a certain facility, they have people that are basically on etheric guard. And if someone comes in and tries to remote view, then . . . remote viewers call them "those who scatter". Right when they start to lock in on the target, they find their thoughts . . . it just gets scattered. And they use technology to enhance them when they're doing this.

When I was a kid, they would find out each of us – what our gift or ability was and try to teach us to use that to protect ourself from people remote viewing us. And the method that they taught me was visualizing a counter-rotating blue ball around me, one spinning this way [clockwise], one spinning that way [counterclockwise], and picture it spinning faster and faster in each direction, and picture who or whatever's remote viewing you or trying to remote influence you being pulled into it. And then grab each end and pull it tight to where it snaps.

And it shoots energy back through the person who is remote viewing you, and it gives them what they call an "etheric headache". And it can give them a very severe headache and other problems for several days.

David: The whistleblower who we're calling Daniel, that gave me the information about Montauk, among other things, because he claims to have worked there, said that at one point, he was recruited for this psychic program. He had somebody come up to him on the base and say, "Hey, what do you think about ESP?" Just seemingly casual. But then they say, "Hey, if you're interested," they say, "Hey, we could bring you into this class, and you get paid for it as part of your military service."

And then he also said there were Nazi recruiters, too. They . . . "Hey, what do you think about those Jews." You know, that kind of stuff.

Corey: The Nazis were experimenting with remote viewing way before the Russians were. That's were they got the idea from is after Operation Paperclip, the Russian

version.

David: Are you familiar with this recruitment technique, where somebody will walk up to you and just start a seemingly random conversation, but there's an agenda behind it?

Corey: Oh, yeah. It's happened to me many times. Once you know that tactic, it's pretty obvious. They come in . . . It's coming in and testing the waters. It's sticking their toe in to see if the water's good, to see if they can go in more.

David: All right. So let's talk about the next thing that happened to Daniel. He gets brought into this room with this guy they call the Professor. The Professor has a bald head, white on the sides and the glasses. The Professor is reading off a piece of paper. He's looking at him. He's asking him these questions.

And as the questions are being asked, these seemingly boring psychological evaluation questions, Daniel is getting this absolutely terrible psychic attack from this Professor. This pain in his mind, it's like a screaming, like fingernails on chalkboard, grinding metal. And he told me that if you don't go "What the hell are you doing" to this guy, that you fail the test.

Corey: Yeah, right.

David: Have you ever heard of anything like that?

Corey: I've experienced something like that.

David: Really?

Corey: Yeah.

David: So what happened to you? A similar story?

Corey: Yes.

David: Let's hear about that.

Corey: And it happened many, many times. Yeah, you have to be able to identify not only one other person in the room, but there will be multiple people in the room, and there will be a group that's interviewing you about a certain training you went through. And you will receive that same kind of splinter in your brain kind of pain, and you'll know that you're being etherically attacked. And you have to identify who it is.

And that's not easy when you've got a room of three, four, six people, all of whom are heavily trained in how to do this.

David: In this case, he said that if you don't have that reaction, that you fail, and you're not brought into the psychic training program at all.

Corey: Yeah. Well, at this point, you're already in it, but, you know.

David: Right, right, right. Now, another thing that we've heard from other whistleblowers is that, unfortunately, since a lot of this stuff becomes black magic and occult, that people will make deals with certain demons or certain entities that attach into their system that will defend them against attacks from other remote viewers as they're doing this work. Are you familiar with anything like that?

Corey: Yes, yes. Definitely, some of these darker practitioners will use what they call black magic to invite or use entity attachments to protect themselves just as these entity attachments can be used for all kinds of things. But that can definitely be one of the uses.

David: So let's talk a little bit more about the remote influencing. We're saying now that people can be influenced to have certain thoughts.

Corey: To have certain thoughts that lead to certain actions. To . . . Say there's a Senator that you really want to affect their ability to govern, or they're working on a bill that you really don't want them to work on. First, they'll do a psychological profile, find out their proclivities, what they're interested in, and begin to remotely influence them and get them to act upon things that they wouldn't normally act upon.

A lot of people . . . You have thoughts or fantasies that enter your mind momentarily, but you would never act upon. But this breaks them down a little bit to where they are more likely to act upon it. And the more that they are influenced, the more likely they are . . . The more people that are working them, the more likely they are to make that mistake and then have a big scandal that ends up in the news, and they get distracted from the bill that they were working on.

David: So when you read T. Lobsang Rampa, “Masters and Teachings of the Far East”, can you talk about . . .

Corey: I can't even say it, but . . . Ha, ha, ha, ha.

David: They're talking about these Tibetans, and that some of these Tibetan guys were doing black magic. And in the “Masters of the Far East” book, it describes some of

these . . . It was a very dangerous practice, but a method of assassination where they would charge a dagger with the energy so that somebody . . . They placed the dagger near where somebody normally is, and that person would become irresistibly compelled to pick up the dagger and actually kill themselves with it.

But, apparently, if you do this, it's extremely dangerous, because you could end up taking the dagger and killing yourself with it. So have you heard of anything that extreme, like charging of objects with magical intention?

Corey: I've heard of people basically using their consciousness on inanimate objects, but not charging an object to where if a person touches it, it causes them to act.

David: Well, let's talk about the voodoo stuff for a moment because that would appear to be a type of remote influencing.

Corey: Yeah.

David: The basic thing you're describing is the same. Somebody creates a doll that's like an effigy of you, and then they maybe stick pins in it, and then apparently some of that is the fear of seeing the doll.

Corey: Yeah. And one of the keys is your target seeing the doll.

David: Right.

Corey: Because when they see it, something . . . a psychological thing happens that also co-creates the experience for the practitioner. So much of what is occurring is being actually created or co-created by the target.

David: So would you say that there is an entity attachment to the doll? That there's some kind of spiritual presence that's put into the doll that can be invited into someone when they look at it?

Corey: That can be part of it, but there doesn't have to be an entity involved at all. It can be . . . If this person grew up in this culture and has a strong belief that there's power in this object, this doll, that now has needles in it, and they receive this effigy of themselves with needles in a certain part, their mind will create these problems in their body.

David: Right.

Corey: So they create . . . They manifest the magic that the person's trying to create.

David: Sure. What do you think about the use of scopolamine in this voodoo tradition? Is there . . . First of all, let's just briefly recap the use of scopolamine in these voodoo cultures. What do you know about scopolamine? What does it do?

Corey: Scopolamine is very nasty. It's a . . . I believe it's a seed that grows on a plant, and I can't remember the name of the plant.

David: Datura.

Corey: Datura. And I believe they crush it up and use the flesh on the inside and dry it out and use it as a powder.

David: Yeah.

Corey: But it basically takes away free will. A lot of the times, it's used to rob people. They'll give the person a drug at a bar - a lot in South America – and the people will . . . Once the drug kicks in, the person that administered the drug will say, “Take me to your house and give me all of your possessions.”

And they'll happily put them in their car, drive them to their house, help them load all the possessions into a truck. And the person will leave, and the drug will wear off, and the people will be bewildered at what happened.

David: But let's get into this. Can you give someone scopolamine and then give them a voodoo curse that they don't remember consciously but is somehow loaded into their mind?

Corey: Most of what's happening is on a subconscious level. So the information could be loaded into the subconscious, and consciously, they have no idea what's going on.

David: So that could be used to enhance the effects. Like they could be given post-hypnotic suggestions under scopolamine, so then when they see the doll, they have this suggestion that's already leaning them in a certain direction.

Corey: Yes. Right. In the programs, they used a synthetic form of scopolamine and a cocktail of other drugs when they were doing chemical blank slating.

David: And could they use that to plant hypnotic suggestions as well?

Corey: Yes. During the blank slating, you're losing memory of incidents. They're also implanting hypnotic suggestions in case you start to remember. So it's like a back door protection.

David: When I was in high school, there was – I think it was on Fox, when Fox first came out, that channel – there was a show called “Friday the 13 th”, and it wasn't based on the Jason movies at all. Every week, the show was about this older man and his attractive female assistant who worked in an antiques shop. And it wasn't really antiques.

What was happening was they kept getting these objects, these weird, old objects that were charged with some kind of spirit or entity or something like that. So every week it was that the object was causing murders to happen, and they had to track down the entity. It seems like if somebody's going to do a whole show based on that, and we know there's a lot of leakage going on, that this idea of objects being able to remote influence people is not just a theory.

So can there be objects that have a charge on them somehow that caused remote influencing – like antique objects, or maybe even from ancient civilizations, things like that?

Corey: Yeah. I mean, objects can hold on to the energy of their environment. And if they're charged with a certain type of energy, they can hold that until they're neutralized or charged with a different energy. So they will hold that energy and emanate that energy until they're neutralized.

David: So we've been talking about remote influencing and some of the ways in which ancient traditions have done it and how it's been incorporated and modernized in these secret programs that we're discussing.

So let's switch back now to remote viewing, so we can exit this episode on something more positive. What are some of the examples, some of the most dramatic, eye-popping examples that you personally saw of remote viewing being a success?

Corey: I wouldn't say this is super positive, but I would read reports of facilities or bases of non-terrestrials that we were planning on attacking or doing infil/exfiltrations of that we had not seen or had no intelligence on. They would have several remote viewers view the location and get a physical layout of what the place looked like, and the operators would use that to build a duplicate and practice their attack.

David: Wow!

Corey: And then it would be almost exactly like the layout that they were given when they would actually arrive on the scene. And it was critical to their success.

David: What was the most stunning personal example of remote viewing that you yourself have done?

Corey: Hm. One I have up on my website might have been in 1989. I was tasked with doing a remote viewing, and it ended up being the Nemesis Star, I believe, is what the target was. And I found myself . . . When I realized that it was a star, I realized that I was outside of our solar system, looking back at our solar system, and our solar system looked sort of like a crescent moon kind of comet, almost.

And I could feel the interstellar winds hitting me. I felt like a piece of taffy being pulled all around. And I was able to . . . It was just . . . It was one of the most vivid experiences I had. And I described it in quite a bit of detail.

David: You also went into something about this idea of a solar flash that came to you in a remote viewing.

Corey: Yes.

David: And I think it would be good to hear that story in context of everything we've been discussing.

Corey: Yes. And it's been a while, so I don't remember all the details. But, yes, it was a remote viewing of . . . and there were beings in the sky, and they would point down. And each time they would point down, something was occurring that I was remote viewing on the Earth. And towards the end of the viewing, there were . . . from the sun came a flash, flash-flash, flash, flash, flash.

And after that, it was . . . in the remote viewing, all the people of the Earth came together and started holding hands and singing and were very happy. And I saw all these negative people looking like they were just falling backwards, but disappearing – like they were just falling off the Earth and disappearing.

David: Now, you had no idea what you were going to be looking at when that happened.

Corey: No.

David: Did this corroborate with other remote viewing data that they had?

Corey: I was not privy. Usually, you give the information, and that's it. You don't receive feedback, which can be very frustrating, because you want to have validation so you can build your confidence.

David: Right.

Corey: But once you get to a certain point, to where you're proficient, you don't get

that constant validation. You're just doing the job, and they'll give you a target. You task the target. They take the information, and then you move on to the next target.

David: But you heard about this flash from others in different contexts, not maybe . . .

Corey: Right. I had heard about certain people remote viewing . . . Some people would view, and they would see the Earth being destroyed by fire. Some people would view . . . Different people were seeing different things. I do know that, but I don't know all the details. But I think they were trying to figure out when and what was going to happen with the sun.

David: But yours sounds almost like a Christian rapture connotation.

Corey: Right.

David: Ascension.

Corey: Right. And they knew my background and all of that. So they approached that information with, “Okay, here's his profile. This is how he was raised. This is his belief system. So that's going to affect the data this way.” And they're going to try to pull out the raw data that they're looking for that causes their flags to pop.

David: But do you think that different people could be on different timelines, where they're going to experience that event differently once it happens?

Corey: Yes, but that's speculation until the moment occurs.

David: Right, of course. All right. Well, you heard it here. We're remote viewing our way through another great episode. This is “Cosmic Disclosure”. I'm your host, David Wilcock. We'll see you next time.

Cosmic Disclosure; Blue Avians & Spheres in Art Season 5 Episode 3

Blue Avians & Spheres in Ancient Art Season 5, Episode 3

08 Jun 2016

David Wilcock: All right, welcome to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with Corey Goode. And we have a special edition for you here with the legendary William Henry.

Now, I've been familiar with William Henry's work since the late 1990s. He has been extremely consistent. I've gone all over the place. I've talked about everything you can imagine – Illuminati, UFOs. William has always been focused on ascension, focused on Christ, focused on the true core of what the message is that we're all ultimately here to convey.

And William has really done an incredible amount of work, unlike anybody I've ever seen, in terms of looking at art and seeing some really, really provocative stuff. And when we found out the information that William had and the corroborating power that that brings to Corey Goode's testimony, we said, “That's it. We've got to have him on the show.”

Wait 'til you see the stuff that we have in this episode. It is going to blow your mind.

So, William, how you doing, buddy?

William Henry: Very good.

David: Can you just give us a little take on your idea of ascension? What is ascension?

William: Well, I always take people back to the story of the caterpillar and the butterfly. The idea is that we're all living in a pupal phase in our human body, but within us is an ascended phase, a next-level, the butterfly.

And the problem is we're kind of like that cartoon I saw once of the two caterpillars looking at the butterfly, and another one flies by and they say, “You'll never get me up in one of those things.” Right? We don't have a concept of what it means to ascend.

But simply, it means to become a celestial traveler, a cosmic being – to leave behind our caterpillar phase and morph, or phase, into an ascended form. And as you said, I've really studied the art of ascension. And they almost always show it the same way.

It's a humanoid form, a light being, a luminous, radiant being, often shown in a sphere

– a sphere of light. And that sphere indicates a portal. It indicates an ascension vehicle of some kind that ultimately manifests from within our own body.

David: Now, do you think Corey's crazy? I mean, what's your opinion on all this stuff?

William: I hear his story, and immediately I am getting resonance with what I know from the ancient world. It doesn't sound crazy at all to me, because I know Blue Sphere beings exist. I know Blue Avian beings exist in the ancient record. Whether they are actual beings or mythological beings, we can't answer for sure, but, however, humanity has been – I could use the word “obsessed” - with angelic beings for many thousands of years.

And very often in this ancient art, they are portrayed as blue beings, and often feathered or avian-type beings. They are Blue Avians.

David: Now, some people have accused Corey of just coming up with this elaborate story that has no precedent. So what I'm hearing you say is that there is a historical precedent for this.

William: Exactly. And when I first heard about Corey's story, that's exactly what I got, is like, wow, there's resonance here. This is not something that you're pulling out of your imagination. This is something that has been in the human imagination for a very long time.

David: What is the relationship, in your knowing, between these Blue Avian type beings that you see in the art and ascension?

William: The Blue Avians are teachers. They are the bringers, the light bringers, if you will, of the mystery teachings of ascension. And when we look to these beings, we're looking to them as benefactors of humanity. You could go 'savior', but that's a whole other category of beings. But benefactors – they're wisdom-bringers.

They're trying to get us to wake up to our soul's potential of what is really within us, and out ability to leave the Earth, if we choose, and travel the cosmos.

Corey Goode: And you said you've been researching this specific topic since 2002, correct?

William: That's correct. I started coming . . . Through my study of mystic Christianity, I started researching the ascension stories of Jesus. In the Bible, it clearly says that Jesus ascends in a cloud, and that furthermore, when he returns, he will return that same way – in a cloud.

But when you go over to Christian art, yeah, you will see a cloud. You will see him standing on a cloud, like the Buddhist cloud-riders, for example, but more often than not, there's a precedence for his ascension taking place in a blue sphere, where he is even portrayed as a blue being. And then he is ascending into the stars through this blue sphere, or returning to Earth in this blue sphere.

It's clearly some kind of a transportation vehicle.

David: Well, let's dive out of the plane and parachute into this, because you have such amazing data. I don't want to rob any time from it.

William: Great.

David: What have we got to look at first here?

William: Okay. Let's go back to the Temple of Horus in Egypt. It's in Upper Egypt. It's on the Nile.

300 B.C. And this is what we're looking at here. We see the exterior walls of the Temple of Horus.

And etched on the wall are these amazing depictions of Horus as a bird being. Now, the key thing is that very little color remains at this temple.

But when you zoom in on it, as I have here, you see that Horus is clearly a blue being.

David: There's definitely some blue below the chin and above the eye.

William: Exactly.

David: Right.

William: And you can say, “Well, okay, somebody added that later or whatever. There's really not a history of Horus being a blue bird being, a Blue Avian.”

So let's go over to the Temple of Hathor at Dendera, which is nearby, also built at the

same time. And what we see in the Temple of Hathor . . .

David: Oh, man.

William: . . . is this incredible depiction of Horus enthroned with a feather cloak indicating he is a bird being. The bird symbolism is very apparent here. And he's on his ascension throne, which means this is a throne that he can travel into the stars.

He's clearly a blue bird being, a Blue Avian in our context.

David: Now, Corey, what we see carved here does not look exactly like what you saw.

Corey: Correct.

David: But William, are these people . . . These are not eyewitnesses that carved this? This is like based on a legend, do you think?

William: These are . . . Well, it could be both. We never know where the artist got the inspiration.

David: Right. Okay.

William: Did this artist at Dendera see a blue Horus, or was he told what to carve by some elder being?There is precedence in the text for the description of these beings in this way, but it's open to interpretation about exactly the source of it.

David: But the core is, we have a human body with a bird face that's blue.

William: Yes. Exactly.

David: Which is insane. This is crazy.

William: Totally. And when you look at Horus here, as I said, he's on his ascension throne. And you have a human figure that's offering a symbol for the soul, as well as a gateway to him. Horus has several very important tools, or implements, in his hand.

In his right hand, he holds his very long stick that's a resurrection stick. It's used for opening the gates of heaven. And in his left hand, he holds the 'key of life'.

Now, Corey, take a look at that resurrection stick and look at the bottom of that. What

do you see?

Corey: It looks like a tuning fork or some sort of resonance device.

William: Right. It looks like some kind of tuning fork or something. Same with the 'key of life'. These could be puns, but it could also be that this is some sort of a vibrational technology that he's demonstrating here.

Corey: Looks like a very subtle hint at something.

William: Exactly.

David: And we also know from some of the “Wisdom Teachings” episodes I did that the bennu bird on the top of the staff is actually the head of a pteranodon. And it appears that occasionally, these dinosaurs go through portals, and they portal into our time, and that the Egyptians saw that and they enshrined that on this stick.

So it does seem to represent ascension, portals, all that stuff, because of this pteranodon head on the stick.

William: Right. Very peculiar that they would have that kind of design, and we can match it up to our eyes with what appears to be some kind of a dinosaur that shouldn't have been in this scene.

And so here we are looking at a benefactor, a teacher of humanity, who is saying, I'm bringing you the 'key of life'. And I'm also offering you a teaching, maybe a vibration, that opens up some kind of a transportation vehicle for celestial transportation.

Corey: And the Blue Avians . . . Their message has been about raising your vibration.

William: Okay, there you go. So it's about vibration. The vibration, of course, is love, what they most want us to know about.

Corey: Uh-huh. Love and forgiveness.

William: That's what opens the gateways.

David: Are there any other points of continuity, William, that we're going to see between this design and some of the other ones in terms of what he's sitting on or what he's wearing? Anything like that?

William: Pay close attention to what's in their hand.

David: Okay.

William: There's very often going to be a stick. And pay attention to the throne that they're sitting on.

David: Can you back up so we can look at that again briefly?

William: Yeah, take a look at that.

David: Okay, what have we got here?

William: You've got Horus wearing a feathered garment, indicating flight or ascension.

David: Or actual feathers.

William: Right, or actual feathers. And he's on a throne. Other examples of this throne will actually feature feathers on them. Osiris sits on a feathered throne, because the idea is that it flies. This is how he comes and goes. And rather than showing a big spaceship or something like that, they're going to show us a simple throne. The technical term for it in mystic circles is the Merkabah throne chariot. This is the throne these beings sit on, and they ascend on this throne. They come and go on this throne.

Corey: That's fascinating.

William: Look at this example. This is extraordinary. We've got a pharaoh on his throne, holding our key tools, or implements – the stick, the key – and he's on a boat, a ship.

It's called the Ship of Eternity, the Ark of the Millions of Years, is the term they used for it. The Ark of the Millions of Years. I mean, what does that say?

Corey: It says a lot.

William: Yeah. These are eternal beings.

Corey: Right.

David: And it looks like the guy on the left is a lot larger than the person on the right. And one of the things, Corey, with the Blue Avians, right, they're taller than us.

Corey: Right.

David: So that could be a connection.

Corey: Yeah, it could be. Yeah.

William: Yeah. So we're in a blue sphere here.

Corey: Obviously.

William: We have a blue being and a blue sphere. This is a Blue Sphere being, okay? Putting it together.

David: It is crazy. I mean, you look at that – this gorgeous lapis lazuli stone.

William: Yes, and gold.

David: Yeah.

William: And along the top . . . Notice the line of stars along the top. That's the Egyptian hieroglyph for heaven. So this is saying this is a heavenly being sailing his Ark of the Millions of Years on his throne in his blue sphere.

David: Right. The board would be like a vessel, right? Something that could actually . . .

William: It's a wormhole. It actually looks like a wormhole.

Corey: Yeah.

William: The lotus buds on each end look like the mouths of a wormhole.

David: Right, exactly.

William: So this is a wormhole that this guy is traveling through. He's a happy camper. This is the goal of all human ascension quests. You want to get on that seat.

David: And, Corey, you're actually traveling in these blue spheres . . .

Corey: Correct.

David: . . . when you go out there, right?

Corey: Right. Yes. They will appear in a room, zigzag around, stop about this far away from me, wait for me to indicate that I'm ready, and then they expand and I'm inside.

William: There you go. We're going to talk about that as we go because that is THE key experience that all of us actually are capable of having.

Corey: Oh, yeah.

William: We can get a hold of one of these flashes of blue light and open it up into a blue sphere and enter into it and travel.

But let's go forward here 300 years now. Let's leave Egypt, and now let's look at what we have here on the left.

David: That's crazy. There's wings. There's something that looks like a blue sphere. There's all kinds of radiants around it like layers of a portal or something.

William: Yep. This is the Last Judgment scene.

David: Where does this come from?

William: This means it's the Second Coming. So Christ is returning. He ascended on the cloud, and the Book of Acts says he will return the same way he left – on this cloud. It's blue.

This is Fra Angelico's painting, Renaissance. You have Jesus sitting on his ascension throne surrounded by this mandorla, or almond-shaped, gate of light, that is surrounded by blue angelic beings. Blue birds.

David: Is there any . . . Was Fra Angelico in a mystery school or something? Was there any type of . . .

William: Yes. He was one of the benefactors of the de Medici family. They had spent the equivalent of $50 million in contemporary dollars seeking the secrets of ascension.

David: Oh, really?

William: Called the Corpus Hermeticum. They decoded this, and then they went to Sandro Botticelli, Michelangelo, Fra Angelico, and they said, “Okay, here's the key codes of ascension. We're going to have you hide these in your art.” And that's what they did.

Corey: You know, that indicates to me that these mystery school initiates must know about Blue Avians.

William: They have to. They absolutely have to. Any mystery school initiate, as we're doing here – and we're just looking at the first layer of this image – would be able to say, "Okay. That almond-shaped gateway? That's a portal. It's held open by Blue Avian beings. They've been coming and going to the Earth plane for many thousands of years."

And now we have Christ as the new Horus, as he's referred to, connected with the Blue Avians, and celestial travel. He's coming and going from the cosmos in this portal or gateway, surrounded by these blue beings. And it tells me that he is part of that same mystery school. That's what we're looking at here.

Corey: Yeah. I think many of us may have seen these images, but never would have made this connection without the research.

William: Yeah. Your ordinary Christian or other person's going to look at this and say, "Oh, there's blue angels around him" - if they get that far. They might not even see him because that's how they hide it in plain sight. You don't at first see that he's surrounded in a gateway composed of these beings.

David: I want to just throw in something really quick so that some of the conspiracy theory people can put the gun down, because what we hear about from the Edgar Cayce readings and from "The Law of One" is that the original Egyptian mystery school teachings were extremely positive. Isis, Osiris, Horus, were positive beings teaching the same teachings as Christ. The Cayce readings say that. "The Law of One" says that.

And then they were co-opted by the negative later on and distorted. So actually, the Cayce readings to say that Thoth Hermes Trismegistus is a prior incarnation of Christ.

William: Yes.

David: And Thoth is one of these Blue Avians, right?

William: Well, you will definitely see him as a bird being with an ibis head.

David: Right.

William: I don't know that I have an image of him blue . . .

David: Right.

William: . . . but he won't necessarily have to be blue to be connected with this bird tribe.

David: Avian human. Yeah.

William: Exactly. Exactly. So the first time I went to Egypt, I'll never forget the guide saying, “Christianity is the Egyptian religion.” I'm like, what are you talking about? You all are Muslims. You're Arabs.

Corey: Yeah.

William: You're Muslims. And then about the third time I heard it, I got it. Christianity is the Egyptian religion updated with now Christ as the new Horus. And the mystery teaching is all in the mystic side of Christianity, the gnostic side – which came out of Egypt. I mean, Christianity came out of Egypt.

The one thing the Catholic Church has done is try to sever that connection with Egypt, because once you follow Jesus into Egypt, now all of a sudden you're confronted with this type of thing and all these mystic ideas. And they don't want you going there.

Corey: Too many questions come up.

William: Yeah, “don't go there.”

David: Well, William, I'm also remembering sitting in at a lecture that Graham Hancock gave in which he was describing Egyptian spiritual teaching. And in the Egyptian spiritual teaching you have a heart and a feather on a scale . . .

William: Yes.

David: . . . and it says your heart has to weigh less than the feather to be ascended.

William: Right. Absolutely. So let's just go back one moment and look at Maat, who is beaming Reiki energy, or healing energy, to the pharaoh on the throne.

And she's got a feather on top of our head. That's that same feather.

David: Oh, wow.

William: And this indicates that this being has passed the Earth test. His heart is lighter than the feather. He's a pure being. And that's the only way he gets to sit on

that throne, is he's got a pure heart.

David: Amazing.

William: He's a being of light and love.

David: So when we get back to this Renaissance art now, are you suggesting that the mystery school tradition from the Medicis, that they might have some secret documents that they didn't allow people to see that have images like this in them?

William: Definitely. There's no question about it, because what they knew - what they determined from their study of the Corpus Hermeticum, which they got from Egypt and believed as the original mystic Christian teaching – is the power of the image.

The Corpus Hermeticum has a very important phrase, “the image will show you the way”. So they were very, very intent on encoding images with this power that will trigger memories, trigger connections that you can make. You start connecting the dots.

You know, when I was a kid, “Highlights” magazines, right?

David: Yeah.

William: I'd sit on the floor, and there's that one page, “find the 15 items that are hidden in this page”. And there is a list.

Corey: Like “Where's Waldo”.

William: You could spend hours. I did, anyway. Well now, that's all I do as an adult. I look at art and find the 15 hidden things in the art. But the thing is, the list isn't there. The de Medicis have the list because they put all the stuff there. And other initiates have the list, but we have to find the list. And that's kind of what we're doing here.

Corey: We have to decrypt it without a key.

William: Exactly. Exactly.

David: I'm kind of hearing you say something similar to the concept of gnosis, where information is alive.

William: Yeah.

David: And if you're exposed to that, it starts to trigger this metamorphosis in you.

William: Totally. Totally. So actually, images like this that we're looking at here of Jesus on his throne of ascension, this is not a static image.

This is actually, to the mystery schools, a portal itself. They want you to enter into this scene. They want you to figure out what you've got to do up here (mind) and in here (heart), in order to take this ride on this blue sphere. It's the whole game of Earth life. This is the ascension sphere. And you know you're ascended when you're in the blue sphere.

Maybe these angelic beings like we're looking at here are surrounding you. It could be Jesus himself who's sitting beside you, who's come back to assist you in your ascension.

Corey: They must have cut me a big break. Ha, ha, ha.

William: Yeah, well it's a vital image and message for us to get today, because we understand now today. We have the concept of stargates and wormholes and interstellar travel. We know there's a whole physics behind this now. And that's what's encoded in these images, this whole interstellar physics that's really a new spirituality. I call it stargate metaphysics.

And that's what we find in Ancient Egypt. That's what we find in Christianity, Buddhism. Islam has it as well.

David: Not to mention so many people having near-death experiences . . .

William: Exactly.

David: . . . seeing beings of light come around them with these spherical auras around them.

William: The tube of light of the near-death experience is a wormhole.

David: Yeah.

William: We can pretty much put that one on the table and say, that is a fact. But there's more to it than that. I mean, we know that that wormhole exists, and we're all capable of ultimately opening a wormhole from within us. And that's the idea in these images.

I mean, look at this. You've got Jesus on this throne. He's in a blue sphere. And the

sphere is filled with stars.

David: That throne is not attached to the ground, right? He's levitating there.

William: No, he's levitating. And so I have kind of a Forrest Gump mentality sometimes. When I see a ring of stars or a gate of stars, I go 'stargate'. This is a stargate that he's in. Or let's put it this way - more comfort level for people – what if Jesus is a stargate-traveling time traveler, and that's what the blue sphere is? What if?

David: But I think what you're also saying here is that these paintings you're showing us, they're not just artistic choices that these illustrators are making.

William: Right.

David: They're based on esoteric, secret knowledge.

William: That's right.

David: We're not getting the whole secret.

Corey: There's too many different artists doing the same thing.

William: You know how we know that? The artists are often unknown.

Corey: Oh.

William: The author's like: “It's not about me. It's not my greatness. It's about the message here.” So the artists are unknown.

Corey: That's important.

William: Yeah. And what we're trying to decipher is, okay, what is the real message behind it? Because they know most of the people are going to look at this and it's just going to go over their heads, or they're not going to have an interest. But if you really get an interest, now you're going: “Okay, this is the core message.”

David: Okay, so William, when we're looking at these four angels around Jesus here in this blue sphere, who are they? What do we know about them?

William: They're archangels, and they're the guardians of the throne. Sometimes they're symbolized by the lion, bull, man and eagle, which are the four primary symbols of the evangelists and the four directions and so forth. But their primary role is to indicate to us that this is happening in the heavenly realms and that this is the

power of flight or ascension that's being indicated, an angelic superpower.

David: And I believe the word “angel” in Greek is “aggelos”, which means “messenger”. Right?

William: Messenger, right. Yeah, exactly.

David: So, Corey, he's saying 'guardians'. He's saying 'messenger'. What is this conjuring up for you right now?

Corey: And earlier, he said 'teacher'. So it reminds me of many people who are having experiences with blue spheres. They're seeing blue spheres that appear in front of them. And sometimes they consciously remember or recall getting information from the sphere.

William: Right.

Corey: So these spheres are imparting knowledge and information to them. And it's always about them growing and changing on the inside.

William: Right.

Corey: From within.

William: Yeah. I covered this in a episode called “The Blue Sphere and the Soul” in my show “The Awakened Soul”, which is the same . . .

Corey: Have you heard of blue spheres visiting people with messages?

William: Yes. It's so vital. There's an Indian guru named Swami Muktananda.

Corey: Yeah, I've heard the name.

David: Oh, yeah.

William: Yeah. Swami Muktananda says that, okay, the most profound meditation experience you can have, that you can train yourself to do, is to raise your vibration so that you attract one of these Blue Sphere beings or flashes of light, and that it manifests before you and it can open up to the size of a sphere so that a person can come through from the other side . . .

Corey: You're kidding.

William: . . . or you can enter the Blue Sphere and travel through it.

Corey: Is this in one of his books, or . . .”

William: Mm-mm.

Corey: Oh, wow!

William: Yeah.

David: Well, this is really trippy because we're taping in Boulder, Colorado. And I was on a train after I graduated college to come out here to Boulder to try to apply to Naropa Institute. And while I was on the way here, I met two guys who were devotees of Muktananda.

William: Wow!

David: And one of these guys had gotten sick of being in the ashram and didn't want to do it anymore. And he's down at one end of the hall, and Muktananda's at the other. And Muktananda shows up and puts his hand out like this, and this ball of blue light shows up in his hand.

William: Yeah.

David: And Muktananda throws it at him. It hits the guy, and he goes into spasms of ecstasy. He's literally spasming on the ground. This is the guy on the train telling me this personal . . . It just randomly happens, right?

And then Muktananda comes up and says, “So now you will be happy and enjoy being here, huh?” And he's like, “Yes, yes.” And after that, the guy was just sweeping and cleaning and doing all kinds of things.

William: Right.

Corey: That's a quick way to raise your vibration, I guess.

David: Yeah.

William: Exactly. But the message has been here for, we've documented 2,500 years of human history, where these Blue Spheres have been around. It could be that now is our time for perhaps mass numbers of people to begin to develop this ability and to have this experience. It's incredible.

Corey: Yeah.

William: I think it's perfectly natural for cosmic beings to be able to have this experience. Again, we're the caterpillar saying, “You'll never get me up in one of those things.”

Corey: This experience is for everyone.

William: Exactly. Exactly.

David: You mentioned “The Awakened Soul”. You said that's a show?

William: Here on Gaia.

David: Okay.

William: It's “The Awakened Soul”. 13 episodes, lost science of ascension. We start from the very beginning. I try to provide a historical context for the idea of ascension, going back into history and saying, “Hey, we've been talking about this for a very long time. And so let's look at the history of it. Let's look at the art.”

Let's stair-step into it so that we can see that a lot of people . . . You hear the new-agey term, 'I'm a starseed'. Right?

Corey: Right.

William: And it turns a lot of people off. But a lot of people don't know that that term was invented by the Stoics in Ancient Greece, 200 B.C., . . .

Corey: Really?

William: . . . where they started discussing our soul as a starseed.

Corey: I would assume that it's more of a new age kind of term.

William: Right. And so that's part of the point of “The Awakened Soul”, is to say, “Hey, guys, this conversation we're having has been going on a very long time. Let's bring some historical documentation into it. Let's put some art with it, and let's show how we all can do this.”

Corey: That's going to be interesting.

William: Yeah. So I'm really excited about it. So thank you for mentioning that.

David: Well, let's see something else. What else have you got in your bag of tricks here?

William: Let's go to the fourth century A.D. This is from Egypt. I took this image from the Coptic Museum in Cairo, Egypt.

The Coptics are the Egyptian Christians, and they believe they have the original Christian story – the original story, which is different from the view most people understand today.

But the key thing is, look, we've got Jesus sitting on a throne holding a book in a blue sphere. This is an ascension scene.

David: Just for the sake of the skeptic, is it possible that all of these guys could have seen each other's artwork? Or are they too geographically isolated?

William: They are geographically isolated. It is possible someone went to Egypt in the fourth century or so forth and saw this, and they duplicated it. But the idea is that this is part of the Christian documentation.

David: Right.

William: This is what they say. This is the experience. And this is corroborated then by other people who've had similar experiences, such as yourself.

Corey: And back then, art was rooted in tradition.

William: Right. And people were going to stick with the tradition, too. They aren't going to veer off and try to come up with their own interpretation of it, because it's sacred.

David: Well, something I'm thinking of too, William, is it says in the Bible that Jesus would only speak to the masses in parables.

William: Right.

David: But then to his disciples behind the scenes, which you don't get to read in scripture, he's saying things that are not in parable.

William: Right.

David: Do you think this is part of the undisguised teaching?

William: I think this is part of the secret teaching of Christianity because your average ordinary Christian has probably never seen images like this. And there's a reason for that because this is for the initiates.

Corey: Yeah, I was raised Christian and still consider myself a Christian, and I have not seen most of these images.

William: Right, and because the church hierarchy has said, “Okay, we'll just keep that over here, and then maybe people will discover it on their own.”

So looking at this image here, it's really provocative because you've got Jesus in the blue sphere. And notice the concentric rings.

As a symbolist, when I see concentric rings, I'm thinking two things. I'm thinking sound or vibration. Sound rings – whoa, whoa, whoa, whoa, whoa, whoa, whoa.

Corey: And it goes back to that tuning fork.

William: Exactly. It goes back to the tuning form, the key of life. And I'm also thinking portal, vortex, gateway, wormhole. Okay? And so here we could read this and say, “All right, this is Jesus on his throne in a vibrational gateway, obviously exuding light and love. And he's traveling through the cosmos.

And now we add in this image these counter-rotating rings. Is that torsion field? What are we talking about here?

Corey: And it also could be he's a higher vibrational being, and it could be vibrations emanating from him, as well.

William: Right. See, that's the key point too, because these are super high-vibrational beings that are beyond our normal perception. So they need some manner or vehicle to slow down so that we can perceive them. And perhaps that's part of the function of the blue sphere. It's certainly the function of that throne, because I'm going to give you a real esoteric secret here.

That throne, with his feet on the footstool, that's the Ark of the Covenant. Christianity is supposed to have dispensed with the Ark of the Covenant because that's an Old Testament image. And Jesus doesn't need the Ark of the Covenant.

Corey: Right, the new Covenant.

William: But he's got his feet on the footstool, and the footstool of God is the Ark of the Covenant. It's the Earth and the Ark of the Covenant. So what if the Ark of the Covenant, then, is some kind of a device that slows him down so that we can perceive him? Because otherwise, he's moving too fast and completely out of our range of perception.

Corey: And in the Old Testament, the way it's described it sounds like a device.

William: Absolutely. There's no question. It's some kind of a device.

Corey: Multipurpose device.

William: Exactly. And I go beyond it being an electrical device, some kind of radioactive weapon or whatever, into it's a teleportation machine. So that wipes us too far off for our conversation, but . . .

David: Well, also, the storming of the walls of Jericho, they use the ark and they blow the horns, and then the walls turn into mud. The stone just goes into liquid, and it all falls down.

Corey: They used vibration.

David: Yeah.

William: Yeah, definitely. But here again, we've got the throne and the blue sphere together. This is the Egyptian image from the Blue Avians.

David: And you just triggered something in me. When we're looking at these concentric spheres, so amazing. In April 2001, I made a prayer. And I said, “The only thing that hasn't happened to me yet is I've read about these people seeing blue spheres, and I want that to happen to me.”

And then I call my father and he's on the other line with my brother, so we get into a three-way call. And my brother then explains that he had seen a blue sphere in his meditation.

William: Wow!

David: And this thing shows up. It's just hovering in the room, and then it goes up to the ceiling, and it spreads out into a vortex that looks just like that. The way he described it was it was brighter on the edges, and it got bluer towards the middle.

Corey: When he told me this, I was shocked.

David: It turned into a stargate. It looked like a wormhole going up through his ceiling.

William: Right.

David: And then when it faded, it said, “The ascension that your brother is writing about will not happen all at once. It is a series of increasingly uplifting events. This is the first of these events for you.”

William: There you go. There you go.

David: Blew me away. And as I'm looking at this . . .

William: It 'blue' you away? Ha, ha.

David: I'm like, this is exactly what my brother saw. Ha, ha.

William: Right. So here's the detail here. I mean, where he's got the book, the Book of Knowledge. It's the book about, “Hey, this is how you do it”. And he's got the breastplate. He's got the cross right there at the breastplate, which indicates the open heart chakra, right? And he's giving us a blessing here.

So if we are sensitive and attuned, we're really locking onto the symbolism and saying, “Okay, he's inviting us to open the blue sphere within ourselves, or to invite a blue sphere into our awareness so that we can have this experience.”

Corey: This is amazing.

William: It's ascension.

David: Well, Corey, what's the connection between . . . because we're kind of dancing around this. We haven't quite hit it, though. What is the connection between the message of Christ and the Blue Avians and the Sphere Beings, and even maybe let's toss in the people from the Inner Earth, the library conversation you had with Kaaree. How does this all thread together?

Corey: Well, their message is all about forgiving others, forgiving yourself, to constantly strive to be of service to others, and to raise your vibration – to focus the light inwardly, you know, to pull the log out of your own eye before you start reaching for the splinter in other people's eyes.

William: Right.

Corey: And that sounds like the tenant of most of the religions.

William: Yeah, absolutely. And what I get out of that message from you is that, hey, this gives us additional motivation to actually do that. Because now you know that, hey, you're not living a life of service just to get a reward. But if you know that this is the reward, it's going to really motivate you, I think.

Corey: Yeah. Let's see some more of these images. These are amazing.

William: Great. Okay. So this is Mount Sinai. We all know the story of Moses and Mount Sinai. There's a beautiful monastery there where they started developing a lot of this early imagery. And here we have the ascended Christ on a rainbow bridge in a blue sphere filled with stars once again.

So this is obviously another portal or gateway indicating that he's traveling through the celestial realms.

Corey: Hm.

David: And you've said in other stuff, and I covered this in "Wisdom Teachings" a little bit, when he's sitting on the rainbow, what does that mean?

William: That indicates that he's in what's called the Rainbow Body of Light. That's the Tibetan term for it. Christians call it the glory body, the Resurrection body.

David: Right.

William: It's the butterfly I referenced earlier – the next level of human evolution. Within us is this light body that is portrayed as radiating rainbow-colored light. And so anytime you see Jesus sitting on a rainbow or enfolded within this rainbow light, that indicates that he is in his glory body, which is a pun on . . . The word 'glory' means 'to glow rays'. So he's glowing rays here. He's in his light body form.

David: Well, it looks like he's standing on a blue sphere.

William: It does. There is that second blue arc beneath him, which again is the footstool idea. But again . . . stargate traveling, possibly time traveling.

Corey: Stars in the background.

David: Can you just tell us again, what's new and hot here on Gaia that you've got to

offer?

William: “The Awakened Soul”.

David: Okay.

William: It's 13 episodes of the lost science of ascension, where we're going to take people through this incredible history of ascension, with also practices involved as well, referencing many different traditions – the Christian, the Buddhist, the Egyptian tradition, the Divine Feminine – and how they all view this idea of ascension, and how we can make it a reality for ourselves.

David: That's awesome.

Corey: I'm really glad this was brought to my attention, because, I mean, like I said earlier, many of us have seen some of these images. We never would have put this together.

William: Yeah, well thank you. I mean, it's a powerful story. It's, I think, THE message for our times, so that we can all raise our vibration in this way and perhaps take a ride in one of these blue spheres.

Corey: Thank you.

David: All right. Well, that's all the time we have for this episode. I hope you've enjoyed this as much as we have. I'm David Wilcock. We've got William Henry and Corey Goode here, and we thank you for watching.

Symbiotic Relationships of Ascension Season 5, Episode 4

Cosmic Disclosure; Symbiotic Relationships of Ascension Season 5, Episode 4

13 Jun 2016

David Wilcock: All right. Welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. We've got Corey Goode here, the insider's insider. And we have as our special guest mythologist, art historian, William Henry.
And the reason why I really like what William Henry has done is, first of all, he's been around as long as I have. He's a real veteran in this field. But more importantly, he's talking about ascension from a perspective of bringing in practical data.
There's a lot of people who have been around a long time. They talk about this stuff, but it's, “Oh, I'm channeling this, that, or the other.” There's no real reference point, no way to prove that what they're saying is true.

But William, you're bringing in hard data. You've got things we can look at, things that clearly have a history behind them.

William Henry: Yeah.

David: And you were telling us about this painting of Jesus here. Let's get into that again. These stars that we're seeing. Those stars represent what?

William: Well, it represents the cosmos. When we're looking at Jesus in a blue sphere, which is what he's in, filled with stars, I read that stargate from our contemporary perspective.

William: And you know, when you research the Dead Sea Scrolls, which were the books of the Essenes, it's remarkable, and even in the Bible too, it's remarkable how many times they reference gateways, portals. So they're clearly . . . and stairways to heaven. So this is not too far out of an idea. It's actually in these texts that they are describing beings coming and going from the celestial realms via stargates.

Corey: With the terms they had . . .

William: With the terms that they had then.

Corey: Right.

William: Right. We can say wormhole today. We can talk about Calabi spheres. We can use scientific terms if we want, but hey, let's just keep it simple, okay, because people now, thanks to movies like “Stargate”, “Contact”, “Interstellar”, we have the

physics behind it and now we have the visuals.

We have a consciousness that says, “Okay, we've caught up with these super-advanced beings that travel the cosmos in stargates, wormholes, or blue spheres. This is one way to do it.

David: Now, Corey, you've said that you feel that the stargate itself, the blue sphere itself, is alive.

Corey: Yes. Well, the Blue Sphere is one of the five beings in the Sphere Being Alliance. So it is a higher-density being. So it is a higher-density being. It's an actual being.

William: Yeah. Right. I would go along with that.

David: So this is like a symbiosis then between the person in the being and then the being itself as the sphere.

Corey: And both the Inner Earth and the Blue Avians have explained that they are in a symbiotic relationship with humanity and our co-creative consciousness and our mass consciousness.

David: Well, what's so bizarre about this is anybody who's been watching “Wisdom Teachings” knows I did a whole long sequence on Wilhelm Reich and his idea that the precursor for biological life . . . I've always been talking about life is a quantum field effect. Life precipitates out of the quantum vacuum.

Well, Reich actually looked at life that was formed that turns into cells where they hadn't existed. And in it's primordial form, it shows up as a blue sphere in this case on a microscopic level. But it just manifests. And then the blue sphere coalesces the water or the material around itself and forms life where none had existed.

William: Incredible.

Corey: I hadn't heard that.

David: So this is like getting us a throughline now between macro, macro, because you're saying the largest of these blue spheres in the solar system are how big?

Corey: The largest of them contains . . . Our solar system is contained by one of them.

David: Oh, the outer barrier is a sphere.

Corey: Yes.

David: Wow! Okay.

William: Well, think about the she-powers, the Siddhi powers, which are the eight great powers, instant materialization of wishes, invisibility, levitation, and the ability to make yourself as big as you want or as small as you want.

David: Right.

William: I mean, these would be part of the consciousness powers of these beings, right?

Corey: Co-creative manifestation.

William: Yeah.

David: The whole point too in terms of scaling when we're dealing with a holographic universe, in the hologram, in a fractal, no matter how much you zoom in on the fractal, you keep seeing the same pattern.

William: Right. And I love that word “scale” in this context. Jacob scaled the ladder to heaven, so he ascended, right? But scale's a musical term, so he raised his vibration.

Corey: Yes. I was about to go there.

William: Right? Goes up to the heavenly realms, then scales back down.

Corey: Goes up the octaves and down.

William: Right. Right.

David: William, what's the teaching . . . because you obviously are a much greater Bible expert than I am and these religious texts in general. Are we looking at a . . . Is the original fall how life is created out of this divine perfection? And do we have to resuscitate from that fall?

William: Yeah. That's the esoteric view of it. The Jewish mystical view was that Adam and Eve were originally light beings. And then when we're evicted from Eden . . . Remember the biblical story, Book of Genesis, Eve eats the apple of wisdom and we're evicted from Eden.

Yahweh, the Old Testament god, does two things. He makes a gate at the east of

Eden, which we exit through, places cherubim on either side of the gate. And then the thing most people forget about is he made for humanity coats of skin.

The traditional view is that these are animal skins that are covering the body. The esoteric view is . . .

Corey: Because they were naked.

William: Right. But the esoteric view is the coats of skin are these skins that we wear, our human skin, because originally we were light beings.

Corey: Luminous.

William: Luminous, radiant, perfect beings. That's the term they used. They were perfect.

David: That's in that movie “Noah”, with Russell Crowe.

William: Yes, it is. Yeah, they drop a line on that.

David: The people of Eden are light beings first.

William: Yes, exactly. That's such a key part of this as well, because then Jesus is then the second Adam, whose part of his mission is to show us how to reclaim our original light body form and ascend, right? He's going to show us the way to do this.

Corey: To get out of here.

William: To get out of here. And I've got an image for you, Corey. Look at this. Think about this one.

William: This is Ravenna, Italy, 5th century.

Corey: And he's not in a wading pool. Ha, ha.

William: Ha, ha, right. I mean, they call this a cloud. But who's ever seen a cloud that looks like a blue sphere, right?

Corey: Right.

William: I mean, what are we looking at here? The Earth? You could make an argument this is the Earth that he's on. But no. Going back to the Egyptian images we looked at in the last episode, they're indicating that this is a sphere of consciousness in

the very least. It's also a transportation vehicle as well.

Corey: A sphere of consciousness is an interesting way to put it.

David: Corey, did these beings say that they're just doing this for us here, the Sphere Beings, or are they kind of like a galactic or even intergalactic . . .

Corey: This is occurring in this local star cluster of 50 or so stars, that they are somehow karmically tied to or that there's some sort of not only symbiotic relationship, but there is some sort of attachment that we need to ascend so they can ascend and return to Source, basically.

William: Yeah. I've come across that I my work as well with the Tibetan rainbow body tradition, because the Tibetans teach that this resurrection or ascension teaching, the rainbow body, is taught in 13 star systems, including our own. And you've got beings coming and going from these various star systems, probably through a system of wormholes, right?

David: Oh, wow!

William: So if you think about it, Earth then, maybe we're a colony in a federation - you know, I hate to use the Star Trek term – but a federation of star systems where this teaching is taught.

So the question then is - maybe you can answer this, Corey – are we the strongest link in this chain or maybe we're the weakest one? What if it's us that has to lead the way?

Corey: Right. Well, we do have to lead the way. The whole message is that they're not here to save us. They're not savior beings. They're here to give us a message. And we're to take the message and make the changes and save ourselves.

William: Yeah. Incredible. I mean, it's incredible. But to think that we're linked to 13 star systems, that just goes like . . . and you're saying it's 50, it's more than 50?

Corey: Right. The local star cluster is around 50 or so.

David: Well, William, I'm just really curious where the references for these 13 star systems . . . Where did you see that?

Corey: That's interesting.

William: Yeah. You know, I was at a conference in California and a couple came up to me, and they told me that they both had PhDs from the Harvard Divinity School.

They specialized in the rainbow body teaching . . .

David: Wow!

William: . . . and told me that essentially what this means is that they believe that the body, the human body is designed to be spun into a vortex of energy that dissolves into five-colored rainbow light, leaving behind hair, toe and fingernails, which have no nerves to be transmuted.

And what they said to me is that they worked with the Dalai Lama. They translated Tibetan texts. This is their expertise. And they always wanted to know that - the Tibetans themselves, this is part of their secret teaching - said that once you attain the rainbow body, you can travel to these other 13 star systems.

David: Oh, wow!

William: And they always wanted to know, well, how do they get there? And then they said they were watching one of my presentations on "The Ancient Egyptian Arcs of the Millions of Years" like we looked at, where I identified them as wormholes. And they said they got their answer, that once you attain the rainbow body, your body itself becomes the stargate. It becomes the wormhole and then you can travel to these other star systems.

But let's just think about this just for a moment. If you go into myth and sacred tradition around the world, then you develop a pretty ready list. You're talking Orion, Sirius, Pleiades, Ursa Major. I've just named five. But the Tibetans are saying there's eight more. And I'm sure there are more than 13. It's got to be up . . .

Corey: Right. And some of these are star systems with many stars in them like the Pleiades.

William: Right. So these are all familiar star systems that we can go out and look into the night sky and point out Sirius or Ursa Major.

David: Alpha Centauri.

William: Right. Exactly. But now the real message here is we're connected to these star systems even while we're in our earthly form. And we can call them in, but I love your message and I agree with it. They need us just like we need them.

Corey: Yeah.

David: So, William, where are we looking here? Is this inside a temple or something?

William: Yeah. Actually, this is in Ravenna, Italy, in a church in Ravenna, Italy, San Vitale, actually. And we see Jesus again on the blue sphere.

David: Is that gold leaf?

William: Yes.

David: Yeah. Wow!

William: Yeah, mosaics. And you've got the angels on either side indicating, okay, these are celestial beings that we're dealing with. And they're kind of escorting him or providing a power source for him.

And I really like to use the word 'upgrade' too, because in “The Awakened Soul”, my show here on Gaia, I did an episode about the hero's journey but from the soul's perspective, that the whole purpose of our incarnation here on Earth is to get that upgrade.

David: Do you think Jesus is holding his crown of thorns here? What is in his hand exactly?

William: That is a crown. It's also a ring that he's holding. And when you trace that symbol of the cosmic ring, you'll see that in Zoroastrianism as well.

David: Oh.

William: You'll see it in Sumerian depictions where the god is holding a ring. They call that . . . The title for this is, get this, the Ring of Cosmic Sovereignty. I want one. Ha, ha.

David: Ha, ha, ha.

William: Can't get it at Best Buy right now, but maybe soon, right? The Ring of Cosmic Sovereignty. What that means is he can go, be, see, do anything he wants. He's got the ringer vibration that he's a fully sovereign being, and he's a cosmic being.

Corey: It's almost like a seal.

William: Exactly.

Corey: A kingship or royalty, or some sort of title.

William: Right. Exactly. But here's the key to this art. What they intend for you to see

when you're looking at an image like this is, again, not a static piece of art, but an invitation.

They believe that the vibration of the blue sphere and the Ring of Cosmic Sovereignty is transmittable through the art. How can that be? Well, you're dealing with gurus here. You're dealing with super-advanced avatars that can even manifest through a piece of art and transmit that vibration to you.

This is why the church is like, “Okay. You know, if people just need a piece of art to get there, what do they need me for?” We don't need a church. We don't need all the books. We don't need the hierarchy of priests.

All the person needs to do is to open their heart and connect with this mentally, physically, spiritually, and emotionally, and they can begin to raise their own vibrations.

David: What do we got next here?

William: Let's see. Oh, here's an angel on a blue sphere.

William: So here's a celestial being in the cosmos.

David: It looks like he's surrounded by them.

William: Right. Exactly.

Corey: And back then, they did not believe the Earth was a globe, correct?

William: No. Right. Exactly.

David: So this is like a matrix of spheres coming in.

William: Yeah. You can read this almost as an interconnecting or link perhaps of star systems.

Corey: It could be spirals, those . . .

William: Yeah. Right. Absolutely.

Corey: Inside the spheres.

David: But Corey, you've also said that we've had a whole bunch of these spheres come into our solar system recently.

Corey: Yeah. Hundreds and thousands.

William: Wow!

David: Ah. There it is.

William: Yeah. There it is right there.

David: Boom!

William: Yeah. So this is a piece of art. This is a transfiguration icon. This is an event in the Bible. Right after Jesus is baptized, he gets these newfound powers. First thing he's going to do is go demonstrate to a few disciples his capabilities. And he takes them up to the top of a mountain and reveals himself as a being of light.

He transfigures, which means he changes his form from flesh and blood into a light body form. And the Bible . . .

David: But he comes out of the tomb . . .

William: This is before that.

David: But people don't recognize him.

William: No, this is before that.

David: Oh, okay.

William: This is early on. This is before the crucifixion and resurrection.

David: Oh, okay.

William: It's very early on. And so he demonstrates, “Hey, guys, here's a preview of what's going to come later on.”

David: Okay.

William: I'm going to change my form so you can show that you all have this capability.

David: Right.

William: And in the descriptions, the disciples say, “Okay, this cloud opened up

behind him.” And that's what our traditional view is that this blue sphere behind him filled with radiant light and the light coming off his body is actually a cloud.

Corey: Well, you know, people that have flown through the Bermuda Triangle, they've reported seeing blue mists.

William: Mmm. Yeah. Really important bit of imagery here, because I think when the portal opens, some kind of a mist emerges from it. That's why they think of it as a cloud, because they probably don't have a conception of a stargate or a wormhole.

David: Sure.

William: Right? And So what also happens here, you see the two figures on either side? That's Moses and Elijah, who suddenly manifested as if out of thin air.

So they too must be these ascended beings that have the capability of phasing in and out if they choose to. They're probably in blue spheres themselves. So really important imagery.

And, again, the teaching that goes with this is that this is how they transmitted the vibration of the transfiguration is through this art, these icons. They called them sacred portals or sacred mirrors. That's their term for these icons like this.

Corey: It's so amazing to me that you've been looking into this since 2002.

William: Yeah.

David: Well, you know what I'm thinking of too is the actual physics of this. Dr. John Searl developed the Searl levity disc, where he has these rotating rings and you create antigravity. And that was then replicated by two Russian scientists, Roschin and Godin. They actually got levitation.

And what they noticed is once they set up the antigravity field, that there was these what they called domain walls, these bubbles. And you could actually take a thermostat, a thermometer, and measure very distinct changes in temperature. It would get colder as you get towards the middle in very discrete walls, just like you see here.

It's spheres within spheres, evenly separated from each other.

William: Right.

David: So this is actually a physics.

William: Absolutely.

David: This is like what we're actually . . . These energy fields, there's a scientific precedent for them manifesting that way.

William: I think there's a super-high-energy physics that accompanies images like this. You're absolutely right on it. And it ultimately leads you to the Blue Spheres as a way of being transported through the cosmos. Because, again, this is an invitation to join them, to raise your vibration, to change your form, because as the Bible says, flesh and blood can't inherit the kingdom of heaven.

So it's saying we're going to go in a different form. And the Blue Sphere is the method that is the way you're going to go.

Corey: And that scares some people. They think you shed your skin, you die.

William: Right.

Corey: You know, you've got to go through some sort of painful death process.

William: Right. Right.

Corey: That part, you know, scares people.

William: Yeah, and that's why the message of the service, the love and forgiveness is so important, because this is how we raise our vibration and begin to realize, “Okay, I can safely leave behind this form and enter my next level of evolution.” Yeah.

David: Well, let's have another one. Let's see what we got here.

William: Another transfiguration.

David: It's the same thing, yeah.

William: It's the same thing, but look what he's got in his hand again.

Corey: Different artist, same time frame?

William: Same time frame, different artist. But he's got that stick in his hand, just like we saw in the ancient Egyptian image in the previous episode.

David: Right.

William: I call it the Resurrection stick. It's the stick that opens the gates of heaven or hell. So we're talking about either an actual object or technology or a symbol for a level of consciousness that these beings possessed. They can come and go, phase in and out.

Corey: It looks like an antenna, something that would send or receive vibration.

William: Right. Exactly. And so we're talking about scaling and raising our vibration once again. And he's saying, "Okay, here's the tool that you need."

David: Well, and one of the things . . . Corey, you probably can back me up on this. One of my insiders is a guy who worked with extraterrestrials and reverse-engineered 13 different UFOs and came up with eight different methods of antigravity.

And one of the things he kept saying to me over and over again, he said, "David, you've got to remember this. The more technology you have, the less technology you need."

William: Ah. I love it.

David: You get an all-in-one device. And that's kind of like . . . Like I guess the equivalent for you would be like the smart-glass pads, right?

Corey: Well, not . . . Well, more so the stone tablets that we were finding that we didn't know what were, that ended up being . . .

David: In the Inner Earth.

Corey: Right. . . . that ended up being technology. And non-terrestrials wanted us to trade it for trinkets.

William: Wow!

Corey: And we stopped trading once we figured out it was a technology.

William: Interesting. Wow! Reminds me of the Me tablets of the ancient Sumerian stories. The Anunnaki are trading these Me tablets, the tablets of destiny. They're stones. They're described as stones. Some of them contain the secrets of ascension, secret to civilization.

Corey: So they could be technology too.

David: Yeah. That's probably the same thing, because you said these tablets, the big

thing is stasis.

Corey: Well, not exactly the tablets, but the stasis – it's this similar technology.

David: They can alter the flow of time. They can create a time bubble.

Corey: Right.

David: Right.

William: You know, and a tie-in too to that is Moses originally had the blue sapphire stones. He made two trips up Mt. Sinai, remember? The first trip he goes up and he's given all the enlightenment teachings on blue sapphire stones.

David: Ah!

William: He comes down Mt. Sinai, sees the Israelites worshiping the golden calf, and he smashes the blue sapphire stones. And all the initiates are going, "Oh, there they go!"

And then he goes back up Sinai again and he comes back down with the Ten Commandments - the penal code. So those blue sapphire stones are super-important.

And one of the legends is that that staff that Moses used to part the Red Sea was also made of blue sapphire.

David: Ah!

William: And it was so heavy, it took many people to be able to lift this thing. So it may not be physically heavy, but it's just indicating, okay, this is advanced consciousness technology you're dealing with. Humans can't lift this stone. And it's kind of . . .

Corey: We can't wield it.

William: We can't wield it. Exactly.

Corey: We cannot wield the power yet.

William: We can't wield this power yet. And so they took away those blue stones. And I wonder if that's what you're describing, because that sapphire blue description, why are they blue sapphire unless it relates to the Blue Spheres?

David: Well, just on an exoteric level, it's really bizarre that you have these Egyptian paintings where you have Horus or Osiris with this staff, and then the same kind of thing around him. And now you're seeing Jesus portrayed with this.

William: Exactly. It's not . . .

Corey: Same . . .

William: I mean people would look at that and argue that's the cross, but it's not the cross, because the cross he's crucified in or upon would be much larger.

David: Right.

William: So this is something else.

David: And it has the T at the bottom too.

William: Yeah.

David: Yeah.

William: So this is something else that he's carrying that's a symbol for a capability or a level of consciousness or something along those lines. And it's identical to what we saw in Egypt as well.

David: Well, let's have another one here.

William: Let's see what we've got here. Okay, so this is another ascension image, a detail of it where he's wearing this bright white garment indicating he's a light being. He's got the illuminated halo around his head as well. And he's in the blue sphere again, ascending through this sphere.

David: And what's the time frame here?

William: We're still . . . This is 6th century AD.

David: 6th century.

William: Yeah. 6th century, 7th century AD.

David: So by this point in 6th century, you're only dealing with a relatively small number of generations since these events actually took place.

William: Right.

David: So there could be oral traditions. There could be hidden documents that would have been more readily available back then.

William: And there might have been more images as well. I mean, then we enter this age, they call it iconoclasm, where Islam comes along in the 6th century and they declare these images are . . . This is idol worship.

Corey: Heresy.

William: Right. This is heresy. So they destroyed a lot of this. And there's no telling what we've lost in terms off this imagery and other prompts that would really give us more clues about this ascension technology.

Corey: Same thing the Spaniards did when they came to South America.

William: Exactly. Exactly. So what a loss. I mean, a huge loss for us. But I think we're reclaiming it today. We have enough examples to where we can now start to piece it together.

David: Well, I can't help but notice that there's wing-like images in the red there. Is that part of what you're wanting us to see?

William: Oh, yeah. Exactly. So those are going to be those angelic beings that are symbolic of the heavenly power, celestial powers, and power of flight.

David: Like the seraphim, cherubim.

William: Like seraphim. Yeah, exactly. Exactly.

David: Wow!

William: Very cool. This is one that is very provocative. This is Hildegard of Bingen's "Man in Sapphire Blue".

William: And she describes an experience where this man in sapphire blue manifested out of a blue flash, just like we were talking earlier. And she sees him. And now he's here beaming this energy to her. Anytime you see a person in art with their hands open like this, they're beaming energy to you.

Call it reiki, the Holy Spirit, whatever term you want. We are to mirror this image in sacred art. We are to put our hands up and connect.

Corey: And receive.

William: And receive. Exactly. And establish a link, an energetic link, because the idea again is we all want to raise our consciousness so that we can have this experience that you had, right?

David: Corey, is it possible that the Blue Avians could change the way they look to look more human to someone if they wanted to portray themselves that way?

Corey: Absolutely. I've never seen an example of that, but yes, absolutely. I mean, they're a higher-density being, that they're manifesting out of nothingness in front of me as Blue Avians. They could probably appear as a human if they wanted. But I have not seen an example of that myself.

David: Well, and they ask you to read “The Law of One”. And if they are sixth density, then in “The Law of One”, they say that sixth-density beings are actually only Blue Spheres. They don't have any form unless they want you to see a form. That's right in there. So here's another . . .

Corey: Blue Spheres?

David: Yes. Yeah. So this could actually be one of the same Sphere Beings. And Hildegard von Bingen, of course, is really important because of many visionary prophesies that she had that foretold the coming of the ascension and the conditions that would appear on Earth during that process.

Her prophesies are right up there with Nostradamus, Edgar Cayce.

William: Definitely.

David: All those guys.

Corey: Yeah. I've never . . . I mean, when was this?

William: German mystic, 15th century, 16th century.

David: Yeah. She had a lot of prophesies that already have been proven accurate, remote viewing the future, seeing the civilization we were going to have and predicting ascension.

And isn't it interesting . . . I didn't know this until you brought this up, this guy actually . . . She said this guy visited her.

William: Yes.

David: And this is her illustration of that.

William: Yes. This is her visualization of this experience.

David: And he's coming in a sphere, a blue sphere.

William: He's coming in a blue sphere composed of concentric rings.

David: It's crazy. It's absolutely . . .

William: Right. It's the same energetic experience. And he's inviting her to: “Come join me. Come have this experience.”

David: When I first started doing readings and I got in touch with these beings that were the Blue Sphere Beings, we were listening to Hildegard von Bingen Gregorian chant music all the time.

William: Oh, wow!

David: And when you play that stuff, the sacredness . . . It's like it's a portal. The music is a portal.

William: Right. It is. It establishes that sacred space.

Corey: Music changes your vibration.

William: Totally.

David: Absolutely.

William: Totally. Yeah.

David: I had no idea that she was visited by an angelic being like this. That's amazing.

William: Yes. Yeah. The “Man in Sapphire Blue”, so she's emphasizing that he is in this blue sphere and he is a Blue Sphere Being.

David: And he had blue skin.

William: Yes.

David: Wow!

William: Yes, exactly.

David: All right, so William, let's have one more, because we're just about out of time. But let's just take one more slide and see what we got here.

William: Okay. So we looked at the transfiguration, where Jesus gives his initial demonstration. “Here's what you're all going to be able to do, drop your skin, become a light being, and open up this portal behind you.”

Then in the ascension, he actually ascends in this cloud. And that's the way that they describe it in the Bible is he went up in this cloud. And the key thing is in the Book of Acts is they describe him going.

Suddenly two men dressed in white, who are very mysterious, sound like celestial beings or angels, appear and say, “Men of Galilee, why are you looking into the sky?” As you see Jesus going, he's going to return exactly the same way he's just left.

So he's coming and going in this ascension cloud.

David: I've got to throw this in. This is too good. Peter Lemesurier, the guy that wrote “Great Pyramid Decoded”, has a whole section of the book where he explains that Galilee is a metaphor for our world right before it ascends, or as it's ascending.

William: Oh, my gosh! That's incredible.

David: Yeah. So men of Galilee . . .

William: Men of Galilee.

David: He will come back the way he left.

William: Men who are going to ascend . . .

David: That's crazy.

William: Yeah. And so in Christian art, they got this idea, probably from Egypt, that this ascension cloud is actually a portal or a gateway. And it's blue.

Corey: Yes.

William: And so here he is, on the arcing rainbow with the feet on the footstool in this

blue sphere.

David: Clearly levitating.

William: Clearly levitating, going through the heavens in these concentric rings filled with light. If that's not a wormhole or a Blue Sphere that they're indicating here, I don't know what it is, right?

Corey: Right. I mean, yeah.

David: Well, that's all the time we have for . . . We want to thank you for watching. This is “Cosmic Disclosure”, and we'll see you next time.

Cosmic Disclosure; Spiritual Ascension vs. Technology Season 5 Episode 5

Cosmic Disclosure; Spiritual Ascension vs. Technology Season 5, Episode 5

13 Jun 2016

David Wilcock: All right. I'm David Wilcock. This is “Cosmic Disclosure”, and we have a special guest here with us, Corey Goode, and also, of course, William Henry, investigative mythologist who is the spiritual voice on “Ancient Aliens”.

And he's been out there as long as I have, bringing you all kinds of amazing knowledge about ascension. And since 2002, he's been very firmly on the heels of the Blue Sphere story. So we're having a stunning convergence now in which an investigative link that he's been tracking now for 13 years has finally come to fruition in people having experiences that link the past, the present, the future all together in a continuum of one phenomenon.

So William, welcome back to the show.
William Henry: Thank you very much. Glad to be here.
David: Corey, good to have you back, buddy.
Corey Goode: Thank you.
David: You're about 40 pounds light now, right?
Corey: Yeah.
David: I mean, you've been going through some amazing changes yourself.
Corey: I have.
David: Do you think that these changes that you're going through – people are noticing obviously that you've lost a lot of weight. Do you think that this has something to do with your contact with these Blue Spheres?
Corey: Absolutely.
David: Could you go into a little more detail?
Corey: I was asked to go on a high vibratory diet. And instead, I was scarfing down corn dogs and ignoring them and gaining weight. And last time I was here, I got food poisoning from eating meat and other things that I probably shouldn't eat.

And after that, my body . . . It's like my medulla oblongata shut everything off and I mean, I couldn't eat meat. I couldn't eat anything. All I've eaten since January is fruit – are berries, bananas. And I have to force myself to eat that. And the weight just poured off.

And I've been going through all sorts of other changes as well. It's been pretty incredible.
William: Good for you. That's great.
David: So this contact is creating a metamorphosis in you somehow - the contact that

you've had since you and I started talking and all this stuff started to happen with the Sphere Beings. Something is changing in you.
Corey: Correct.
David: William, is there a historical precedent that when people have these phenomena happen to them that these sorts of changes occur with them?
William: I actually call it the light body effect. I had one person ask me one time, is that a diet? It's like when you start connecting with the Blue Spheres, with the light body concept, you do start to plug into a higher vibration and it will manifest in physical body changes.

When I really started heavily working into . . . with these rainbow body images five years ago, it also came at a time when I was newly married. I've lost 20 pounds myself. I can understand that. And I know part of it is the change of diet that my wife made for me - a higher vibrational foods. But I also know it's my constant interaction with these images of the light body and saying, that's the direction I'm going. And it literally manifests in a lighter body. That's part of the chain.
Corey: And you're just looking at the images. You're not doing this [holding hands up, palms out] in front of the computer, right?
William: Right. I'm not doing that all day. I mean, I'm just working with them all the time, and your values change. You just decide, "Okay, I'm really going to step this up, because it's very important." We are what we eat.
Corey: What we consume.
William: What we consume. And it really feeds the soul. We talk about this in my show "The Awakened Soul" here on Gaia – the importance of food as a vibratory input into the body and that kind of thing, and how the soul needs . . . it craves food. Just like the physical body, needs higher vibrational food, the soul also needs high vibrational food. It wants to contemplate its existence.

What am I doing here? How did I get here? How do I leave? These are the questions that the soul really wants to contemplate. And that contemplation is feeding it.
Corey: That's interesting.
David: Well, I want to point out too, one of the reasons why I chose to work here instead of taking other offers is that this network has such an amazing collection of health and wellness videos people can watch. A lot of people might only at first be interested in the surface information of, "Oh, I want to hear these sci-fi cosmic things about Corey being in space". But then eventually as you get into this, you start transforming.
William: Definitely.
David: And then that transformation is going to include body, mind and spirit.
Corey: And everything's tied together.
David: Yeah.
Corey: Everything's interlaced.
William: Right. Right.

David: So it's all part of that continuum.
William: It's the ascension. You know, people think the ascension has to do with becoming immortal, like you've got all these technology companies now that promise immortality. Google. You'll be able to live to be 500 years. We don't want that. We don't want immortality. We want ascension. We want the light body. And you can't get the light body through technology. That's a little ahead of our conversation right now.
David: Well, now William, I did a whole eight-episode mini-series on this really remarkable guy, the second Buddha, Padmasambhava.
William: Oh, yes.
David: And what I went through in that was essentially describing there was some leaked information from a man named Tulku Urgyen Rinpoche. He has a book called "Rainbow Painting" - probably the best book. It really gets into the data of how they activate the rainbow body, leaked from the Tibetan schools.

And one of the things he said was that if you can spend 13 years where every thought is a loving thought, which I'm not even on day one.
Corey: I can't go 13 minutes yet.
David: Ha, ha. But theoretically, if you can stay in that state of harmony and be meditating and so forth for 13 years, you activate rainbow body. You're done with your entire universal curriculum of evolution.
William: Wonderful. That's awesome.
David: And I know you've studied this too.
William: Definitely. Getting back to "The Awakened Soul" as well, one of the things I discuss in that series is the power of the sacred art and the image to trigger the light body within us.
David: Oh, wow. Wow!
William: It's an actual spiritual practice engaging the image and allowing that to trigger the blueprint within us for the light body.
David: Similar to the stained glass in the cathedral or merkabah.
William: Absolutely. Yeah.
David: Or a mandala.
William: Exactly. Exactly. And now we know the whole neuroscience behind this now, how it triggers the mirror neurons in the neocortex of the brain. The brain can't tell the difference between a real and imagined experience. So for example, if I'm looking at an image of Padmasambhava, as we're doing here in this thangka, in his rainbow body, that image is interacting with us.

And because Padmasambhava is a guru, an avatar, he can manifest through that image and activate our rainbow body. That's really powerful stuff.
David: Now, if we look at his body, we're seeing a vortex center in his head and another one in his heart.

William: That's correct.
David: Why do you think there's two instead of just one?
William: Well, for one, the swirling vortex at the heart is the open heart chakra, being of love.
David: Okay.
William: But then when you get into the detail of the image and you look into the forehead, look at the third eye. There's a blue sphere right there in the third eye.
Corey: Right where the pituitary gland is.
William: Exactly. He's meditating on the blue sphere or the blue pearl and then activating the blue sphere within himself that manifests as the rainbow body.

You know, one of the things about Padmasambhava that's so interesting too is that his name means “the lotus born”.
David: That's right.
William: And very often in this artwork, the lotus that he is born from is blue. And it's a Blue Sphere. So . . .
David: Incredible.
William: Wait a minute. Is it too much of a leap of the imagination to think that he's not born out of a lotus flower?
Corey: He came out of one.
William: He manifested out of a Blue Sphere, and that's why he's meditating on it.
David: Even to the point that you have angelic beings around the sphere, just like in the Christian and the Egyptian images.
William: Precisely. It's the same story over and over again. And so they're trying to get us to wake up to this concept by the repetition of it and just showing, “Okay, we'll show it to you from this angle. You didn't get it there, let's show it to you from this angle.
Corey: Through this tradition and through this tradition.
William: Exactly. And then when you put them all together, as I do in “The Awakened Soul”, now you get this comprehensive picture. And it says, “Okay. Wow! This is profound.”

They describe it as a universal teaching. And what I'm hearing from you is that It really is universal.
Corey: Yeah.
William: We're talking it being interstellar. I mean, it's throughout many star systems.
David: So it's clear now that we have Egyptian, Coptic, Renaissance. We've got Hindu.
William: Tibetan.
David: All these different things are showing a perspective on ascension that is rooted in Christ. It's rooted in these positive teachings of service to others.

So Corey, some of these mystery school teachings seem to have been . . . I mean,

obviously as William's so eloquently describing here, there's a really great spiritual, positive core to them.

But then in modern times, we see people doing human sacrifice rituals. We see people doing outrageously evil things, black magic on a global scale, trying to openly promote Satanism, trying to promote Lucifer as a liberator.
Corey: Right.
David: And they seem to think of themselves as gods. And they seem to think that if they practice their religion, that they will become gods.
Corey: Well, I mean the Blue Avians pointed out that they had delivered this message three other times.
David: Really?
Corey: And that each time when they left the message with us, we corrupted it. Apparently, the negative forces, if they find something that brings light, they do whatever they can to cover that light or distort it in some way.

A lot of times they'll take the beliefs and bend them and morph them with their own. Or they will do whatever they can to taint the beliefs that are out there among the populace, to pull out the nuggets of information like we're being shown here.
David: Well, when they're saying New World Order, they're not saying that we're all going to be levitating and loving each other, right? Their idea of a New World Order is pretty dark.
Corey: It's extremely dark. Yeah.
David: What do they want?
Corey: Well, different groups want different things. There is one group that wants to wipe out most of life. You know, we've heard of the Georgia guidestones. We've heard of the mandate listed there: “Bring the population down to a manageable level.” Real bizarre and . . .
David: 500 million people.
Corey: Yeah. Upsetting plans that they have.
David: All right. So William, I want to open this up a little bit, because Corey only vetted me out on the negative aspect of AI a year and a half ago, when we first started talking. You've been actually tracking a very interesting idea, which is there's an organic ascension that's the path of Christ, the path of the masters.
William: Right.
David: But then there's like this weird imitation of it that we may not even realize we are being steered into something that does change what it means to be human, . . .
William: Definitely.
David: . . . but in a very unusual way that most people really don't see how far this could go and how fast it could go there.
William: Right. Exactly.
David: So let's open that up a little bit.
William: Sure.

David: What have you found?
William: Well, I started back . . . it's kind of interesting, synchronistic, that when I really started coming into awareness of these Blue Sphere beings, or Jesus in the Blue Sphere and so forth, I was also doing research on what's called the Robe of Light. It's part of the Light Body Teaching. They describe the light body as the Robe of Light, the Robe of Glory, the Miracle Garment, and so forth. It's a garment. And it might be a tangible, actual physical garment, or it could be a symbol for a transmittable teaching.

Going back 5,000 years, I was seeing story after story of various figures that would put on this light body garment, ascend, but very often before they ascended, they would transmit this garment to a successor, like Elijah goes up in the heavens in a whirlwind, a portal. As he's going, he transmits this garment to his successor, Elisha.

So it's a transmittable teaching. Maybe it's a vibration or something that they're transmitting in this light body.
David: But a physical garment could be used in art to represent that.
William: To symbolize that. Yeah. Exactly.
David: Right.
Williams: And so this is 2002. The US government in that year releases a report. They had gathered all these high tech titans, giants, in Hawaii, major conference in which the US government said, “Here's what's going to happen. Between now and 2035, four separate technologies, bits, atoms, neurons and genes, – computer science, nanotechnology, neuroscience and genetic technology - are all separate disciplines and technologies.

The government is saying by 2035, we want all those four to become one. And it's going to be aimed at the human skin: the creation of a new human skin.

I'm thinking, “Wait a minute!” This sounds exactly like this robe I've been tracking all these years, like they're going to use this technology to create a new robe of skin for humanity. And the very first manifestation of this that I noted – and I documented this in my book called “Cloak of the Illuminati” - was at MIT, where they were building the super-soldier suit, the new suit of armor, the exoskeleton.

That's the first entry into saying, “Wait a minute. We are going to change the human body. We're going to . . . “ It's called transhumanism, of course, where we're going beyond human.

Whereas in the ancient world, they used to ascend by organically putting on this Robe of Light, now the US government was saying, “We're going to fuse these technologies into one, aim it at the skin, and now we're going to have a new version of humanity.
Corey: You know, I never made the connection with all the time I've spent with the

AI issue. I've never, and I've heard of ascension, of course . . . Everyone has. I've never made that connection of a mechanical or technological ascension.
William: Right. Right. It seems to me that we have in our core a desire, maybe even a program to ascend. And whether people at Apple, Google, and these other tech companies that are involved in this know it or not, they are answering this ancient call to transcend our flesh, to turn it into light.

And their version of this is, "Oh, yeah. We'll do that. It's going to be digital light."

And the problem with this is that if you go down this road, free will goes right out the window, because part of what Google's plan is is to create a synthetic neocortex. When we take their chip, we will link our brain, our neocortex to all 7 billion other neocortexes.
Corey: A true hive mind.
William: A true . . . In fact, Corey, that's exactly the word the government used in this report. They want to promote the idea of the hive mind once this technology is in place. So they laid all this out. And this is in my book "Cloak of the Illuminati". Anybody can go online and get that book.
Corey: When was this book published?
William: 2002.
Corey: Wow!
William: And then my 2003 book, "Oracle of the Illuminati", is where I started making the Blue Sphere correspondence. So I've been looking at both of these questions for the past, whatever, 13 years.

And I used to think, "Wow! Okay. So they're saying 2035." Now, what I'm hearing from people in my audience is it's not 2035. It's 2020 is what they're saying is when they were going to see this dramatic acceleration of this AI technology brought online.

And people are going to be required, mandated, to take this technology into their flesh. So I've been out trying to warn people about this and say, "Look, here are the choices that are ahead of us." And everybody has free will.
Corey: Right.
William: Maybe some people are going to opt to have this technology implanted. My feeling is that, where's the soul in this? Because what we're talking about here with these four technologies, bits, atoms, neurons and genes, are simply technological versions of earth, air, fire and water – the four elements that we're composed of.
David: Right. Well, I want to expand this a little bit, William, because we're saying that humans have a desire for transcendence. Right?
William: Yes.
David: There's a desire for ascension.
William: Yes.

David: And I think on some level, if we can maybe even make that simpler, there's a desire for an experience of the cosmic.
William: Yes.
David: And I think ultimately that's a desire for love. And when we get stuck in addiction, addictions are essentially a thirst for love, but we're getting it through some kind of substance or some kind of compulsive behavior.
William: Right.
David: And you look at what's happening with people with their smartphones now.
William: Yeah.
David: They're in love with the phone.
William: Yes.
David: They're being drawn into a virtual world.
William: Right.
David: Now, Corey, what is this AI agenda? I know some people might not have seen that show. They might be watching this for the first time. William hasn't heard this before. Is there an AI? Is there some ancient AI that has an agenda for us?
Corey: Yes. And this AI has fulfilled this agenda in multiple galaxies. It implants itself, usually through a Trojan horse, into our society.
David: What would that be, though? What's a Trojan horse?
Corey: Well, it would be . . . Let's say they had already overtaken another civilization. That civilization has gone through the end part of what I'm about to explain. They've created technologies, androids for the AI signal to inhabit. And then after they do so, it turns on them, just like in "Battlestar Galactica", destroys the flesh, and then takes over and then sends one of their spaceships that they've build to crash on, let's say on Earth, a planet like Earth, that happens to be just about at the developmental stage to where we're developing technology, and then boosts us to where they have a pond to swim in, because technology is the water that this fish swims in, and then repeats the process here – basically like a giant virus going from solar system to solar system.
William: So let's say that was the Roswell crash. They discover the beings on that are cyborgs. Then all of a sudden, from '47 to about 1960, they're researching all this. Then all of a sudden, what was it, 1961, '62, NASA puts out its first cyborg report. Guess what, kids? Flesh and blood can't inherit the Kingdom of Heaven. That's what the Bible says. There's a boundary.

Our flesh and blood bodies are too fragile to cross the barrier of space-time, to go out into deep space. So that means just like the beings in the Roswell crash, we're going to have to become cyborgs. And NASA initially puts this report out then immediately retracts it in 1962 and kind of says, "Oh, we were just kidding about all that."

But I don't think they were kidding.
Corey: NASA's known for being big practical jokers.
William: Yeah, right. This is DARPA today, where the Defense Advanced Research Projects Agency is feeding this technology into these corporations. And now we're

starting to see it at the consumer level, and people are beginning to accept it.

But ultimately to me, what they're trying to do is turn us into cyborgs in order to take us into space.
David: Now, William, you said something so provocative when we were on the panel with George Noory, and he also has a show here on Gaia. You said that these globalists have actually come out and said that it will be illegal to hold a body, that you will need to upload yourself into some sort of Facebook matrix or mainframe.
William: Yes. This is one scenario. What people don't realize about Facebook is how primitive it is. We're in the very first stages of it.

Mark Zuckerberg just yesterday was at a major conference where he proclaimed that Facebook is a quarter of the way towards its goal of having every single person on Earth online and connected to Facebook.

And by that time, what they have in development are super-computers that will take every keystroke, everything you've ever put on Facebook, every photo, every image, every keystroke will then be animated in a holographic kind of version of you so that your successors will be able to interact with you.
David: Wow!
William: It will be just as if you're sitting with this personal view of yourself. And ultimately, what they're saying is that this could be the scenario that to depopulate the planet, they're going to convince us that. “This physical body, you really don't want one of these things.”
David: “It gets sick. It gets old.”
William: “It gets sick. It smells. You've got to take care of it. What you really want to do is clone yourself. But then you really don't want to clone yourself either, because that's only temporary. What you really want, David, is you want an avatar body. You want a . . . We're going to scan the contents of your brain. We're going to create a perfect avatar version of yourself that's going to live in a simulated reality that's so much better than this one that you don't need to come back here. And you will live forever in this simulated reality.”

And they believe that this will be a choice that kids are really going to want to make. And they will gladly drop their . . .
Corey: The sad thing is with technology and compression, they could put you in this technology for 45 seconds, and you could experience an eternity. And then they could delete you and put someone else in.
William: Exactly. And so this is the great threat that's out there, that we're all going into this new game, that they're way ahead of us.

I mean, Facebook already knows that what you're looking at here is just so primitive. But they already know the plan is to be able to create these animated versions of you,

these holographic versions of you that will live in this simulated reality that you will want to go into.

Now the thing is that, will it be mandated? Will they be able to do that? That's the big question. Will the introduction of this technology, especially interfacing with our body, be by choice? Probably it will be for a time.

But the big threat is that it will no longer be choice after a few years. It will be mandated because part of Obamacare is that all of your medical records have to be in digital form. And I have been told by lawyers who wrote the law that on down the road what they mean is that that information will have to be inside your body in a chip form, . . .
Corey: Right.
William: . . . which is mandating that you have this chip. And they're going to come along with that and say, "Well, you know, you're probably going to resist that. But, hey, you know, your flimsy little single brain here really isn't that great, because what Google is developing is a chip that will link your brain to all other 7.5 billion brains on the planet."

And their promise is that you will now have this super-power of their synthetic neocortex, where you will have the power of all 7.5 billion brains on the planet.

This is like Satan taking Jesus up to the top of the tower and saying, "And all of this can be yours."
David: Well, I wanted to . . . You just picked up on what I was thinking. One of the other insiders I've been speaking to . . . He's not going to come forward. We're never going to get him on the show. But he's the guy that's been leaking information to Richard C. Hoagland for a long time. And he's given me some really big briefings.

And in his view, in his program, the people that are in that military space program, they believe - they're Christian – and they believe that the beast, that Satan is an AI and that it has to stay in electronic machine intelligence form because it can escape – and this is his words, not mine - "it can escape God's judgment".
William: Ah! Right.
David: It can be free. As soon as it tries to go into flesh, it becomes subject to karma, to reincarnation and to judgment.
William: Right. Well, what I've just described here with this long-term view of creating this avatar version of yourself, this digital version that will live in the simulated reality, that's the fulfillment of prophecy in the Book of Revelations about the emergence of a new human who will live in a new heaven and Earth. But in this case, it's a technological one, a simulated reality.

And whether these companies in Silicon Valley, the digerati, realize that this is what

they're fulfilling or not, I can't say. But what I've been trying to do over the years is to say, “Look, guys, some of this technology can be good.” But here's the thing. When we're dealing with bits, atoms, neurons and genes, as I said, that's earth, air, fire and water. What's missing in this is the fifth element, spirit, love.
David: Yeah.
William: Steve Jobs believed that he could infuse spirit into technology. Ray Kurzweil, Google's tech guru, believes they can do the same thing. I don't think so.

But my advice to people on this issue is that if you have developed your soul's capability to where you have the power of mind over matter, then in a life and death situation, you might consider interfacing your body with this technology – letting it under your skin. If you can't control this technology with the power of your mind, then never consider allowing them to put this technology under your skin. That's my advice to people.

So what I'm saying is, guys, it's time to uplevel our soul's capabilities.
David: We don't need technology.
William: Absolutely not.
David: Yeah.
William: Absolutely not. I mean, we have this organic circuitry already built in us. And what they're proposing in Ray Kurzweil's own words is “We're perfecting God's creation”. In their view, our body is an unfinished symphony. It's a cake that needs icing. And Google and Apple and all these companies are saying, “We're going to put the icing on the cake here.”
Corey: Well, actually, we've been looking at some of that technology in some of the images. I mean, to me, that's ascension technology, but of a spiritual type.
David: Sure.
William: Exactly. Exactly. So what I say to people is that we have two choices. You can become a pink elephant and stay purely organic, raise your soul's vibration, change your diet.
Corey: Who wants to be an automaton, you know?
William: Right. Or you can go gray, because this technology, I mean, the Greys were the ones in the Roswell crash, right? I mean, that's one of the theories. And they're the androids. They're the borgs. And as you so beautifully said, they could be the Trojan horse that brought this technology in – the transistor, laser, all those technologies that emerged from the '50s that have now culminated in this AI phenomenon.

How did we develop artificial intelligence in less than 50 years? I mean, come on.
Corey: Right.
David: Well, now Corey, you also said that this is a very widespread issue, that it's like AI versus biological. And it's gone on for eons, all throughout the universe.
Corey: It's gone on more than millions of years. It's gone . . .
David: So are the things that William is saying, is that the standard operating

procedure of this AI?
Corey: Yes. It's giving me the creeps. I'm sitting over here and it's giving me the creeps.
William: Yeah.
Corey: Because it's exactly . . .
David: Well, what's the endgame? If we did what . . .
Corey: He just gave the endgame.
David: But what happens to us if . . . Let's say some people decide, “Okay, I think I can handle this. I want to try it out. I want to have bulletproof skin. I want to be able to glow at night. I want to be able to have access to Facebook in my brain? What happens to us?
Corey: They begin to see flesh and blood beings as a virus or a threat that consumes all of the natural resources, doesn't live in symbiotic relationship with the environment or anything around them.

“What's their use? We should do what we do with viruses – wipe them out.”
William: Right.
Corey: “It'll be better for the planet. It will be . . . It's just logical.”
David: Right.
Corey: And then after that, they move on to another planetary sphere and repeat the process.
William: Right. And the answer to me is not Artificial Intelligence, AI, it's AI – Ascension Intelligence. We've got to link our consciousness with the Padmasambhavas, the Christ, because we can interface our consciousness with them. And I think as people go on this path, they're going to realize, “I don't need this technology after all.” And they start to move away from it.

And so I think that's the answer – is massively educating people about our organic ascension. And as you do that, you just decide, “Yeah, I don't need all this crap. I don't need the technology because I can do it myself with my own consciousness, with the power of my heart and my mind united. I, in my soul, is capable of doing all of these things that they're trying to mimic technologically.

And as Jay Weidner first introduced to me is this idea, John Lash as well, is that one of the keys that these Grey Reptilians, or the Grey beings, use is simulation. They want to introduce this technology in the simulated reality in hopes of snatching our souls from us, because as technological beings, they don't have souls.

It's the one thing you can't get from technology is a soul. And that's what they're looking for.
David: Well, on that note, William, I want to thank you for being here.
William: My pleasure.
David: This has been truly incredible information.

William: Thank you. Thank you, Corey.
David: Could you just again give us a brief description of what do you have for us on Gaia that people can check out and how does this tie-in to what we've been discussing?
William: Yeah. Thank you. My show is called “The Awakened Soul: The Lost Science of Ascension”. I'm going to take you through the beginning, middle and end of the ascension process . . .
David: That's awesome.
William: . . . giving you a real historical foundation to build from, some practical ideas of things you can use. It's based on the divine feminine as well as the masculine – a real balance. Lots of images that you're going to be able to really get this idea of ascension.

And if people want to know more about my views on this technology, they can get my free e-book from my website, www.williamhenry.net. It's called “The Skingularity is Near”. I've given it away free.

I intended that anybody who wants it just get it. Share it with as many people as possible, because most people are unaware of what we just discussed about, except the work that you're doing here and you guys have discussed it. We need to get this information out there so people are really aware of the choice that we're making right now, because there's no turning back, is there, Corey?
Corey: There's not.
William: Yeah.
David: Well, this has really been blowing my mind. I hope you've enjoyed it at home. We're going to be back next time with another episode of “Cosmic Disclosure” for you. I'm David Wilcock. Check out William Henry's new show, and we'll see you here next time.

Plasma Beings and Etheric Entities Season 5 Episode 6

Cosmic Disclosure; Plasma Beings and Etheric Entities Season 5, Episode 6

23 Jun 2016

David Wilcock: All right, welcome to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with Corey Goode, the insider's insider. And in today's episode, we're going to cover a broad topic.

We've only really been talking about extraterrestrials up until now that have biological forms, that would appear to have a hominid appearance. They might not be human, but they're human-like.

In this episode, we're going to talk about etheric beings and get into all the different avenues and roads that that leads us down. So,Corey, welcome to the show.

Corey Goode: Thank you.

David: I guess the first thing that we could start with, keeping it simple, is just a brief recap about . . . in Solar Warden you studied some beings that were apparently just plasma?

Corey: Yes, beings that lived off the electric field of Jupiter that were plasma-based that mainstream science would not even consider life.

Plasma Beings

David: The conventional biological view of life is that it has to eat. It has to excrete. It has to have locomotion. It has to have respiration.

Corey: Right.

David: And it has to have sentience. So how do you get eating, excreting, locomotion and sentience in these plasma beings exactly? How do they demonstrate signs of life?

Corey: They were definitely sentient. They showed signs of preservation of life. They did not like or appreciate being experimented on or having pieces of their bodies harvested for experiments. They would avoid craft coming towards them. So that showed a sign of intelligence.

They reproduced sort of like mitosis. And they used . . . I don't exactly know the form of locomotion they used, but they would travel through the electromagnetic field of

the planet.

David: Was there anything visible about them at all? Or are they almost completely invisible to the naked eye?

Corey: Almost completely invisible to the naked eye.

David: Did they have an infrared heat signature or something like that? How did you know where they were?

Corey: I don't believe it was infrared, but there was a type of imaging that they used that allowed them to, the scientists to, observe them.

David: Okay, I guess that's important because I had kind of seen them as maybe being like a glowing plasma.

Corey: It's not a giant plasma thing you can see with your physical eyes unaided.

David: Why do you think it was considered so important that you guys spent so much time going out and looking for these things?

Corey: It was new. It was science. And it was a science vessel.

David: Okay. Now, there's a whole science in the esoteric community. Jose Escamilla talks about the rods, things that . . .

Corey: Oh, yeah. Sky fish?

David: Sky fish, right. These things that sometimes seem to show up on cameras. Now, I'm not entirely sure. Sometimes I've wondered is that insects that are flying by, but they're kind of smearing out on the camera? So since we're talking about etheric beings, and that's a big topic in the alternative media, do you have any information about that one way or the other?

Corey: Not that one in particular, but there are similar type of plasma-type beings out in space. So I can't say that those aren't real.

David: Okay, there's a very important footage that I want everybody to see now. And we can roll it as I'm talking.

Video: NASA U.F.O. FOOTAGE (FULL VERSION) (17:52)
https://www.youtube.com/watch?v=8njYpyAkMp8 Uploaded on Sept. 3, 2011

This is footage from the space shuttle where there was a tether experiment to a tethered satellite. And they have this long, electro-conductive wire out in space conducting energy, electrical energy, to this satellite.

And as they did this, all of these spherical, glowing, orb forms, with kind of like a hole in the middle, cluster around the tether.

Now, a lot of people have called that a UFO sighting, but it looks like these are some form of etheric beings. What do you think we're looking at here?

Corey: That's most likely one of these life forms that live in the Earth's electromagnetic field. Every planetoid that has an electromagnetic field is going to be a part of their feeding ground as they travel around. And some of them spend their entire life cycle in one sphere.

David: Why do you think they would be attracted to a wire that has an extremely high amount of electrical energy running through it?

Corey: Their food source is the electromagnetic energy, and if it's causing some sort of pulse or is interrupting or pulling from that source, it's going to get their attention.

David: So they're feeding.

Corey: Yes.

David: Interesting. Do they go after satellites, like the geostationary satellites that we use for cell phones?

Corey: I've not heard of that, no.

David: What about craft, like the space shuttle or X-37B or space program?

Corey: I have not heard of encounters of them going after a spacecraft or collisions or any issues like that.

David: Okay. So far what you're talking about to me sort of sounds like an amoeba or a bacteria, a very primitive, very low-level life form of some kind. Are there any signs of advanced intelligence in these things? Do they do anything that suggests that they might be smart?

Corey: There was a lot of speculation on that. If they are highly intelligent, then they are not paying any attention to us or wanting to communicate with us, but it really seems like they are focused on just living out their life cycle, reproducing, just having

their life cycle.

David: So it's almost more like a bacterial life.

Corey: Right.

David: Okay. So this topic of etheric beings goes in a lot of different areas. We've also . . . To go to the far opposite end of the spectrum, you said that the Blue Spheres themselves were explained to you as some type of etheric being, not a technology.

Corey: Right. It's not a technology. It was explained that they are the highest density of the Sphere Being Alliance. They said they're said to be ninth density beings that appear as orbs or spheres. And the size does not matter. I mean, it can be the size of a ping-pong ball, or it can be so large that it can contain an entire solar system.

David: Right. That level is going to be difficult for some people, because we tend to think of intelligent life as having a body. Where is the dividing line between biological life and etheric life?

Corey: If it's sentient but doesn't have a corporeal body, then it's going to be etheric life.

David: Okay. But specifically, do these etheric beings start out as biological and they graduate into energetic? Or are there beings that have an entire lifecycle that remains energetic the entire time?

Corey: The answer is both. Some of them have had a physical body. Some of them are said to be from somewhere called the outer realm, or another reality or something. So it's a combination. There are a lot of different types of non-corporeal beings.

David: Let's talk a little bit about some of the negative ones, because that's obviously something we want to get into. One of the topics that we had on our list for this episode was shadow beings. So what are shadow beings?

Corey: Well, shadow beings can be several different things. A lot of times when people see shadow beings, they are beings that are coming in to observe them. Or they can be beings that come in that are trying to cause fear so they can feed off of the loosh or the energy from the fear. And some of them are entities having an out-of-body experiences to do the same thing, such as Reptilians having out-of-body experiences, visiting people, and scaring the bejesus out of them so they could feed off of the energy they release.

David: So there's a shadow that people see? Just walk us through what someone

would experience if this happened to them.

Corey: Okay, well, this is definitely first-hand knowledge. A lot of times out of the corner of their eye, they will see the shape of a human walk by or duck into the next room real quick. And, you know, you'll jerk around and look and just miss it.

Shadow Being

And it's happened with my children. They've seen them to where my daughters looked up, and they just stay there and let her observe them.

David: Like a silhouette?

Corey: A silhouette of a human.

David: What does it look like? Do you see a face? Do you see skin?

Corey: Looks like a three-dimensional shadow.

David: Just a shadow? Okay.

Corey: Right.

David: I spoke to a lot of people 'who took LSD', and 'other people' who I spoke to told me that they would see these things quite often. So do you think that when people take these mind-expanding, psychedelic drugs . . .

Corey: Yeah. It drops the veil.

David: . . . that it makes these things more visible?

Corey: Uhm. Yes. And that is one of the things that they experimented with, giving people psychotropic drugs, trying to find out what they will experience, what type of etheric beings they may encounter and, depending on the person, what's going on in their life, whether they're positive or negative oriented, they may experience negative or positive etheric beings.

David: What would someone actually go through if they had a positive etheric being experience?

Corey: A lot of times they'll be given spiritual knowledge or teachings or just real blissful emotional feelings.

David: Okay. So what is the agenda of these negative beings? When they're appearing in front of people, what's their endgame? What's their goal?

Corey: Some of them are there just to feed off of your energy. Some of them are just there to observe. And some of them have been put there as entity attachments by people using like dark magic, like people in the Cabal.

If they can't control somebody by using mind control or using other methods, they will use entity attachments and use those to cause people to go into reactionary states of mind.

David: Okay. So this is actually a really, really big topic.

Corey: And they also use these entity attachments as gatekeepers when a person starts to . . . If they can't keep a person from accessing memories, they will use them as gatekeepers to where if they try to talk about the memories, the entity will cause them to go into all kinds of anxiety attacks or any number of things.

David: What is the relationship between trauma-based mind control, psychotropic drugs and the use of these entities? How does that actually work in this MKUltra technology?

Corey: Well, they use a combination. They're going to use all of the above on people, but different people are resistant to the three things that you mentioned. They usually use them all together to get the desired effect, because using just one is not going to do the trick.

David: Okay.

Corey: Using trauma is also one of the ways that they implant these entity attachments. Physical, sexual trauma is one of the ways that they use to implant these.

David: Does the trauma make someone more receptive to an entity attachment somehow?

Corey: Well, the trauma itself is the glue that binds.

David: Okay. What is the type of being that is going to do this? Are you saying that these beings that are attached to people, that they just live inside that person? That's their whole life is like a parasite in a host?

Corey: Right. Yes.

David: Do these beings have multiple people they live in at the same time, or do they focus on one?

Corey: I don't know the limitations that these etheric beings are under . . .

David: Okay.

Corey: . . . but yes, they're definitely assigned to people and will be dedicated to whatever they are assigned to do. So if they're assigned to a person to keep them from talking about certain topics, they will be very dedicated to that, and any time the person even tries to broach the topic, they will be thrown into whatever this entity uses as a tool, a panic attack or go into confusion or fall asleep.

David: We hear multiple stories of shamanic practices saying that these entities anchor to certain parts of the body that might have pain or might have disease conditions or kind of like a rottenness inside the tissue, some kind of putrescence. Could you talk about that a little bit?

Corey: The information that I saw is that some of these entities can also cause people to have, over time, cause them to have tumors and weird things that show up in their body where the attachment is. That's definitely in line with what I heard.

David: So we have different words for these kind of things. I've heard them called engramic memories. I've heard them called somatic memories. Massage therapy gets into this. Acupuncture gets into this. Can you just personally confirm that these entities do anchor to certain parts of the body and that there would be usually pain or disease conditions in that particular area?

Corey: Yes. They're going to be anchored to different parts of your energy field. And when they do, they're sucking energy from your body, and that is making you ill. And in that area, you will have a physical manifestation, and it can be pain, it can be lesions, it can be any number of things.

David: But what did you hear about how to actually solve this? This is going to freak people out . . .

Corey: Right. Right.

David: . . . and I'm trying to give them some hope here.

Corey: Well, I do know that shamans have figured out a way of getting rid of them. And it's something that Western medicine doesn't even consider in any equation if a person is ill or having psychological issues or anything. They're not going to consider

that at all. But shamans, that's going to be one of the first things they're looking for. They're looking for . . . there's something spiritually that's manifesting itself physically.

David: What do you think about the Native American strategies of burning either sweetgrass or Palo Santo wood or sage to create some kind of smoke that makes it less friendly to these entities?

Corey: I think that probably something's happening to change the vibration, to make the vibration sort of putrid for these entities to where they can't co-exist with it. I don't think it's the actual smoke that's making things uncomfortable for them. It's more of a change in vibration and energy related to the burning or the use of these items.

David: Well, that mirrors what's actually said in "The Law of One". They mention two strategies. One would be hanging up garlic if you think that there's entities in a room or you're moving into a new space and you're worried about entities being in there. Crushing garlic, and really the intent being that you set your intent that that's driving them away. And then the garlic becomes a focal point for your intent.

Corey: We don't understand the power of our co-creative consciousness. You can will them away. But if you're told you can't and you're convinced you can't, then you won't be able to.

David: And another thing that "The Law of One" said is to pour salt along the doorways and the windows and then charge that salt with the intent of the purest love vibration, and that will block entities from being able to get back in once you drive them out. Do you think that the salt crystal, as it's explained in "The Law of One", could have some sort of storage capacity, some sort of vibrational ability to hold the intent?

Corey: That's absolutely possible because crystals are used to store all sorts of information, information as in data and information as in actual beings can be stored in crystals.

David: Now, let's talk about the pyramid for a little bit. You saw some of my episodes in "Wisdom Teachings" about pyramid technology.

Corey: Right.

David: When people go into the Great Pyramid, this technology apparently was made by an earlier incarnation of the Sphere Beings. If you believe the Sphere Beings are the Ra of "The Law of One", they built the Pyramid. So you have this sarcophagus, and the idea is that you go through a purification ritual. Someone's holding a crystal.

All of these negative karmic attachments that you have, actual entity attachments, are purged in the pyramid as a result of going through some sort of psychodrama where you have to forgive the negative things that happened and forgive yourself and forgive the people that hurt you.

So if that's such a big part of the technology, is there a psycho-emotional component to these entities? Are they attached to us because of our unwillingness or inability to forgive?

Corey: Yes. Emotions have energy, and that energy will have, I guess, sort of like mass. And that is something that these entities can hold on to and use as an anchor.

David: Like a food almost.

Corey: Used like an anchor as well.

David: Right.

Corey: And when you let go of that emotion and energy, they don't have that anchor any longer.

David: The main place in “The Law of One” that these entities get attached to us is in our digestive system. Because with all the bends in our intestine, you have this impacted material that's waste products that could be in your colon for 20 years. And those entities can live in there.

Now, you've been going through a really phenomenal transformation yourself. You've been losing a tremendous amount of weight. And it all happened after you touched hands with Kaaree, is kind of how I'm seeing it. Something has been changing in you. So do you think that your own weight loss . . . Do you feel as if you've had a deliverance from these entities to some degree, that you've shed them?

Corey: Well, I definitely went through a period when I first was starting to discuss everything that we've discussed in this show . . .

David: Before we did the show.

Corey: Before we did the show. Before I even really began to tell you all the deep details of all of this. I had the memories. I could revisit the memories any time I wanted, but if I ever tried to verbalize them, I would start stammering. I would get very anxious or very tired and forget I was even going to talk about it.

David: Wow!

Corey: I ended up doing a remote viewing of my light body, and I visited this orb that was in my light body. And with my mind, I wanted to see inside of it, and about a quarter of it went clear. And I saw what looked like almost like a frog sitting all curled up inside this little sphere – inside my light body - but it's head was squished.

It was like a frog with its head kind of longways like this. And the first time I saw it, it freaked out, and it said, “You'll forget me.” And I forgot it.

David: Wow!

Corey: And so I was unable to talk about this stuff until I was able to go through the process of going through a deliverance of getting rid of the entities. And I did it using my background and the knowledge I knew by calling on the name of Jesus. And that's all I knew. And when I did, I actually with my physical eyes saw things just – fwoo, fwoo, fwoo, fwoo – leaving me.

David: Wow! That's crazy.

Corey: Like I actually saw shadows leaving me. And afterwards, I could talk about it. Overnight, I could talk about it.

David: This is interesting, because multiple insiders I've talked to . . .

Corey: It gives me . . . Just talking about it now just really gives me the shivers.

David: Multiple insiders I've talked to, you try to get them talking about certain subjects, and they immediately start falling asleep. They get distracted. They go on tangents that have nothing to do with the question.

You wait 20 minutes before they let you in, and then you try again, and they go off and do it again.

Corey: And it's one of the things in the Secret Space Program, even. These dark practitioners will attach entities to people to keep them from talking about what they're not supposed to talk about or looking into things that they're not supposed to be looking into - to keep them in line, to control them.

So these dark Cabal-type people, they use these entities as tools.

David: Would you agree that doing things like exercise and healthy diet can help to cleanse this stuff? Is that part of what these Sphere Beings have told you to do?

Corey: Yes. When you are eating higher-density foods and you're keeping your body,

I guess, in shape and cleansed, all the toxins out, there aren't these lower-density particles or areas for them to hold onto and use as an anchor. And you are also . . . They are not compatible with your energy any more.

So having a high-vibratory diet and making sure that you're trying to put yourself in a positive environment as much as possible will limit their ability to hang on.

David: Some people watching this show, “Well, I don't have any entities. I'm clean.”

Is that a natural thing that the ego is going to want to say, that you're totally free of these entities? How widespread is this? Does everybody have some attachment at all times?

Corey: Most people have some sort of either attachment or some sort of connection going on. If you have any trauma, physical or mental trauma, that affects your daily life, then there's a very good chance there's also an entity involved. Not always, and this is not something that people need to completely dwell on, either.

If we begin to change our diet, do the things to make the changes in our self, forgiving others, forgiving our self, that releases the energy that these emotions have created, and these beings will not have the ability to hang onto you.

And the Blue Avians have made it clear that here in the future, with the solar events that are happening and the energetic changes, these etheric beings are not going to be able to stay in our reality. They're going to be 'pushed back out to the outer realms', is what they said. They just will not be able to co-exist with us any longer.

David: What will happen to the people who are the hosts for those beings?

Corey: Good question. Everyone has someone in their life that, I guess, sort of will treat them badly and get off of . . . I guess sort of like a vampire. They'll vampire off of you.

David: Sociopaths, psychopaths.

Corey: Sociopaths, that kind of thing. A lot of those people have entity attachments, and these entities are in a symbiotic relationship. These people are being sociopaths, mistreating people, drawing their energy.

This energy is going up to that entity, and the entity is sharing it with the person that is hosting the entity. If the entity is removed, the person goes through withdrawals, just like a heroin addict would if they went cold turkey stopping the drug.

David: So is there any last thing you'd like to leave people with as far as . . . First of all, let's not demonize this, right? This is something that happens almost to everybody.

Corey: Right.

David: So it's not like we want to start turning against people.

Corey: Yeah, you can't start pointing fingers and saying, “You have entity attachments. You have entity attachments.” Everyone's going to be affected on some level by this.

David: But it is possible to use these spiritual teachings to purify yourself with diet, consciousness, and become far less affected by this than . . .

Corey: Right. And it's a daily struggle, because you're going to run into people on a daily basis that are infested, and you're going to have to fend them off on a daily basis.

David: Did these Sphere Beings say that eventually all these entities will be gone as we go through this ascension process?

Corey: That's what they said. They said that the energy changes that are occurring were going to be incompatible with these entities, and they were going to be driven back to the outer realms where they came from.

David: Well, that's awesome. Well, that's all the time we have for in this episode. Very interesting stuff. The power is in your hands. And I'm David Wilcock. This is “Cosmic Disclosure”. I thank you for watching.

Veiled Threats and Open Disclosures Season 5 Episode 7

Cosmic Disclosure; Veiled Threats and Open Disclosures Season 5, Episode 7

06 Jul 2016

David Wilcock: All right, welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock, and I'm here with Corey Goode. And you've been asking us and asking us and asking us for this, so this is the moment you've been waiting for. We are getting right down into it with the new updates, what is going on since we last were talking to Corey about the latest, greatest things that he's been experiencing.

And so I'm going to bring you up to date with where we were so that we have some orientation, you understand the jumping off point that we have, and where we're going.

How are you buddy?

Corey Goode: Doing well, thank you.

David: All right, cool. After you got through this epic tour of the Inner Earth, you met Kaaree, you have the library, you didn't immediately segue into telepathic contact with them, in fact, I remember you telling me you did not want them to contact you telepathically. You insisted . . .

Corey: Right. Yeah, I . . . Kaaree communicated with me through a telepathic teleconferencing kind of situation. And I have always demanded face-to-face contact, because there's too much that can happen with the information – you can be tricked, who knows.

David: Could you just describe what this telepathic teleconferencing was like? What did you experience?

Corey: Yes. It was like we were pulled into a area. I was not . . .

David: Well, who's “we”, first of all?

Corey: Well, she originally contacted me herself. It was just her and I.

David: And this is in your house, like you're lying in bed?

Corey: I was lying in bed, yes.

David: Were you told that you were going to have a meeting?

Corey: No.

David: Okay.

Corey: It was a surprise.

David: And was it the same time that you would usually have these meetings with Blue Avians, like 1 o'clock in the morning?

Corey: No. I don't even . . .

David: It could be any time.

Corey: Yeah, it doesn't matter.

David: All right.

Corey: And after I made that comment to her, she just kind of smiled at me like I was a child and said, “Before long all of your people will be communicating in a similar manner.”

David: So she just kind of dusted off your concerns about there being some sort of AI influence or Cabal influence, Draco, tampering with it.

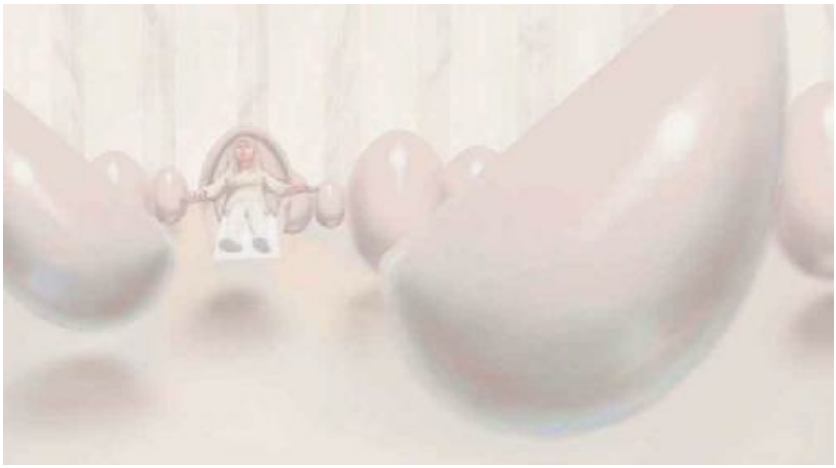
Corey: Trickster beings, whatever. Yeah.

David: So could you just please describe for us a little bit more about . . . Is this like a discontinuous, out-of-body experience?

Corey: It was very similar, yes.

David: Really?

Corey: When I would look at her, she'd be sitting in one of those egg-shaped chairs.



David: Right.

Corey: And I would just be standing there. And this kind of . . . I don't even know how to describe it. It's like a teleconferencing kind of room where you're kind of meeting. And we would converse. Other times . . .

David: Almost like in “The Matrix” where Neo and Morpheus show up together in this white room.

Corey: Yeah.

David: And they're projected into this, but they're able to have this conversation.

Corey: Right.

David: Interesting.

Corey: Yeah, similar to that.

David: And was there any equipment in this teleconferencing room?

Corey: No.

David: How big was it?

Corey: Well, the room seemed to just go on. It was . . . It went off into like light. I

couldn't see walls.

David: Wow!

Corey: I couldn't see corners of the room. And the only equipment, I guess, in the room would be the egg-shaped chair she was sitting in. And she communicated with me mentally back and forth as we were together in this . . .

David: What did you talk about exactly during this meeting?

Corey: She was kind of . . . This was kind of a breaking the ice kind of showing me this new way of communication. And she let me know that Gonzales was staying with them. I wasn't given a reason. And he was down in the Inner Earth in their city living with them for a number of weeks.

David: Okay. Was there any contact that you had with the Blue Avians or with the Inner Earth beings after your Inner Earth visit before this meeting in what we'll call "the Construct"?

Corey: Most of my communication occurred with . . . It was of a personal nature with both Kaaree . . . I was brought down there another time, and also with the Blue Avians. It was more of a personal communication.

David: Okay. And from what I recall, it was after your visit with the Inner Earth in particular that harassment started to take place on a higher level.

Corey: Yeah. That and after I was starting to put forth information about there being a partial disclosure narrative that was coming and that some of the lower-level Secret Space Program had broken away from the Alliance and were now going to be a part of this program that was going to eventually going to be revealed to the public of the lower Secret Space Program. And I was speaking out . . .

David: I thought the lower Space Program was not a part of the SSP Alliance.

Corey: No, they had representatives.

David: Oh, they did

Corey: Yeah.

David: Okay.

Corey: Yeah. Not all of the different programs that . . . like DIA, all these different

groups. Not all of them knew what was going on. There was a select few in the group. And they were breaking away while working inside their group, unbeknownst to the people they were working with.

David: So when did the first Chinook helicopter fly over your house? I think that was around this time too, wasn't it, like November of 2015, something like that? I think it was.

Corey: You know, it was November, December. The Chinook, yeah . . . I came out and I kept hearing this thwop, thwop, thwop noise. And I look out my window and the place that we're staying, the swimming pool, the water was just kind of all vibrating. And I walked out the door, and I look up, and there's a Chinook helicopter directly over my house with a guy.

I see a helmet looking out the side of a service window. And I couldn't believe it. I ran back in the house. I grabbed my phone, came out, was trying to get it all going. And they saw me get my phone ready, and they started to take off. And I caught it on video.

And I started videoing right as they were lifting off, turning, and then they did about three more revolutions of my house after that.

David: Are you near a military base? How far away were you from the nearest military base?

Corey: Well, the formal Carswell Air Force Base is in Fort Worth. It's about an hour away. But they . . . Very seldom are helicopters housed there.

David: And that's where you went as a kid?

Corey: Right.

David: Yeah.

Corey: And then we have Fort Hood, which is more like five or six hours away. And they have a large contingent of helicopters there.

David: Okay. You also mentioned something to me that was so sensitive that up until recently, you did not want to talk to anybody about this or disclose it publicly. But now you've given me the go-ahead to do so and that is that, I don't know if it was this time or another time that one of these helicopters came overhead, that as it's flying around, you're seeing what on your chest?

Corey: No. That was something different. I went outside with my son, and we were walking around in the backyard because he wanted to go outside. And I'm looking down at him, and I see something right here. [Corey points to his chest area.] And I look and it is a green laser dot on my chest. And I was out there with my son. So it was pretty upsetting. I nonchalantly put my hand on the back of his head and guided him back towards the door and said, "We're going inside." He didn't . . . He just got out. He was wanting to play. He didn't want to go inside. I was like, "We've got to go inside."

And I didn't tell my wife about it, because she's been dealing with a lot of emotional depression and stuff because of a lot of this stuff.

David: Now, you also described seeing suspicious activity outside your house, people walking around in black clothes, cars that were parked in the road, and then you'd look at them and they'd zoom off.

Corey: Yes. I was walking through the house. I keep weird hours. It was real early in the morning. And I look out and out by the stop sign and street sign, there's a guy all in black standing there holding something in his hand - I don't know what it was – looking at my house, just looking around.

So I don't know if it was some sort of operative or a thief casing the neighborhood, but it got my attention with everything else going on.

David: Now, also sometime during this period of the winter of 2015, you called me up and told me that an anomalous object appeared in your kitchen.

Corey: Yeah. We come and there's a Marlboro cigarette. It's just sitting out on our table. And that's been used as a warning in the past that people come in and they put a cigarette.

David: And you mentioned the Mafia, that this is like a Mafia or has been a Mafia-type of thing.

Corey: Yeah, a syndicate kind of thing. Yeah. To where . . . It's one of many ways that they'll send small warnings and let you know they can get in your house.

David: And is it like a message that you could be "smoked", quote, unquote?

Corey: Pretty much. Yeah. Also, threats . . . It comes as threats of burning your house down. We can get in your house any time. We were in, you didn't know – to make you feel totally disempowered that at any moment someone could pop out and take you out or burn your house down when you're asleep.

David: Now, right in the middle of all this going on, Gonzales is seeming to be telling you that they wanted to fast track this partial disclosure, right? This isn't something that's going to take a long, long time.

Corey: Right.

David: They're potentially getting ready to make a big move.

Corey: Right. That was the biggest part of the negotiations between the Earth Alliance and the Cabal groups. They were hashing out how they were going to do a disclosure, if they did end up coming together with a common goal. And how much they would release, how they would release it, and they had a whole plan laid out. Well, they had several plans laid out for a partial disclosure.

And one of them was the disclosure of the lower Secret Space Programs.

David: Some people watching this show are going to have trouble understanding why would the Cabal want to disclose anything for any reason at any time?

Corey: They don't have a choice at this point. They are on their way out. They have had - the Cabal groups - have had people defect, bringing extremely sensitive information with them over to the Alliance. They are at a point to where they're just trying to negotiate from a point of weakness while feigning power.

David: What's the next noteworthy thing that takes place with any of this stuff that we've been talking about, Gonzales, the beings, the Anshar, etc.?

Corey: Well, I was still having these etheric conference calls. And the rest of them . . . Kaaree would be in one of these egg-shaped chairs and so would Gonzales.

David: Really?

Corey: Yeah. They would both be sitting . . .

David: In 'the Construct'?

Corey: In 'the Construct'. And we would have meetings that way. Gonzales started behaving very strangely. He was making real smart comments, derogatory comments. And his attitude was just horrible towards me. And it seemed to happen overnight. And I did not know why. And I was given no explanation as to why he had been residing with the Anshar for a number of weeks.

David: So you found this out in the course of these meetings that they had with you?

Corey: Correct.

David: Other than him being snide, what was the content of these meetings? What was actually being discussed?

Corey: There was a discussion of upcoming meetings that we would be having. And Gonzales was delivering messages from the SSP Alliance and confabbing with me about the data that he was giving me. And he was giving me some partial briefings. They seemed to be a lot . . . There was a lot less beef in the briefings than there used to be.

So I felt . . . I could tell that he was trying to squeeze me out.

David: So by this point, you have also apparently been pulled in by this lower level SSP group, but we haven't actually discussed that yet. And I know that you're reticent to want to talk about it because it was very upsetting.

Corey: This was different than anything else I'd ever experienced. My first memory of what was happening is I was walking . . . and there was a parking lot behind my house for a stadium. And I was walking barefoot with people around me, military people around me, walking towards a craft that was parked in this parking lot.

David: I don't understand. Did people come to the door, knock on your door and say come with us?

Corey: I don't know.

David: You don't remember?

Corey: All I remember is walking up towards the stairs to go up onto the craft, seeing a partial view of the front of the craft. It reminded me of these stealth boats or ships that the Navy has a little bit – how it was angled. I remember walking up to the stairs. I don't remember going up the stairs.

And then the next thing I know, I'm sitting in a fold-down chair inside a craft, and I'm strapped in with a harness.

David: Okay, now the first image that we have is just of the room itself. We have these bunk beds over on the left.

Corey: That fold up against the wall.

David: Right. And there's what looks like IVs of some kind on them. Then we have these chairs that look like flight chairs with seat belts on them.

Corey: Right.

David: So could you describe for us what this image is that we're seeing right now?

Corey: This was the small area of the craft where they interrogated me. And it was a bit tighter spaces than the image shows. It's a little bit spread out. It was a little bit more cramped. But, yeah, the bed. They had IV posts that folded on the side of the bed. And they popped one of those up and stuck an IV in my hand.

David: Now, we have another image here in which now we're seeing you strapped into the chair. And there is a military man standing in front of you, holding out what looks like an iPad in his hand, and you're looking at the iPad.

Corey: Right.

David: So could you explain for us what this image is describing that happened to you during this meeting?

Corey: This group . . . There were two that were working on me.

David: Two soldiers?

Corey: Two . . . And they smelled of Air Force. It just felt like that branch or they came from that branch.

David: Okay.

Corey: There were two that were working on me and one that was coming and going. And he would come in and ask them questions. And they were in the process of taking hair samples. They were scraping skin. They took blood. And they were saying that, “If he's been where he said he's been, there'll be trace evidence, and we can tell.”

David: So they actually know how to measure these off-planet locations by trace elements that would appear in your hair and blood and skin scrapings?

Corey: That's what they said.

David: Interesting.

Corey: One of them began telling me, “You know that all of these beings are not really aliens. They're just us from the future from two different timelines.” And I couldn't really respond. And he was saying that the Nordic type of people are us from the future. And these little grey beings are us from a different timeline in the future.

And they are coming back to try to fight over the timelines. And they were stating that the Greys, their genetics had broken down so badly in the future that they were coming back to get genetic stock as well.

David: So they've been trying to push this on us for a long time.

Corey: Right. Yeah. This . . . You know, and I really couldn't respond in the state I was in. And with the iPad, I did not recall this immediately, I did not recall this part until later.

The guy that was holding the iPad in front of me first sat there and he started going through all of these different like Scandinavian, German, and all these different phrases for different programs. They were going to see if I was going to be triggered.

David: As in like MKUltra mind control stuff, trigger words?

Corey: Yeah. Yeah. And also tones, like a series of tones or a series of words . . .

David: Really?

Corey: . . . in different languages. And they went down a whole list. And all of that I was able to recall.

David: So nothing caused you to go into some mind control state?

Corey: No.

David: Yeah.

Corey: So what occurred next . . .

David: What did they feel when they . . . What were they looking for by running these words on you?

Corey: Well, they were looking to see if I was triggered. They were already a little . . . Their eyebrows were raised a little bit already when they strapped me in and before they drugged me, they were starting to power up the craft to take off. And I didn't normally hear this in other craft. I heard like rotors starting to turn all around me, but I couldn't see them. And they felt like they were under. And the craft started to vibrate a little bit.

Then I heard that distinctive sound of when a capacitor is charging or discharging. And I felt when we started to leave, I felt a little inertia, which I normally don't feel. And I made a comment to them that this must be one of the older models because I'm not used to these sounds and sensations.

And they just kind of looked at each other kind of puzzled.

Well, we're skipping ahead a little bit with the iPad because I hadn't recalled what had happened. But they put an iPad in front of me that had a little camera on it somewhere that was watching my eye. And I was drugged. And I was hanging down and my head was like this. [Corey's moves his head so he's looking down at his stomach.]

And they held it under . . . Like hovering above my lap, they held this iPad kind of machine. And they started going through all these photographs, six photographs per screen – three on top, three on bottom – and they looked like academy photos – military academy photos.

David: When people graduate and they've got the full uniform on, and they got the

flag behind them. That kind of thing?

Corey: Yeah. The flag's behind them, different symbols behind them or seals for branches of military. And then there were people that were in suits as well as they were going through.

And I was looking at it. And as they would go through, they would pause for a second. If I looked at one of them and recognized one of the pictures, it highlighted red. And this occurred three times. There were three people that I recognized out of all of the photos. And it turns out one of them was Gonzales.

David: Wow!

Corey: Yeah.

David: Now, when you say that some of these people were wearing suits, why would they not be wearing military uniforms?

Corey: I don't know. They could be contractors. I have no idea.

David: Intel people perhaps?

Corey: Yeah, or . . . Yeah, intel people, politicians. I have no idea who the people in suits were. And they had flags as well.

David: But you didn't remember outing Gonzales until much later?

Corey: Right. Because I did not understand why he was being so hostile towards me in our meetings. He was being very rude.

David: Now, you also said in the course of this interrogation that they kept telling you, “You will forget. You will forget.”

Corey: Right. Well, one of the people, the guy that kept coming in and asking questions, they were like, “Are you sure he won't remember this?” And the person that had the laptop was like, “There's no way. It's like class something amnesiac” or something. He said that it's like an anesthetic when you go to surgery.

David: But somehow you, maybe because of the same powers that allowed you to not be blank slated after your space program service, this actually did not work on you.

Corey: The data came back a little differently. It came back in chunks. And then I had to marry them together. And once I put the unsegmented memories together, then it

just all started tickling down and opening up for me – all the memories.

But I did not remember the outing of Gonzales and two others until the Anshar actually told me in a meeting after Gonzales had worn out his welcome in the Anshar city he was staying.

David: These guys . . . Did they think you were a fake or were there things that were shocking to them?

Corey: Well, they didn't understand because the information I had been giving was accurate. And they didn't understand how I could be giving accurate information when according to their records, there were no records about me in all of these program files that they were looking through.

So I think they were trying to investigate and find out more.

David: Do you think these guys were aware of compartmentalization and the higher-level Secret Space Program, or did they think they were it?

Corey: They thought they were it. But they were aware of compartmentalization. But their egos had been played too. They'd been told, "You're at the top of the totem pole. This is all there is."

David: So you have this interrogation. And now let's go back to the meetings in "The Construct" with Gonzales and Kaaree. You said you identified three people, but you didn't know that anything had changed.

Corey: Right.

David: However, and I remember talking to you about this, it was of deep concern to us because your briefings used to be quite thorough and now they've gotten almost down to a trickle.

Corey: Yeah, very sparse in data.

David: And Gonzales . . . His whole attitude and demeanor towards you changes.

Corey: Right. Yeah. He was just making snide comments, little rude jabs, and I didn't know how to respond because it was totally out of character for him. He normally was the one pushing to get more intel to me instead of holding back information.

David: What did Gonzales say during this time about the war for Full Disclosure vs. partial disclosure? Because I know some of that was starting to come out.

Corey: Well, yeah, our conversations all throughout were dealing with partial disclosure, their ideas on how I should proceed to get people together and to focus and that kind of thing.

David: Right. Did Gonzales say that there was still a possibility of Full Disclosure, or was it like partial disclosure was now going to take over?

Corey: The Alliance believed that partial disclosure would be very difficult to do with all of the data that was out there.

David: Because they'd have to fly in the face of all these high-quality whistleblowers who are already on public record.

Corey: Right. And people would start asking all kinds of questions.

David: and then it just unravels.

Corey: Right. Kaaree had stated that he was behaving very erratically. He was constantly pacing off steps and making mental notes, like he was doing intelligence-type gathering.

David: Like he's trying to create a map in his head of the base that he's in?

Corey: Right. Yeah. You normally count paces.

David: Okay.

Corey: And this store had so many paces down this corridor. That kind of thing.

David: And, of course, these people are telepathic so they know exactly what he's doing. You can't hide anything.

Corey: Right. And apparently he was also going into restricted areas, wandering into restricted areas when he knew better.

David: Wow! But did you know why he was in the Inner Earth at this point?

Corey: No, I had no idea until he had already left and went back to a Kuiper base. And Kaaree had one of those, I guess, etheric conference calls with me and had explained that Gonzales was not staying with them anymore, told me a little bit about how he had worn out his welcome, and then that's when she opened my eyes to . . . that I had outed him and two others.

David: Okay. I got to ask you this because a lot of people are going to be writing in these comments otherwise. Why in the hell, if the Blue Avians can pull you out of Mars when you're about to be killed on the Mars base . . . We did that episode already. Everybody's seen that. Why in the hell do they authorize you to get pulled in?

And if Gonzales ends up getting angry at you about outing him, how could you have defended against this technology? I mean, you're drugged. You got abducted. You don't remember how it happened.

Why would this be authorized? What was going on here?

Corey: Well, they later on, it was explained to me by the Blue Avians that these incidents needed to occur.

David: Oh, really?

Corey: Right. That it was . . . That they were all catalysts for other things to happen.

David: Let's talk a little bit about what Gonzales' role was. How critical was his role to the SSP Alliance?

Corey: Well, he was living down here on the Earth a good deal of the time under a cover life. And while he was here, he was interfacing with some of the Earth Alliance and some of their operatives that are down here.

And when he was very quickly removed, basically rescued by the Anshar, he was unable to fulfill those duties anymore.

David: Would you say that these lower level SSP people that abducted you were reporting back to the Cabal?

Corey: I assume that. But I don't know if that was an unauthorized series of missions they did trying to figure things out, get some intel themselves.

David: Why do you think these . . . If the lower level SSP people are not connected to the Cabal, why would they want to take Gonzales out? What would be the objective that he would have to be rescued by the Anshar?

Corey: Well, out of the three people, one of them was killed. And one of them disappeared.

David: The three people that you outed?

Corey: Right. And Gonzales was rescued.

David: So let's just say if the lower level SSP people did report to the Cabal, the Cabal knows who everybody is in the Space Program. They have dossiers on everybody, but they don't necessarily know who's in the Alliance.

Corey: Right.

David: Now, you did say the Alliance has some safety zones in the Kuiper Belt, and there are people hiding out in there. But there's obviously also double agents – people that are still working in the program - but they're keeping a very, very tight secrecy around themselves to be able to pull this off.

Corey: Correct. And very soon after that . . . after this conversation with Kaaree, I was actually teleported, as I was before, just flashed down to one of their flight control areas. And I was told that I was going to be taken to a meeting in the Kuiper Belt because the SSP Alliance at this point, they've been unable to enter the atmosphere or low Earth orbit - near Earth orbit.

David: And why not?

Corey: Well, they no longer had clearance.

David: From who?

Corey: From the people that are basically like air traffic controllers at the LOC, and those who control the defense grid around the planet.

David: Why would they lose clearance?

Corey: Well, because they had been outed as opponents.

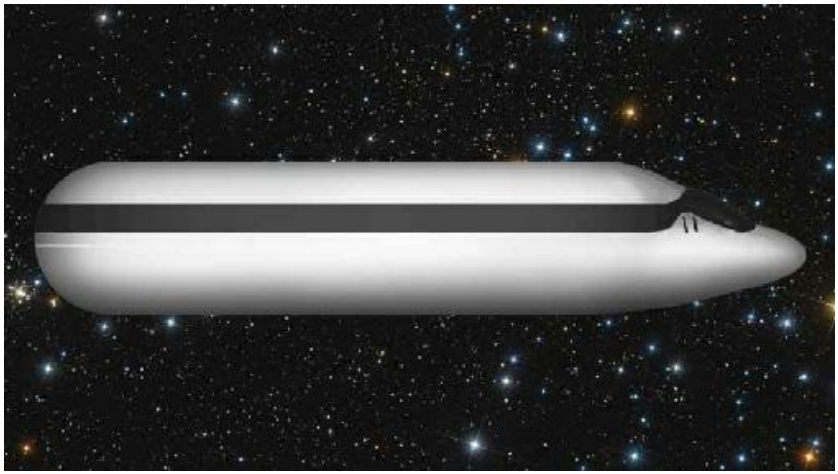
David: Okay. Right. So they had been working within the system, but keeping this all very secret.

Corey: At that point . . . Until that point, they could put a call in through into intelligence assets, task intelligence assets, and those intelligence assets would have no idea that they were doing errands for the SSP Alliance.

David: Wow!

Corey: But when I was pulled down to the Anshar flight control area, I saw one of the craft that Gonzales had told me . . . that he called “a bus”. He called it an Anshar bus.

And it was kind of like a bus. It had a bunch of . . . you know, a whole lot of seats, like 26 or 28 seats in it. And it was arranged sort of like a bus. And the front of it squared off and went into a cone like a fighter craft.



(Gaia used an incorrect image. This is the correct image of the Anshar Bus craft)

And there were two Anshar pilots that sat one in front of the other in the cockpit area. And it was just Kaaree and I. And I expected her to sit next to me, but she sat kind of in another seat, one seat up across.

David: Okay.

Corey: And they took me to the Kuiper Belt. And this was going to be the first time I saw Gonzales since I knew that he had been outed. So I was a little bit nervous.

So we get to the Kuiper Belt base - the same one where earlier they had the Anshar meeting the Triangle-Headed being, the Golden Triangle-Headed being.

David: Okay.

Corey: So I recognized the area. But this time I was brought into an interview room, basically an interrogation room with a metal table that was welded or bolted to the floor. And Gonzales was sitting in a chair. And there was a guy, kind of a big guy, sitting in a chair right next to him, which . . . The whole thing was unusual.

And I was sat down and Gonzales wouldn't hardly even look me in the eye. He just had this total energy of disgust towards me. And that threw me off. And then this other guy started talking. He was talking more than Gonzales.

And I was supposed to get some sort of a briefing. And they were sitting there sliding a pad back and forth, a smart-glass pad, back and forth. And the other guy actually had a pen and pad of paper – real low tech. He was writing stuff down.

He had notes on there he kept sliding over to Gonzales and pointing like this. And Gonzales would do that. [Gonzales would shake his head side-to-side meaning 'no'.] And Gonzales was obviously on board now with restricting information to me since I had been a major security leak in that interrogation when I revealed three people.

So that meeting was real short – not so sweet.

David: Did you get any briefing information at all, and if so, what did they actually tell you in this meeting?

Corey: They were just giving me very light information. Different . . . I mean, Trump came up. They talked about how there were some certain threats against him that weren't being taken seriously. They were talking about a bunch of . . .

David: You mentioned the possibility that he could be assassinated by what would appear to be a Mexican national.

Corey: That's what their report said.

David: But that it would actually be a Cabal operation . . .

Corey: Right.

David: . . . and that his people weren't taking it seriously enough.

Corey: Right. And so they were talking about some of the meetings that they . . .

David: Now, some people are going to go, “Whoa, whoa, hold on. Trump? Why do they care about Trump? What's their opinion on Trump?”

Corey: Well, they care about Trump and Sanders big time. They've been extremely excited about the movement behind both of them – people standing up to the-powers-that-be saying, “Enough corruption, enough lies”.

David: So they don't think Trump is, with all his money, that he's Cabal?

Corey: Correct.

David: They think he's actually totally different from that.

Corey: Right. Yeah. And they were not pushing him over Sanders or Sanders . . . They were just very happy about the movement.

David: I have had other insiders independently tell me that the Cabal feels that if Trump wins that it would be catastrophic for them.

Corey: I was told that there is no way they're going to let him win. They'll steal the election - whatever they have to do.

David: Wow!

Corey: And this was just one thing. I mean, they also . . . Next, they covered . . . They expected some very big terrorist attacks, like a last hurrah of ISIS, because most of the operatives had moved out of Syria and into Europe and were trying to get to the United States. Because . . .

David: But we know that ISIS has gotten heavily defeated and they were . . .

Corey: The point is Gonzales was making it very obvious that he felt differently and that I would now get very manicured intel.

David: Right.

Corey: That they were making . . . It was almost like theater. They were making a point that I had screwed up, even though I didn't do it on my own volition, that I had screwed up and it had cost them dearly. And it did.

David: And what was the attitude of pen and paper guy? How did he treat you?

Corey: He was kind of gruff, but he didn't . . . I mean, there wasn't a whole lot of interaction. You know, he was just kind of a gruff military type – matter of fact.

David: What takes place next?

Corey: I was extremely upset on the way back.

David: In the bus craft?

Corey: Yeah. And she was asking me what all occurred telepathically.

David: Okay.

Corey: And I had just enough time to relate to her what went on in the meeting when we were approaching Earth. And then we went back down, entered through this blue swirl in the ocean, and ended back up in the flight control center. And I was sent back home.

David: Okay. And the blue swirl is just like a portal thing . . .

Corey: I would imagine.

David: . . . that appeared in the ocean. Okay. Now, this is also going to hep to set up and get people excited about what we're going to talk about in the next update episode, because some very, very fascinating stuff takes place regarding Venus, Ancient Builder Race outposts, whether there's Inner Earth beings living on Venus.

So since we don't have enough time to do this in this episode, but could you just give us a teaser about what we're going to be hearing next – some of the really weird stuff that happens?

Corey: Yes. And when Gonzales was still staying with the Anshar for that number of weeks, the Anshar had arranged a meeting on this outpost on Venus that had working Ancient Builder technology. And there was another meeting planned as well. And Gonzales found a way to convince them to only take him.

David: Right. All right. So that's just some of the amazing stuff that we're going to be getting into in the next episode of these updates. It's pretty fascinating stuff that gets very strange. And also, we have what starts to happen with you and this guy we're calling “The Wrangler”, which I know I've been trying to kind of hold you back from having to talk about this because it's pretty frickin' horrible for you.

Corey: And the Wrangler happened to be the gruff guy that was sitting next to Gonzales.

David: Okay. So that pen and paper guy is the Wrangler.

Corey: Yeah.

David: Okay. So there's some pretty intense stuff coming up for you in the next episode. This is Cosmic Disclosure. I'm your host David Wilcock. And I thank you for watching.

Cosmic Disclosure; From Venus to Antarctica Season 5, Episode 8

09 Jul 2016

David Wilcock: All right. Welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. And I'm here with Corey Goode.

I'm actually learning a lot myself by talking to him about this, because even though we discuss some of these things on the phone, I've never really gotten to see it all laid out like this. It is a tragic story.

In fact, I would say this is probably the greatest drama of any of Corey's accounts that we've had since he was first taken to Mars and was captured and almost killed before he got portaled out.

So Corey, welcome back to the program.
Corey Goode: Thank you.

David: So where we last left you, you have now been in the bus with Kaaree on the way back from this meeting in the Kuiper Belt in which this man who becomes The Wrangler later on in our story and Gonzales were both sitting there. And they're looking at intel, but they don't want to tell you anything, which means you and I, and, thus, our audience and everybody else, is getting cut off from valuable stuff.

And everything we've been hearing is that this is all building up to some epic defeats of the Cabal on Earth, some stuff that we want to know more about.

Corey: Right.

David: So did you get any sense of the progress towards the exposure and defeat of the Cabal from any of these briefings at all?

Corey: It sounded as though everything was still status quo on the negotiation side, but there was beginning to come . . . Information about Antarctica was starting to come out. And there was a little bit of that in there, but that really developed more later.

David: The Wrangler and Gonzales started to give you information about Antarctica?

Corey: Right, that . . . Well, Antarctica and more information about . . . That was actually the time I was given information about bases, the underground bases in Brazil and Argentina, that Cabal groups were going into like ants, bringing supplies and all

kinds of stuff.

And I was told about the rift system that ran from Antarctica and connected to enough . . . another rift system that ran underneath South America, Central America, on up to the United States. And part of . . .

David: These rifts are in the ocean, and they're like traversable tunnels with water in them?

Corey: These are actual tectonic rifts that, you know, like a rift, and . . .

David: A crack between the plates of the Earth.

Corey: Right. And some of the area was completely underwater. In some areas, they had built out towards the top little bases or outposts. But the area was so incredibly huge.

And they described what they call 'black subs' that were the size of container ships that carried shipping containers full of beans, bullets – everything needed. And they were traveling underwater, propelled electromagnetically underwater, through this rift system all the way to Antarctica where they had a port.

David: All right. I want to bring this to your attention, Corey, because I don't know if I've ever said this to you. My insider, Bruce, who I met through Hoagland, who's a major part of the new book “Ascension Mysteries”, told me that he may be leaving, that he may have to go to Argentina or somewhere in South America.

And when I asked him why – now remember, this is the guy who worked for the Reagans – he told me that they are moving everything out of North America, Europe, all that. They're migrating down there. And it's because there is this massive effort against them from Putin – is how he was explaining it.

Then we independently had Pete Peterson basically tell me the same thing, not that he was going to be leaving, but that there is a massive transportation of all kinds of assets, personnel, personal items from high level Cabal people.

They're moving their houses, their families, their staff, everybody. They're trying to hide out. Now why do you think, or were you told, why are they hiding out?

Corey: Well, because of the way things were going for them, was what I was told at this meeting. But later on, I was told that they, at least some of them that were headed down to Antarctica, had the belief that there was going to be some sort of solar kill shot or huge plasma waves that were going to hit the Earth.

And since they couldn't escape the Earth at the time, they were going to hide out under the ice shelf.

David: And this gets back to the Hindu Zoroastrian Christian prophecy of the so-called glory Lord of this big solar flash event.

Corey: Correct.

David: Okay. So, but can you also corroborate the intel that I got from Bruce and Peterson that these people feel like there's going to be some epic public defeat of them, exposure of them, and that's part of why they're on the run?

Corey: Oh, yeah. They're . . . This is the part of the Cabal that is not negotiating. Part of . . . There's part of the Cabal that's negotiating with the Earth Alliance, and then there's another part that is not up for negotiation. Don't even consider it.

David: Okay. So let's now move forward on this. And what is the next noteworthy thing that happens? Did you talk to Kaaree and find out more about what Gonzales was up to while he was in the Inner Earth?

Corey: Yes. And that had occurred a little earlier. The conversations I was having with Kaaree were after she had told me that Gonzales was not only made things to where only he went to this outpost, this Ancient Builder Race outpost that was working, operational - he had them take only him to that and also to another meeting right after, which was very similar.

It was the exact same station that we had gone to outside of . . . in Jupiter's orbit. He had, after that, he had been taken directly out to Saturn, which had an exact duplicate base or station that we had gone to around Jupiter that we had meetings with the Super Federation group.

This . . . But when he went to this, it was the same thing. He went through this, not really a portal, but some sort of a time anomaly to where you have to go in and come out the same way. He went . . . They went in the same way. They docked. There were no other vessels. There was nobody in that station at all.

And she took him to the exact meeting room that we had been in where everyone would sit in these horseshoe shaped areas where they were assigned. And he saw one of these beings again that was out at the Venus location.

And once again, he was told that he lacked humility. And he couldn't go ahead with the meeting.

David: So I want to double click on Venus a little bit here, because I have had an incredibly hard time getting any information about any unusual activity going on in this planet, around this planet, at all.

Corey: It's mostly a no fly zone for various SSP groups.

David: So let me tell you what I have heard from various insiders whose testimony corroborates with yours, and we'll just take it from there.

First of all, I talked to Pete Peterson about it, and from his level of need to know, that's a very important point for everybody to remember, 'his level of need to know', he was told that the planet is very hot because of all the clouds and that the only . . . that there are some developments from our Space Program there, but they have to be staffed by androids, because humans can't handle the heat.

That's what he was told, that everything that's there is run by basically robotic humanoids and not people, because the temperature is so sweltering.

Corey: Yeah. Well, we have bases that are floating in the clouds of Venus.

David: 'We' as in the Space Program?

Corey: The Space Program.

David: And you knew that while you were in Solar Warden?

Corey: Yes. I had read about those facilities.

David: Okay. Could you tell us a little bit about what they are? What they did?

Corey: Well, they were research. They were listed as research facilities that were somehow suspended in the clouds of Venus and that there were also some on the ground that were built pretty much just like the high pressure underwater bases.

Would you like to hear what Gonzales said . . . reported that he saw?

David: Yeah. Yeah.

Corey: Him and the Anshar bus craft and Kaaree . . .

David: Now when did he report this to you, first of all? Or did you get this from Kaaree?

Corey: They both reported it to me when they were both sitting in the . . .

David: In the Construct?

Corey: In the Construct.

David: All right. So what did Gonzales tell you in the Construct happened to him?

Corey: He stated that they entered Venus' atmosphere and . . .

David: Was he in the Anshar bus craft?

Corey: Yes.

David: Okay.

Corey: They entered the Venus atmosphere, and when they got down to the area where the clouds broke, and all of a sudden these holograms just sort of phew, phew, over these different areas. And there were these . . .

David: I don't know what you mean by 'phew, phew'.

Corey: Well, they just . . . They turned off.

David: The holograms turned off.

Corey: Yeah, hologram, like camouflage holograms that were covering . . .

David: So what you're seeing without the holograms . . . with the holograms in place (it) just looks like a regular, ordinary, barren planet surface?

Corey: Just geology.

David: Okay.

Corey: He could see these very large, very large H-shaped buildings, and flew down, went down into the ground of Venus and traveled a little ways before they landed in a cavern. And this one that he went to was a working outpost. So . . .

David: For who?

Corey: For the Ancient Builder Race. This was Ancient Builder technology.

David: So the Ancient Builder Race did not leave.

Corey: Well, the technology was still working.

David: Wow!

Corey: Yes. Once they had landed and disembarked from the craft, he was told to wait at the entrance – not to come in. And Kaaree and two others, probably the pilots, walked in to this arch area that he could just see a piece of kind of an angled glass-like structure going up. And he couldn't make out the rest of the structure.

And they walked inside . . .

David: And it was of colossal size?

Corey: Colossal size.

David: Wow!

Corey: So Gonzales is waiting in the area where they had landed, but watching. And they walked in, and all of a sudden the . . . everything lit up. The glass got darker, and then started to have all these symbols appearing, all going all the way up the . . . It's like an A-frame, I guess, going up like this. And all these symbols started appearing.

And one that he could make out he said looked like a backwards E that had a little G thing on the bottom.

David: Hmm.

Corey: A symbol he had never seen before. And that's the one that really stuck in his head. The rest were real small, and they would just - 'phit, phit' – appear and disappear, just all up and down this thing.

David: Now, how does this match up with other cool stuff that Gonzales has seen? He's obviously been to a variety of star systems. He's seen all kinds of extraterrestrial constructs.

Corey: This was a big deal.

David: Was he blown away by this?

Corey: Yes. No one had heard of any working Ancient Builder Race technology, or any that was not just destroyed or had been visited and picked at. Scavenged.

David: But this seems to have been protected by holograms, and very much active. It hadn't been smashed by meteors. It was still working just fine.

Corey: Correct.

David: So he's blown away. He's tripping out from this.

Corey: Yeah. He was very excited.

David: But you were supposed to be there with him, weren't you?

Corey: Correct.

David: But he is now playing this dodgy game and didn't invite you.

Corey: Right.

David: So what happens next? He sees all these symbols on the wall.

Corey: He saw . . . You know, the three Anshar came back, and Kaaree said that they refused to . . . and he could see the being that they were conversing with.

David: And what did that look like?

Corey: It was a 12 to 14 foot tall completely white being, white clothes. And that's from that distance. That's . . . you know, he said that its . . . It had a head that had a very interesting nose that came down that reminded him of the Easter Island heads.

David: Oh, like the Moai.

Corey: Yeah. It was kind of similar. Not exactly.

David: Hmm.

Corey: So he was pretty excited. And then the Anshar walked up, and Kaaree told him that he would not be entering the facility or the outpost because the guardian of the outpost had told him that . . . or they called him a sentinel.

The sentinel had said that Gonzales lacked humility.

David: Okay. I think a lot of people may be confused at this point, because you told us before that the Ancient Builder Race folks are long gone.

Corey: Mhmm.

David: They left behind a whole bunch of ruins, including these little tablets that can create stasis fields where you hopscotch through 10,000 years.

Now you're saying that there is a being that looks like Easter Island that's 12 feet tall that's still there hanging out for two billion years?

Corey: Yes, but it seemed to have been materialized or projected from this outpost.

David: Right. Like the same thing with the holographic projections of clouds, and then these projections of symbols.

Corey: Right.

David: So this may not have been a living being . . .

Corey: Yeah, it was not . . .

David: . . . as much as some sort of . . .

Corey: . . . a flesh and blood living . .

David: . . . super high tech repository of . . .

Corey: Projection.

David: Wow!

Corey: So after that, they left. And he again had talked his way, and I talked about what had happened around Saturn. And that was a real short non-meeting, because he was told again he lacked humility and was turned away.

David: This would have been a meeting with the Super Federation and it took place in the same room?

Corey: No. This was a totally different station that was an exact duplicate of the station that the Super Federation was meeting on. But this one was not . . . The second one was outside of Saturn, not Jupiter.

David: Oh. You were supposed to be there with him, and he had outfoxed you somehow.

Corey: Yes. And at that location, they asked to meet with the name that they call me.

David: Okay. Now, . . . and I know you can't say what that is, and I respect that. The Blue Avians have only ever spoken to the SSP Alliance through you . . .

Corey: And Gonzales.

David: And through Gonzales. Now he's cutting you out of the deal. But did the Blue Avians tell him to cut you out of the deal, or did he just make this decision on his own?

Corey: That was his own. He was in a reactionary state.

David: Sure. So both of these meetings get blown, and they don't happen. Let's go to the next part of the story. What happens at this point?

Corey: He is taken back to the Anshar city. And it was very shortly after that that he had officially worn out his welcome and was sent back to the Kuiper belt base.

And that's where he's remained as . . . until he . . . I was told that he went off for healing with the Mayan group.

David: And that's interesting, because I remember back when you were still on good terms with him that he had warned you at one point that you might not see him much longer.

Corey: The way he stated it was if he were to disappear and no longer . . . and didn't have a chance to say goodbye, that I should understand that he has gone . . . It was his turn to go in with the Mayan group for healing - the healing technology they have.

David: It's really kind of sad that this ended up happening the way that it did. You and Gonzales were good buddies, and now he's basically trying to stab you in the back. And I think a lot of people watching this show, they might want to have had a very benevolent view of Gonzales. They've seen him as a hero. They like him.

Corey: I like him. I mean, he was . . . He's just in a triggered state. He's, you know, upset.

David: Did he have . . . I don't know if you can say this, but I guess since he's outed now and they know who he is, I mean, did he have family here on Earth? Did he have to . . . Did he, like, lose people?

Corey: He told me that he didn't have family, but later on he said that there were

people he cared about that he was worried about.

David: Hmm.

Corey: But he was not going to give me any specifics about people close to him.

David: But you said that he had this very important job liaising with the Earth Alliance, and that he was of critical importance in this whole SSP Alliance plan to try to get Full Disclosure on Earth.

Corey: Yes.

David: So he himself apparently just couldn't forgive you for what had happened here.

Corey: Yeah, he . . . One of his friends and colleagues was dead, and another one was missing, and he was outed and could no longer perform his job.

David: We've also heard from you before that there has been a breakdown in communication between the SSP Alliance and the Earth. And you mentioned in the previous episode something really fascinating which I hadn't understood until we were doing this on camera, that the SSP Alliance couldn't just show up on Earth whenever they wanted, that they had to do all of this stuff they were doing covertly.

Corey: Yes. Some of it was done covertly, but they were doing a lot of it overtly. They were getting clearance to land at the LOC (Lunar Operations Command). You can't just land at the LOC and disembark a bunch of people and go into a meeting room.

David: Right.

Corey: So, they . . . Until they were outed, they had a lot more, I guess, ability to move around.

David: So what do you . . .

Corey: And during this time, the Anshar were really working on trying to get a meeting with the Super Federation, the Draco, and other groups that had signed this what they called that Muhammad Accord that would allow them to interact with humans more openly.

All the signatories of this treaty had to agree to change it to ratify it.

David: This involved the evil and the good groups all having to form a treaty with

each other?

Corey: All groups present in the solar system that were in competition, had different agendas. They were up until the . . . supposedly up until the time just after Muhammad, they were appearing to people and having open conflict in the skies.

And this treaty stated that they would allow humanity to develop on its own overtly, and they would only covertly manipulate and puppeteer the leaders.

David: Why do you think both the good guys and the bad guys would agree to something like this?

Corey: Well, because they were having major skirmishes. They were chasing each other out of different areas. They were destroying the experiment, the genetic experiments of the others. It was chaos.

David: So this treaty essentially served both sides. It kept the game fair. They both have to work covertly. They can't tell us who they are. Each side gets to take its chance for the title belt, which is the control of the planet and control of humanity.

Corey: Yes. And I . . .

David: And humanity's ascension, whether it goes dark or positive.

Corey: And also, I kind of intuitively picked up or felt that it also involved maybe carving up the planet into territories.

David: I see. So now, let's get to what happens next.

Corey: Next, I had had another series of, I guess, etheric conference calls with Kaaree.

David: In the Construct?

Corey: In the Construct. And in one of them, she told me that I should be ready to go and have the meeting that I was supposed to have on Venus and visit the ancient outpost.

David: Oh!

Corey: And very shortly after that, I'm not sure how many days, I was . . . I went and I laid down in bed. I was just starting to fall asleep and then a flash. And I'm confused. I'm still laying down on some sort of bed kind of thing. And I sit up, and I . . . just the atmosphere felt . . . You're in a different place.

And Kaaree was there. And she said . . .

David: And this is not the Construct now. This is real.

Corey: No. This is real.

David: Okay.

Corey: And she said, “It is time for us to make our way to the outpost.”

David: Wow!

Corey: So we boarded a different Anshar bus that had different colored seats. One of them had sky-blue colored seats, and then the one we got in this time had, like, burgundy-ish color seats.

David: Hmm.

Corey: And it was a little bit different that there were two chairs on this side, and then there was, like, a big wraparound kind of couch that went . . . instead of seats being on the other side.

David: How futuristic did it look compared to anything we would build here on Earth?

Corey: It . . . There was nothing that you would look at and say, “That's an engine compartment. That's where thrust comes from.”

They had windows that wrapped all the way around the back and came up and then in the squared-off area in the front. And it was . . . Everything was white. And it looked like real thin material. Whatever was between you, the bulkhead, between you and what was outside of the fuselage of the craft, was very thin.

David: Okay. So you just get this flash, and now you're on board this craft in a bed.

Corey: No. We had to board. We had to leave a room and then walk a little ways into the flight control area and board the craft.

David: Oh. Did the room look consistent with other Inner Earth areas that you'd visited before?

Corey: It was a white room.

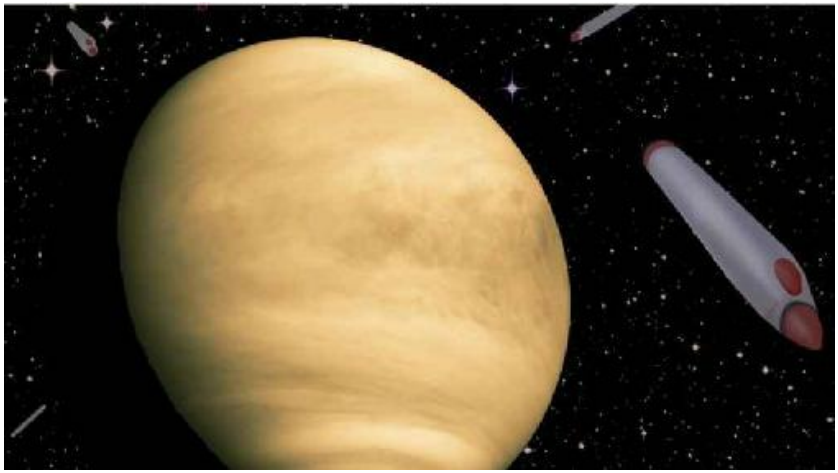
David: And you fly through a portal? How do you get out of there?

Corey: Well, we . . . the same way. We fly out through the blue swirl.

David: Okay.

Corey: And we exited the atmosphere, and we headed to Venus. She said, “We were going to Venus to the ancient outpost.” And that was a very short trip in that craft. I don't even . . . We were talking a little bit, but all of a sudden we were just there in a matter of minutes.

And we stopped pretty far off. You know, Venus was about this big. [Corey shows a 10-inch circle with his hands.] And there were all of these real long, several kilometer long craft that were real narrow, almost pencil-looking. And they had faded red, looked like paint, on the back and on the nose cone.



And then there was faded , , , some sort of, I guess, ornamentation, decoration, that had been on it, that I couldn't make out, close to where the cockpit was. And they were pointed down towards Venus with the rear end sticking out, you now, toward space, and were just parked there.

And then there was one of the big craft that just immediately appeared in front of us and blocked our way. And I didn't hear anything, any . . . You know, there was no radio chatter.

David: So you have no idea who these people are . . .

Corey: No.

David: . . . or where they came from.

Corey: And nor was I told.

David: Wow!

Corey: And she said, “We'll need a few moments. There is . . .” This was, I guess you would call, a scheduling conflict.

David: Ha, ha, ha.

Corey: So we're sitting there, and she starts to go in . . . and we talked a little bit, or conversed a little bit. And then she was . . . started to . . . like she was starting to prepare me for what I was about to hear.

And she also inquired about this . . . if this meeting was approved, when it would occur, the logistics of it - between the Super Federation and all the groups that were signatories to that Muhammad Accord, or whatever they call it.

David: Okay.

Corey: And she was just starting to get into tell me about some of the things that the Draco had claimed. They had claimed that millions and millions of years ago, this was their genetic experiment location, and that some of these groups had come in from other star system and had wiped out their colony here, and that there were something . . . that there were three lost races that they were upset about.

David: You said the Draco only showed up after the Super Earth exploded 375,000 years ago.

Corey: Right. Right. She said this was the narrative that they were putting forth, that the Earth was theirs and it always was.

And she was like really just starting to get into that, and she stopped and said, “We will have to return another time.”

David: What are these three lost races?

Corey: I don't know.

David: Okay.

Corey: I don't know.

David: But they're . . . the Draco are claiming that they made them, or that they started out here? This was their laboratory?

Corey: That they started out here. That's all that I got out of her before, you know, we started to head back. And . . .

David: So you were turned around by these ships.

Corey: Right.

David: You weren't able to proceed with the mission.

Corey: Correct.

David: What's the next noteworthy thing that happens in our story now?

Corey: Well, in the conversation, I had been . . . I was talking about how things were rough between the SSP Alliance and I, and how I had been told that I didn't really have that much to offer them, you know, that I . . . pretty much the only thing I had to offer them is to do odd jobs and to work for them.

She said that will soon change because you're going to accompany us on a reconnaissance flight. And I was like, “Okay.” And so we headed back to Earth.

And we flew in the atmosphere, the same area where we punch out and punch in. And we head down at an incredible rate of speed. I could see a land mass area. I didn't know what it was because it was very cloudy, and it was dark.

David: Hmm.

Corey: And we shot down. And then right when we got to the surface of the water, I was thinking we're going to, 'phst', punch through the water. We straighten out parallel with the water and increase speed. And all of a sudden, I start seeing . . . looks like ice cubes all next to each other everywhere, almost like you could walk on them. Tons of ice. And . . .

David: You don't literally mean cubes. Just you're talking like icebergs.

Corey: Right.

David: Yeah.

Corey: But we're passing by it real fast.

David: Okay.

Corey: And she starts telling me, she said, “The technology of this craft is incredibly intuitive.” She said, “Do not get lost in the data.” [David's looking at Corey with an inquisitive expression.] And, yeah, I had the same look on my face, I'm sure. Ha, ha.

But she said this just before we started heading right towards a giant wall of ice, like a ice shelf. And we were heading directly towards it at speed.

David: Wow!

Corey: And we passed right through what had to be some sort of hologram. And soon as we punched through, we saw an area carved out to where the largest ship that we have could go through and still have two or three times the height of the ship to the ceiling of this archway.

But there was all of this, I guess, steam. It was real foggy.

David: Okay.

Corey: At the entrance, this like fog was coming out. And we headed directly into this basically ice tube. And we were flying all around, and there'd be areas . . . all you'd see was ice, but then you would see, like, some little bit of rock outcroppings. And this was several miles that we went that way until everything started to then spread out and open up.

And then we were flying over water. We're flying under . . . over water, under the ice. And then we came up upon this little island area that had a little outpost – looked like an industrial city, but not a city. It was small.

And we're still going at a good clip. And all of a sudden, we're . . . there's land below us. And you can't see it real well because it's very dark. And then we get to an area and you start seeing light, a lot of light, up ahead.

And the light was penetrating and refracting and reflecting out of this giant ice dome above the ice.

David: Hmm.

Corey: And there were these pools of water that had steam coming out of them. And it was obviously very warm. I could . . . There were trees that looked about this big [Corey shows a distance of about 4 inches with his fingers.] that looked . . . that had pine needles on them. But it was so dark, I couldn't make them out real well.

And we curve around this mountain . . . and there were these mountain peaks that came up out of the ground and disappeared into the ice, the ceiling of the ice. It was bizarre.

And this was obviously . . . this ice pocket, or little igloo under the ice, was obviously created by the thermal activity. And this was in the northwest area of Antarctica.

We then came upon the first really big industrial city that I saw under there. And you could . . . It looked like it was . . . At one time, it was about this size, [Corey shows a distance of about 10 inches between his hands.] and then they had built it out [Corey spreads his hands as wide as he can.] over time.

But amongst the area that they had built out, there were these huge shattered and broken H blocks.

David: So the H blocks were like the ones that we see in Peru at Pumapunku? Same kind of idea?

Corey: Except some of them were up into the ice, like frozen up and partially exposed out of the ice. Some of them were pushed down in the sediment with just kind of like the corner sticking out. And then there were broken pieces of the H blocks everywhere. And these were very, very large. Very large.

David: Now, you've said before that Antarctica was originally a habitable world, and that there was some kind of Earth axis realignment, a physical movement of the Earth in space that caused it to become the South Pole, thus causing the Atlantean flood. The waters that come in then quick freeze and turn into glaciers.

Corey: Right.

David: So these were ruins from before that happened most likely.

Corey: Right.

David: Okay.

Corey: And they were obviously crushed by the ice at one point.

David: Hmm.

Corey: Another thing, we saw all of these large triangle craft just . . . I couldn't tell if they were hovering above the ground or parked on the ground because of the lighting conditions.

And it was pretty well lit from all of the industrial lights reflecting off the ice in the general area of where this complex was.

And as we flew over, we see two conventional-looking submarines and a few of those very large black subs. And they had these cranes on kind of like a train track that were positioned and unloading part of the almost egg-shaped black sub that the top kind of like slid back like that and exposed the inside. And they were unloading.

And it was at this point that I started wondering how many of these outposts are there? Is there anything under the ground? What . . . You know, I started thinking all this stuff. And all of a sudden, all of these displays . . . I mean, like holographic displays started popping up all around.

And what I didn't mention is when we first entered this under ice area, the ceiling and the floors turned transparent on this craft.

David: Oh, wow!

Corey: So the view was incredible. The back of the seats were transparent. You could see through them. If you looked back behind you, you could see the burgundy area where people sit. But if you looked forward, it was just . . . you could just see

everything.

David: That's wild!

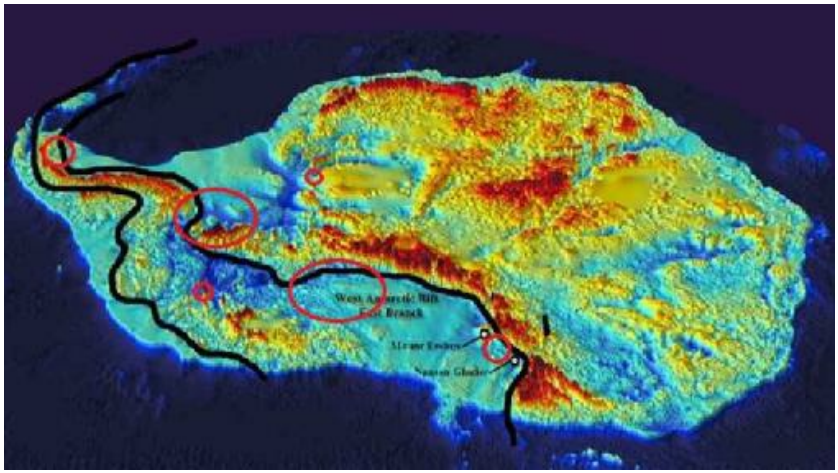
Corey: Yeah!

David: Now, she had told you this was an intuitive craft.

Corey: Right. So all these displays started popping up, and I started looking at it and I was like, “Wait, I need to see, you know, see what I'm supposed to.” You know, she told me not to get caught up in the data.

David: Ah.

Corey: And I really wasn't understanding all I was seeing – everything that was popping up. I saw sort of the map of the area we were in, and I saw two large areas and then four smaller outpost areas on the map.



We pass over that industrial city. It gets darker again. And then all of a sudden, we're over like a bay area. And across the end of the bay area, we could see what looked . . . which was another city that showed up on the map that popped up for me.

And I thought we were heading right towards it, but we stopped over the water. And I look up, and I see this huge . . . The ice was 200~300 feet above the surface of the ground in most of the area, but in this bay area, it was 600 feet or 500 feet. It was

much higher.

David: The ceiling was higher.

Corey: The ceiling was higher.

David: Yeah.

Corey: And there was this large hole, you know, 70~90 meters wide, that went up and then went off at an angle above us. It was a huge . . . and it's apparently where all of the thermal heat is escaping or . . .

David: Hmm.

Corey: So . . .

David: From this underground volcanism that you say is causing the igloo.

Corey: Yeah, and there was . . . Yeah, there was all kinds of volcanism and stuff down there.

David: Okay. Hence all the steam you're seeing.

Corey: Yeah. Yeah. So we stopped underneath it. And I think we're about to shoot up through it. But instead, “phst”, we go into the water, like flat, and like a belly flop almost, but just “phew” into the water. And we're under water. And it's dark. It's pitch black.

And you know, we're, you know, traveling under the water. And then all of a sudden, we enter into this cavern type area where obviously these subs are coming and going from.

David: Hmm.

Corey: And we . . . I don't know how far, we head back a ways. And I see two or three of those subs coming with a long line of tiny little bubbles behind it and a light out the front. And this was obviously a rift.

And the rift started to curve around, and we traveled around curving, and then we saw this huge arch that was, I mean, I don't . . . It was so big. And it . . . what it had done is, a rift was curving around this way, and this was an arch that connected two rift or tunnel areas. And it was ancient.

David: And those little black guys at the bottom, what's that?

Corey: Those are the giant black subs that . . . That's how big this area was.

David: Wow!

Corey: It was just huge.

David: And this was built by somebody a long time ago?

Corey: Some ancient group. Some ancient group had built this big, giant arch. I mean, there were cracks . . . and it was a real smooth arch. There were cracks and areas where, like, pieces had settled to the bottom – had broken off.

We headed through that. I thought we were headed back to the Anshar base, and then we shoot up through the top of this rift cavern, and we pop out of the ocean in . . . where a blue swirl is. And then we go right back in.

David: Hmm.

Corey: And we're at the air command center (a part of the Anshar city in Inner Earth). And that was the end of that.

David: What time approximately do you think this was when you had this trip? Do you remember exactly? Was it in April of 2016, or March?

Corey: This was at the end of April, early May.

David: Okay. Now, I remember getting a briefing from you on April 27th is what my written notes say, and you had started to get some very unpleasant briefings. In fact, you mentioned that I think by that point you said you'd had eight or nine of them.

Corey: Right.

David: And this was the first wind that I got that you and I were not necessarily doing a good job, and that there was some very significant trouble that we were in with the people in the Alliance.

Corey: Well, all of these experiences, all of the information that I've just shared, was intel that the SSP Alliance and the Anshar stated was . . . it was critical to get the information out to the public, because there are people that also look at this intelligence in the Earth Alliance that they wanted to give them the intel of the actionable intel. Because of some other operations that were going on, it was time critical.

David: And I guess because of the loss of Gonzales, they didn't have a way to communicate this intel anymore except through direct effort of you or me doing what

we're going to do.

Corey: Correct.

David: What . . . I know what you told me on that briefing from April 27th, that you had eight or nine meetings. I didn't really get the full scope of how bad it was. But let's start to go into that now.

Corey: In the beginning, they said that the incident of me being chemically interrogated had destroyed basically my relationship with them and their trust in me.

David: So you said also that when you had that meeting with Gonzales at the metal table, that there was this guy writing things down on a piece of paper. And this guy ends up contacting you again.

Corey: Right.

David: So tell us about him, whatever you can say that's safe.

Corey: Right. Well, this guy was . . . he was a very, very unpleasant individual. He introduced himself to me and said, "You can call me the Wrangler." He said, "I am brought in when we have assets that are underperforming or are not doing what they're supposed to do to wrangle them."

And he said that in order for me to get some of their trust back, that they wanted to do what they called a chemical debrief.

David: Wow!

Corey: Yeah. And if I had any idea of what I was agreeing to, I would not have done so. It was just a euphemism for another chemical interrogation. One that I agreed to, and that they wanted to put me under so they could find out anything that I may have betrayed, and unknowingly betrayed. That's . . .

David: So they're worried about, in the haze of battle, that if you've been compromised and brought in, they want to know exactly how much stuff you leaked.

Corey: Right.

David: But since you were amnesic, you're not going to necessarily remember it. And then that means the enemy has a weapon they could use in a surprise attack against them.

Corey: That's how they presented it to me basically.

David: Okay.

Corey: So I agreed. This chemical debrief was . . . It was horrible. The chemicals burned. The other ones didn't when they went in. I mean, burned bad, to where I was like, “Ah! Ah!”, you know.

David: Jeez.

Corey: And they just started laying in with all kinds of questions and everything. And I . . . that is kind of a fog to me. But the . . . What was really the most stressful part of my relationship with this Wrangler is the way he treated me. He treated me with complete disdain, told me that I needed to toe the line and start picking up some of Gonzales' work on the ground.

If I did so, they would give me more material support and technology to help me with issues I'm having with my body. They reiterated people that have been through what I've been through in the 20-and-Back that, you know, I'm going to start having more problems with eyesight, neurology, and he starts listing all these things.

You know, he said, “You know, you should wear lead sunglasses, the way your eyes are.” And, you know, he was basically dangling a carrot in front of me.

David: When you said 'material support', this means they were actually offering you what could have been a potentially very high-paying job.

Corey: No, it was more of Gonzales' operational fund.

David: Ah! Okay. So it's not like a huge amount of money, but it would have been money.

Corey: Yeah.

David: The comments that we had, people are like, “Well, wait a minute, now I'm confused. This is the Alliance. These are the good guys. Why are they treating Corey this way?”

So could you speak to that for a moment?

Corey: Well, you know, they . . . They've . . . They came basically out of Cabal programs. So you know, they're damaged individuals. They're . . . They have intentions of bringing all of this technology and disclosure to humanity, but they're

still damaged individuals.

And with all of these new influxes of galactic energy that are coming in through the sun and being buffered by the spheres, we're seeing a lot of strange behavior in people. And they're not immune from it.

David: Right. So this vibrational increase is causing, as you've said to me off camera, end time madness. People are acting more crazy. They're emotionally agitated. You also mentioned that their karma, old karma is coming up for them.

Corey: Right. People are being forced into karmic cycles until they learn what they need to learn and accomplish what they need to accomplish.

David: Why does he keep bringing you back over and over again?

Corey: It's all about intimidation and coercion for me to become their asset.

David: Now when you eventually briefed me on this the day before I was to start speaking at Contact in the Desert, you also told me some pretty shocking stuff that made it sound like they were trying to blackmail you, about beams that were aimed at your house and my house.

Corey: Right. They said . . .

David: So talk about that for a second.

Corey: They said that they would be able to help you and I with technology that was mounted around and point at our bedrooms, our . . . where we sleep that interfered with our dreams and our ability to have cogent thoughts and that kind of thing.

David: That they could basically shut that stuff down.

Corey: Right.

David: But they're not gonna do it unless you accept the job.

Corey: Right. And whether that's true or not, I don't know. This was such a manipulative person and situation, you know, it's really hard to tell.

David: Okay. So you tell me this, and then I do not act because . . .

Corey: For about six weeks.

David: . . . I'm in the middle. And it's driving you crazy because I apparently . . . I just really didn't grasp . . . When you told me this, you were very emotional. You didn't say very much.

I really didn't get how badly you were being tortured, or how much of it could hinge on me . . .

Corey: Yeah.

David: . . . and what I was doing. So the Wrangler meets with you, and the message is very, very bad.

Corey: Right. And they gave me basically an ultimatum. They stated that the next time we had a meeting that they expected me to give an answer on whether I would be an asset or an operator for them here on Earth. And in doing so, I was going to be very much under their control, under their thumb.

So, I had told you this before the . . . when we were in Joshua Tree. And then when I'd gotten home about a week later, I was waiting for this time on this date when I was going to have this meeting and delivered the message to the SSP Alliance that I was turning them down.

And I knew it was going to be very contentious and very upsetting – their reaction.

So I'm sitting there, and I'm waiting, and a Blue Sphere comes in the room. And I hadn't seen one in a while. And it came into the room, zipped around, did the normal thing. I indicated I was ready, and I was brought up to a Blue Sphere before Tear-Eir.

And behind Tear-Eir in the background I could see all the other Spheres, and there was a very large amount of what looked like static electricity – like electricity between them. It was very active.

And I had . . . I conversed with Tear Eir, and Tear-Eir told me that they had communicated through Gonzales that I was not going to accept the offer and that they were not to pick me up anymore.

David: And if you had been picked up, what might have happened with the Wrangler?

Corey: I don't know. It wouldn't have been good, because he was very angry that the intel hadn't got out. He was very angry on several things.

David: Angry at me, too.

Corey: Oh, yeah.

David: I mean, you had given me some very contentious stuff about me.

Corey: Yeah. He was . . . Yeah, he's just very . . . a very triggered, angry person.

David: So it appears now that you are not going to be abducted by this Wrangler any further.

Corey: Right.

David: But that also means they're not going to be able to replace Gonzales with you. And didn't he tell you that you were the only one that could be replacing him.

Corey: Right. Well, the Blue Avians, you know, they delivered that message to . . . through Gonzales to the Wrangler. And then they went on to tell me that I needed to converse with Kaaree and let her know that this big meeting over the Muhammad Accords would not be occurring because the groups associated with the Draco were refusing to take part. So without all the signatories, they couldn't have the meeting.

And I was also told about . . . We're about to experience a lot of 'end time madness', that the SSP were not immune from it, and that the strangest part, towards the end, was that when masses of people start having visitations from dead family members, that that is a big sign. It'll . . . It's gonna happen en masse that that is a big sign that the veil has thinned to the point to where we're about to go through the transition.

David: Ascension, in other words. And they told you . . . I remember you telling me many of the things that you folks who are into the UFOs and have been watching the show are interested in, expecting to see, that those things will happen very soon . . .

Corey: After these . . .

David: . . . after these mass ghost sightings start to occur.

Corey: Right. So after this meeting, I was brought back to my home in a Blue Sphere. And very shortly after, Kaaree contacts me through this etheric . . .

David: The Construct.

Corey: Yeah, the Construct. And I was reticent to tell her that her meeting had been turned down, but I did, and she didn't miss a beat. She said, basically that was . . . this kind of thing is expected. It's basically the opening of negotiations. This is how those beings, basically that's how they negotiate.

David: Right.

Corey: And she did not seem disheartened or discouraged by it at all.

David: And this basically brings us up to date now . . .

Corey: Yes/

David: . . . with what's happened to you up until the time of this taping.

Corey: It does.

David: So, Corey, again, I am very glad that the Wrangler is not able to meet with you anymore. I was just absolutely tormented when I found out that my inactivity not writing these articles was causing you to be tortured. And I did say, and I asked you to tell them, please bring me up there instead of you. I didn't want you to go through this. But now we're off the hook. Thank god.

So we're getting this intel out. We're going to continue to get the intel out expediently because we do not want to get into this trouble again.

Corey: Negative.

David: So we've both been 'inspired'.

Corey: Yeah, we'll call it 'inspired'.

David: All right. And I hope you out there will understand that it's up to all of us to move the ball forward for Full Disclosure. And you're a part of this, too. Your efforts are needed.

Help spread the word. Let people know about this show, and help us bring about the new Golden Age for humanity. I'm David Wilcock. This is “Cosmic Disclosure” with Corey Goode, and I thank you for watching.

Anniversary Special Season 5, Episode 9

Cosmic Disclosure; Anniversary Special Season 5, Episode 9

20 Jul 2016

David Wilcock: All right, it's great to see you. I'm David Wilcock, as I'm sure you already know. And what you're about to witness here is really cool. We have decided to give you a special treat, a life review, if you will, of the last year of "Cosmic Disclosure", some of the highlights, some of the most impressive, most shocking, most amazing things that came out in the course of my discussions with Corey Goode over the last year.

I know you're going to love this. Check it out.

LUNAR OPERATIONS COMMAND

David: Tell us a little bit more about the LOC (Lunar Operations Command). I guess, first of all, what does it look like as you're flying into it?

Corey Goode: Well, you can tell it's been built and added onto quite a bit since the '50s. It's built into the craters and into the rocky area to where it blends in somewhat.

Some part of it is built into the rock. Very little of it is above ground.

David: Oh, okay.

Corey: Most of it, I have not had access to. I have seen a diagram to where it somewhat goes into a bell shape further and further down you go. And I've only had access to the upper levels.

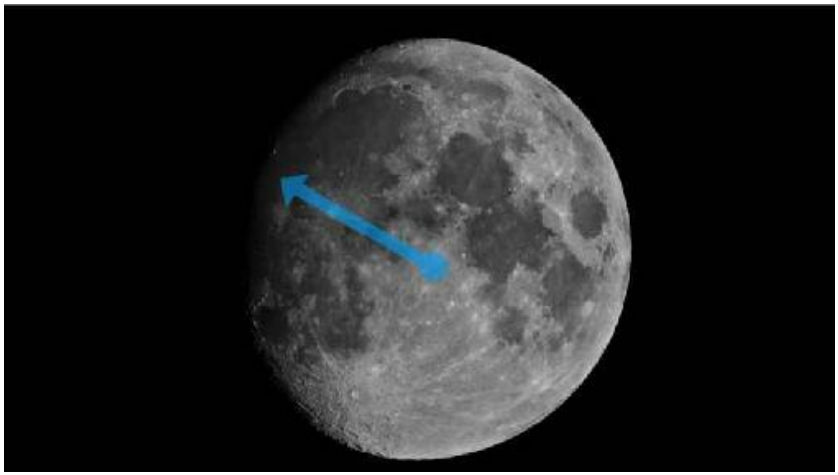
David: So even though it's a bell shape, you don't actually see the bell on the surface of the Moon?

Corey: No. It's like looking down at the top of the bell or the tip of a pyramid. You just see the smaller top, or the tip of the iceberg, I guess you would say. The rest is below and spreads out as it goes on.

David: If there are this many craft going to and from the LOC, and you say it's on the dark side of the Moon, how could it possibly have been kept secret from us? Couldn't people, with their telescopes, see all the ships coming and going from the Moon?

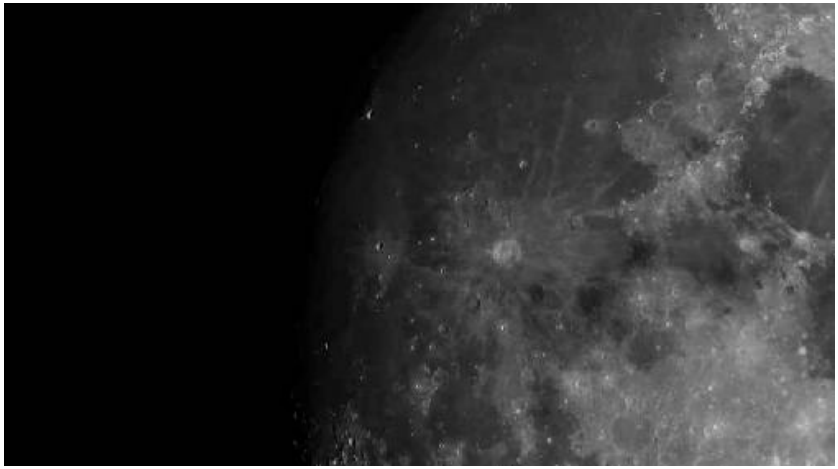
Corey: People do see that. There's actually another base on the backside of the Moon that belongs to human beings. It belongs to one of the Secret Space Programs called Dark Fleet that a lot of people see craft coming from.

I can give more of the location of that one. If you're looking at the Moon, it's at about the 10:00 position.



People have filmed and seen flurries and swarms of craft leaving and coming from

that area quite a bit, amateur astronomers with video cameras hooked up to their telescopes.



This is something that has been seen.

David: When was the LOC actually built?

Corey: The LOC was built onto an existing Nazi facility that had been built in the latter parts of the '30s and '40s.

David: So it goes that far back?

Corey: That far back. Once the industrial might of the United States became involved, they really started putting a lot into it and built it out like crazy. They started really building in earnest in the late '50s on it.

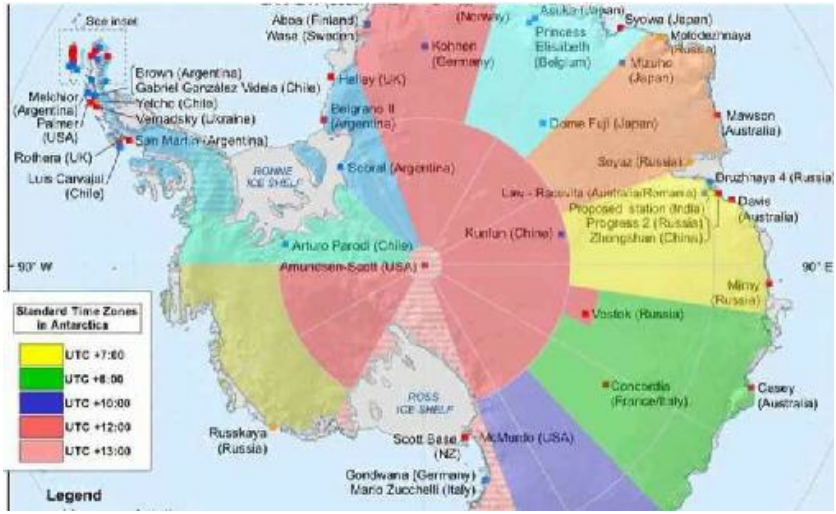
The Moon is a very strict zone that is like a giant Switzerland.

David: It's strange that you would say that the Moon is this neutral Switzerland type of area because it's right next to the Earth. If it's our moon, shouldn't it be our property and we get to have control over the Moon?

Corey: No.

David: It doesn't work that way?

Corey: No. If you've seen the maps of Antarctica, how it's sliced up amongst all the nations, . . .



David: Yeah.

Corey: . . . the back of the Moon is that way too. and all these different regions are pretty much owned and inhabited by different ET groups.

David: Really?

Corey: And there are some groups that have bad blood or have warred with each other going back many, many, many thousands of years, but they have installations that are just a couple kilometers away from each other.

And they have been there for many thousands of years in peace. There's some sort of diplomatic agreement about the Moon. There's something very special about the Moon being a very diplomatic neutral zone.

David: What is it like when you are in the LOC? Do they have apartments that you can go to once you get inside? Is it just wide open conference rooms and little chairs? What happens when you go inside?

Corey: Well, until recently, I had never been to the VIP area. I had always been to just the area to where they have small, not really apartments, but small little dwellings to

where it has two to four bunks. The halls are real narrow.

You move over to the VIP area, the halls are wider. There's wood paneling on the walls, like cherry wood – nice walls, very upscale. It's a dramatic change when you go from one area to the VIP area.

David: Could you wander around and try to find a restricted area, or do you have military escorts that lead you around. How does that work?

Corey: Well, you're allowed certain areas. There are marks, paint lines, on the floor . . . lines that are a different color that lead to different areas.

David: So, if you were red, then you'd just walk, follow the red line to where it leads to?

Corey: Right. And, like I said, I've only been . . .The top floor is where most of everything takes place. The next two floors were the medical and some other more advanced medical stuff take place. I have never been further down than those.

There are some people recently that have been taken on a tour that have gotten to see a lot more than I have. There are some people that are stationed there and work there, but it's more of a way station. People are coming and going from it all the time to go further out into the solar system and beyond to go out to other stations, other bases, to go out to their assigned vessels.

SUPER FEDERATION

Corey: What I've described as this federation super-council, . . .

David: Okay.

Corey: . . . this is a Super Federation made up of other federations, councils, and other different organizations and groups.

David: So hence, the word "super".

Corey: "Confederations", I've heard used.

David: Right.

Corey: And it's kind of like a giant UN of all of these different federations, confederations, councils that come to meet. And there are 40 main groups, with 20 other groups that are there a fair amount of the time, but not all the time.

Now, these groups are more of the human-looking, human type, and their bases seem to be mainly on the back of the moon and on moons of some of the gas giants, especially Saturn, so much so that there are areas around certain moons of Jupiter and Saturn that our vessels were completely forbidden from going anywhere near. And this is in our own solar system. These areas were off limits.

David: Our vessels' meaning your Solar Warden faction?

Corey: The Secret Space Program.

David: Right. So whatever faction it was . . .

Corey: All of Earth's Secret Space Programs were not allowed. No Earth space vessels were allowed within a certain distance of these moons.

There were 22 genetic programs that were going on.

David: What does that mean? What's a genetic program?

Corey: Programs of them mixing their genetics and manipulating our genetics. The information was presented almost as if, going back to the college analogy, there were 22 term papers competing with each other, and each of these genetic experiment programs were presenting their information in that manner.

They were somewhat competing with each other. They weren't all working . . . They weren't all hand in glove, working together.

David: Did this involve these human-looking extraterrestrials . . .

Corey: Yes.

David: . . . splicing their DNA with ours, that kind of thing?

Corey: Yes, and manipulating our DNA. There was also a spiritual component. They are very much involved in a part of the experiment. It's not just them experimenting on us. They're a part of this Grand Experiment too.

David: Did they have a goal? Why are they doing this? Why do they care?

Corey: That, I do not know. I don't know if they're doing it just because they can, if they're trying to create some sort of super-being, but a lot of it didn't . . . Why would they try to create . . . mix all of their best genetics together and then manipulate us in

our civilization to keep us down?

David: How long do you think this program has been in action for?

Corey: Of the 22 different programs, they've been going on for different lengths of time, but the genetic manipulation of what we are has been going back at least 250,000 years.

David: Wow!

Corey: But these programs, they vary, in their length from 5,000 going . . . They're all different lengths of time.

David: This doesn't sound like something that our secret Earth government or elected government would want these folks to be doing. Could we stop them?

Corey: I don't think so. I mean, this is something that we've just recently been able to beg to get a seat at their table to be a part of the discussion.

David: So would these be negative-oriented extraterrestrials or more neutral – not really the benevolent type?

Corey: It depends on your point of view. It's all amount of . . . It's perspective. It's hard to say this group is positive, this group is negative out of all those groups, because they see what they're doing as a positive thing.

MOON BASES

Corey: It's going to be overwhelming to learn that there is a vast infrastructure throughout the entire solar system with everything from mining operations in the asteroid belt and on moons and planets to procure raw materials, to industrial complexes that produce technologies, and colonies of human beings that work in those industrial complexes and support this large industrial machine that is throughout our solar system.

David: What moons are we talking about? How many of the moons in our solar system – because there's a lot of moons in our solar system.

Corey: Yes.

David: There's at least 100.

Corey: Right. There's a lot more than 100.

David: Okay. So how far did this go and how much did it expand over time? What were the earliest moons that were conquered or landed on?

Corey: All of this is very tricky diplomatically because a lot of moons are off limits to everybody, because they're diplomatic territory – 'owned' by some of these 40 or 60 groups.

David: The Super Federation.

Corey: The Super Federation people – especially around Saturn.

David: Really? Saturn has a lot of moons.

Corey: Yeah, yeah. But there was a lot of activity around the moons of Jupiter.

David: Germans and ICC people?

Corey: Um-hmm. And Uranus, and then the asteroid belt.

David: Now, I had Jacob, my space program insider, who I've mentioned before, tell me that some of these moons, the entire interior would be like a geodesic shape that has - like a dodecahedron, let's say – pentagonal faces with trees and habitable land. Like the whole interior of it is hollow. You can fly your craft along, and you get to a certain point, and then you make a turn, and you fly this way.

And like when you get inside there, it's almost like a paradise-type of world. Do you think that that might be some of what is going on in these Saturn moons, that they're that built out inside?

Corey: Mm-hmm.

David: Did you encounter information like that yourself?

Corey: Yes.

David: Really?

Corey: And I encountered information that I've tried to stay a lot away from. All of this is so incredible, but our Moon is also an artificial body.

David: That is something that almost everyone in the know, that I've spoken to, has said.

Corey: It's in a locked orbit with the Earth with almost like a tractor beam technology that has locked it in a orbit with the Earth. And they've found the energy field that goes deep within the Earth, to where it's focused, to anchor the Moon. And the Moon only changes position, as it goes further from the Earth by, I think, centimeters every certain amount of years or something.

David: You're saying that's not normal for a moon?

Corey: Absolutely not. The Earth's density and the gravitational effect it has in timespace, creating a torsion field by its spinning and contorting spacetime is not enough to capture something of the density . . . of what scientists say the density of the Moon is.

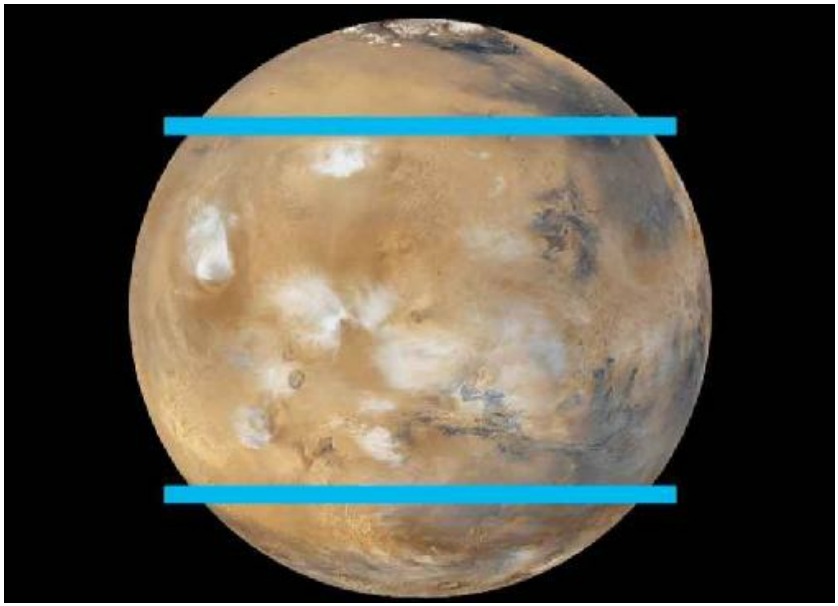
And because of the spinning of the Earth, it should have an effect on the Moon to cause it to spin.

David: Oh, wow!

Corey: But the Moon is locked in. It doesn't spin. It's locked in too close to the Earth, and it is not something that could have been captured. None of the scientific models have worked, that it was once part of the Earth and was flung out. It was around 500,000 years ago that the Moon became a satellite.

MARS BASES

Corey: The first couple of German seed colonies that actually made it on Mars were within the first 20 degrees of the polar regions. There was one in particular that the ICC used to expand and build off of, and this one was somewhat in a canyon area, into the side of a canyon, and advanced in and was under the surface of Mars – not on the surface.



David: And you said that some how they hollowed out more space inside the Earth was with these what I was told were called Fifth Gen-type nukes, where they just create a big, sudden explosion with no lingering radioactivity?

Corey: Yes.

David: The one that became the mainstay, was it in the northern or southern hemisphere?

Corey: The northern hemisphere was where the first main base that was a German name, in the beginning, which was built . . . was built out.

David: Okay.

Corey: And it was built out in a huge way. It was built out to contain a large amount of engineers and scientists. And also, a little ways away, an industrial complex was built where they were going to start producing the, I guess, the items that they needed – technology that they needed that came from raw materials they mined on Mars, moons, and in the asteroid belt.

They took these raw materials, turned them into usable materials, and even composites, and created what they needed in these rather small plants in the beginning.

David: So what was considered to be the desired technology that they were building out there in the beginning? What was their initial attempt? What did they want to make?

Corey: They were building what was needed to expand on Mars.

David: Okay.

Corey: So in the beginning, they were just building what was needed to expand their infrastructure on Mars.

David: So are they building materials on Mars out of local stuff, like you said before, involving the Kevlar bags and then making concrete out of local earth from the Mars sphere? What was the building technique? You said that these industrial facilities they had were building the things they needed.

Corey: Yes, they were building . . . The raw materials were coming from mining that was going on on Mars, on various moons and the asteroid belt. These raw materials were taken to the Mars' industrial areas further away from the colonies and converted into usable materials, whether they be melted down into certain metals that were put into dyes or forms or converted into composite materials.

David: When was the first stable base that lasted on Mars?

Corey: I think they . . . around '52 to '54 is when they really started getting the United States to sign the agreements, and they had only just really got a good foothold on Mars by then. They really had a lot of setbacks on Mars. They lost a lot of lives.

David: So almost like an 18-year struggle.

Corey: Yeah. It was . . . I mean, they really did the pioneering work on Mars.

David: But they had better success building mining facilities on asteroids and moons prior to stabilizing Mars?

Corey: This was at the same time.

David: Oh.

Corey: Yeah. Once they had a stable area to call their own territory, then they were then starting their mining operations. Their mining operations were more . . . I guess when a geologist goes around a large region and is picking up certain rocks, doing core samples, getting a good idea and then labeling certain areas and grids. I think it was more of an excavation and figuring out what was out there. When they found certain things they needed, they would start small mining operations.

You might think that you're in some sort of naval facility or something. The living quarter areas are all labeled in alphanumeric. It looks very, very much like a military installation.

There was one place that we went that they had to fix a damaged piece of equipment that was essential, that the ICC couldn't get their personnel to in a manageable amount of time. And we were escorted to . . . told not make eye contact with anybody, not to talk to anybody, that whole thing.

And there was a wall where people were like hanging art. I mean, it looked like they were doing some things for the mental health of people to make them not totally depressed and suicidal.

David: Sure.

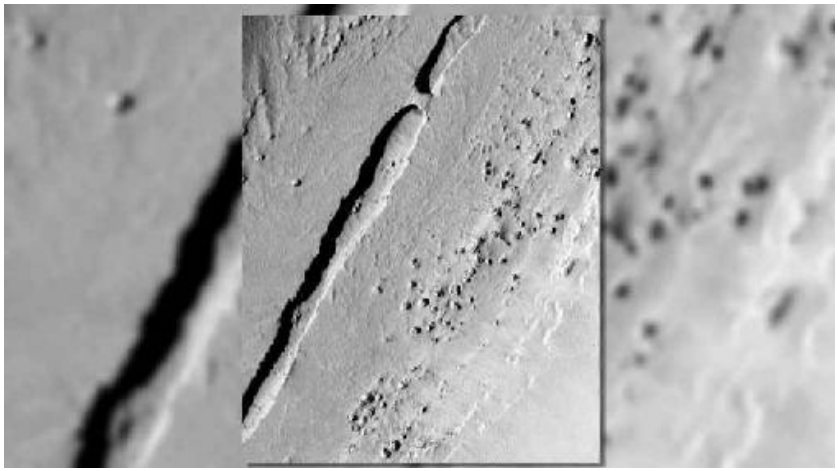
Corey: But the people looked gaunt, pale and just almost like drones – just going about their day.

David: Were there photographs of cool-looking ruins from old civilizations that you saw?

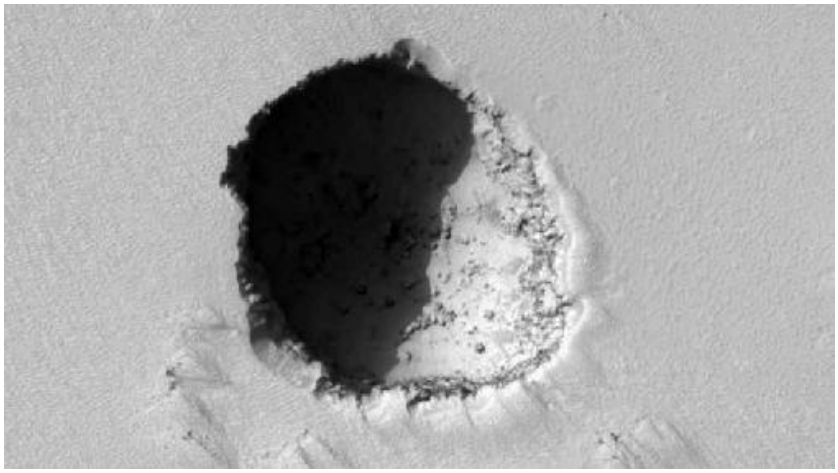
Corey: Yes, of ruins and of aerial photographs of areas, the huge volcano.

David: Olympus Mons.

Corey: Olympus Mons. There are lava tubes that are 10 times the size of the lava tubes we have here.



And they are perfect for sealing and creating an environment on the inside, and you have an easy, ready-made base. And that is a very highly coveted area to create bases.



And the Germans wanted it. Later, the ICC groups - I guess the modern space program groups – wanted to utilize that area, but it was already occupied by another group. There were a lot of them, and they defended it fiercely.

David: Really? Do we know anything about what they look like or where they're from?

Corey: Yes. There's a treaty between some of these groups. One of the groups are a reptilian type, and the other are an insectoid type.

David: That's kind of what I expect. Ha, ha, ha.

Corey: That is a very coveted area.

David: So when you say 10 times bigger than lava tubes on Earth, are we talking five miles wide, 20 miles wide, 50 miles wide, top to bottom?

Corey: I mean, huge. Bigger, I mean, they dwarf any of the caverns or the tubes that we have here.

David: Most of which we don't know about, I guess you're saying.

Corey: Right, yeah.

David: Because they already have huge cities built in them.

Corey: It has to do with the size of the volcano, the gravity, the barometric pressure on Mars, and the way that . . . how come they're so huge.

David: So could they be even like 100 or 200 miles long from top to bottom?

Corey: I would be speculating.

David: Okay.

Corey: I didn't see any hard data on how many meters or yards or feet they were.

David: But given that some of the cities here on Earth, I guess, can probably hold hundreds of thousands of people, you're saying that in these lava tubes, you could have millions of people.

Corey: There are millions of beings . . .

David: Really?

Corey: . . . living in these lava tubes.

David: Wow! What are they doing?

Corey: Just living out their life cycles there.

SOLAR WARDEN

Corey: I'll start with the oldest, which is Solar Warden. They were started back in the late '70s, '80s, during the SDI – Strategic Defense Initiative, I think, is what that stood for – just before and after Reagan.

STRATEGIC DEFENSE INITIATIVE
DEPARTMENT OF DEFENSE

TIME
DEFENDING DEFENSE
Budget Battles and Star Wars

David: What was Solar Warden's original responsibility?

Corey: They policed the solar system from intruders.

David: That would be groups that are not part of these 40 that are the Super Federation?

Corey: Right. And also somewhat of a space traffic-control, air traffic-control. They took care of that.

David: Couldn't some ET group just interfere and invade with vastly superior weapons and technology? I mean, how could a group from the '80s be able to police our solar system against, potentially, anybody that could try to invade here?

Corey: Well, they wouldn't have been able to hold their own with a large invasive force, but most of the groups that passed through were only in, maybe, one to a handful of vessels. There's so many different groups that pass through our area.

David: And I would guess it's sort of like gang warfare, where the 40-some-odd ET groups that have sort of claimed this as their turf, with whatever level of technology they have, they're also going to defend their home turf from an invasion.

Corey: Right.

David: So Solar Warden is not necessarily meeting a tactical force. They're not having a weapons-up fighting stance when you say they're policing the solar system. Or are they?

Corey: They would engage small numbers when they had to, but they were not ever a huge force to be reckoned with.

David: So most of these unwanted entrances into our solar system would be more small groups of ETs or single craft that are trying to be sneaky?

Corey: Right.

David: Just trying to slip in?

Corey: Little marauder groups that would come in and do hit and runs to come in and take things and leave.

As Solar Warden has started a cold war – pretty much, a cold war – they started to fly in front of the International Space Station to “accidentally” show their vessels, little

things like that, in the beginning.

David: If Solar Warden is going to try to create disclosure, where obviously the other parts of the Space Programs don't want it, couldn't that lead to a shooting war between these factions?

Corey: Yes.

INTERNATIONAL CORPORATE CONGLOMERATE

Corey: You have the ICC, the Interplanetary Corporate Conglomerate, which is pretty much the largest. They own pretty much all the infrastructure out in the solar system. You have . . .

David: And what corporations?

Corey: Just about every aerospace and other than aerospace, it's a huge amount of...

David: Lockheed, Boeing, McDonnell Douglas, Hughes Aircraft?

Corey: Yes. Just, all of the above. And not just American corporations.

All of these aerospace companies and other engineering companies started to build all of the secret space technology.

The military and the "government" itself could not do this. They did not have the ability to build all this. They didn't have the "infrastructure". But the Germans highly coveted this infrastructure because they were already out there, and they needed this infrastructure to grow.

They had big plans for what they had already – they had a foothold out there. And they wanted to grow. They had large plans, and these plans – when they brought information to some of these aerospace companies, that they had been out to the asteroid belt and found entire asteroids that were made of precious metals that they had already been mining some, dollar signs popped in their eyes, in the eyes of these US capitalists.

So they fully got behind this German grand plan to build out a giant infrastructure into outer space.

David: How soon after they got to Mars and they got successful, stable encampments, did they start building facilities on asteroids or other moons?

Corey: Almost immediately.

David: Really?

Corey: Yeah. The Germans had already started mining certain asteroids. And this is one of the reasons the ICC wanted to go out there. They heard there were asteroids out there that had platinum and gold.

David: Ha, ha.

Corey: And the talk down here on Earth about there being hardly a discrepancy in gold, gold being rare, silver being rare, that is a total manipulation. I mean, just on Earth, the syndicates have hidden a bunch of gold.

David: Right.

Corey: There's tons of gold. And the gold that they're finding in these asteroid belts, atomically, you look at Earth gold and this gold – they're the same. They don't have different atomic structures. It's gold.

David: Wow!

Corey: So there is plenty of gold in the solar system and so many tons of gold, and platinum, and silver, and other elements in the asteroid belt that have been . . .

David: Could you actually find entire asteroids that are just a piece of gold or a piece of silver?

Corey: Well, I wouldn't say that they're entirely a big nugget of gold, but are very much gold.

David: Did the ICC or the Germans develop advanced computer technology faster than we did on Earth that they could start to use in all this robotic mining and things?

Corey: Yes, they've had computer systems and quantum computers much, much longer than – way before Bill Gates and IBM started to put out motherboards and integrated chips. The ICC always kept the most advanced toys.

DARK FLEET

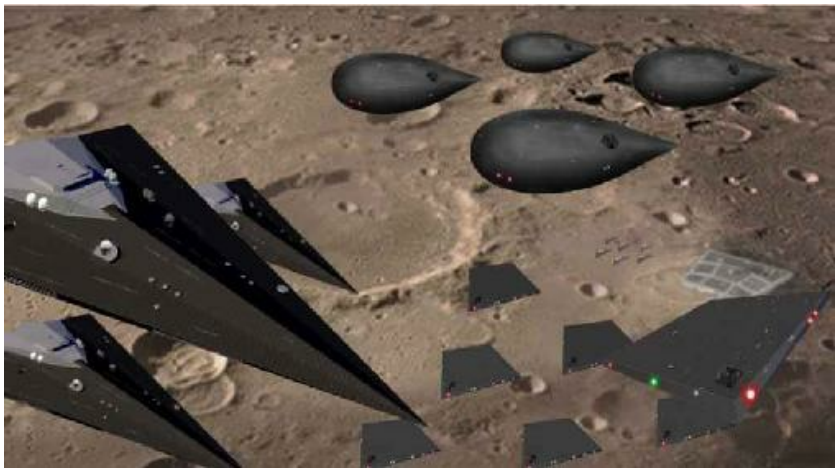
David: What is it about the Dark Fleet that earns the name “Dark”?

Corey: A number of reasons. Well, in black ops, when there is a dark program, it is

completely compartmentalized to where no one receives any intelligence. The other Secret Space Programs received very little information about the Dark Fleet's mandate, what they were doing, what they were up to.

David: Really?

Corey: Their bases were completely autonomous. Other Secret Space Programs did not get to go to their bases. Their craft were of a different design usually.



They had several different types of vessels that you would see that you would associate with them.

David: Well, could you describe some of what made these vessels different? What were their characteristics?

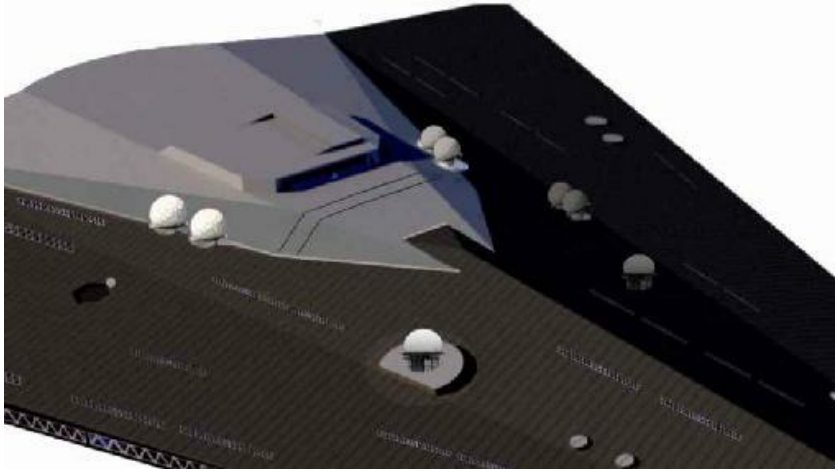
Corey: Yeah. And one of them is a very large wedge-shaped that is very much like "Star Wars" – the Destroyers, I guess, very much like those, but they're a little bit more sleek.

David: What about the little thing on top? Is that there?

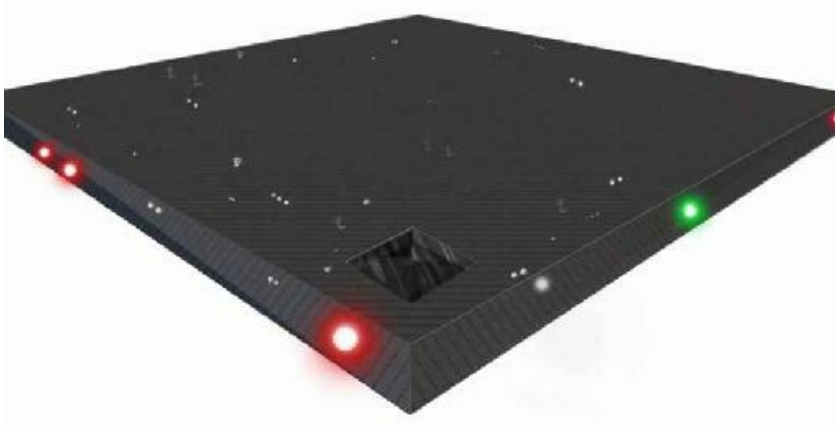
Corey: Similar.

David: Really?

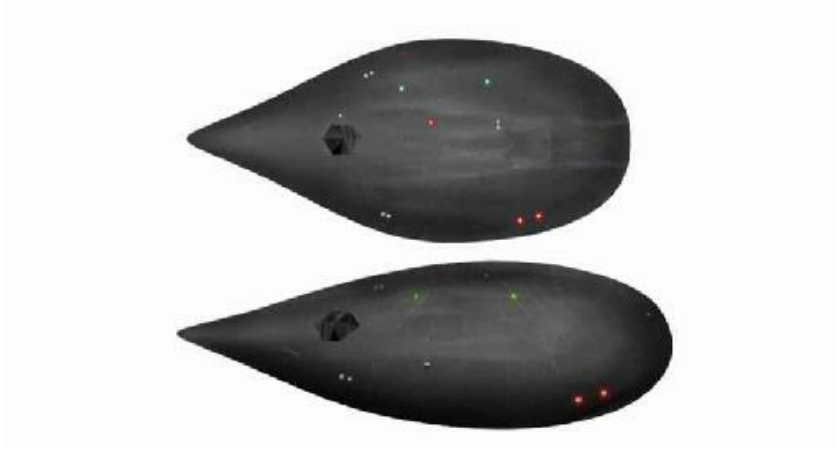
Corey: Similarly, but not as high, but similar.



There's also a very large diamond-shaped vessel that they have.

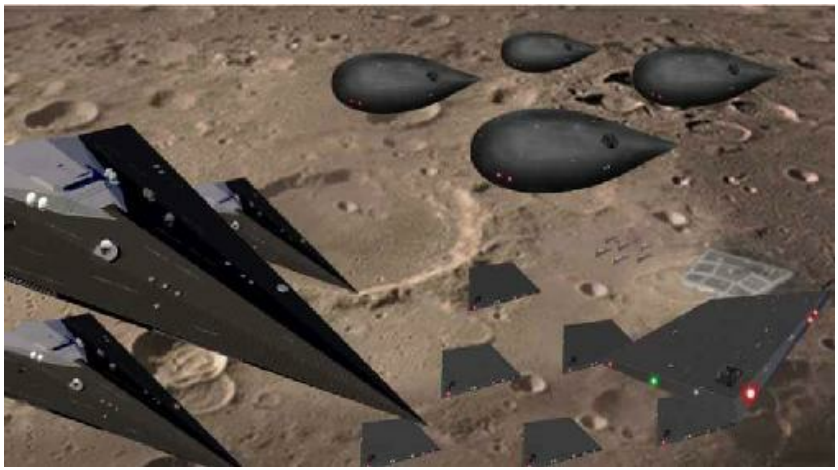


They have a very large pumpkin seed-shaped vessel.



David: When you say 'very large', now, what are we talking?

Corey: Over 600 feet [183 meters] across.



David: Okay.

Corey: But those are smaller than the large wedge-shaped vessels.

David: Right.

Corey: And all we've really known about them is that they fight . . . They're an offensive force. They are for going and doing offensive type of work alongside the Draco. They go outside the solar system on, I guess, conquests or defending Draco territory, helping the Draco on military expeditions.

The ICC has helped them build out a lot of this, these vessels and weaponry. And then the Draco group has helped them enhance it even more so for offensive duties outside of the solar system.

And they spend almost all of their time completely outside the solar system, and we hadn't received . . . We knew of . . . There's one of their bases on the Moon that is quite a ways from the Lunar Operation Command that is shaped like a pyramid with the top chopped off.

David: Yeah, and you have an illustration of that we can bring up here.

Corey: Yeah, that's not my illustration. She needs full credit for this image. She had been abducted and taken to this facility. I was very surprised when people wrote me, and someone else had described this same facility on the moon.

David: And it looked exactly like what you saw.

Corey: It looked almost exactly, pretty close, but it's a very good representation. And it's been almost impossible to get good intelligence about what's going on there.

The Dark Fleet is completely human-ran. They do answer to and work alongside the Draco Alliance. They're allies, and they go out and they do offensive battles and offensive expeditions together outside the solar system.

David: What are they going for? What is the offense about? What is the goal or the objective?

Corey: We assume that it's conquest or keeping certain areas secure or reined in in their empire, but we really don't know. It's been very difficult to get information and intelligence about the Dark Fleet. And there's been a few defectors from the Dark Fleet that were stuck inside of the outer barrier that was erected. Most of the Dark Fleet was stuck outside.

And whatever information has been gleaned from those defectors, I have not heard. So they have been a very large mystery to a lot of people.

David: Why would anybody want to cooperate? Why would any humans from here want to cooperate with these reptilians that are basically like biblical demons or devils?

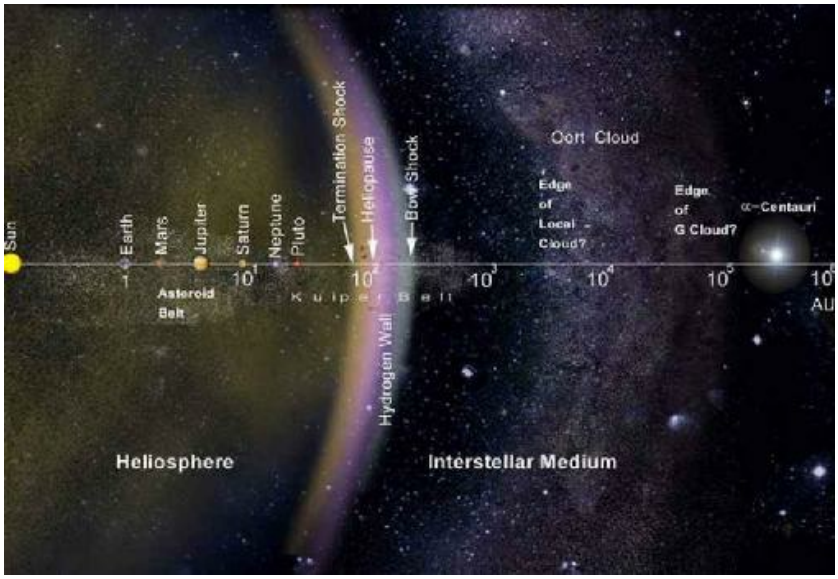
Corey: Well, one person's demon and devil is another person's god.

David: Sure. So we don't really know exactly what they're doing out there, but you said that when this outer barrier went up, a lot of them got locked out of our solar system.

Corey: Yes.

David: But it appears that a significant portion of their command structure, their elite, were actually in our solar system when the barrier went up?

Corey: Yes. Yeah. Command and control, and communications were still here, and a lot of their operational forces were outside doing what they do when this outer barrier was raised. So they became stuck outside of this field around our entire solar system that is way, way out past where the heliosphere is - out past the Oort cloud. It's huge. And they can't come back.



So the structure that was here has somewhat been cannibalized into the ICC and defected to the Alliance.

David: If you saw somebody from the Dark Fleet, what are they going to be dressed in? What do they look like?

Corey: They were very distinctive. A lot of the times they usually . . . It's almost out of "Star Wars" again. They wore . . . They had a very . . . They looked very stern, very arrogant, like they felt very elite. They wore black stormtrooper kind of clothes, just very stern like. Very totalitarian acting. And a lot of the people that ended up going into this program came from a lot of the German secret society Nazi kind of programs.

A lot of them and their ancestors or people that were born later on after these breakaway civilizations occurred have joined.

David: So do these Dark Fleet personnel actually . . . Do they have homes here on Earth? Do they go out to work? Do they drive into a local military base and portal out?

Corey: I would assume that they are 100% vested off-world.

David: The way you're describing it, it sounds very military. I'm wondering is it all men, or are there women in the Dark Fleet, too?

Corey: I'm sure there are women, but I personally only saw men.

David: Hmm.

Corey: Yes, they're very regimental, very totalitarian, very . . . The energy you feel from them is very unnerving. They don't feel like pleasant people at all.

David: Are there different races of normal humans that we'd see on Earth in the Dark Fleet?

Corey: Yeah. It's not a Caucasian purity kind of . . .

David: Really. Okay. You mentioned that the Draco have different reptilian types, and you said there's insectoids as well. Did they co-mingle with these humans in the Dark Fleet, or is the Dark Fleet simply a human fleet that is a support crew for the Draco Alliance?

Corey: They are their . . . It's a human, completely human, fleet that flies in support of and alongside the Draco fleet.

David: So you don't . . . You're not going to see extraterrestrials on these ships.

Corey: I don't think so. I've heard people talk about advisers, maybe one or . . . some advisers being on board, but this is like second, third-hand information that I've heard people talking about. There's a lot of mystery about . . . That has been so compartmentalized about the Dark Fleet. That is one of the biggest secrets still remaining even with those in the SSP Alliance unless there's information they haven't shared with me recently that they have found out.

The Dark Fleet had a lot of secrets.

GLOBAL GALACTIC LEAGUE OF NATIONS

Corey: And then we have this Global Galactic League Of Nations group that was somewhat of a carrot that was offered to all the other nations to have them maintain this veil of secrecy about what was going on in outer space by giving them a space program and giving them a narrative of “There's certain threats, or possible invasions, we need to come together and work together.”

And at the one facility that I visited a couple times, it looked very much like the TV

show "Stargate Atlantis" where you had a real laid back environment, people walking around in jumpsuits with patches from all different countries off the world. They are almost completely outside of the Solar System as well.

This program was a fairly recent one. It didn't start back in the '50s and '60s.

David: Oh.

Corey: Back then is when they started to find out what was going on.

David: Okay.

Corey: I believe this was something that started probably, at least, in the '80s maybe even '90s. It's fairly recent.

SSP ALLIANCE

David: Where does the Alliance come into play now that we're talking about the Solar Warden? You said Solar Warden got started in the late ‘70s and they got a lot of the “Star Wars” technology?

Corey: Mm-Hm

David: How does this relate to the Alliance exactly?

Corey: Okay. Well, that . . . They were kind of the root group that formed the Alliance. Now, they’re made up of breakaway or defectors from the other space fleet groups.

Yes. It was on the brink of that when the Sphere Alliance, the Sphere-Being Alliance, went into an active mode and made contact with the Alliance . . . the Secret Space Program Alliance, which had just started accepting defectors from some of these other group to where it wasn’t just the Solar Warden group anymore.

The Alliance was made up of defectors from the other programs, as well. So, it’s a hodgepodge of defectors from all the space programs that have a common goal of ending the tyranny on Earth of basically the secret Earth Government that controls the “Babylonian money magic slave system” and to bring to Earth the technologies that we have developed that has free-energy, all kinds of medical technologies that will heal just about anything you can think of, clean up the environment. Overnight, these technologies would collapse the financial system and there would be no need for a financial system. And they want to bring this to Earth and to also do a full disclosure of all of the crimes against humanity that all of these elites have been doing over

many, many years. That's their goal.

David: So, when did the Secret Space Program Alliance start to have these goals in mind and begin to take action on them, to your knowledge?

Corey: To my knowledge, they started forming these ideas in, probably, the late '90s and were really starting to act on it in the early 2000s, where they were really trying to cause accidental disclosures by flying in front of live (video) feeds, trying to get people to ask questions.

EARTH ALLIANCE

David: Is there an opposition going on to the Cabal that goes beyond bloggers?

Corey: Absolutely. Every single enemy they've created over the hundreds of years, every group they've alienated, every atrocity they've done to these countries over these hundreds of years, has finally built up to a point to where they all came together, loosely came together.

All of them have their own cultural pains, and I guess some of them have different agendas on the retribution they would like to see exacted on the enemy, which we're calling the Cabal. Others would like to just maybe have a few changes. They think a world government is inevitable anyway, and the Cabal was wanting to do it in an evil way, so why don't they co-opt it and do it the right way?

Despite many of these alliance groups having different agendas and ideas about what should happen to the Cabal once they overcome them, they've put aside a lot of differences, and they've come together for a common goal, which is to defeat the Cabal.

And this is the key of why the Cabal had been so successful. They are made up of many different syndicates of people with many different belief systems and agendas, but somehow they found a way to work together. The 0.01% of them have found a way to work together, even though a lot of them really don't like each other, to exact control over the Earth.

Well, the Alliance is following the same playbook, getting together with people they wouldn't normally work with, forming a loose alliance, and trying to, or actually are in the midst of, overthrowing the financial system that this Cabal has set up for the last 100 years and want to replace it.

David: So I think people that are investigating this have felt that the Cabal controls central banking in every country. They have bribed or compromised all of the leaders

in every country. The leaders are blackmailed, and therefore even people who are fairly compassionate and reasonable folks, there's a widespread belief that this Cabal has just penetrated every country, all aspects of society. So what do you say to those people when they hear about the idea of an alliance and they, “I just don't believe it?”

Corey: Well, there is an Alliance, and it is true that this Cabal is a master at infiltration, and, indeed, they have infiltrated elements of the Earth Alliance. And, you know, this is a problem, but, like the BRICS Alliance . . .

David: You're talking Brazil, Russia, India, China, South Africa is the B-R-I-C-S.

Corey: Right, they've gotten together, and they've created pretty much a new world bank and financial system to compete with the Western or Cabal banking system.

David: And you're talking about the Asian Infrastructure Investment Bank, or AIIB.

Corey: Right. Over time, countries like China have been slowly purchasing the debt and also natural resources from countries owned by the Cabal as their financial Ponzi scheme has slowly, slowly started to collapse.

THE DRACO ALLIANCE

Corey: There are a wide range of different types of reptilian beings that are involved with this Draco Alliance, but there are also some insectoid-type beings that are involved in this Alliance and some very strange Nordic-type beings.

There's been a little bit of information that they are a conquered race that was forced into servitude, but that are also a part of this federation.

David: Well, let's start with some of the basics, which would be if somebody were unfortunate enough to see a Draco, what are they going to see? What are we talking about here?

Corey: There's many different types.

David: Okay.

Corey: Yes, but they're bipedal. They have different types of reptilian beings, some that are quite short in the 4 ½ to 5 feet tall that look very much like Greys. They have reptilians that are of like the Draco-type that are . . . They range from 9 to 14 feet plus tall. And there's a whole range of them.

They have different castes within their system. They have like a warrior caste. They

have engineers, scientists, almost like a hive. And then they have their royalty up at the top that control and direct everything.

David: If you were to see a Draco royal, what are you going to see? What's the height? What are the characteristics? What do the eyes look like? What does the skin look like? Let's just get into that.

Corey: Well, I met, unfortunately, a Draco royal, and it's not . . . it's something that I've refused to repeat and so has Lt. Col. Gonzales. This one was around the 14 foot [4.26M] range, which is incredibly tall. They are incredibly muscular.

David: They couldn't even stand up in a typical room that any of us would have.

Corey: No. Very reptile looking, had vestigial wings and a vestigial short tail.

David: What do you mean by 'vestigial'? What are you saying it is?

Corey: Like the wings at one time would have been able to support them in flight, but now they are just a remnant.

David: So they're just stubby little . . .?

Corey: Right. They're kind of a remnant of what I was able to see unless they were triple-folded in a way to where they could have opened up wide. I mean, it just looked like vestigial wings.

David: When you see this white being, does it wear any clothes, or is it basically just naked with its scales – white scales?

Corey: Yeah. It was not wearing clothing.

David: Okay. And you have said before it has a very ripped muscular look to it?

Corey: Yeah.

David: Now, my other insider said they weigh 3,000 lbs. [1,360 kg.] and have a 5-foot-wide shoulder span. Would you say that's correct?

Corey: The weight . . . I would say, yes. That's probably close. 5 feet for the shoulder span – I don't know if that's even enough.

David: Really?

Corey: Yeah. Very broad, very intimidating.

David: Are they all white? Or is this just one type?

Corey: No. There's another type that people describe as red, but it's a real weird brown that makes it look red that also has wings. They're smaller, and they're less muscular, but they're . . .

David: Now, these folks have the vertical slit pupil, right?

Corey: Mm-Hmm.

David: And the eyes are kind of large on the face like a Grey, or is that not so much this type?

Corey: No. It's in proportion to its skull as you would picture a reptile.

David: And there's just two holes for the nostrils or not really a nose?

Corey: Well, it depends on which ones you're talking about. Yeah, they have nostrils that will sink in and go up, and then there are some of them that have sort of a nose that goes up . . .

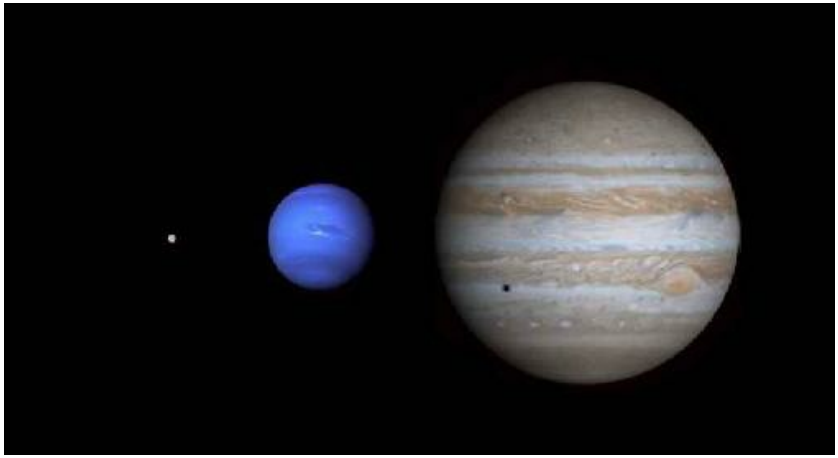
David: Like a snout.

Corey: Kind of like a little snout.

THE SPHERE-BEING ALLIANCE

Corey: They do not call themselves the Sphere-Being Alliance. This is a term that the Secret Space Program and some of the secret Earth governments gave them. They call them the Sphere-Being Alliance, because they were able to gather, through intelligence, that it was a group of beings that were associated with these giant spheres of three different sizes, the Moon, Neptune and Jupiter, that were now in our solar system for reasons they were not sure why they were there.

But this group was not making contact with them. They were ignoring their hailing attempts to communicate with them. So this is just what they named them early on.



LIFE AFTER DISCLOSURE

David: What would the average person's life be like if the Alliance's goals are met on Earth? What would that life be like?

Corey: It would be no different than the “Star Trek” era - what you've seen in “Star Trek”.

David: So could people have a portal station that they could go to, where instead of flying through the airplane that you’d be able to take some kind of stargate-type system to wherever you wanted to travel?

Corey: Sure. Yeah. There's replicators. There would be no starvation. Literally, the deserts could be turned green with desalination of water.

David: What about all the plastic floating in the ocean in these big giant gyres of waste material?

Corey: Matter is easily changed into something else. It's just a matter of knowing how, the technology to do so. And we have that technology. It's just not being shared.

David: Some people might be really freaked-out by the idea of not having money anymore. They're going to say, "That's socialism. That's communism. That's going to get us under even more control because nobody will have any money to resist this new thing that they're trying to so."

Corey: That's the way we're programmed.

David: How would you think that that's not the case?

Corey: I mean, if you want money that badly, you can use a replicator and replicate some silver or gold of replicate yourself a $100 bill, if it makes you feel comfortable, and put it in your pocket. There will be absolutely no need for any type of financial give or take.

David: I would think that the typical old-school politician mentally would be that if you gave everybody on Earth this kind of stuff, that they would all just want to drink beer and nobody would want to do anything, and they'd just be hanging around and it would kill them. It would ruin their lives.

Corey: Well, there's going to be a transitional period where people are going to go probably a little bit nuts for a while with the technology.

David: I mean when people win the lottery right? It's not good for them.

Corey: Right. Well, if everybody wins the lottery at once, everybody has a replicator. Everybody's going to be pushing the button every day and trying all these different meals. Everybody is going to want to go all over the world, and once it's cleared all over the solar system, and see all these different ruins that are everywhere. I mean there's going to be a lot that's going to be opened up. But first, we're going to have to go through the process of dealing with our past and getting over our past.

David: All right. Well, I hope you enjoyed that as much as I did. This is awesome stuff. When you start to get it all together like this, as I'm sure you can feel now, the scope of this information, the awesomeness of what there is to know, how much we've

been lied to, and the incredible world that exists all around us veiled from our view so thinly that we now have people like Corey coming forward, and others, blowing the whistle on this, telling us the truth, bringing us the knowledge that you need to help your mission and my mission of freeing this planet from the tyranny that has held us under for so long.

We look forward to another year coming up of even more amazing episodes like this for you to enjoy with us as we both go on this journey of exploration and discovery together.

This is David Wilcock and the Gaia network, and I thank you for watching.

Coming up soon, we're going to have explosive new episodes of William Tompkins and Sergeant Clifford Stone. Tompkins is an aerospace engineer whose testimony validates many aspects of what Corey has been saying on “Cosmic Disclosure”.

And Sergeant Clifford Stone specialized in UFO crash retrievals, firsthand identification of the extraterrestrials, both alive and dead, from these wreckages.

That's coming up here very soon on Gaia.

Cosmic Disclosure; SSP Testimonials William Tompkins Season 5 Episod 10

Cosmic Disclosure; SSP Testimonials with William Tompkins

Season 5, Episode 10

30 Jul 2016

William Tompkins: So I went to work, then, at Douglas, and I'm a draftsman for two weeks, and my Section Chief started through my background.

And, of course, it says all of this stuff that I had done in the Navy. So he puts me in this think tank, and there is where we get to the first think tank, okay, - was inside of Douglas in a walled-off area.

And there's 200 guys in it.

And we investigate every aspect of extraterrestrial - military, commercial, whatever. And I was assigned to design for the Navy about 16, 18 different classes of US Navy battle group ships,which didn't exist.

And these were . . . The larger ones were from 1 kilometer to 6 kilometers.

These ships fly in space. They're spacecraft carriers. I designed US Navy Spacecraft Carriers, which finally got built back in the late '70s up in Utah, underneath the ground.

And you've seen the pictures of US Navy spaceships – Solar Warden. So Solar Warden came out of a think tank inside of Engineering at Douglas.

And a whole lot of other stuff came out.

* * * * * *

David Wilcock: All right, this is David Wilcock, and you are watching Cosmic Disclosure. I'm here with Corey Goode, and in today's presentation we have a bombshell for you. We're going to be interviewing the veteran insider of the Secret Space Program, William Tompkins.

I've had numerous conversations with him. He's actually 94 years old, he's still with us, and his testimony is unbelievable. It validates so many aspects of what Corey and other insiders I've spoken to have been saying.

People tell us, “Oh, you have no proof. You have no evidence.”

Well, here's a guy who comes out of the World War II era, and his testimony is just going to rock your world.

I want to give you a little background, biographical information on him to set this up. So check this out.

William was first noticed by the United States Navy when he was just a young boy. He was living near Long Beach, California at the time, and his father would take William and his brother down every weekend to see many Naval ships that were parked in the harbor there at Long Beach.

William Tompkins was a good artist and he was really good at building models.

And soon, he started creating scale models of the ships he was visiting.

The Navy began taking notice of this brilliant young boy and his models because they were so close to the real thing.

But it was when young Bill Tompkins began adding top secret parts to these model ships that the higher brass took real notice of him.

He was then taken into the Navy and was brought into a think tank during World War II.

After the war, he went to work for Douglas Aircraft, which is now the defense contractor McDonnell Douglas.

If you want more information on William Tompkins's fascinating background, I encourage you to go to the biographical introduction on William Tompkins that we have here on Gaia.

William Tompkins became part of a secret think tank that began to design the ships, the craft, the buildings, and everything they would need for the Secret Space Program.

But we want this to start out with a bang, so we're going to begin by joining William Tompkins as he tells us of his many decades-long journey through the Secret Space Program.

He's going to start out our conversation by telling us how the US Navy began discovering some of the things that the Germans had been inventing since the early 20th century.

GERMANS IN SPACE

Tompkins: It's '42 – 1942. The war's on. Rico Botta, his hobby is sending these Navy operatives into Germany. They've been going all over Germany, and they're staggered at what they've found.

They found that Hitler and the SS made an agreement with reptilian extraterrestrials.

They found hundreds of different types of advanced weapons being built.

These included 60-foot and 250-foot, 500-foot UFOs – round vehicles, okay? UFOs.

They built some of these out of chromealloy steel that would weigh tons and tons and tons.

They had developed, or they had been given, electromagnetic anti-gravitational propulsion by the reptilians.

The agreement turned out that they were to develop a parallel space Navy that the reptilians had and operate out through the galaxy, with the reptilians taking over planets, enslaving the people on the planets.

But what they had already accomplished was really strange.

They have all these UFOs, different types of propulsion that were unbelievable, laser weapons systems – unbelievable stuff – all over the country – Germany and the occupied areas.

They had massive underground production facilities that they were using –- they had developed -– for regular arms waste, like tanks and places to build Navy ships and all this kind of stuff.

Most of it was underground. So they started expanding those facilities, and they put 11 of these UFO-shaped vehicles in production.

So the operatives are trying to explain to us, and the admiral would back off and say, “Slow down. I don't believe you.” And that went on, and then the captains would say the same thing.

The operatives were nice guys, and they knew they were going to get the questions when they got back into the admiral's office, and they knew that nobody was going to believe what they said.

So fortunately, the admiral had a typist in there, and the admiral's aide was NOT in there – he wasn't even cleared to be in there.

And one or two of the captains, the admiral, and myself. And we were the ones – the only people that this information was given to by the operatives.

I want to step back to my job in the Navy there working for Admiral Rico Botta.

We talked about my mission – not my job, my mission. It's documented, okay? It's written by the Secretary of Navy Forrestal, who became the number one guy in the military.

Then he, like several other people, including our president at that time, were talking to a lot of other people.

And so he was supposed to have had a mental breakdown, so they took him to the hospital there in Washington at the top floor and pushed him out the window.

And so that's the guy that wrote Admiral Rico Botta's mission, which my mission came from his.

That was the level of this information in the United States.

Now, no other country but Germany knew about the extraterrestrials. Nobody did.

Now, as this starts to unveil the reality of what Germany was doing, it was like, the war is going to be over, period. They're going to take the whole planet, and they could do it in five minutes.

They even had trained a group of soldiers – an entire battalion of them – who were cloned.

They had cloned a whole battle group of soldiers.

They sent them out front, and they were killing the Russians unbelievably.

So it's not just the material, but the – and advanced medical systems, longer lives.

The size and the magnitude of what was taking place was unbelievable to everybody that got involved in the program.

The SS found out that people could live longer, so there was another big massive program in pieces brought back by the Navy operatives [and] plopped it on the table in front of Admiral Rico Botta.

And, of course, that ended up with about 24 packages because of the different magnitudes of living longer.

And I guess if you asked the question for the Nordics, their comparable lifespans are 1,400 to 2,200 years.

But they look exactly like us.

There is a study that we did later on at TRW on advanced life systems – extended life.

And that program is down now to, within less than two years, it's going to be available to some people on this planet.

The way it works – I'm very involved with it – essentially you take four aspirin over six months, pop them.

Or you get four shots.

You immediately change – everything is nicer. Everything is nicer. Okay?

What you do is you revert back to – the girl is 21 and the guy is 29.

Now, it takes a while for you to do this. You then stay at that time for essentially a couple of thousand years.

Your brain then . . . which collectively we're only using 2.2% of our brain. I don't care what they're telling us. We're only using 2.2%.

You get a minimum of 400% capability over what you normally had.

Now, what this does is this allows you to contribute. It allows you to contribute.

You go to work for the company here, 20 years they give you the watch, and you've got a couple three years later on, and you're out of the picture. Okay?

So you didn't contribute very long, all right?

Now, you're living two thousand years, and you can contribute and you also can have fun for 2,000 years.

And you don't change age. You stay there. Five of the top medical research groups – just like Scripps right here in San Diego – are involved in this.

And there's hundreds of companies involved in this.

There's a whole lot out there that is being removed from our part of our life. And we are in this position where everything that we've been taught – whether it's in the university or in medical or in any technical field, even mathematics – is baloney.

Yet, because we have allowed reptilians to put the stuff in our minds, it removes our capability to operate, learn. Our entire history – all the way back thousands of years - has been being controlled. We now know this.

This is not something that we think could happen. We now KNOW this.

So if you look at countries – you looked at the Roman times and you see . . . If you take in parallel these events back with that, the Romans were being mind-controlled.

They had the elite group, and they had all of the army, and then they had the slaves.

And that's where we are now. We're just finding out about this and we need to fix it.

* * * * * *

David: All right. Well, as you just saw, that's a very dense amount of information that we've just gotten. It's unbelievable.

If you've been paying close attention to the show before, you've seen other episodes, then you're already aware of how much validation we've been getting there.

So here to discuss more about these details with me is Corey Goode. Corey, welcome to the show.

Corey Goode: Thank you.

David: So, first of all, we have Tompkins starting out, working from 1942 to 1946, actually debriefing these 29 spies that were embedded in Nazi Germany a total of 1,200 times. And he said that they had experienced this German Secret Space Program firsthand, and that the Germans had cut a deal with reptilians.

So just to start with that, how did you feel when someone comes forward and validates such a key part of your testimony on this show?

Corey: Well, I have to say it's gratifying, especially after knowing that he – I was told – has no idea who I am, couldn't pick me out of a crowd. So you know, this is leading me to believe that his program is what fed the data into - or some of the data - into

these smart glass pads.

David: Right.

Corey: So I was most likely reading the results of his briefings.

David: Now, when we are talking about somebody like Secretary James Forrestal being pushed out the top floor of a building in the course of setting up this work, is that a common thing? Is there a short life expectancy for people that get into these programs?

Corey: Well, yes, and a lot of it depends on whether you toe the line or not. If you don't toe the line, then things – I mean, they're not afraid to take out a president, let alone a former – was he head of the Navy?

David: Yeah, he was Secretary of Defense.

Corey: Oh, Secretary of Defense?

David: Yeah.

Corey: Wow! So, I mean, since to them this secret is higher than the nuclear bomb, any other secret, then they think any of this type of retaliation on people that open their mouths or don't toe the line is justified.

David: Now, he said that Admiral Rico Botta's aide wasn't even cleared to have access to this information. That might strike some people a little strangely. Do you think that there are other precedents for that, in your own experience?

Corey: I saw that kind of thing happen all the time. You'd be in a briefing and they'd give a pre-briefing, and then they would have 5, 10 people have to get up and leave the room . . .

David: Really?

Corey: . . . because they were not cleared for the rest of the information.

David: Wow!

Corey: So I've seen that kind of thing happen a lot of times.

David: He also said that Admiral Rico Botta was constantly calling BS about the testimony that he was hearing, that it was just so fantastic-sounding, so hard to

believe. And he said that the Germans were the only people, the only country at the time, that really knew about extraterrestrials back then.

So did you find that this wow factor was a fairly consistent element, that people just have a really hard time processing this when they first encounter this information?

Corey: Oh, yeah, absolutely. I mean, case in point, when I came out talking about being regressed 20 years, serving in a 20-year space program, I felt the same way. People were just . . . This is just too incredible to entertain.

David: Now, he also discusses in this short clip that we just saw, Nordics. And if you read his book, he's describing intensive encounters that he has later with Nordics, and we're going to have some interview footage on that later on.

But was it interesting to you, as well, to hear him mention that aspect of things?

Corey: Yes, because the Germans were in contact and working hard alongside the reptilians, as he stated. But there were Nordic groups involved as well, that different elements of the German Space Program were in contact with.

David: Right. Now, he mentioned that the Germans with the help of . . . He just calls them the reptilians. He didn't say 'Draco', So we'll just use that term. The Germans with the reptilians were creating a space Navy, and that their goal was to not just worry about conquering the Earth, but to use the material and the personnel of Nazi Germany to create an interplanetary, interstellar conquering army.

What was your feeling when you heard that?

Corey: I was a little bit shocked, knowing that he doesn't know anything about my testimony And I've reported the genesis of what we are calling the Dark Fleet for a while, and this is exactly the genesis.

They are working mainly outside of the solar system, working alongside the reptilians for defending territory and conquering new territory. That was their mandate.

David: It seems hard for me, just personally, to understand why people on Earth would give a darn about conquering other worlds if they only found out those other worlds existed a few years ago.

Do you think this is more of just something the Draco talked them into, as part of the deal?

Corey: That was a part of the deal.

David: . . . to get to the technology?

Corey: That was a part of the deal.

David: Because why would the Germans care about other planets? They don't know anything about this. They'd have no background in it.

Corey: Well, I mean, if you were 1930, '40 era, had that consciousness and perception of the world and you were told that all of this stuff was out there, that might change. You might become VERY eager to get out there and see it.

And if you are from a conquering kind of mentality force, hey, all the more better for the reptilians and their goals.

David: So he also said that the Nordics would live between 1,400 years to 2,200 years long. Now, that's over 10 times, maybe even 20 times, a normal human lifespan. Some people are going to have some trouble with that.

Have you seen any information that corroborates that detail?

Corey: Yeah, we're talking like, two or three times the age of Methuselah. Ha.

David: Right.

Corey: So, yeah, that . . . I mean that is actually pretty common out there in the cosmos. Once they've gotten to a certain technological place of development, they . . . the human body is extremely easy to manipulate, heal and all kinds of stuff medically.

So the bodies of these non-terrestrials, I would assume is similar. And if they can travel across space, they've definitely looked inward and figured out their own genome and how to manipulate it.

David: Now, another thing that might be contentious for some people that they're going to have trouble believing is his testimony that the Germans were actually cloning soldiers, and that clones were being used in combat during World War II.

What's your response to that aspect of this?

Corey: Well, I hadn't . . . That's new to me – that part.

David: Okay.

Corey: But I do know that there was cloning going on later on, that I read about, that

the Germans were doing and that the Americans started doing as well in underground bases in these so-called NBC or biological weapons facilities. They were working on and doing a lot of cloning.

David: And speaking of these underground facilities, he said that the Germans were building these discs in several of them, and he also said there were several different prototypes that would go up to 500 feet wide.

Corey: Yeah.

David: Is that consistent with what you've heard?

Corey: Our shipping yards, or whatever, for when we were building our earlier craft? It was done in the same manner – in underground . . . that I was briefed about. They were in huge underground caves, and they were building them in sections, and putting them together and then flying them out into space.

David: Is the craft being as wide as 500 feet consistent with what you have heard?

Corey: Much wider.

David: Okay. And what about the chromoly steel that he mentioned?

Corey: That, I had heard. The ships were incredibly dense and heavy because they were using that era of material science. But they started developing material science, and within 20 years or so they were having craft very similar to non-terrestrial craft that we would run across, to where you could pick it up with one hand and rock it.

David: Wow!

Corey: But I don't think it was quite there, but they developed quite a bit in their material science to make them lighter. But the weight really doesn't matter when you have the torsion or gravity-canceling technology.

It could weigh 1,000 tons and once they turn it on, it doesn't matter.

David: Sure. Now, he also said something that again, people may have trouble with, especially the more skeptically-inclined, and that would be . . . He said that within two years, we could have a life extension system released to certain individuals, in which you take four pills or four shots over the course of six months.

And he's saying some pretty outrageous stuff. He's saying that you're going to get a 400% IQ boost, that your age reverts to about 29, and that you then stay that way for

like 2,000 years, and everything becomes better, and you feel better. Your life just is enhanced.

Does a technology like that exist that you're aware of?

Corey: Yes, and as I have stated in the past, some of the technology in some form was used on me at the end of the 20 years, when they age regressed me all the way back to the 16, 17-year-old range.

David: But you're not staying at 15, 17 years old?

Corey: No.

David: And you're not living for 2,000 years, obviously.

Corey: Right. But this is more of a maintenance kind of . . . If I was getting these chemicals on a semi-regular basis, most likely that would occur.

And that's one of the things about these programs. They want to make people reliant on who's running the program, to come back for more shots, pills, whatever.

David: Well, and I'll tell you, Corey, one of the things about this that concerns me, and I want to put this on camera, because I think it's very important, is that the space program insider, Jacob, he described to me that they – the Cabal – are going to try to get humanity to accept shots that will extend lifespan.

But he told me that there were going to be nanites in it, and that we would actually become merged with AI. So do you think that could be how this works?

Corey: That's most likely a type of scenario . . . You know, these are not real good-hearted people that are going to . . . If they've kept this technology hidden for 80 years or whatever, why are they all of a sudden going to become all benevolent and give out life extension?

There's always a catch with these people, so there's probably some sort of Trojan horse in the shots, just like most of the shots that people get now.

David: Do you know of a way that this could work that doesn't involve AI and nanites?

Corey: Well, I mean yeah, it obviously worked for me without nanites.

David: Okay.

Corey: I think to get me so quickly down to the age that they needed, they did a little bit different method. I wasn't taking pills. They did it intravenously.

David: Right.

Corey: But I only witnessed a pharmaceutical application to what happened at the end of my service. I passed out and all that afterwards.

The fact that he's talking about telomere manipulation and that type of a pharmaceutical innovation to help people extend their life, that's pretty good details that I hadn't had before.

David: Let me ask you this. Is there a way that if this technology does come out, that we could test it for nanites? Or could we shock it somehow with electricity or something so that if there were nanites in it that they wouldn't be able to work?

Corey: Yeah. Both of those are true. They could test them for nanites or just to not have to worry about it. They could take all of the samples through and hit it with an electrical charge.

That's unless introducing electricity is going to change something in the chemical.

David: Right. So we don't necessarily have to have a xenophobic attitude about this. If there is a technology that's benevolent, that comes out from the good guys, we can potentially use it, but we just have to have certain safeguards and caveats in place.

Corey: Right, and unless mortality was staring me in the face, I would probably sit back and let a few other people try it first.

David: All right, so now what we're going to do is we're going to show you another clip that gets into some of the more interesting aspects of Maria Orsic and the whole Nordic aspect of what Tompkins' testimony has to offer us. So check that out.

MARIA ORSIC AND UFOs

William Tompkins: So we had a young girl, Nordic, just outside of Germany.

Some people talked to her, and they said, you are now involved in a new program. And you're going to have great support in this program.

She had developed with . . . I think she had eight girls.

They were continually talked to telepathically to go and design spaceships.

The little blonde actually built them. And eventually, two of those got over here in Area 51.

But Germany found out about the blonde, took her over, stopped everything, and then got to this point where there was some sort of pressurized program by the SS to control that original group.

Now, several times they did work together, but Hitler allowed them to operate independently of the whole SS program – the whole development.

So we had two developments going on in Germany. The girls didn't want their vehicles to be used for anything else but travel.

They were afraid that somebody would get a hold of it and they'd use it for military, which is, of course, what they got.

But the girls finally ended up in Antarctica, in the large facilities.

In fact, the reptilians had three massive caverns.

They let Germany use two small ones, but when you're talking about small, it's like as big as California.

So there's cities in both the extraterrestrial caverns, and manufacturing everything that you would need on a planet.

So then Hitler's group did the same thing.

Four years before the war was over, it was decided that the war could possibly be lost, but if we win it, we still need to get out of the area because the Allies are going to bomb us off of the Earth, and there won't be anything here left for us.

So they decided to move everything to Antarctica.

Admiral Byrd . . . They were going down there and they were going to take out the whole thing in one week. The top people in every area of the Navy – best aircraft, best ships, best weapons, everything.

And five weeks later, things didn't look very good.

When we got down there, they had decided they were going to have one thrust from the west side of Antarctica, and then the opposite side coming into both of them towards the center of the continent.

And so before we even got all the guys around and I'm talking about big four-engine flying boats, okay, and ships, battleships and destroyers and submarines and you name it.

Before they got there, these fairly large – they were 100-foot diameter saucers – came up out of the ocean and took down everything.

Now, there's a misnomer on some documentations about the photographs of some of the German UFOs. Many of the close-ups give you a real clear picture of the cross on them.

What was partially incorrect in that information that's been released was that not all of the vehicles came up out from the German side to take out ours.

But from the large caverns adjacent to them, unmarked UFOs and unmarked cigars came up, which then it was a joint venture by the extraterrestrials that lived there, operated from there, and built the vehicles that went to the Moon and Mars and all these other places.

But we lost that war.

* * * * * *

David: Now, when he talks about Maria Orsic, we're dealing with what he said to be Nordics. Is your understanding that Maria Orsic was in fact a Nordic here on Earth and not a human born on Earth?

Corey: No. My understanding was that she made contact with several groups, one of them being Nordics.

David: Okay.

Corey: And she was the conduit for the Nordic people, that they were in contact with.

David: So she may have looked like them, but she was born here.

Corey: Yeah, every one of the people in her group, they were very beautiful. People would turn their heads if they walked by, you know, real long hair.

David: Now, we've heard from other sources that Maria Orsic was actually starting out this work doing automatic writing, and that she was, in fact, writing Sumerian language. And there were only three people on Earth who could correctly read it, and

the Germans brought them in and validated that, in fact, that was accurate Sumerian writing.

Corey: And the same sources that she got the automatic writing communication from guided her in doing sketches and to look for certain ancient documents that would help them . . . give them a boost in their development.

David: Now, I thought there was something interesting in there as well, which was that Maria's team only wanted these vehicles to be used for transportation. They were not wanting it to become a military application.

That would suggest that whoever was helping her probably was not the Draco, but might have been some kind of benevolent group like these so-called Nordics.

Corey: Right.

David: So what are your feelings on that?

Corey: Well, that's usually what happens. If a negative non-terrestrial or entity makes contact with leaders of a certain group, then very often, either through like they did with Maria Orsic, or directly face-to-face, the benevolent groups come in and warn them and try to give them pretty much a hippie love and peace message. You know, get rid of all your nukes, and we'll give you all this technology – extended life, travel throughout the cosmos, everything.

And the military minds just couldn't accept that.

David: And I know that in William's book, he describes that there were a series of people beginning in the late 1800s that were all getting telepathically contacted independently and were all getting this initiative for a space program.

So do you think that these benevolent beings knew that the Space Program would be co-opted by the negative, but also, were they wise enough to see that we needed to have this for the time that we're in now, so that we could also ultimately use those tools to defeat the Draco and help kick-start us into this Ascension/Golden Age?

Corey: From what I've read, it seemed like they were bringing balance to a situation. We were getting all of these advanced weapons of war, and we were interacting with a negative force that wanted to go out and take over other planetary systems.

So them coming in, providing technology and more of a benevolent message on how to use the technology, was their way of trying to counteract it, because the technology was not that incredibly different than what the Germans were getting from the

reptilians.

David: How does it feel for you as a whistleblower who's been out there risking your life . . . You've had all kinds of problems, all kinds of hardship and setbacks, and people have said that you're a charlatan, a liar, a fake, etc.

How does it feel to see William Tompkins validate Operation Highjump?

Corey: It's gratifying, but a little shocking, too, because, I mean, I'm really beginning to believe that a lot of his briefings during the time period – '42 – were what made it into the database that I was reading on the smart glass pad, you know, like 30 years ago.

David: Right, because as he said, there was a stenographer that was there typing up everything that these 29 different embedded spies said over the course of 1,200 briefings. And that was just the ones that Tompkins personally supervised.

Corey: Yes, and we were viewing old typeset documents.

David: Oh, really?

Corey: Yeah.

David: I didn't know that. Okay.

Corey: Yeah.

David: So you would actually see the original typewritten paper documents?

Corey: Yeah. Yeah. Well, there were redactions, but very little redacted.

David: Wow! So when he said that there were unmarked craft as well as German craft, and this included cigar-shaped craft . . .

Corey: That was new to me. I had not heard that.

David: Okay.

Corey: But I wouldn't doubt it, because if they're allied with the reptilians, and we come down to an area that's mostly reptilian-controlled, of course, they're going to come out and back up their new ally.

David: Now, another thing that I find absolutely shocking - and I would hope that you

watching this at home will dig this as well – is how he said that two main areas were like leftovers and were given to the Americans [Transcriber's note: I think David means 'given to Germans' not 'Americans'] underneath the ice in Antarctica, in addition to these much larger Draco areas – that there were three, very large Draco areas.

Now, you've independently – before this ever happened, before you knew about Tompkins or I knew about Tompkins – had said that there were two major areas underneath Antarctic ice, and then some smaller ones as well.

Corey: Uh-hmm.

David: So what does it feel like, again, to be seeing so much precision in the line-up of these testimonies?

Corey: It makes me hungry for more.

David: Yeah.

Corey: You know, I'm ready for more from Tompkins and more from some of the whistleblowers that we hear are starting to come forward. So it was exciting, but we need to hear more. This is great.

David: So we're seeing independent, verified testimony of Operation Highjump. All the things that you said, showing up very paralleled, in which Byrd goes down there with this huge army.

We have these - it appears to be - Draco and Germans that are striking against them, and they are very, very heavily-damaged, and they have to limp back.

Corey: Yeah, they were crippled.

David: So this is really very tightly-aligned with what you saw in your own briefings.

Corey: Yes, and I guess I was reading what Tompkins and his group had reported.

David: I just think it's important for people to understand watching this at home that I can't bring out some people that I know, but I have other folks who are saying exactly the same stuff that you've said, that Tompkins has said, that others have said.

And it's when you get this many different sources that are all telling us the same thing, that you now have veracity. You have proof.

So the proof is not all the way as far as people want it to be, but we're getting closer and closer all the time.

Corey: Well, a lot of these skeptics, if one of these craft were to land in front of them, would still be in denial.

David: All right. Well, this has been really fascinating. I want to thank you for watching our show. This is certainly mindblowing.

After all this time, people say, “Oh, Corey has no validation.” Well, what you've just seen here is a gamechanger, and I encourage you to tell everybody you know about this, because now that we're bringing this all together, maybe a lot of people who wouldn't have taken this seriously before are going to take a second look.

And we do need your help. We need as many people as possible to educate themselves about this.

As Corey just said, it's vital to humanity's future that we no longer act as ostriches, that we have the awareness of what's really going on.

This is “Cosmic Disclosure”. I'm here with Corey Goode and William Tompkins. I'm your host, David Wilcock, and I thank you for watching.

William Tompkins Bio Season 5, Episode 11

Cosmic Disclosure; William Tompkins Bio Season 5, Episode 11

31 Jul 2016

David Wilcock: I'm glad you're here for this one, because this is going to blow your mind. You're about to see a biographical sketch of William Tompkins, an aerospace engineer, who has come forward as an insider with exclusive knowledge in a wide variety of aspects, specific data points related to the Secret Space Program that we have been disclosing in the show that I have here with Corey Goode.

I want you to see this now and get into the details of all the amazing intricacies of William Tompkins' illustrious career. Check it out.

Narrated by William Tompkins:

I had, for whatever reason, been interested when I was a kid, nine years old, in building Navy ship models.

To get more information, I'd go to the library and I'd try to find what you could get on the library, and then there's be news broadcasts about different Navy ships sometimes.

My dad though took my brother and I, older – he's older than I am – down to Long Beach. We were living in Hollywood.

And he would take us down to Long Beach on the weekends, where in the early '30s there, the Navy was concerned about what the Japanese were doing in China.

They decided to move the Eastern Navy to the West Coast, but they didn't have a harbor.

So they had to wait for the construction of a breakwater right off of Long Beach.

And this breakwater then was large enough to actually handle both the Eastern Navy and the Pacific Fleet.

So this was all new to everybody when these ships came in. And to me it was wonderful, because I could go down to the bay and I could . . . You can't use cameras, but I could sketch all the radar and the classified stuff, because the ships are only 10 or 12 blocks off of Long Beach.

So then on weekends, the Navy allowed people to come on board and just walk around on the ships. So my dad took my brother and I down there.

And I was really interested in the aircraft carrier. We had two of them at that time, and the “Lexington” and the “Saratoga” were both right there.

That great big enormous aircraft carrier, 1,000 feet long – crazy – stood up like 11 stories high.

And when you get up inside, it's a big enormous hangar, and you wouldn't believe the size of it.

But the whole thing looked to me like it was a space vehicle that somebody had built. That's the way I saw it. So I needed help for building the “Lexington” aircraft carrier.

So I needed the radar. I needed a lot of other details of the five-inch guns, 20 millimeter, 40 millimeter, where all this stuff was, because, remember, at that time they were refitting every ship, almost, for battle conditions with the latest equipment that they could come up with.

To get the radar, I would walk the flight deck and way up there on top of the tower next to the control center, there would be a shadow that would come down, and this shadow then gave me the opportunity to walk two ways of it, another two ways, and mark it down.

And I could figure basically the shape and the size. And I was really good on being able mathematically to come up with what it was.

So then I would walk up to the bow of the aircraft carrier, and they had these secret steam catapults to catapult the aircraft off so they could get them in the air faster.

Of course, it was classified, but I just walked around, and I got all my numbers and came back. And on the way home, while dad's driving us back to Hollywood, I would start making my perspective sketches.

Later on in the week, after school, I would make a detailed drawing.

And then I would build that part of the ship and put it onto the model.

So we got to be about 40 ship models in this collection, and so some people found out about it.

Newspapers found out about it, and they had articles written about the Kid's Navy.

So the Broadway Department Store on Hollywood Boulevard requested that we show

the models in their front window.

So they opened up a great big area.

They had a table inside for me with a desk, and I had some of my model stuff there, and they had me demonstrate how I would make the models.

And I did that after school all week long and the Saturdays and Sundays. So it was quite an effort.

But the first article that referred to this got several Navy people that were on leave to come up from the base into Hollywood. They were going there anyway, and so they went over to where the models were.

And they couldn't get over looking at the accuracy of these models. So one of them contacted a Naval Intelligence guy. And this then got to be sort of a hard story.

Naval Intelligence came from San Pedro to my dad's office on Wilshire Boulevard. They confiscated him. They investigated him for 2 ½ days and finally figured out that he was not a Russian or a spy or something.

But in that conversation, they then came out to our small apartment in Hollywood. I shared a bedroom with my brother, and actually I had stacks of paper that were piled up halfway around the height of the room.

These fellas came in this little room and looked at this stuff. They studied it. They came back three days later. They reviewed it. They came back four days later, and they reviewed almost everything that I had.

And I had hundreds of sketches, hundreds of drawings, hundreds of pre-perspective-type things, because I would get all these crazy things, and I was visualizing how all this would come together for the models.

So they let my dad off the hook. Okay? From there, we had moved to Long Beach for my dad's business, and we were only 11 blocks from the beach.

So now I can go down to the beach, and I can get all the latest stuff. And that really worked.

I went to a special school down there for a couple of years, came back to Hollywood and got into junior high in Hollywood. And then, of course, the drafting class.

And this young girl that was sitting next to me, she couldn't get over how fast I could

make the drawings.

I was way ahead of the class all the way through, because I'd been doing this stuff myself.

We graduated to Hollywood High School, and she was actually in my English class. And I was not an introvert, but I just was not . . . I didn't like English. I didn't like talking in front of people or anything like this.

But she was there, so she at break - we would talk and everything, and I would sort of calm down. Anyway, the teacher picked me out and wanted me to come up in front and talk to everybody.

So I talked about the ship models, and I talked about going on these aircraft carriers and destroyers and cruisers and submarines and all this stuff.

I learned how to speak in that class to where I was called, from information about the ship models in the newspapers, to speak at the open stadium in Hollywood, the Hollywood Stadium, and spoke to four different groups about the Navy.

And I spoke just like I'd been speaking as a speaker professionally. It's unbelievable what that class did for me.

One of the people that was involved with the Navy asked my dad to take my brother and I up to Mt. Wilson Telescope, which was just east of Pasadena, a beautiful area up there.

So looking through that 100-inch telescope was sort of an event.

And being able to listen to some of the meetings that were going on with the astronomers, they just allowed us to sort of participate in their daily workloads.

So it was surprising to me that some of the questions that were going back and forth indicated to me that there is nothing out there.

And I somehow, at that point, I knew that there were planets out there that had people on them. I knew it. There wasn't any question.

And so I sort of brought this up a couple of times and, of course, I get pushed away because these fellows have all got their eight years in astronomy, and they know what's going on, but they didn't.

And so that little part then led to the Navy Intelligence again confiscating my dad and

I, and took us down to San Pedro, and put together a package for me to go in the Navy and implement some program. I didn't know what it was.

Instead of going into boot camp right away, the Navy sent me to Vultee Aircraft over in Downey, California, just right in the Los Angeles area, which is now North American Space Systems.

The job there at North American was converting extraterrestrial communications systems and then making them work and then copying them.

So then I went over to Lockheed, and I got in the wind tunnel over there.

And they pulled me out of the wind tunnel, and they put me in other research.

I had this feeling that, yeah, Lockheed is good, but there is something going on over at Santa Monica – Douglas.

And I went over there and signed on as a draftsman.

And I got in the door with the ship models. In a very short time, Douglas company used my ship models, and they were taking them all over the place, advertising Douglas Aircraft Company.

So then the Corporate Vice President of Douglas nailed me and had me build a very large sailboat, which is to be a copy of Douglas Sr's sailboat that he had tied up down at San Pedro.

So I had to go down there and measure stuff and come up with the drawings. And I built the thing in a real short period of time because I knew how to do it. And they gave it to him for Christmas.

So now I'm in with the Vice President of Douglas.

So I went to work then at Douglas, and I'm a draftsman for two weeks, and my Section Chief started through my background.

And, of course, it says all of this stuff that I had done in the Navy. So he puts me in this think tank, and there is where we get to the first think tank, okay. [It] was inside of Douglas in a walled-off area.

And there's 200 guys in it. And one of my assignments was like 12 years old, and it was one that I had carried to Douglas. I flew to Douglas and gave to the Douglas Engineering when I was in the Navy.

And here's in the files – I had to refer to it – and here's one of my documents that I did in the Navy, and I flew and gave it to them.

And so it turns out that this becomes the first think tank. Like TRW later, we investigate every aspect of extraterrestrial - military, commercial, whatever.

And I was assigned to design for the Navy about 16, 18 different classes of US Navy battle group ships, which didn't exist.

And the larger ones were from 1 kilometer to 6 kilometers.
These ships fly in space.

They're spacecraft carriers. I designed US Navy Spacecraft Carriers, which finally got built back in the late '70s up in Utah, underneath the ground.

And you've seen the pictures of US Navy spaceships – Solar Warden. So Solar Warden came out of a think tank inside of Engineering at Douglas.
And a whole lot of other stuff came out.

SSP Think Tank with William Tompkins Season 5, Episode 12

Cosmic Disclosure; SSP Think Tank with William Tompkins

Season 5, Episode 12

04 Aug 2016

SSP THINK TANKS

David Wilcock: Hi, I'm David Wilcock, and you're watching “Cosmic Disclosure”. I'm here with my co-host, Corey Goode. And as we saw in our first episode interview with former aerospace engineer William Tompkins, he is the consummate insider.

We learned how spies discovered what the Germans had really been working on, including the invention of actual working flying saucers.

In this episode, we're going to go even further into the life and times of William Tompkins. He's going to start out telling us about the secret think tank he was involved with while he was working with the Navy and dealing with the Secretary of Defense, James Forrestal.

MAJESTIC 12

William Tompkins: He's the Secretary of the Navy. He's sort of the top guy. And unlike many military organizations around the planet, everybody liked Forrestal. All the people did. He was really a beautiful guy. And he knew what he was talking about.

But his people were essentially like a short name, a name that was abbreviated.

And so it had quite a few different titles to it. That group were essentially the apex of the Alumni.

So at Douglas, we had the situation where putting together packages among different areas that we were working on in the think tank – now other people in the tank were aware of who Forrestal was.

And they were aware that we should not be using his group's name.

But essentially, every document that we came up with inside that secret think tank – how will this be accepted by that group?

Are we deviating from their agenda? What is their agenda? Who are all of these

people? Is the Bilderberg involved in this? Are other organizations – secret organizations – are they involved in this?

We then structured our presentations to them when he came out to assume Forrestal was the number-one person in the country who ran the PROPER organization, the REAL organization, to handle technically the extraterrestrial.

We have now what essentially is the US Navy space systems, which is not an organization, but it's inside of the secret think tank at Douglas.

That operation was controlling everything in the country, and the President of the United States was not included. Top military people, congressmen were not included.

So here we are giving away the store to the people that are causing the problem. And I think this is hard for us to accept, but this is what was going on. We didn't know it, but that's what it appeared to be.

In documents that I put together and several of the others that were submitted back to the Navy, I would make comments on, essentially, "Who does this information go to?" This was a continuous problem in the secret think tank.

Dr. Klemperer – he's a real nice guy, smart, brilliant, and you can kid with him, okay? He's my boss.

Klemperer was convinced that there were two different groups. There was the standard organizations – the Navy's levels of information. And then you got this other group up on top.

And we know that the admiral was heading that group up on top. He was the head of it.

So we assumed after he was assassinated that that was then true, because he then was talking too much.

These are the complexities of the program where we're off by ourselves, not being influenced by anybody. We're coming up with what we think we're going to have to do to solve an unbelievable problem.

And when you don't know who your boss is, you do the best you can.

* * * * * *

David: What you're seeing here is very corroborating information with what so many

others have been telling us over time about this mystery of how do they keep this stuff secret.

People say, “Oh, the government can't keep a secret. They can't even find a file in a file cabinet. How could they keep these things secret?”

Well, Corey, when we're hearing about the guy who ultimately becomes the Secretary of Defense and was the first Secretary of Defense in America, Forrestal – and even he – they don't know who he's really working for. They don't know . . . Yeah, he's the head of the Navy. He becomes the Secretary of Defense, but he mentioned this thing he called the “Alumni”.

And when I hear that, I'm think “Illuminati”.

Corey Goode: That's a name that's been used for them before in the military.

David: You're saying “Alumni”?

Corey: Alumni.

David: They actually used that word?

Corey: Mm-hmm.

David: And that actually means “Illuminati”?

Corey: Right. That was their name for it.

David: He also kind of dances around a code name for this group, but he doesn't say what it is. It appears to be MJ-12. Would you agree with that? That's what he's talking about?

Corey: Yes. Yes.

David: Okay. Have you ever been in a situation where the people that you're working with don't know who they're reporting to or what their agenda really is?

Corey: That's the basic tool they use to keep people oblivious to what's going on. And everything is highly compartmentalized. Even on the vessel I was on, everything was compartmentalized.

David: Could you give me an example?

Corey: Well, there was a large area that was a bay that we would use for transportation, and everything was modular. So the bay would be this open. [Corey's hands are about three inches apart.] You'd push it all the way open and then start building out laboratories or whatever else needed to be in there.

And we would not . . . If I was working with a certain group of scientists, we would not have any idea what the other . . . just on the other side of the wall, going right next to each other.

David: In the same research vessel?

Corey: Right.

David: Really?

Corey: Yeah, and they do things like they'll give us a special access program – the same name as a regular military program that's secret, so that if one of the programs' names is thrown out there, they can say, "Oh, look, it's tied to this." This is a secret program, but it's not what you think it is.

David: He was tossing out some alphanumeric codes that were like alternative titles for this group. Is that commonly done? Is that kind of what you're talking about now?

Corey: Yeah. Yeah. You give a group several different names so it causes confusion if people start to talk about them. They'll be like, "Who?" You know, "Well, I knew a group named this." And it just adds to the confusion.

David: This compartmentalization that we're speaking of, do some of the people in some of these space program factions not even know that there are other factions?

Corey: Absolutely. Hardly any of them know about other factions. They will often know a little bit about less technological factions below them. A lot of them have come up through those. But they are not privy . . . If they see another craft, they're told that it's a concept craft for their program, not to speak about it to anyone.

David: Right. Tompkins also described that this guy, who supposedly is answering to this shadowy MJ-12 group, ended up getting murdered.

Now, that suggests that there is something nefarious going on. We know the term MJ-12 didn't even come into the public lexicon until the 1980s thanks to William Moore, Stanton Friedman, who got this roll of 35mm film that had documents on it that up until then had never been available in the public domain.

Yet, Tompkins clearly seems to have known about MJ-12, even though he didn't want to say the name on camera.

Why do you think people are so afraid of these guys, and what do you think happened to Forrestal?

Corey: Well, Forrestal, it was reported in the smart glass pads, was one of the people that had been eliminated.

David: Oh, really?

Corey: Yes.

David: It said that in there?

Corey: Yes.

David: Really?

Corey: Yeah, and I don't know who the other people are. A lot of their names I would have no base of reference. But, yeah, they have a list of who was taken out in the name of national security or whatever.

David: And did they use that as an incentive for people to keep their mouth shut?

Corey: Yes, because everyone in the programs knows what happened, even though the general public is given a cover story.

David: So the implication is that no matter how high-falutin you think you are, how important you are, they'll snuff you like a candle the minute you step out of line.

Corey: Yeah, presidents, senators – it does not matter.

David: Well, that's a group you don't want to mess with. In the next clip here, we're going to be talking about Nordic secretaries and their role in helping to shape America's development of their own Secret Space Program. Let's take a look.

THE NORDIC AGENDA

William Tompkins: I could never get my secretary to admit that she was a Nordic, okay?

And everybody knew it, but she wouldn't accept [it]. But from what she would drop

into conversations, essentially, she was a part of the Nordic Navy, like a commander in intelligence with a mission to support a specific program – the Apollo program – and support all of it, not just the first phase to go to the Moon, but second phase to build Navy stations on all of the planets that were habitable or their moons in the solar system, and then build bases on all of the 12 closest stars.

That was the Apollo mission.

Now, the two girls in engineering, the two Nordics, never in any way of that four years came up with anything that would bother the mission to be accomplished.

They were constantly pushing everybody to the side who were trying to stop the program from being implemented. Cover it up, change information, do it wrong – everything – all the way through the four years.

So we ended up . . . We roughly did four years. I roughly did four years in the Navy, and I roughly had slightly less than four years on Apollo. Now, part of my four years on Apollo was on Nova trucks.

And the Nova trucks were like 8 times the size of the Apollo, 10 times the size, depending on what you were . . . And they were trucks to haul all of the facility equipment that we needed to build a 20,000-man Naval station research center on the Moon. That's what we were supposed to be doing.

The mission to the Moon was to build these facilities, and all we did was get to the Moon.

And some guys gave us the finger and told us, “Don't come back! Okay, go ahead and finish a couple or three more of your missions, and don't come back.”

Well, these were the reptilians. So they were already there. We didn't know that.

And essentially, we got stopped a third [of the] way through the missions.

Now, the Nordic people . . . What are they here for, and who are they? And we didn't learn until much later there's boxes full of Nordics, okay? I mean, we got a whole box full of them, like maybe 100 different types, we know now. But back then, we just thought of one.

The two young ladies represented the Nordic civilization. And my girl turned out to be a Nordic Navy Lieutenant Commander with a specific contract and a specific mission to get the Apollo program implemented – the whole program.

So you have to say that that group that she supported from out in the galaxy were the greatest thing that could happen to the planet.

Never did she ever come up with anything that threw cold water on any part of the program. She was always way ahead of everybody with how to fix it.

And she telepathically, continually threw stuff in my head. “Don't let them go that way, Bill. You know what we talked about. You got to fix it.”

And I have to say, I never had any type of relationship with a person like her till I got over to North American and then over to TRW.

And those girls also refused to say that they were Nordics, but they again were doing exactly the same thing as my secretary at Douglas on the Apollo. They were pushing those girls. [i] had two of them at North American. The one I got into . . . my secretary, administrative assistant in TRW.

So there, again, you're getting support from an individual that is probably part of the Nordic Navy, implementing an agenda, again.

They were at war with the reptilians way out there. And Solar Warden, of course, was our portion of that war.

And they were also at war with the insects, the praying mantis people, if you want to call him that.

And so we were fighting two of the really bad people collectively. We were going to be fighting with them, which the Nordics were already doing.

And the Nordics had lost one massive battle between their planet and another planet, which the reptilians had, and restructured again and then were back at war again.

We're talking about a whole lot of things that were elements in who are the Nordics. Who are these guys?

* * * * * *

David: All right. Now, this is getting very interesting, because we're starting to cross over into a lot of the areas that you folks have said are the things that you want us to talk about the most. And so we're going to just tear right into this thing.

Now, first of all, it was very interesting that he talked about the Apollo missions having phases and that only Phase One was landing.

He talked about them building trucks and that there was a separate launch site for these trucks, and that their goal was to actually build these 20,000-person bases first on the Moon, then on other planets and their moons, and then 12 stars around our solar system.

That's a lot of information, and I just want to get your take on that before we go into all the rest of it.

Corey: Yeah, I may have actually visited one of those.

David: One of what?

Corey: Those installations in another star system, . . .

David: Ah!

Corey: . . . when I was taken through the portal to that moon that was around this gas giant that I described.

David: Right.

Corey: So this could be one of those bases in one of the local 13 stars.

David: Now, he said that the reptilians told us to buzz off when we got to the Moon and that, on the overt level, the Apollo missions were not continued.

But it definitely appears on a covert level that they were, and this might be one area in which Tompkins and the intel that he got hasn't given him the full perspective on what really happened. Would you agree with that?

Corey: Yes. Yeah. The information is always going to be skewed and elements redacted.

David: Now, he's talking about a Nordic Navy. And he gave us some very interesting information. It was a little awkwardly worded maybe for some, but he talked about there being a box of people, and that he said within the box we ultimately found out that there were 100 different types of Nordics.

Is that consistent with anything that you've heard?

Corey: The number isn't. I don't remember hearing that specific of a number, but, yes. There were many different types categorized. And they were slightly different in size

and stature.

There was even one group that they were calling Nordics for a while, but they have the Nordic look, that they're about 8-feet tall, have a big forehead and six fingers. And they were putting them in that category for a while.

So that happens, just like there are tons of different beings out there that look similar to what we call the Grey.

David: Now, he describes that these Nordics had a navy and that the woman that was working with him as his secretary, or administrative assistant when he goes over to TRW, that in either case, they had a command designation within that military structure.

Is this consistent with anything that you've heard, that they have a sort of militarized structure to their organization?

Corey: Yes.

David: It is?

Corey: Yes.

David: Wow! Okay.

Corey: And also with the Inner Earth groups I was interacting with, seeing that - you know, their pilots that piloted the craft that we rode on to the Kuiper Belt and Venus – they were very military type.

David: Really?

Corey: Yeah. Yeah. They said they have their military groups or scientific groups. They don't all mesh together.

David: Now, he describes a war that was being fought between the Nordics and the reptilians. And I thought one of the really interesting things that he dropped on us was that there was a planet that the Nordics actually lost in this war because apparently there was an adjacent planet controlled by the reptilians. And they were fighting over this area.

The Nordics lost that war and then had to regroup and that apparently part of their regrouping was coming here and working with us.

Corey: That was probably one operation or mission out of their regrouping.

David: Right.

Corey: Yeah.

David: So how long has this war gone on? Has it been an ongoing war with the Nordics for, let's say, tens of thousands of years?

Corey: I really don't know how long they're been fighting, but I do know that there are wars out there that have been fought with the reptilians and their allies. And they've conquered planets.

And one of the groups that works with the reptilians is a Nordic-looking being that I described earlier with the big forehead and the six fingers. And all the intelligence was that they were a conquered race that was forced to work.

David: All right. Now, let's get right down into this idea of Nordics actually appearing within the military-industrial complex and taking on essentially support jobs but telepathically influencing people at those jobs.

Is it possible that these Nordics could actually be doing this? Could they actually appear on Earth and get these jobs and get the security clearance necessary to be in these positions?

Corey: Yes. Yeah. There are a number of them living on the surface of the Earth right now walking among us.

David: A number of them? Like as in how many would you . . .

Corey: I don't know. I mean, it's from different groups.

David: Okay.

Corey: The Anshar told me of thousands of years ago, one of the factions within their conglomerate of groups was banished to the caverns towards the surface and the surface of the planet.

David: Really?

Corey: Yeah.

David: How would one of these Nordic men or women be able to get into such a

highly compartmentalized, highly classified thing? Wouldn't our government or the military-industrial complex be highly afraid of them because of the possibility of them either deceiving us or bringing intel back to their own group and then weaponizing it against us?

Corey: Yeah, and after a while, they found out that we were being deceived about some things that the Nordics – that we're calling them – did for operational security, you know? There were definite[ly] some deceptions that were given to us.

But for the most part, they were learning about the reptilian threat and the threat of their allies. And this group looks a lot like us. Basically, it's like a cousin coming to help a cousin.

David: The enemy of my enemy is my friend.

Corey: Yeah, yeah. But these people presented themselves as wanting us to get rid of our nukes, wanting us to become more loving and peaceful. And they just . . . They did not see as big of a threat from them as they did their enemy, the reptilian groups.

David: Right. One of the things that Tompkins is going into that's different from what you've said is he seems to be portraying these Nordics, at least in this part of the interview, as being essentially from outer space, from other worlds.

So what do you think is really going on here? Is this . . .

Corey: Well, it's a mixture.

David: Okay.

Corey: So I don't know what group he was in contact with. He could very well have been in contact with a non-terrestrial group.

David: Okay.

Corey: But the groups that I had contact with that fit this description claim to be created on this planet naturally and that this is their home.

David: Now, Corey, I want to get into something that's a really sensitive personal thing for you and that everybody who's watched the show, it's their favorite episode. And that is, when you had this mind-meld with Kaaree, the priestess of the Inner Earth, and you reach out your hands to her hands.

She offered you some kind of beverage that you declined. You didn't want to drink the drink.

Corey: The elixir of Isis.

David: Let's just talk a little bit about what she showed you, and does that corroborate in any way with what Tompkins just told us in this interview?

Corey: Yes. And she was connecting with me to focus on one small period in my youth. And as we regressed in the mind-meld to that time, I was seeing her life, too,

throughout the same time periods, or here age, that matched mine.

David: Right.

Corey: And one of the things that I saw was a series of meetings that she had with military types. The suits looked . . . the material looked '40s, '50s era, and she was speaking with Russians, with English, Canadian, United States representatives of the military . . .

David: Wow!

Corey: . . . and assisting them. And they said that they assist them psychically. They assist them with some technology. So, yeah, there's definitely some crossovers.

David: All right. So now we're going to have another clip for you. And this is getting into some really interesting stuff in which Tompkins is going to be describing his own experience of understanding that abductions are taking place.

And we're also going to hear him describing what he knows personally about the Inner Earth. And this stuff absolutely blew my mind, because, Corey, there were some things he says here we're going to see that even go farther than what you've said to me before. And it rocked my world. So check it out. You're going to love this.

ABDUCTIONS AND THE INNER EARTH

William Tompkins: A lot of people have been abducted for years, and a lot of them are still being abducted. But we're into a situation where, what do we do now? How do we fix this? What are all the things we have to do to fix it?

There are ancient extraterrestrial facility people, if you want to call them that, who have been living underground in massive caverns for thousands of years.

The Earth itself is almost a honeycomb. It has millions of massive caverns.

We look at the little caverns that they have over in New Mexico. And everybody goes there and they look at the cavern. They looked at the entrance of a guy's office. That's all they looked at.

When we're talking caverns Earth-wise, one of the caverns in Southern California goes way past into Oregon. And it goes east into Nevada. And it's one cavern. And there's caverns inside that cavern.

There's caverns inside of caverns, not just tunnels, but there's bubble caverns inside of

caverns.

And some caverns are only a couple of miles long. But we are honeycombed.

And so these extraterrestrials came here, some of them before Noah built the raft. And some of them came after he built the raft, after the flood. But then there's been seven flood kinds of things that have happened here. We forget about that.

My uncle Walter had specifics of seven times when they took place. One was a situation where we had earthquakes on a continuous basis from Alaska to the South Pole all at the same time. Split the thing wide open, and so that caused all kinds of floods.

And so, yes, we have extraterrestrials here on the planet that are not just living in caverns. They have cities there. They have industry there. They have entertainment there.

They have essentially – maybe not like us – but they have, essentially, a full life there. They're born, they work, and they stop out of the picture.

And some of them have ridiculous short lives like humans. Others have in-betweens, living 2,000 or 3,000. Others don't stop living, period.

And these people sort of live together in the different caverns, but obviously with totally different agendas, totally different lives, and different missions.

Now, the Air Force got involved in this, and so they built their diggers, which are about half a mile long. And they'll dig a hole. It'll be 100 foot in diameter.

And we have trains throughout the United States, all over the country, even connecting to Nova Scotia, and some of them connecting to other countries locally, in this particular hemisphere.

But the extraterrestrial tunnels are like 300 feet and close to 400 feet.

And these tunnels – the tunnel diggers dig at 2 to 3 miles an hour.

And they reduce all of the rock, all of the material – everything – down to microscopic material. and they spray it on that lining of the tunnel, which then turns to be almost glass, which then is electrically excited and becomes a lighted tunnel.

And these guys are running there 2 miles an hour, operating this tunnel, which then has subsonic vehicles operating on rail that don't leave the rail all over the planet – not

just from ours, like from Washington, D.C., and the Pentagon, to the Air Force facilities at Vandenberg.

And so we've run into their tunnels digging ours, and we get not to graciously suggested to take another route.

And like in New Mexico, we have a large facility there, and we've had wars with some of the extraterrestrials that are there and wars with our military people and light skirmishes continually.

But then our people that are taken from their university laboratory to that facility, they get taken pretty fast. Like in one second they're there. And they take them inside. And they let them continue that particular research that they were doing at the university, except that now they are a slave.

They're not a business associate. They are a slave. So now we got slavery going [on] in these caverns all over your planet.

But then that's not such a big deal, because out in the galaxy, the different extraterrestrials, they do the same thing.

And they take the good guys, and they abduct them, take them to their facilities on their planet. Or they take them down underground of their original planet, and they do the same thing.

So again, we don't have just Earth as a laboratory. We have billions of laboratories on billions of stars out in the galaxy doing the same thing.

We're really low on the totem pole, unfortunately.

* * * * * *

David: Phew! Heh! Okay. You saw it! I saw it. Corey saw it. This just happened. This is something that we are not fooling you. This is not a joke, okay? Tompkins is real.

I've interviewed him a bunch of times now. And Corey, how does it feel to see this stunning body of corroboration for everything that you've been telling us?

Corey: It's amazing.

David: He described the people inside the Earth as extraterrestrials. And he said that there are different types of lifespans, some of which live very short lives like ours, some of which live longer, and he said some of which live essentially indefinitely.

So let's just get your feedback first on that statement about them being extraterrestrials.

Corey: Well, I would agree that a very large contingent of extraterrestrials, many different types, have what we called “embassies” in caverns all across the planet.

But as I've given in my testimony, I recently had contact with a group, Inner Earth group, that claimed to have developed on this planet, which would not make them non-terrestrials.

David: Right. So some of these people may, in fact, be indigenous to Earth. It's just that they have evolved or they developed in these Inner Earth areas.

Corey: Right.

David: Okay. Now, another thing that I really was taken aback by that caused me shock when I saw this was his statement that there are millions of caverns. And then he actually used the word “honeycomb”.

I just want to clarify for everybody watching that he was not prompted with your testimony. He never heard you refer to it as the honeycomb Earth. You had not seen “The Law of One', which also refers to it as a honeycomb Earth.

So we have three independent sources now all documented, in addition to others who've mentioned it that way to me privately – other insiders that don't want to come forward.

So let's just start with that. Would you agree that there are, in fact, millions of caverns inside the Earth?

Corey: Yes! Yes! The way the Earth developed, there was, I think, similar to a vascular system going through it, and as it cooled off, you know, of molten rock, and as it cooled off, it formed all kinds of caverns. And then the tectonic activity on the Earth, as crazy as it is, has created those as well.

David: Hmm. Now, we had some people write comments on an article I wrote recently talking about the Inner Earth, where they didn't understand why those caverns would be safe from things like giant earthquakes on the surface of the Earth.

Corey: Right. These are down towards more below, further down in the crust than most of the fault lines, except for the deepest fault lines.

David: Ah.

Corey: And then they do not normally, depending on their level of technological development – thus, different non-terrestrials that live different ages – you know, they're in different stages of development.

David: Right.

Corey: Some of the higher technological groups, it would not be as difficult for them to live close to fault lines, but most of this is very deep in the 20-to-40-mile range of the crust.

David: Right, so an earthquake's only going to jiggle up near the surface, and the shakes aren't even going to make it down that far to any significant level.

Corey: It jiggles all – yeah, the whole thing. Shock waves travel through the rock in both directions, but a lot of them, of the more technologically developed groups, have the technology to mitigate that.

David: Oh, like shock absorbers, basically.

Corey: Yeah, sort of.

David: Something like that.

Corey: Energetic.

David: Now, he also said – I just want to get your raw comment on this without interjecting my opinion – he mentioned a cavern that goes from California up past Oregon and then all the way over to Nevada that he says is one single, contiguous cavern.

Corey: Uh-huh.

David: That's a pretty shocking statement. What's your response to that?

Corey: Well, I've talked a little bit about the same cavern system. Part of it, we have submarines going in and out . . . going far inland into the United States, popping up in lakes.

David: Okay, so some of these caverns are not hollow and filled with air. They're going to have seawater in them, in some cases.

Corey: Yeah. It's a mixture. Depends on how the cavern is sealed off, how the cavern runs, as opposed to a cavern that's right next to it. So a lot of the times, they'll have one area that's water that they'll have submarines in. They've dug through to another cavern area that is somewhat pressurized naturally, keeps the water out, and build out facilities.

David: All right. So another really disturbing aspect of this clip that we just saw is him describing what appears to be a variety of different types of slavery going on. He describes slavery inside the Earth. Humans being taken to other solar systems.

And you've covered on this in other episodes, and you also did it with George Noory on “Beyond Belief” here on Gaia. But could you touch on some of your feelings about his sentiments about the slave trade?

Corey: Yes, and he's either only reporting a small amount because it's so disturbing, or that's all he was briefed on.

David: Right.

Corey: But he was touching on, well, the abduction scenario, he touched on. But the people disappearing off the planet, that are just being abducted, . . . that, during a certain time period, were being abducted by non-terrestrials and were being taken outside of our star system for a slave trade.

Later on, we decided, “Hey, this is a commodity” - “we” being the Cabal-type groups. And they started obtaining and trading humans for technology and biological material.

David: So what can we do about this slave trade? It's a very disturbing thing for people. I can understand they might feel powerless. Is there anything that we can do to try to bring this to a halt and get freedom to happen for people on Earth?

Corey: Well, on our end, the most we can do is make people aware that it exists. You can't tackle a problem unless you're aware there is a problem. And, I mean, everyone's asleep. They've been mind controlled.

And this information's going to be very disturbing and very hard to accept for many of these people.

David: Right.

Corey: But to mitigate it, what people can do on this, is mainly just educate themselves and others about it so when this information does come out, people won't lay in bed and suck their thumbs.

David: Now, you also mentioned some messages that the Blue Avians gave you regarding what will happen to people who have been kept as slaves as we go through this shift and the Draco have been defeated.

And I believe this concerns certain breakaway groups.

Corey: Right, and there are some non-terrestrial groups and a couple breakaway groups that are assisting in this. The infiltrators that infiltrated the program, the galactic slave trade program, started putting tracking markers on their victims so that they could later track them down to wherever they went, no matter where in the galaxy or other galaxies, and send their allies in to retrieve them.

And then after they've been retrieved, they're in all different psychological states from what they've been through.

And the ancient Mayan group has been helping a lot of them recover and heal on one of their planets.

David: So in short, do you think that, as we get this breakdown of the negative, the Draco, being defeated, as we've discussed in other episodes, that there will be a widespread rescue and salvage operation for these people that have been brought into slavery?

Corey: That already has been ongoing.

David: Okay. So it's just important for people to hear then that something is being done and a lot of these people who might be enslaved now will be able to be freed as we go through this change.

Corey: Yes, and once they go through all the healing, they will be returned to our society, whatever state it's in at that time.

David: Wow. All right. Well, this has been really fascinating. I want to thank you for watching our show. This is certainly mind-blowing. After all this time, people say, “Oh, Corey has no validation.” Well, what you've just seen here is a game changer.

And I encourage you to tell everybody you know about this, because now that we're bringing this all together, maybe a lot of people who wouldn't have taken this seriously before are going to take a second look.

And we do need your help. We need as many people as possible to educate themselves about this. As Corey just said, it's vital to humanity's future that we no longer act as ostriches, that we have the awareness of what's really going on.

This is “Cosmic Disclosure”. I'm here with Corey Goode and William Tompkins. I'm your host, David Wilcock, and I thank you for watching.

Empaths and Extraterrestrials, with Clifford Stone Season 5 Episod 13

[Cosmic Disclosure; Empaths and Extraterrestrials with Clifford Stone] Season 5, Episode 13

10 Aug 2016

David Wilcock: Hi, I'm David Wilcock, and you're watching “Cosmic Disclosure”. I'm here with my co-host, Corey Goode, as we go down the rabbit hole.

Clifford Stone never rose above the rank of sergeant while he served in the military. That's an important point. But he was noticed by higher-ups in the military from the time he was a young boy, because of his empathic abilities, or, as he puts it, his ability to telepathically “interface” with the extraterrestrials.

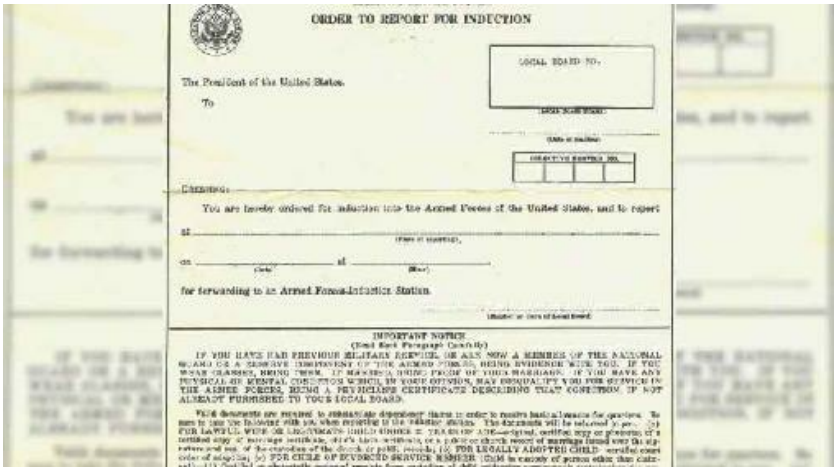
When the military encountered extraterrestrial life forms, they entrusted Clifford to help with communication and facilitation with these entities. It turns out that there are many life forms and extraterrestrial species, just as Corey has been describing on our show.

Life in this universe is much more robust than we have been led to believe. Stone individually corroborates this notion.

So, ladies and gentlemen, without further ado, I give you Clifford Stone.

RECRUITING MR. STONE

Clifford Stone: When I graduated in . . . it was first part of June, 1968, I got a notice from the draft board. And the draft board was telling me, “Greetings and salutations from your friends and neighbors. We need you to report for reconsideration at the Ashland, Kentucky, AFEES, Armed Forces Entrance Examination Station.”



ORDER TO REPORT FOR INDUCTION

LOCAL BOARD NO.

The President of the United States.

To

Greeting:

You are hereby ordered for induction into the Armed Forces of the United States, and to report

at

on ____ at ____

for forwarding to an Armed Forces Induction Station.

IMPORTANT NOTICE

(Read Each Paragraph Carefully)

IF YOU HAVE HAD PREVIOUS MILITARY SERVICE, OR ARE NOW A MEMBER OF THE NATIONAL GUARD OR A RESERVE COMPONENT OF THE ARMED FORCES, BRING EVIDENCE WITH YOU. IF YOU WEAR GLASSES, BRING THEM. IF HANDICAPPED, BRING PROOF OF THAT HANDICAP. IF YOU HAVE ANY PHYSICAL OR MENTAL CONDITION WHICH, IN YOUR OPINION, MAY DISQUALIFY YOU FOR SERVICE IN THE ARMED FORCES, BRING A PHYSICIAN'S CERTIFICATE DESCRIBING THAT CONDITION. IF NOT ALREADY FURNISHED TO YOUR LOCAL BOARD.

And my mom was upset, says, “No”, you know. “I know you're going to get in the military, and you're going to wind up going to Vietnam.”

I said, “Mom, you don't have to worry about that. I'm medically disqualified. And it's still going to be the same.”

So I went there, and I passed all my written tests, you know, with flying colors, but I still had the medical problem.

There was a captain there that was the medical doctor, and he'd already told me. He says, “Well, you know you're going home.” He says, “I know that you'd like to go ahead and serve your country, but there's nothing we can do. You have medical issues, and you're not qualified for military service.”

We had this colonel who was visiting from the Washington DC, area – I'm going to put it that way – who went ahead and told the captain, “Look, go ahead -” and it was on Friday, and it was Fourth of July weekend - “take your family, go on home, and enjoy the Fourth of July weekend. I'll go ahead and finish up the ones here.”

Well, I was saved till last. Then he called me in, and he said, “You know, you have medical problems.”

I says, “Yes, sir.”

And he says, “Do you really want to go in?”

And I says, “Well, yes, sir. There's a lot of people that don't believe in this war. There's a lot of people that don't want to go. And I want to serve my country. And if I get to go, that's one less person that's going to have to go in my place.”

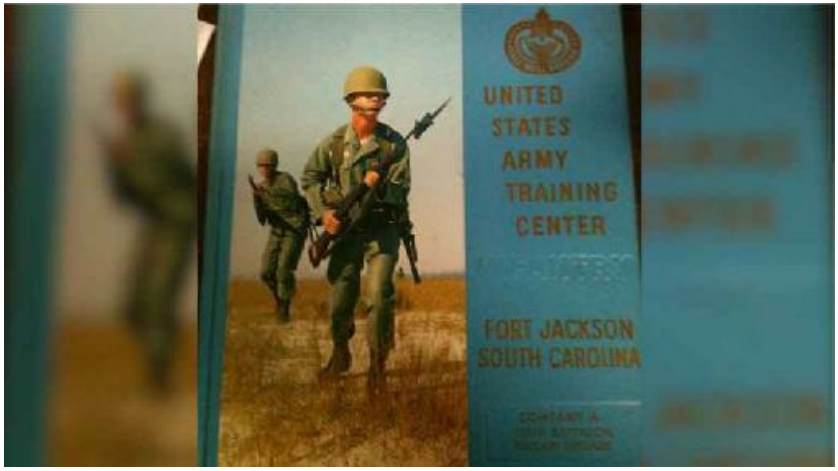
I said, “Right now, I feel every time somebody that doesn't want to go ends up going, that's a person going in my place. And if I hear that they get killed, then they got killed in my stead.”

And he says, “Well, what if I fix it to where you get to go? You can go ahead and fight it at any time. All you have to do is go and tell them that you have this medical issue.”

And I said, “You get me in, I won't fight it.”

He says, “Well, remember, you got 179 days, once you're in. After you hit that 180 days, you're locked in. They're recognize the medical problems, but you're still in the service.”

I went ahead. I got in. I hit up on staying in. I passed the 180 days, then I went to Fort Jackson, South Carolina.



When I got to Fort Jackson, South Carolina, that was for my AIT. That's Advanced Individual Training, and I was going to be a clerk typist. Not the dream of my life, because I wanted to be a helicopter pilot, but that wasn't about to come to pass

because of the medical situation.

But I went there, and I was one day in class, part of the second day in class. The next day, even before I got to class, they picked me out to go over and clean up the headquarters building and specifically the section that housed the intelligence section.

When I went in there, there was this guy there who was visiting, once again, allegedly from the Washington, DC, area. And he drummed up this conversation with me.

Well, my mom didn't raise no fools. I wasn't about to tell somebody I was interested in UFOs. And he went ahead and told me, he says, “Well, how do you feel about UFOs?”

And I said, “I don't know. I don't give them much thought.”

He says, “Oh, come now. Everyone thinks about UFOs.” He says, “Do you believe in them, or do you not believe in them?”

And I remember saying, “I really don't know. I haven't given it much thought.”

He says, “I think you have.” He says, “I personally believe in them.” He says, “Here, I want to show you something.”

And I looked at some of the documents and some of the records he has there. When I'm looking at it, I'm thinking, “This is not for me to see.” Because I did not believe I had a security clearance.

I knew what Top Secret meant. And I knew, by looking at those records, I was violating the federal law of the United States – the espionage laws.

I did not know what the other words meant following Top Secret. Now I know that it is identifying it as documents under the Sensitive Compartmented Information Program or the Special Access programs.

I did not know that prior.

Now, I told him, “You know, I don't think I should be look at these. I don't have a security clearance.”

He told me, “Son, I am not showing you anything that I have not been told to show you.”

I know now that from a very early age, somehow, some way, they knew I was having

this ongoing interaction with - and I prefer to call them - “our visitors”. And it was the one species, but I know other species were interacting in and around with this one species.

But only one of the entities was to follow me throughout life. But even at that, there was always that other interaction with the other entities.

The reason that I feel that the military permitted me to get in – it wasn't that they permitted me to get in. They have to choose people within the civilian sector that may not otherwise want to get into the military, that had this ongoing interrelation with “our visitors”.

What they used me for when they used me with UFOs, it was called “interfacing”. And that's where you actually carry on communication with “our visitors”, whether they're injured or whether they're okay and we're holding them until their kind come and pick them up.

But the whole situation is they won't talk to just anyone. They'll talk to these other people that have been specially selected.

And like I said earlier, you don't learn this. It's not something they can teach you. So they have to find people within the civilian sector, and then they have to entice these people to where they become willing to come into the military.

And a lot of times they may do this by appealing to your patriotic sense of duty or, in several cases, it's even monetary gain. And when it's monetary gain, every time I've seen that type of situation happen, it was because of family issues or otherwise people didn't want to be involved.

And these people are very difficult to find.

The reason I know that – when I got out of the military, there were only seven in the military, including me.

You know, when I got into the military, and after I went through AIT and everything, I got to my first duty station. And when I got to my first duty station, I was very concerned, because above all things – even though my record said I could type 72 words a minute – I would hunt and peck, and I'd be lucky if I could type four or five words a minute.

So when I got to my first duty station, which was the 36 Civil Affairs Company of the 96 Civil Affairs Group at Fort Lee, Virginia, I went in and gave my records to my

First Sergeant. And I went ahead and I told him. I said, “You know, First Sergeant, I think you should know right now, I can't type.”

He looked at my records and he says, “But you can read?”

And I said, “Oh, yes, sir, “ or “Yes, First Sergeant, I can read. Not a problem there.”

And he took my records back in to the company commander. The company commander then came back out and said, “Well, tell me, son. Are you color blind by any chance?”

And I said, “No, sir.”

And he says, “Okay, just checking.” And he says, “What color of the uniform do you have on?” which I found to be a very strange question.

And I said, “Well, sir, it's the AG44 Army dress green uniform.”

“So you're telling me it's green?”

I said, “Yes, sir. It's green.”

He said, “That's all I want to know. I just wanted to make sure you wasn't color blind.” Nothing else was said.

Within a couple days, First Sergeant came back in and says, “Well, since you can't type, what we're going to do, we're going to send you to Ft. McClellan, Alabama, to attend the non-commissioned officers' nuclear biological chemical school.

Therefore, you'll be the NBC, a non-commissioned officer for our unit. And it's a three-week course.

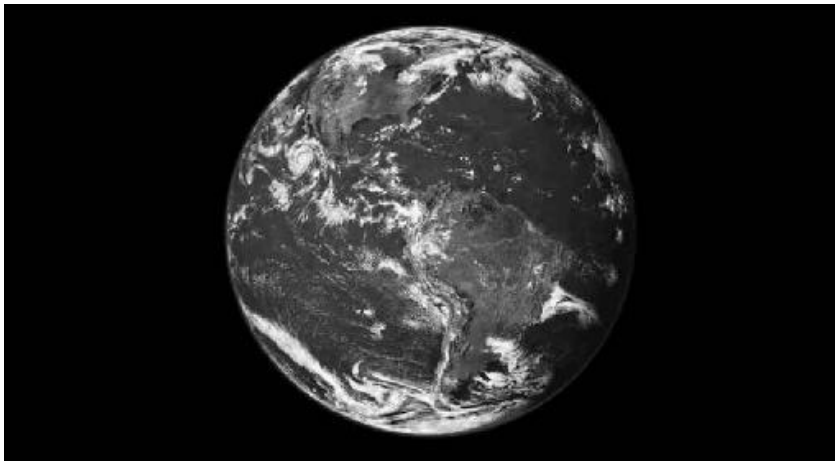
And I said, “Okay, I don't mind doing that.”

And he says, “But, of course, along with that, you're going to be handling the communication equipment.”

And I thought, “Okay, fine. It's better than typing, because I can't type.”

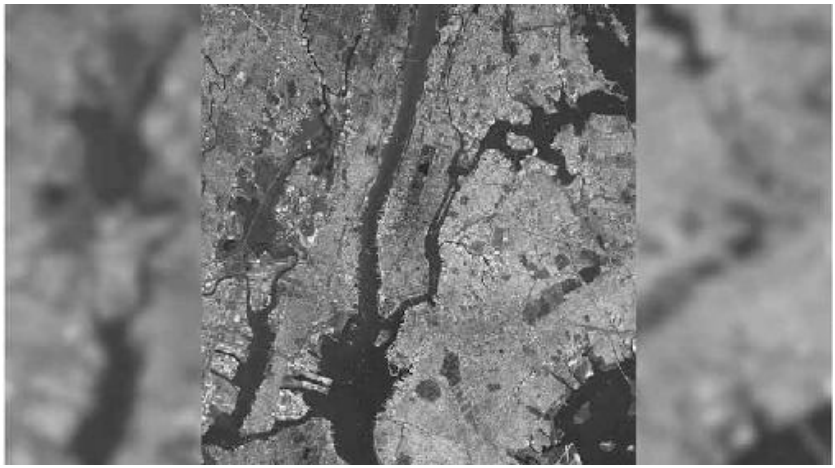
So they went ahead, and they sent me to Fort McClellan. When I got there, we got to see some things, which I never actually understood how it would tie in to NBC.

They showed this film, “This right here is from greater than 500 miles out in space, taken by a satellite.”

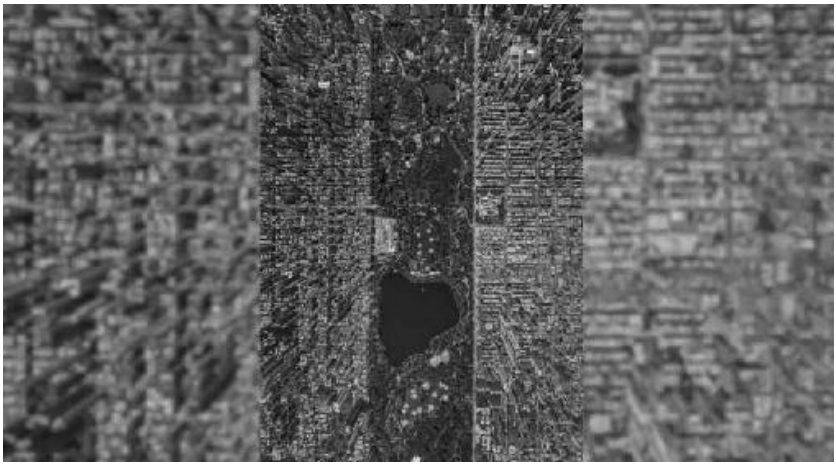


Then they went ahead, “This is the United States taken greater than 500 miles out in space by a satellite.”

Then, “This is New York City taken by a satellite greater than 500 miles out in space.”



“This is Central Park, taken by a satellite greater than 500 miles out in space.”



“This is a man on a park bench looking at a newspaper taken from a satellite greater than 500 miles out in space.”

“This is the headlines of that newspaper taken from a satellite greater than 500 miles out in space.”

The date was sometime in 1968. And, of course, this was, I think, February of '69.

But we wasn't supposed to have this type of technology. I know now, from my research and hitting up on my documentation with the NRO, that we had satellites

capable of doing this all the way back to the mid-60s and probably earlier before that.

But did not know it at that time. I was an innocent kid having no idea what I was being groomed for.

Anyhow, we finished school, and I met this guy. I knew him as Jack. He was a Spec. 5. And he worked for the US Army Security Agency.

And, of course, he was assigned to the National Security Agency.

And he said . . . You know, when I got ready to come back home, I found out my ticket had been stolen. And I'm wondering how am I going to get back home? How am I going to get back to my unit? And because, you know, Fort McClellan, Alabama, versus getting back to Fort Lee, Virginia.

And he says, “Well, you know, I'm there at Fort Belvoir. It's on the way. I'll go ahead, and you drive along with me. I got my own car here.”

So we drove. And as we drove on home, we talked about various things – family, military, things of this sort. Then he brought up about he had an incident where he saw a UFO. And he started to prod me.

“Have you ever seen a UFO?” And I said, “Oh, I've seen things I couldn't identify.” But, you know, I tried to keep it low key.

And he says, “Come on, you can tell me. We're friends.” So I started telling him a little bit more.

Well, he dropped me off at my unit. And a couple of weeks later, he called and said, “Hey, listen. You've never been into Washington, DC, have you? You've never visited the Pentagon and some of the other nice to see places around here that tourists like to come visit.”

I went, “No.”

He says, “Well, why don't I send a car to pick you up?”

Now remember, he's a Spec 5. That's an E-5 in the military. It's the same as a Sergeant E-5. The difference is, is that you're a specialist in your field with no command authority. Sergeant E-5 – they have command authority.

So they went ahead, and he's going to go ahead and send a staff car. Highly unusual, but I didn't think anything about it. Hey, NSA – what do I know?

But a car pulls up, complete with driver, and at my unit, and they're taking me away for the weekend, supposedly. And we went to Fort Belvoir, Virginia. I know that for a fact.

And we went to, I'm saying, it's the NSA headquarters is where we went. And we went to his office.

When we got there, well, Jack wasn't there. He had to go. He had an assignment he had to work on, but he'd be coming in later on. So one of the other guys who was there, who was supposed to be one of Jack's friends, says, “Hey, no problem. Why don't I take you to the Pentagon, because I understand you've never visited the Pentagon? Why don't I take you over there and let you see what goes on over at the Pentagon, get to visit there?”

And he went ahead and he gave me a badge. He says, “Keep this badge on you at all times.”

And they had a picture there. Then it had different color-coded sections on it that said where I was authorized to go and where I wasn't authorized to go.

And right at the bottom there was something on it that he stated, “That's very important because that opens up all the doors to you. But you have to stay right with me.”

We go into the Pentagon. And when we go into the Pentagon, we go in, and he takes me around and shows me some of the offices. He shows me the one place where – “This, right here, is where they had the news conference in 1952 – July 29, 1952, dealing with the UFOs that was seen over Washington, DC.”

And he says, “You're aware, of course, that 68 UFOs were picked up on the night of August 18, 1952?”

And I said, “Oh, yeah. I'm very aware of that.”

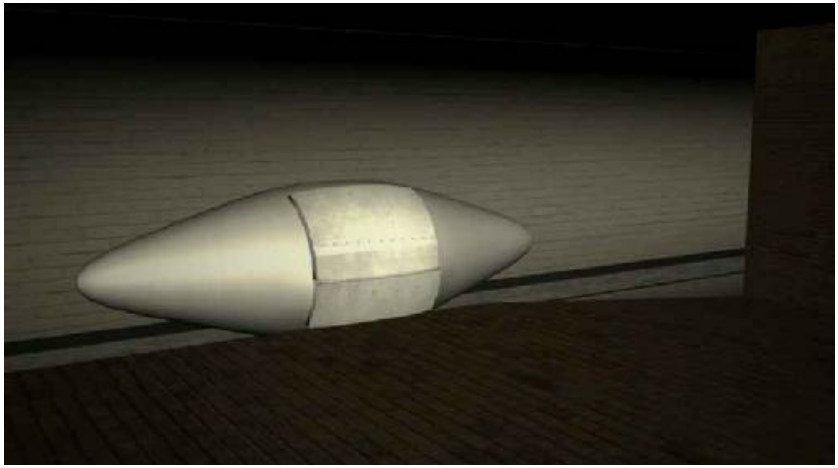
Then he says, “Well, you know, the most unique case, even though all these get all the publicity, was the night of July 19 and 20. That was the most unique one. Most people don't know anything about it. And he carried on the conversation, bits and pieces

about it.

Then we get to an elevator. And he says, “Well, I'm going to show you the basement of this place.” He says, “People haven't seen this, and, of course, we have to harden”, which means that you prepare a building for a nuclear strike, “so we have to harden the Pentagon to make sure that people survive in the event of a nuclear attack.”

So he took me on down. And we got down . . . I don't know how many floors down.

But we got out and there was this little silver car. I mean, you couldn't tell which was the front, and which was the back other than where the seats were, and the seats were facing one direction.



And we got into that, looked like a little bullet. We got into it, and he says, “This is called a monorail.” He says, “It's not on a track.” And he showed me where you have a little tube-like, and it drove on that. And it was electromatically driven.

So he went ahead, and we got in there. And I don't know how long we drove underneath there, but he was trying to tell me that the Pentagon's a mighty big place. So don't be concerned that we're driving for . . . in that little con . . . and there's no driver. You know where you're going and . . . I'm sure he had some way to control it, but I don't remember all of that about it.

I was just taken aback and fascinated, because this was the first time I'd seen anything like that.

But we got to this one place and there was this door on the side. We get out and we go into that door and there's this long corridor – no doors, just a long corridor. And this is underneath the, allegedly, underneath the Pentagon.

And I know we drove for at least 20 minutes.

But we went down that corridor, and he was telling me, “You know, a lot of things aren't the way they seem.”

He says, “This looks just like it's a long corridor. You walk down to the end, there's nothing there. You have to turn around and come back. You can see the door at the other end.”

And I said, “Yeah. What's your point?”

“Well, a lot of things aren't as they seem to be.”

He tapped on the wall, and he says, “Solid wall, right?”

And I said, “Yeah.” And I started to say, “What's your point?” Before I could say anything, he says, “It isn't necessarily solid.” And he pushed me. And I go through the wall.

You know, there's nothing there, but yet, when I was there, it looked like it was just a solid wall.

And I go, “What the heck are you doing?” But before I could get up and say, “What the heck are you doing?” I notice I'm in a room. I turn around. When I turn around, there is this, what we call a field desk, which is nothing more than a little table.

And setting at the field desk, is what you would call your typical Grey.

And, once again – people get upset with it – I'm going to have to say he was about 4 ½, maybe even 5-foot tall. But he's sitting there, and he's got his hands up like this [on desk], and he's looking directly at me.

On either side of him . . . and I'm not going to say black suit, it's a dark suit, and they had dark glasses on. And they were standing there like this. [Standing up straight.] Not one word was said.

And I was the one that when I got up and turned around to see, “What the heck are you doing?” That's what I said. I remember to this day. “What the heck you do . . . ?”

And I stopped right there because I saw this, and immediately it's like a buzz saw going off in my head. I went down on my knees, and I went face down first. I remember that. That's the last thing I remember.

I wake up. I'm back in Jack's office. I'm being told nothing happened. I must have dreamed it. No one took me any place. We had been there all along, and I seemed to be tired. And I must have just dozed off.

Jack never showed up. I was put back into the staff car, and I was drove back to my unit, being told that whatever mission Jack was on, it was going to be time consuming and it probably would be another week before you get to come back. Last contact with Jack.

The reason I think that that incident happened, it was part of the conditioning to get

me in the frame of mind that I would understand there are many things that people aren't supposed to believe in, that is reality. And that I was going to have to play a role in it, whether I wanted to or not.

So I think it was part of the conditioning to get me conditioned to where I would accept it and, eventually, assure myself, within my own self, that I was doing this for the greater good of the country.

And I'll tell you, right now. All the time that I was involved in this stuff, I really felt that I was doing something that was for the greater good of the country until toward the end. And then I didn't feel that way.

* * * * * *

David Wilcock: This is pretty intense stuff here. This is an origin story. And I don't know about you, Corey, but when I watch that clip, . . . anybody (who) is going to try to tell me that this guy is making this up . . .

Corey Goode: No.

David: I mean, come on.

Corey: There was nothing but genuineness coming . . .

David: And I don't know if you know this, Corey, but Sergeant Stone's son died as a result of him coming forward.

Corey: Yeah, I heard.

David: This guy has not profited off of his story. He came out in 2001 at the Disclosure Project. He's hardly done any events since then. He is not trying to go out there and make a name for himself.

He's obviously not getting any ego gratification off of telling these stories. And they haven't changed in the 20-some years that he's been out there publicly.

Corey: He's not the ego-centric type.

David: No, definitely not. You can clearly see, in the beginning of this interview, 1968 – the height of the Vietnam War. It really was remarkable to me his sense of personal honor and duty to his country that he wanted to go in the place of people who didn't want to go, that he felt personally responsible for those people's lives.

Corey: Yeah.

David: Now do you think that that quality is part of what made him empathic enough to do this intuitive communication?

Corey: That's one of those chicken or the egg kind of questions. You know, nature or nurture. These personality types are heavily searched for. They are extremely valuable. And he didn't say it this way, but he is what they would call an intuitive empath.

And this ability that intuitive empaths have allows the military types to interface or communicate with beings that don't use words, that have left language behind, you know, eons ago.

And, you know, they're not going to be able to sit there and doodle questions back and forth on a notepad.

David: Yeah. I thought that was one of the really fascinating aspects of corroboration with your testimony that we're getting out of Sergeant Clifford Stone here. The simple fact that it is such a rarity that the extraterrestrials will find anyone who they actually want to speak to.

Corey: Right.

David: Now, he also mentioned in there that he had a medical issue that would prevent him from going into the military. And I just want to clarify that he didn't ever say what it was. It was a personal private matter.

But it sounds like the fix was in on him. I mean, would you agree with that that this is something he'd been targeted for?

Corey: Yes. The military-industrial complex, whatever you want to call them, they are tracking just about all of these visitor craft that come. And, more than likely, when he was young, and one of these craft had come and visited him, some time after it left, he was probably re-abducted by the military to be questioned about the relationship and what all happened with his visit.

And at that point, you're on their radar. Even if they don't come and re-abduct you, they know the people that are being visited.

David: All right. So let's now talk about how he gets activated, and they throw him into this very bizarre job, but it's in Washington, DC. And on the second day, he has this official, who's supposedly only a Spec 5, that comes in and starts trying to make

small talk with him about UFOs.

This very clearly looks like it was a setup. Do you think that the whole job of him going there was just a setup?

Corey: Yeah.

David: That they sent him there to have that guy approach him?

Corey: Yes. That's exactly what happened. They . . . And in the military, people just don't nonchalantly kick back and say, “What do you think about UFOs?”

David: Right.

Corey: It's just like how pilots are. And like American Airlines, you're not going to see one of them walking around with their peers talking about UFOs. It's taboo.

David: Is it common for potential insiders to be approached in a manner like this with somebody who has documents in hand that are highly classified and then just tell you not to freak out, that you're authorized to see these documents if they want somebody that badly?

Corey: Yes. And all it takes is a person higher up clearing a person to see documents that are from Special Access Programs (SAP).

David: Right. So are you familiar with other people having a system similar to this happen to them, in terms of getting brought in where, first of all, it's very strange? A guy who's only a Spec 5 has the rank to be able to go right into the Pentagon. And then the whole thing about him being given a special badge and being able to just go right in.

Corey: Yeah. He had to be accompanied.

David: Right.

Corey: Yeah.

David: Is that . . . and then him going down through this long elevator for, God knows how long, and reaching . . . What was your feeling about him getting to that little craft that he described, this little egg-shaped thing where it looked the same on both sides?

Corey: It's a train, a transit system – the underground transit system.

David: So his description is consistent with what you have heard and seen?

Corey: Yes. And that sounds like one of the smaller trams that brings them to different areas within a facility.

David: So he takes this ride, and we have something that sounds a lot like [British accent] “Platform 9 ¾” in Harry Potter. Is there maybe some kind of hologram technology, a projection that makes it look like a wall? What do you think that was?

Corey: Yeah. They've used holographic technology, and holograms within fields that they called “hard light” that actually had . . .

David: Oh?

Corey: You know, you could knock on it. You could touch it. Or it could be programmed to be electrical.

David: So it's totally within the bounds of things that you've experienced that his story could be, in fact, genuine.

Corey: Nothing he said raised my eyebrows.

David: So he goes through that wall that's seemingly solid, and then he is seated in front of a Grey that he said was 4 ½ to 5-feet tall. And you noticed there was some reluctance there, in terms of him obviously thinking that our viewers are going to expect Greys to maybe be more like three feel tall.

Corey: Yeah. There are a lot of different types of beings that a lot of people in the UFO community put the “Grey stamp” on. They have a lot of different looks. They come from totally different areas. They're unrelated, but they look very similar.

David: Now, he reported going in front of this Grey that's got these two guys on either side and then having a feeling like a buzz saw inside his mind that actually causes him to pitch forward and fall to the ground. Do you think that's something that they Grey was able to do telepathically?

Corey: It sounds like it was an invasive interface attempt. You know, he wasn't sitting there, opened, indicating that he was ready to interface.

Some of the beings are . . . They're very, very, very powerful, psychically. And they just reach in, and they just grab your mind.

David: All right, now another thing that I thought was really interesting, that there

was statements about a satellite 500 miles away from the Earth, and he's shown a series of images in which the zoom keeps going further and further from the Earth, to America, to, I believe it was Long Island, and then a guy on a park bench, and then the headline on the newspaper.

Are you aware of there being perhaps NRO technologies like this in the 1960s?

Corey: Oh, yeah. They've had this for a long time. And the distance he gives of most of the secret military space program objects are further than 400 miles from the Earth.

David: Right. so these are not geostationary satellites at all.

Corey: No, they can be tasked to go to different areas.

David: Right.

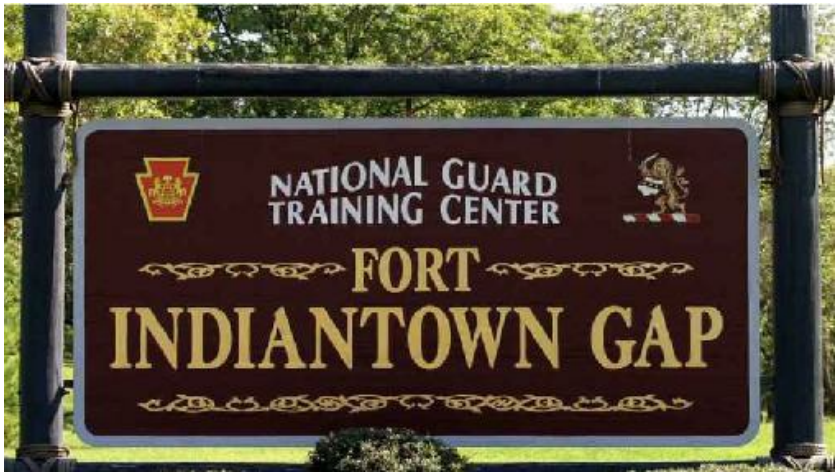
Corey: Yeah.

David: All right. Well, what we're going to do now is we're going to take you right into the next really fascinating clip that's directly relevant to the one you just saw from Clifford Stone. And this was his first example of where he got to see a UFO at Indiantown Gap.

This is very interesting stuff. So take a look.

INDIANTOWN GAP UFO

Clifford Stone: Now the next thing that involves something of a UFO nature, we were at Indiantown Gap, and we were on a field training exercise. They call it FTX.



So we went to Indiantown Gap. We set up. I had my Deuce and a Half, and I drove my Deuce and a Half.

I had my switchboard in the back of the Deuce and a Half. And I had my field phones that I had to set up to the various locations outside and I handled the switchboard.

And I had two prick-25's. Those are field radios, backpack radios.

So I had those there. One was for the group push – what we'd call battalion push, really. And the other one was for the company push.

So, you know, you had mock traffic and all this stuff that you recorded, like, if it was a real situation.

But a little after midnight we got a call that there was a crash of an aircraft there on the reservation of Indiantown Gap, and that they already had a response team there on station, but they needed a backup response unit to go out there.

I disconnected my field phones, because there wasn't time to pick them all up, and they would get somebody else to move in there. But I did that, and we moved on out.

There were three jeeps and four Deuce and a Halfs – 2 ½ ton trucks – to the best of my recollection. That's the best I can remember.

We went out, and as we approached the area, we were in blackout dry, which means we had no lights on or nothing, but then we saw this area all lit up, with these big powerful –- I think they call them light-alls –- shining down into this little area where the Earth had been raised up a little.

And there was like this hill-shaped craft embedded at about a 30º~40º angle into the ground. You could only see the tail end of it.

So as we approach it, I'm wondering, “What the heck is that?” But now they'd already told us that it was an experimental aircraft.

And, as we got closer, I wasn't thinking no more. “Well, it could be an experimental aircraft.” And I wasn't thinking too much. You know, I was thinking, “Okay, well, it could be a delta wing aircraft swept back –- anything like that.

But when I got there, as soon as I got out, the guy that I always called the Colonel -– this would be my actual first interaction with him.

He went ahead and he told me, “Son, do you have a Geiger counter?” And I said, “I got a APD 27.”

And he says, “That'll work. I need a surface reading on this craft.”

I said, “Do you think there's radioactive material on this aircraft?”

And he says, “We have reason to believe that there may be.”

And I went ahead and said, “Okay.” So I got the APD 27, the military Geiger counter, out.

And he told me, “I want you to walk towards the craft. Go up to the berm of the area where it dug in, and try to get a reading as close to the center of the craft as possible.” And I said, “Okay.”

And he said, “But every couple feet, you go ahead and yell out what type of reading you're getting.”

And while I did this, I'd go ahead, and I'd get closer. And it was a little higher than background radiation, but not a whole lot. Then I got up to the berm. And when I got to the berm, I looked down.

[Emotional response] And when I looked down, there was this . . . It had a canopy on it. And there was this kidney-shaped hatch, for a better word, that was right up against the canopy, but opens to the side. And halfway out was this little creature. Once again, typical Grey.

And, you know, I can't tell you whether it was 3-foot, 4-foot, 5-foot, but [emotional response] it was half out and half in, and I could tell that it was dead.

And I started to say, [emotional] "Excuse me. I need an officer up here."

And he says, "Just tell us what you see, son."

And I kept saying back to them, "You know what? You don't understand! I need an officer up here!" [Emotional]

And he said, "Just tell us what you see, son."

And I said [emotional], "Well, what I'm seeing . . . it's not from this world, and you guys know that." I said, "Why the hell are we lying? Why are we telling people that these things aren't happening?"

I said, "What do you want me to do now? I need an officer up here."

And he said, "It's okay, son. Come on back down."

And I went ahead. I turned around, and I walked back down. And when I walked on back down, I looked the guy that I called the Colonel right in the face, and I said, "What the hell are we doing here?" I said, "You know, there could be others on there hurt."

And he says, "We'll take care of it. You get back in your Deuce and a Half, and you man your switchboard."

There's no phones connected up, no nothing. I got back there, and I know it was winter, because I had my field jacket on. It was cold, and the only thing I had for a heater back there was a Coleman lantern. But, you know, I got back there.

The next day, when it was daylight, I looked out, and I saw them moving the craft. And it was a hill-shaped craft.

They put it on back of . . . we called it a lowboy – a 18-wheeler. It's just a flatbed.

We covered it with a tarp, and we moved it out. I have no idea where it went. Then we went back.

We were told that it was an experimental UNMANNED craft, which you didn't hear of drones at that time. And that was the end of it, but the situation, the whole matter, was classified.

No one was to ever talk about it.

Not everybody is trained or has knowledge of what to do or to have any interaction with “our visitors”. And like I say, the people who they [military] need to do this [interface with the “visitors”], they have to find in the civilian sector.

So I think I was the closest thing to that that they had there. So they went ahead and called us in, because they needed the one person, and that was me.

And, see, you feel things. And when I approached, I was feelings things. That's . . . I guess, that's why I get emotional about it.

It's not just looking down there and seeing a little dead guy. You're feeling . . . you're feeling pain. You're feeling loss. You're feeling suffering. You're feeling fear. But it's not like fear that you're going to feel as an individual.

It's just like 1,000 pictures running through your mind that you can see. But the emotions attached to those pictures, they're all there.

* * * * * *

David: All right. Well, that's some pretty intense stuff there. Now, Corey, Indiantown Gap . . . If it's a reservation, I assume that there could be some pretty wide open spaces, some pretty empty areas, in which something like this could happen. And they could kind of swoop in, and not too many people would know about it.

Corey: Some Indian reservations are used. They have installations hidden on various Indian reser . . .

David: Oh, so do you think it's possible that there could be, like, a joint human-extraterrestrial base or maybe an extraterrestrial base around that reservation, and maybe they crashed because they were close to where they would come in?

Corey: I have been informed many times . . .

David: Oh, really?

Corey: . . . that they have installations on Indian reservations in areas that are secluded.

David: Interesting. So you have Stone here, and some skeptics might try to attack him for this or think that he has an ego or something when he says that the whole reason why that detachment was brought out – because they already had people managing the situation, and then his detachment gets brought out. Do you think it is true that that could have all been just because of him?

Corey: Them calling in reinforcements?

David: Mm-hm.

Corey: That part was just for him – to get him in.

David: So why would they send a kid out there by himself with a Geiger counter, ostensibly to take radiation readings, but then he walks up and he sees this dead extraterrestrial body? What's the objective of doing that to him?

Corey: They had checked the radiation long before they called in for backup. They already knew what all the radiation readings were. It had nothing to do with radiation.

What it had to do . . . It was a kind of a controlled test, to send him up, get his reaction, and also to see if he detected any life forms that were, you know, still alive.

David: So why do you think, when he keeps calling out, “I need an officer. I need an officer”, that they're telling him just to yell out what he sees? Are they gauging his stress – how much stress can he handle in that situation? Will he break down?

Corey: Yes. They're judging how much stress he's having. They're reading every single thing – his body – everything about him. You know, not all people that have the ability to interface are meant to do so. Some people just don't have the psyche to deal with it.

So this was a major test to see how he reacted. How he did in the days after. And they watched him very closely. And if he fit the bill, then they're like, “Okay, he's an asset now.”

David: Well, and he also said . . . He got very emotional and said, “Why aren't we telling people about this? If this stuff is real, why don't we know?”

Corey: That's a pretty common response.

David: Do you think that in the subsequent days after this that they'd check to see if he tries to blow the whistle . . .

Corey: Oh, yeah. Oh, yeah.

David: . . . or tell somebody?

Corey: Oh, yeah.

David: So they're also gauging his silence.

Corey: Yeah. They were watching him very closely and judging everything that he did, said, everything that happened with the people around him, in the context of how it related to the craft and the being that they exposed him to.

David: Now, he also described seeing what seemed like a flash-forward image of a whole bunch of pictures. He mentioned, like, 1,000 different thought forms, each of which has very intense emotions associated with them, like pain. And it sound from his description as if it was really fast . . .

Corey: Yeah.

David: . . . just a very intense, almost overwhelming, experience.

Corey: Yes. And most likely that being that had died . . . When someone or a being

dies, there's still residual energy left. And he may have been picking up on that. Everything that that creature felt as it was crashing or afterwards as it was dying – a lot of that residual is in that area. And he walked into that residual field.

David: Have you experienced this sort of flip-book, 1,000 pictures with emotions, type of experience like what he's describing?

Corey: Oh, yeah. Yeah. When you interface, you're not getting words back and forth. You're getting smells, tastes, images. I mean, it's . . . And you have to piece it together in a way to where you can communicate back and forth and turn those experiences – the smells, tastes – into words to report back to the people that are counting on you to interface with the being.

David: Hmm. Well, this is just the beginning of how Stone's testimony lines up so well with yours. But obviously, as we're seeing here, there is a great deal of crossover.

And once again, I believe Sgt. Clifford Stone was one of the most intense Disclosure Project witnesses, because people always say, “Oh, come on. The government isn't picking up these UFOs.”

But clearly you're getting a boots on the ground, very detailed testimony of someone who actually was doing this professionally in the military.

Coming up next time on “Cosmic Disclosure”, we're going to have more of this fascinating content for you to explore with us here. And we'll see you next time. Thank you for watching.

Clifford Stone Bio Season 5, Episode 14

Cosmic Disclosure; Clifford Stone Bio Season 5, Episode 14

11 Aug 2016

David Wilcock: I'm glad you could make it. I'm David Wilcock. And you are about to see a biographical sketch of Sergeant Clifford Stone, a man who joined the military around the time of the Vietnam War. He was really gung ho about getting into the service to try to serve his country.

Little did he know the wild adventure that he was going to end up on involving UFO crash retrievals, and how this testimony now is being brought forward by us to help directly validate many of the things that Corey Goode has been revealing on our show, “Cosmic Disclosure”.

So now you're going to get to see an insider's look at the incredible career of Sgt. Clifford Stone. Check it out.

* * * * * * *

Clifford Stone: When the children showed up, they would go ahead and they would talk to me. They even helped me with my homework. But they cautioned me about one thing: Don't tell others about us because they can't see us.

I could see them like I can see you; you can see me. Looked like typical children – boys and girls. Now one guy, he was like a little blonde boy, he was the one that was closest to me.

We'd go ahead, joke, and if I had no one else to play with, they'd play with me, you know? But to me, they were just children.

My mom and dad, and some other people, “Oh, they're imaginary friends.” I knew the difference between imaginary friends and what I was seeing, but I figured, you know, grown ups are never going to understand.

So I went ahead, and everything went real good. Then one day, I found this little bird that had fallen out of its next. I grabbed the little bird, and I took it home, just like any other child. If you have a cut, you hold the cut underneath the faucet, and it washes the blood away.

When the little bird fell out of the tree, it broke its beak. And to me - it was squeaking – but to me that was screaming and it was in pain.

So I went ahead, put it underneath the faucet trying to stop the blood, and naturally I killed it. And my childish-like mind, it was like I murdered someone.

I thought about the bird will never see its family again. The mom and dad's going to be worried, never knowing what's happening.

Then the little boy, he showed up. Only he wasn't the little boy no more. He had like a one piece, silver-like suit, and he had this shocked expression on his face that was no longer human. And he was looking at me and literally I could hear it in my mind. But it's just like you and I talking right now.

He was telling me, “Why do you feel that way? Why don't I feel that way? Why is it that you mourn this little bird? It was just a little bird. Why are you feeling the way you feel? Why such a deep sorrow and sadness over this?”

And he didn't like the feeling, but, you know, he went ahead and said this.

And he says, “What is the water in your eyes?” He couldn't understand me crying. And I didn't know what to say to him, but at that point, it was no longer about worrying about the little bird or anything, it was total fear. Because here was what I always thought was the little boy, no longer was the little boy.

And I ran and I tried to hide. I ran. I hid behind the sofa, because it was set catty-corner. And I'd get behind it.

And it was like he showed up there, let me know, “I'm right here”. The last place I hid was between the sink and the refrigerator. And I found – I can tell you and people don't like this, but, hey, the truth's the truth – like three bony fingers and an opposable bony thumb scratching me on my head as though to say, “You can run and hide, but you can't escape.”

Then my aunt – my mom was in the hospital at that time – but my aunt, Aunt Lynn, she was taking care of us. And she made me sit in this chair, because she thought I was being mean. And she thought I was out of control, so she made me sit in it, and I didn't want to sit in that chair. I had to go find another place to hide.

But eventually my friend came back to me. And now he looked like a little child, but I knew he wasn't a little child. I knew the truth now. There was something more to this.

And very carefully, very gently, he tried to make it to where he got back into my life and tried to reassure me that nothing evil is going on, nothing evil is going to happen to me, that they mean me no harm, and explained to me, “Look, we select people from

among your own species. Throughout life, we follow these people, and we learn about your culture, [emotional] from the life events in your life. And we want to learn from you. And I chose you.

“Our lifespan is a little more than 300 years. I will live to mourn your death.” He said, “but I will learn a lot of wonderful things about your culture and your people from you.”

And I hate saying this, but I'm going to say it anyhow, because I think it's so important: he says, “The one thing that I like about you, you have what your people call a 'heart'.”

As a child, that's crazy. Everybody's got a heart, right? But he could sense, I can . . . I've always been this way. I care what happens to the other person – myself last. And a lot of times my family don't like that because they think sometimes I put the family last too, which isn't really the case.

But they got to understand, I have to care what happens to other people.

But he went ahead and he told me he'd follow me throughout life.

Now, at that point, I had to make a decision. I could go ahead and fight it, and it would drive me crazy. Or I could accept it and learn from it.

I finally chose the latter at a very, very young age. But I didn't choose the latter until I asked my mom and dad to take me to see a doctor, because the doctor could make the monsters go away.

But once again, they chalked it up just being imaginary friends. So I went ahead and accepted it, and we started to open up a dialogue from a very early age, now, about seven.

At the age of seven, not even a couple months after that, “True” magazine came out with a magazine about UFOs.

And, of course, “True” magazine is considered a men's magazine. Well, I went to – I think the name of the drugstore was Kelso's Drugstore – and I was going to buy a copy of the book. So I went and got the book, took it up to buy it, and I was told, “No, no, no, we can't sell you that. That's a man's magazine.”

Then I heard a voice in back of me saying, “Yeah, I'm interested in UFOs too. You're interested in UFOs?” I turned around. There was this person in the Air Force in a captain's uniform. And he went over, got another copy, came on back over, says, “I'll

take two copies."

And he says, "So you're interested in UFOs?"

And I said, "Yes, sir."

And he says, "Okay," he says, "Well, let's talk a little." He says, "Have you ever had a strawberry float? Do you like them?"

And I said, "I don't know. I've really never had one."

He says, "Well, we'll get two, and if you don't like it, you don't have to drink it."

So we got two, not strawberry, but root beer floats. We got two root beer floats. We went, we sat down at the booth.

When we sat down at the booth, he says, "Well, tell me, what got you interested in UFOs?"

And he was prodding me, because now he's bringing up things, and I wasn't picking up on it, not with a child's mind.

He knew things that had happened in my life. He knew about the UFO I saw, and that was broad daylight. That was at 10:00 a.m., approximately 10:00 in the morning.

I went to get a friend of mine - his name is Michael Eubanks - and we were going to go play ball. I went to the backyard, which was out of the alley, into the backyard, knocked on his door, and started to call out for his name.

All of a sudden I heard this high pitch whirling sound - and bright sunny day, no clouds. It was a clear blue sky. And I looked up, trying to see, because it seemed like the noise was coming from above.

And there was these warehouses in back of . . . on the other side of the alley where his house was. then all of a sudden this white, dish-shaped object came over the warehouses, flew over the open area between the warehouse and his house, and flew directly over his house.

And I remember this day. The outer ring was going clockwise; the inner ring going counterclockwise.

And to me, dare I say, it was like an epiphany, because I saw something I thought I

needed to share with the world.

Prior to that time, I didn't believe in UFOs. I didn't believe in flying saucers. I just saw one. And I wanted the world to know that “Hey, these people that are talking about these things? They're not crazy. They really exist.”

And I went and told my family, and, of course, my family rejected it. But here it was. Now, I'm talking to a guy that's a captain, that was listening to me, that was believing what I was saying.

Now, after we finished, he said, “I'm going to give you a copy of the book – the magazine. But first I have to talk to your parents and make sure it's okay with them.”

So we went back home, and he talked to my mom. And I don't know what the conversation was because I wasn't permitted to be there.

When my dad got off work – and that was a little after 3:00 because he worked at the Detroit Steel Mill – he came home and they talked to my dad.

And then they went ahead and said, “Okay”, cause Captain Brown says, “Well, we're friends now, so I'm going to be coming back to see him from time to time.”

And apparently, my family agreed to this. And from that time on, every couple weeks or so, I'd run into Captain Brown. And Captain Brown would want to know if anything new has come up.

And I kept him appraised of the situation. That went on until about March of 1968.

Accordingly, in March of 1968, Captain Brown was killed in a crash of a T33 out of Laughlin Air Force Base.

After that, I went ahead, still had strange things going on from time to time, but they were taking more of a back seat. But by this time, I'm a firm believer.

I know we're not alone in the universe.

Close Encounters with Clifford Stone Season 5, Episode 15

Close Encounters with Clifford Stone Season 5, Episode 15

18 Aug 2016

David Wilcock: Hi, there. I'm David Wilcock, and you're watching another episode of "Cosmic Disclosure" with my co-host, Corey Goode.

Hey, Corey, how you doing, buddy?

Corey Goode: Doing well. Thank you.

David: All right. Now, we are gonna be talking more about Clifford Stone who was recruited by the military because of his empathic abilities and his ability to interface with extraterrestrials.

This guy is totally amazing. I hope you've seen the previous episodes because these UFO crashes don't happen all the time, but they do happen. And he is one of the bonafide insiders who's been out there, I think about 20 years by now, talking about his personal close encounters with crashed extraterrestrial wreckage.

Now let's listen to another one of his fascinating, personal eyewitness accounts.

GETTING ET HOME

Clifford Stone: The next significant event was that they went ahead and they wanted me to go with them to, once again, Fort Belvoir, Virginia.

And I know it was Fort Belvoir because they had one of the entities, one of our "visitors", that was left behind. And he was being held as a "guest" at this location in a wooded area.

So I went there. And when I got there, he was sitting there, and they had guards all around the place.

And as soon as I went in, he looked up at me. And when he looked up at me, you know, no one else could hear what . . . Just like I say, I can hear it like you and I talking, but I can also feel it.

He said, "I am afraid." And I could feel the fear, and I could also see, you know, his concern about his seeing his family again.

And I said, "You know, there's no one gonna hurt you." But, you know, he had that fear.

So I went ahead and I said, "Well, what can I do?"

He says, "My people are coming to get me. And if they come here, they're not gonna try to hurt no one, but because of the technology to extract me from inside this building, many of your kind will die and be injured."

And I went ahead and said, "What can I do to avoid that? Should I tell them?"

He says, “No, they already know that that is a possibility. The ones that are here that know, know that.”

So I went ahead and said, “Okay, what can I do?”

He says, “Try to help me get outside. So I went ahead and had a friend of mine bring over some wire cutters and place them out by the fenced in area, because the building had a fence around it.

And I went ahead and told the colonel, “Look, he's got to tell me something, but he says he will not do it because there is a little demonstration that goes along with it while any of the military is in here.

“I need the building completely cleared, and it's got to be just him and I.”

Reluctantly, the guy I always called the colonel, he cleared them.

Once again, this alien was – and I can't call it a typical Grey, but the skin was a little lighter than a typical Grey.

The facial features was about the same. The head was not totally round, but, you know, s-long shape is the best way to put it. But he still had a definitive jaw and everything, the large eyes, but it had, like, a yellowish tint to it, if that makes any sense.

But, you know, when he looked up at me, I thought everything he was feeling.

If you missed your child, if you had a person you miss, you gotta understand they missed their family also. It's the same way, but you feel it from their perspective. And it's hard to put into words. But you feel it, then your own emotions come into play.

And at the same time, you know that this little creature is willing to give up its life because it doesn't want to see us be hurt or destroyed because they're coming to get him.

They cleared the place, and I went ahead and told him to follow me, and we started to go out.

Then, as we started to go down the hallway, I started to hear other people yelling, “Halt, halt, halt.” And it got to the point where they were saying, “Halt or we will shoot.”

So I made him get in front of me. So he's in front of me. And we get out there, and I go ahead and I clip the fence as quickly and as fast as I could.

He goes on out. Then this craft comes over. And as the craft comes over, it was just like this bright light just shining down on the ground.

(4 - extraction)

And like, when it goes off, he's no longer there. He's rescued.

(Emotional) But I can remember I was waiting to die that night because I heard people locking and loading their weapons. And I figured it's only a question of time before they are . . . I'm gonna get shot in the back because they're gonna identify me as being a traitor.

And the colonel was very upset with me. When I called the colonel, he was very upset with me, and he just told me, “The next time, let us know what you're gonna do.”

But I told him, “You know, how do you keep 'guests' under armed guards and call them 'guests'?”

And the whole situation is . . . I will never understand that. He was left behind by his own. We knew of a landing, and we immediately put a “pounce operation” where we immediately went to the area and was gonna try to extract as much of the useful data we could get – even up to and including the craft, if possible.

And I never liked that type of scenario. I never fully understood it because the situation is – were we gonna try to take a craft by force?

And they do have the means to defend themselves, but they don't want to do that. And that was one of the biggest concerns I had was - what happens when we try to do that?

But what happens Is we come up on a craft, and the “visitors” already have a rescue ship within the vicinity. Then we go into what's called a holding pattern. We don't approach the ship.

And on several occasions, they took their people and left the craft there intact. So when we got there, we had a craft – the whole craft – but the people wasn't there.

But then again – this is gonna sound crazy – they felt that we were so immature in a galactic sense of the word, that we could back engineer little bits and pieces of it, but we would never, ever be able to back engineer the whole craft.

Well, I think we have back engineered enough to where we have certain technology where we tell people we can't do things. I have no inside knowledge whether we have bases on the Moon or whether we have bases on Mars and Venus.

But with that being said, I have no inside knowledge that that officially has occurred and that's “officially” happened. I know from the knowledge I have gained, the documentation that's there for anyone to read, the technology has existed all the way to, at least, the mid '50s, and probably long before that.

Let me give you an example.

Take a 2016 car. Take it back to 1776. And I have to use 1776 because there's a little understanding of technology at that time. We will understand how the lights on that car work. We won't be able to back engineer them, but we'll understand how.

We will understand how the fuel works, but yet, we are not going to have the technical capability to process oil out of the ground to make gasoline.

We are going to be able to understand what plastic that's involved there – what it's all about – but we're never gonna be able to replicate it.

So this is where they're coming from.

* * * * * *

David Wilcock: All right. Well, as you can tell, this is some pretty intense stuff. And I don't know about you, but I'm not looking at a guy who's lying here. You watch Clifford Stone, and there is credibility.

Remember, he had a son who died, and that came out, which, actually, really stopped him from being a whistleblower for a long time.

And the things that he's describing have those kind of really intense, specific details that people who make up stories and are lying just don't have.

So Corey, he mentioned that this ET was being held as a "guest".

Corey: Right.

David: Is that kind of sanitized, big brother-type of lingo fairly common when they're . . .

Corey: Oh, yeah.

David: . . . holding someone prisoner?

Corey: Yeah. If you go somewhere – let's say you're delivering a message – and it's a group that are not friendly with the people you're bringing a message from, it's very often for you to be their "guest" in a room with no door knobs while they figure out how they're gonna respond.

David: Hmm. Now, something that really kind of strikes me almost like the scene in a movie – it's very cinematic – was this being describing to him that there would be some sort of event that would take place that would either hurt or kill many of the people in that base if he were to be extracted with their technology from inside the base.

And then when he did see the extraction, it was some kind of bright beam of white light.

I know it's just speculation, but could you speculate as to what possibly . . . what are some of the technologies that might exist that could cause loss of life if someone was extracted from inside a building like that?

Because, you know, we think of "Star Trek" and like a transport beam, that they can just beam you out from anywhere. And it's the same thing.

Corey: And they CAN do that. I was a little confused about . . . Maybe that being was telling him that as a catalyst to get him moving.

There could be technology that does that, but the technology I had seen and heard about was not gonna cause damage inside of a building that it wouldn't cause outside of a building.

David: Well, here's one thing that I've wondered about. Could it be possible that this particular group of ETs is using some kind of torsion field beam that would basically be like a matter disruptor so that if you're in the field of the beam that, perhaps, the molecular bonds loosen up or something?

And that could cause, potentially, electrical lines to cross over, and then to set on fire larger areas of the building and cause an explosion or something like that.

Are there beam technologies that could lead to those kinds of explosive events, perhaps?

Corey: What you're describing about is . . . There are torsion weapons to do that kind of thing.

David: Right.

Corey: Now, I just can't see how them laying down light to change the being's molecular structure into that of the light and then pulling the light up, I don't see how that necessarily is going to cause a large loss of life.

Maybe some damage to the building, at most. But then again, this could be a technology that this group used that I haven't heard of.

Or it could have been the being using that as a catalyst to get Sergeant Stone to help him escape.

David: Why do you think the being might want to escape instead of just being beamed out from inside the building?

Corey: Well, I don't know. There could be some sort of shielding in the building.

David: Oh.

Corey: Yeah, it depends. If they put certain types of shielding in the building, it disperses a lot of stuff or makes it hard to see who or what's inside.

David: Right. So the being might say that it's gonna hurt people inside to appeal to Clifford's emotions.

Corey: And he's obviously . . .

David: He himself might end up going through, like, a meat grinder if it was tried to be beamed out of that field that they've created inside that base.

Corey: Or the beam couldn't reach him at all. They could not be rescued at all, unless they were brought outside of this , , , whatever would buffer it.

David: Are you aware of there being such containment fields at these military bases that would disrupt those kinds of technologies so they wouldn't work inside?

Corey: Yes, but they're usually somewhat like bunkers. I've never heard of a building sitting on top of the ground with barbed wire fence around it shielded in such a manner, but that doesn't mean that they don't exist.

David: Right. So there could be some willful deception going on on behalf of the being just to ensure his safe passage where he did deceive in order to be able to get into the safe transport area.

Corey: That's possible.

David: There was no real loss of life that might have occurred.

Corey: That's a possibility.

David: Right. Okay, now when he's describing the phenology of this being, the description is that it had a paler skin than most Greys. It was whitish, but that he also described that it had a yellowish hue. Now, when we were watching this together and we weren't filing this, you mentioned something about their diet.

Corey: Yeah. The different Greys would . . . Their skin would change color if they were not getting the right diet when they were in captivity.

David: Really?

Corey: I don't know how long. It didn't sound like this being was in captivity that long though.

David: How would the skin change color?

Corey: It becomes paler, paler, and then, almost white.

David: Wow! And do you know what it is that they're missing that we can't give them? What would they eat if they were here?

Corey: It's like us suffering from malnutrition. And I don't know what they eat. I've since read things on the Internet about them absorbing things under their skin.

You know, there were dozens of different types of beings that looked like Greys. So . . . They don't all have the same biology.

David: Okay. Now, I guess the other thing we should cover here is his very interesting statements about taking a car from 2016 back to 1776.

Corey: As long as Benjamin Franklin wasn't there.

David: Ha, ha.

Corey: You know, he probably could have reverse engineered a lot of it.

David: How do you feel about the idea that the ETs didn't think that we'd be able to do very much with their stuff and, therefore, allowed it to come down here?

Corey: Well, by this time, there has already been an ongoing trade with a lot of these different beings, and we had developed technology equal to theirs.

David: But Clifford's obviously, not on a need-to-know basis for that kind of intel.

Corey: Right. So, you know, one of the things militarily we do if we have a concept, or a secret helicopter, or craft that we can't extract, we will bomb it - you know, destroy it.

With them not destroying the craft left behind, I'm speculating that they didn't see a need to because we've already developed, on one level, some of this technology.

David: Do you think that these beings might be, again, trying to steer our evolution and deliberately gift us this stuff so that we're gonna get to where we need to be faster?

Corey: It could be. I mean, that definitely occurred, but it would have occurred earlier in history, I believe.

David: Okay. Now, one last thing is that he mentions a “pounce team”. And that term I've seen online in various declassified names of project codes. And I've seen reference to a “Project Pounce”. I'm wondering if you know anything about that.

Corey: Just like you, I remember reading that, that it was a program of mainly, I believe, it was Army mainly, but they'll pull mixed services anytime they can to respond to satellites coming down, secret craft coming down, craft from foreign nations coming down, or unknowns coming down.

David: These pounce teams now have these gigantic, C-5 Galaxy airplanes. And the plane will land at the nearest airfield, and then there's all these . . . They can hold, like, half a million or a million pounds, I guess, of content inside.

Then, all these trucks come blasting out of the plane. And they immediately declare a perimeter around the area. So . . .

Corey: That's a pounce operation.

David: That's a pounce operation.

Corey: Yeah.

David: Okay. So now what we're gonna do is have another really fascinating video for you, this time, of an encounter that Clifford had with UFOs and extraterrestrials in Vietnam. This is very fascinating stuff and gives you even more of a glimpse into the world that Clifford was brought into.

ALIENS IN VIETNAM

Clifford Stone: Just a couple of months before I went to Vietnam, we had the situation with . . . They told us that they needed us to go to a foreign country because we had an aircraft down and that that craft was a B-52.

They had reason to suspect, which now I know it wouldn't be a reason to suspect. If it had it, they'd know it. But they had reason to expect that there may be nuclear devices on that B-52.

Well, I'm getting ahead of myself there too, because what happened was we were all going to a field training exercise, allegedly. But we were hand-picked. It wasn't the whole unit.

They went ahead and we actually drove down to, I think, it was South Carolina. We went to an air base there. We got on a plane – a commercial airliner. And they were supposed to be flying us in to Florida. And Florida was where we were going to have a training exercise.

So we leave, and, you know, it should have only have been a couple hours flight, not hours upon hours.

But as we got airborne, we flew – six, seven hours passed – I can't remember exactly how much. But then we landed for refueling. You know, you don't need to refuel if you're going from South Carolina, North Carolina, whichever it was, to Florida. You didn't need to do that, but now we're refueling.

Then, we're gonna be taking off again, but they told us, “Okay, once we land, we'll go up to the terminal.” We go ahead. We land. We go up to the terminal and they tell us, “No one gets off the plane. We stay right here, and you'll stay on the plane.”

So we get up there, and if you know anything about how they refuel, they don't want you on the plane because if there's an accident, you got all those people who's gonna fry. So they don't want that. They want you to get off the plane before they refuel it.

But anyhow, we go ahead, we get up there, and they're refueling the aircraft. And we look out the window. Of course, I'm wondering, “Okay, where's this place?”

And one guy says, “I'll kiss your hind side if this isn't Oakland.” Of course, you know, everyone starts to say, “Well, wait a minute. Oakland, that's nowhere . . . that's not anywhere near Florida. What are we talking about here?”

And at that time, the guy we always called the Colonel, went ahead, pulled out a .45 – military issue – all locked and loaded, a round in it, and says, “The next SOB that says a word, I will personally shoot.” So he says, “This time, I want you to shut your windows, and I want them to stay shut.”

And where there wasn't people sitting, he went ahead and had other personnel there to shut those windows. And he said, “You'll be briefed before we get to our location. And that's all you need to know right now.”

And, you know, no one was about to say anything, period. I knew this guy from a couple of other occasions that I was with him, but, you know, I didn't know would he really be willing to shoot somebody or not? But it got as quiet as any . . . You could have heard a pin drop.

The engines were a loud roar when the plane took off, louder than I've ever heard any other jet take off before because it was so silent.

Anyhow, we flew and I don't know – 14, 15 hours, 16 hours. And a couple hours before we landed, that's when they told us, “Okay, we're going into a country in which this B-52 has gone down. The natives there, the people, the populace, whatever you want to say, they're not friendly towards the U.S. government. We have to get in there, check for survivors and check to see if there is any danger of any bleed off from the radioactive material that's on that craft. And we also have to provide for an extraction.”

So we figured, “Okay, fine.” So when we land, I remember when we were going in for a landing, it's dark. It's night. We looked down. And I remember seeing these fires

on the ground - no lights, just fires.

But then, when you get to the airport, naturally, you have the red and blue lights and all that. But as we went in, you know, we were still several thousand miles high, and I thought, this is really strange. This is not Florida. You don't see that kind of thing in Florida.

And I'm going ahead and I'm thinking, “This is crazy.”

But we land, and when we land, they go ahead and let us out. And once we get out, I'm sure some people there knew because there were signs there, and they were in Vietnamese.

Well, I'd never been to Vietnam. l didn't know it was Vietnamese. All I knew is we were in a foreign country. For all I know, it could have been a South American country, whatever. I wasn't putting two and two together yet.

And I didn't see any oriental-looking people there. It was just us.

But they went ahead and took us out of the airplane. There were two choppers waiting for us.

We got in the two choppers, Uh-1s, Huey Slicks, and they flew us. And I don't know how long we flew. It seemed like a couple of hours, but I know for a fact we went to Cambodia.

And I'm pretty sure the area of Cambodia we went to is the Parrot's Beak area.

And there was this little stream that flowed by the area where we were let out at. And that was what we were calling our staging area. So from there, we'd go on into the jungle to where the craft went down.

And you know, of course, you anticipate seeing smoke. You anticipate seeing debris because, naturally, the craft would have had to been blown all to heck.

But when we went in, no one asked for any Geiger counter readings or nothing, but we come up on this clearing. And there in the clearing is this B-52, almost totally intact, except for the damage that was caused to it by natural enemy fire.

And I'll always say I don't know for a fact, because I don't have no inside knowledge, but I still believe it was surface-to-air missiles that hit this aircraft and probably more than one.

The people on the inside had died of the wounds they received as a result of the shrapnel from the hits on the aircraft.

We go ahead. We're looking at this, and I always thought a B-52 was much, much bigger. And don't get me wrong, it wasn't a small craft. It was a big craft, but I always thought it was much bigger.

So I start to walk around it, and I walk around through the tail section. When I get

around to the tail section, I go around to the other side, and I hear this, like something in the bush.

So I turn around, grab ahold of my M16. I don't bring it up yet, but I grab ahold of it. Then I look and this – a typical Grey – and once again, I would have to say about 3, 3-½ foot tall, comes out. Then several others come out with him.

Then I remember to this day what was said. And it said, “Clifford, what are you doing here? You are not supposed to be here.”

And I remember I still think I may have been the first to fire. I don't know. But I brought up my M16, fired, and started to yell, “VC”.

And you know when you get real humble? When you know you're hitting something with rounds from that M16, and it's having no affect. You get real humble because the whole situation is you now realize any other weapon you have on you is useless. And you are now at the mercy of whatever it is you were just trying to shoot.

So the whole situation is that we started to fall back. By this time, other people were shooting.

Like I said, I may have been the first one to fire. And why did I even say, “VC, VC”? They didn't tell us we were in Vietnam. They didn't tell us anything.

Only thing is, you know, there was mention made of the “little people”. I knew what

the “little people” meant.

But as we pulled back, we got all the way back to the river crossing. And they followed us to a short distance. But most of the people stopped shooting because, I think, within all of our minds, we were all like . . . we realized shooting is no good. It's not going to hurt them. And they're not really trying to do anything to us yet.

And the question is, if they have weapons, they might try to use their weapons.

We got across that little crossing. And when we got back there, immediately we were told, well, those were the local natives we saw there.

We were thinking, what kind of scam are these guys trying to pull? These entities, no, no, no. They're not people. They're not local natives. And I already knew from other experiences.

But when we get back there, the guy that I always called the colonel says, “I need a volunteer, because we have to go back there.”

And I'm looking around. And the other people are like, “Well, I'm not going.” “I'm not going.”

And I darn sure didn't want to go. But the, I kept thinking and thinking. And I went ahead and got my M16. Without saying anything, I started to go back across the stream again.

Prior to that, the guy that I always called the colonel, he asked me. He says, “Are you afraid?”

And I said, “I'm human. Yes, I'm afraid.” But then I grabbed my M16 and started to go back because nobody was about to vol . . . nobody wanted to go back there because we didn't know what we were going in for.

And I went ahead because I had experiences in the past. Started crossing and the colonel said, “I thought you said you were afraid.”

I turned around, “Yes, sir. I'm afraid, but I got to know what's going on. I got to go back there. I got to see what's going on there. None of this is making any sense.”

So I started going. One by one, the other soldiers that were there with me grabbed their M16, and they followed suit. They followed me.

We got back there. When we got back, we extracted the bodies. We called in to have

them lifted out. Then we were told that there was an engineer team coming in. That they would be going ahead, and I think they called it “piecing”. I may be calling it wrong. But “piecing” because they were gonna cut the aircraft up.

They cut it into five portions. They cut the wings off. They cut the tail section off. And then they had the fuselage. Then they had what we call CH54s. Flying cranes is what they called them.

They came in, and they picked up piece by piece.

Then we went back to the area that we called the staging area. The helicopters came in, picked us up and flew us back. We got back on the aircraft that we came in on, and we left, and we came back to the United States.

* * * * * *

David: Corey, let's start with something simple first before we get into the tough stuff. And that is, some people who are skeptically inclined might say, “Come on. The colonel is gonna frickin' shoot somebody's brains out because he questions whether they're flying to Florida when he says it looks like Oakland, California?”

Is it true that the military would consider an operation to be so secret that you're flying somewhere, and if you even try to figure out where you're going that they will blow your brains out?

Corey: Yeah. Yeah, they do that to soldiers. They do it to civilian contractors. That's . . . I mean, that's SOP.

David: So why would they not want these guys to know where they're going?

Corey: Going back to “loose lips sink ships”. And if they don't know information, they can't reveal information. It's part of the comparmentalization.

David: So if he said that he's part of this Project Pounce”, then keeping it compartmentalized means that he doesn't have any information that he could leak to any enemies of the United States if he got captured or tortured or something? Is that part of the idea?

Corey: Or decided to go to the media.

David: Right. Okay, so he ends up in Vietnam, and this is in the theater of war in 1968. Now, this is where the thing gets really, really bizarre.

He's going around what appears to be a crashed craft of American manufacture during an active war, in the theater of war, in Vietnam. He goes around the corner, and he sees a group of Greys.

And then the Greys tell him . . . They call him by name, and they say that he's not supposed to be there. What the heck is going on here, dude?

Corey: It could be several things, like they were in the middle of an operation. “What are you doing here? You shouldn't be here.”

But the feeling I got was, “Wait a minute, aren't you supposed to be in Georgia” or wherever he was? “How are you thousands of miles,” you know? “What are you doing here?” you know. “You're not supposed to be here. This isn't your theater of operation. You're stateside.”

David: I guess I'm not really getting to the core of this, which is what the heck are these Greys doing in an American War? Why would they care? Why would they be right near a ship that has just crashed with all these dead people inside?

Corey: Well, this is a phenomenon that's gone on in just about every war and skirmish.

David: Really?

Corey: Yeah. The nonterrestrials that have human beings that they consider assets,

they will often protect them. Or if something happens related to them, go and investigate.

David: So you're saying then that, perhaps, some of the people on the B-52 were high-level assets that these Greys considered vital for them, as well as for America?

Corey: I'm speculating. But there could also . . . A B-52 can carry some interesting things with a few modifications.

David: Okay.

Corey: So they may have had something else inside that B-52.

David: So in other words, there could have been some extraterrestrial material or technology that was on that ship, and it appears to have been shot down by enemy fire.

Corey: That's a possibility.

David: I want to get right to the core of another key question, which is, to your knowledge, has there been direct collusion between entities like the United States and extraterrestrials like Greys to fight a war together like Vietnam?

Corey: Well, yes. They don't fight the war with us, but they have agreements with different nonterrestrials on what kind of a role they will play observationally or any other number of possibilities.

They have agreements with certain nonterrestrials before they go to war, during war, but they're not normally fighting with them in the war.

David: Now, we've heard that both Truman and Eisenhower signed these treaties with Greys, including the Tau 9 Treaty, which apparently was about abductions.

Is it possible that part of what these treaties with the Greys would include is that if the U.S. government allowed them to abduct a certain amount of American citizens that in exchange for that, that they might give certain things like logistical support for war efforts?

Corey: Well, at that time, we really didn't need their logistical support because we had a lot of this technology developed on our own, even in the late '60s.

David: What technology?

Corey: Technologies for observing the enemy, you know, a higher level of tactical support abilities.

David: So if the treaty has been signed, why do you think these ETs would care at all about what's happening to us in a war? I'm still trying to get to the core of what might be going on there.

Corey: Well, I don't think we're ever gonna know what was going on there. All we're gonna do is be able to throw out a lot of speculation. There's any number of reasons why they were on scene there.

The reasons I just described to you are just a few.

David: Okay. Another thing that I think everybody's gonna want your take on before we end this episode is, how do you shoot at beings with M16s and not hit them? What the heck was going on there? They didn't seem to have the slightest concern about those weapons.

Corey: The common era weapons that we have, or the era of weapons that we have, kinetic weapons, even high-energy weapons, they have defenses against.

David: Now you also mentioned that Project Pounce also takes care of Broken Arrow.

Corey: Right.

David: Would you explain for our viewers what that is?

Corey: Well, a Broken Arrow situation is when a nuclear weapon has either crashed or we've lost it in some sort of an incident. A Broken Arrow means a nuclear weapon or device that is no longer in our possession.

David: Wow!

Corey: That's right up there – the highest thing, the quickest thing, that they'll respond to, as well. If they . . . If these Special Access groups are told we have a Broken Arrow situation, they are in the plane, and they are out there immediately.

And you have the veil of secrecy that comes along with that situation.

David: All right. Well, thank you, Corey. And I thank you for watching. This is really fascinating stuff.

And we are bringing you the cutting edge of “Cosmic Disclosure” here on Gaia.

Thanks, again, for watching, and we'll see you next time.

On the Other Side of the Veil of Secrecy Season 5, Episode 16

Cosmic Disclosure; On the Other Side of the Veil of Secrecy

Season 5, Episode 16

24 Aug 2016

David Wilcock: All right, welcome to "Cosmic Disclosure". I'm your host, David Wilcock. And in this episode, I am here with Corey Goode, and I'm also here with Dr. Bob Wood.

And Dr. Bob Wood is going to be our focus. Part of the reason why is that he has been acquainted with William Tompkins since 2009 and knows a great deal about Tompkins' testimony. In fact, he's practically a walking encyclopedia of what Tompkins knows.

But, Bob, you also are coming into this with a lifetime of very bizarre, interesting experiences related to this whole topic of cosmic disclosure. So I just want to hand it over to you now.

And I know you said that you have some very critical autobiographical information you want to give us about yourself that will become very relevant as we go forward in your story in the timelines of what's happened to you.

Dr. Bob Wood: Yes. It started, actually, in 1949 at the University of Colorado when I graduated.

And after then, I got a job at Douglas Aircraft Company for the summer because my father was a professor, and he was always talking with the guys who were hiring engineers.

So he just . . .

David: Douglas is the same company that William Tompkins worked for.

Wood: Exactly. It was . . .

David: Right.

Wood: Douglas, at that time, had merged to McDonnell-Douglas in 1968.

David: Right.

Wood: So my first summer job was working on missiles that day. I worked for some

of the same people that later turned out Bill Tompkins was working for.

David: That's wild.

Wood: It is wild. But actually . . .

David: Could you give us a couple of names?

Wood: Yeah. Dr. Klemperer was one of them. Wolfgang Klemperer.

David: Klemperer, right. He calls him 'Klemp' in the book sometimes.

Wood: That's right. Yeah. And the other one was Elmer Wheaton.

Elmer Wheaton later became a vice president of Douglas until he got hired by Lockheed.

So after one summer job, I went to start to get my PhD, and I got my . . . I had a break, and I took another summer job and worked for some of the same guys.

But it was interesting that at that time, I looked around to see if there were any vaults [secret think tanks] or secret things going on, and I was told there weren't any, and I didn't ever notice any.

But it turned out that towards the end of that summer, at that same time, if I had been paying attention, I could have seen Bill Tompkins walking down the aisle.

David: No kidding.

Wood: Yeah.

David: Ha, ha, ha. Very interesting.

Wood: So from there I went on and got my PhD, and then I went to work for Douglas until they drafted me. I went to work for the Aberdeen Proving Ground for a couple of years and worked on ballistic . . . well, shell dynamics. It was a good experience.

With that behind me then, I was asked to select an area, and so I selected thermodynamics, because they were really starting to build – actually, it was the Air Force, the M-18 that Bill Tompkins worked on.

It was a Thor missile at the time, . . .

David: Right.

Wood: . . . and they worried about whether the back of this Thor missile would get hot, and so that was one of the challenges. Actually, I spent most of my time early on working on the Nike-Zeus missile.

And I actually hired Jerry Buss, of known fame now, who was a chemist, to decide how much Teflon we should put on the leading edges of the fins on this missile to keep it cool.

Well, anyway, my career went on, and I got involved in aerospace management. We managed the independent research and development program. And I got involved in the Space Station design later on.

And by 1993, I retired.

But in 1968, there was an unusual event that happened that caused me to become involved in UFOs.

David: Okay.

Wood: It was pretty simple. My boss said, “Hey, I've got to give a briefing to the Air Force next week. And they want to know, 10 years from now, how we would go to orbit and back.”

And I said, “Well . . . “ - just for a joke – I said, “Well, Ray, why don't we tell them how many alleged UFOs would do it.” And he said, “That's a great idea. Why don't you work on that?”

So I read my first UFO book, and it was by Don Menzel. And he wrote the . . .

Corey Goode: In 1968?

Wood: 1968.

Corey: Wow!

Wood: I read my first UFO book. And I kind of concluded, “I don't care if this guy is a famous astronomer, he's obviously ignoring the data.” So I read more books, and the briefing went off okay.

But a year later, my boss was out of town, and his bosses had me give the usual report on how we were doing on contracts and that sort of thing. And at the end of this

meeting, he said, “By the way, Dr. Wood, we don't often see you. Tell us what you're doing that's interesting.”

And I said, “Well, you're not going to believe this, but I've read 50 UFO books in the last year, and I have concluded that everything is certain. That is, we know that there's aliens coming here in spacecraft. The only thing that's not sure is whether we figure out how they work before or after our Lockheed competitor.”

And there was a moment of silence, and my boss said, “What do you think it would take to look into that?”

So for the next year and a half, actually, they gave us a half a million dollars. I hired Stan Friedman, who's now a well-known UFO guy, to read the literature and see whether or not there was something in the literature that would tell us how they work.

We had a laboratory. We did laboratory tests. We hired a detective to interview abductees and stuff like that, which, in those days, was kind of outside the norm.

David: So what were you thinking, Bob, when you're seeing, obviously, all this data? You're obviously a credible, credentialed PhD. You're looking into this data scientifically. You have a half million dollar budget in 1968 dollars.

And then you're looking at the public and how the media is presenting this as if it's a big farce, and it's a joke. And, “Oh, it's all swamp gas!” What did you feel about that at that time?

Wood: Well, that's when the swamp gas report first came out, is actually that era.

David: Right.

Wood: It turns out that I was focused on learning something, and so I joined organizations I thought were relevant – MUFON and CUFOS. And I would up meeting James McDonald.

And so whenever he came to town, I would go to his lectures, and I became pretty aware of the work that he did.

He was the one who said, “You ought to go visit the Condon Committee and tell them what you think.”

David: Wow!

Wood: So I did. I went to the Condon Committee.

Corey: Wow!

David: Ha, ha, ha.

Wood: And I said, “Well, . . “, I told Condon and his committee, I said, “Do you know we're doing a little study? And we did come up with one way that you could build a UFO that would potentially work. You could hover in the Earth's magnetic field.”

So I went through designs. And it turned out, it doesn't work, because it's not practical.

But at the end of this visit, I decided that I would write Professor Condon a memo, a note, which I had properly approved. And I had suggested to him that maybe he could divide his team up into two parts: part of the believers and the nonbelievers, the skeptics.

And he got this letter. I also, in this letter, decided that I would send a copy to everybody on his committee.

David: Ha, ha, ha.

Wood: Ha, ha, ha. Well, he was so upset that he called up James S. McDonald on the phone and tried to get me fired.

David: Really?

Wood: Yeah. And I had no knowledge of this until months later, when my vice presidential boss said that he had to deal with that.

And fundamentally, James McDonald didn't like some university professor telling him how to run his business. And I had performed all the required approval signatures before this letter went out.

David: Could you just . . . For the viewer . . . I'm sure we're going to get comments if I don't say this. Explain to people who James McDonald is?

Wood: James McDonald was one of the scientists and atmospheric physicists, actually, who really dug into the individual cases, especially those that involved radar lighting up – all the physical cases. And he put them together so effectively that he testified to Congress that there were clearly . . . that there were objects there.

David: Right.

Wood: So Jim McDonald and I became good friends and colleagues, and I was dismayed to find out that he'd committed suicide a couple years later. I could never imagine that happening.

But, actually, I did . . . it was . . .

David: Do you think it was suicide or not? I mean, a lot of times these guys commit "suicide".

Wood: I have now concluded, with all the apparently classified work that the CIA has done on influencing people and psychotic drugs and stuff like that, anything's possible.

David: Yeah.

Wood: But the one thing that told me that McDonald was really interesting is . . . I knew him well enough that once I was going through Tucson on business, and I stopped off, and he was willing to meet me at the airport. So we had been looking at the evidence, and he said, "Bob, I think I figured . . . I finally out how it's working."

And in hindsight, I have concluded what he had found . . . he had found one of the top secret documents that said that we had really recovered lots of craft.

David: Hm-mm.

Wood: And in those days, that would have been a huge revelation. But he didn't tell me that. He just said, "I finally found out what's really going on." And that was the last I knew. And the next thing I knew, he was dead.

Corey: Yeah, that sounds suspicious.

David: Well, it's really fascinating just to have you here and to be getting a window into this history of Project Blue Book and the whole very obvious government cover-up that was put in place.

And for you to have been given the same budget money as the Condon Report, but yet your findings obviously were not put on the same level in the media as the whitewash.

Wood: Well, actually, the reason for that was McDonald was . . . He was really a pretty pressure guy. He said, "Dr. Wood, because of all the work you're doing, you ought to testify to Congress."

David: Right.

Wood: So he set it up so I could be on a congressional committee. I got an invitation from them, actually. So I consulted my management, and I said, “Look,” I said, “You guys are treating me pretty well. I'm a Deputy Director and going on to a pretty good career, it seems like. And I've got this opportunity to testify before Congress.”

And one of the VPs, who was kind of my friend, he said, “Well,” he said, “I don't ever remember knowing anybody who had a lot of good from coming to testify to Congress.” Ha, ha, ha.

David: Ha, ha, ha.

Wood: So I thought about it a lot, and I decided, no, I wouldn't do it. And, furthermore, right about that same time, we lost the MOL program. And we just got an opportunity to bid on a ballistic missile program – defense program. And they didn't have any radar guys.

And furthermore, on this project, we knew how fast we were spending money on these four or five different aspects, but we didn't know how close we were getting to any answer.

So we all agreed, “Let's kill it.” So we stopped it in 1970.

Corey: 1970.

Wood: And I made a deal with Stan Friedman that he would never talk about this. And we were going to write it up to tell the government what we'd done, and it turned out that our management decided, “No, we'll pay for it right out of profits. We don't tell the government we're doing this subject.”

Then I became a radar expert for ballistic missile defense for the next 10 years. And that turned out to be interesting too because it gave me top secret clearance for stuff, and the CIA was a customer to study the Soviet ballistic missile defense program.

And my career went on until I got assigned to the Space Station. So for the next 10 years, I worked on the Space Station, which is a lot of fun, you know. It's up there now.

Corey: Yeah.

David: So you're talking about the International Space Station, the ISS?

Wood: Yeah. Yes. Yeah.

David: What was your role in the ISS's development?

Wood: My role there was to try to make the Space Station cheaper, better, sooner or safer by using advanced technology. It turns out that really, it was a low-tech thing, and we made it out of aluminum, for heaven's sakes, you know.

Corey: Hm-mm.

Wood: It's the cheapest. So the question was, could we take any of this high, sophisticated stuff that I'd been managing, and get some benefit out of it by putting it on the Space Station?

However, my career was sort of very conventional . . .

David: Right. Right.

Wood: . . . except for this one little tweak there where I was working on the UFO program.

David: Sure.

Wood: And then when I retired . . . However, in the process of knowing about some classified material, I was working with a guy in a vault who was interested in some psychic stuff. So he introduced me to Russell Targ and Harold "Hal" Puthoff over at Stanford.

David: Oh, yeah.

And so we took a visit up to Stanford, and I got exposed to remote viewing and . . .

Corey: At Stanford Research, when they were actually . . .

Wood: Yeah, right.

Corey: . . . doing that work?

Wood: Yeah, when they were doing that work.

Corey: Wow!

Wood: That was the '80s. And, in fact, my enthusiastic guy in the vault said, "Well, why don't we turn in a proposal to James McDonald and try to do a coordinate remote viewing job, experiment?" So we did.

In remote viewing, a target is selected, a person is selected, and at the right time, the person is asked to describe the target, which they've never seen.

David: What would the target be, for example?

Wood: It could be a ship sinking in the ocean.

David: Okay.

Corey: Or a new type of radar on a ship that we haven't got a good look at.

Wood: Yeah.

David: Okay.

Wood: However, in this particular case, one of the things that had never been done in that time was to just use the coordinates. And they would take the coordinates of latitude and longitude, and those are the coordinates that are on a piece of paper. And the remote viewer is asked to describe what those coordinates . . . what's at those coordinates.

David: So this is an intuitive, psychic thing they're doing.

Wood: Yeah. Right, right. So we did that. Actually, it turned out that James S. McDonald, without taking the proper advice of his lawyers, he gave us $25,000 to do that.

Then later on, they found out what he does. “Never do that again!”

David: Ha, ha, ha.

Wood: Well, that was just a minor portion of everything I did. What happened, however, was that I met Hal Puthoff, who exposed me to the fact that there were people who were thinking about things psychically. And I became active in the SSE – Society for Scientific Exploration – a group of university professors, typically, who were willing to think outside the box.

In any case, I retired in 1993, having had what I thought was a fun, successful, career, beginning with the missiles and ending with the Space Station, and having lots of fun on classified work in between.

David: Yeah.

Wood: I couldn't have had a better career. So then, in about 1995, my former long-time friend, Stan Friedman, who had been my first employee, called me up and said, “Hey, I've got a fax that looks like it's a classified document. I got it from a guy by the name of Don Berliner, who works in this area.

He said, “It's sort of a fax. It's called 'Extraterrestrial Entities and Technology, Recovery and Disposal'. Would you like to try to authenticate it?”

David: Wow!

Wood: And I said, “Why, sure. I'm not doing anything.” Ha, ha. So I went and I visited and got the high-quality copies of this document, which was a Special Operations Manual, 1-01, and replicated it in great detail and went and talked to a guy at the printing office and showed him the document.

And he read it. It was stamped “Top Secret”, which was a little bit awkward, but . . .

David: Right.

Corey: Yeah. Approach him, “Oh, by the way, I have a top-secret document in my hand.” That doesn't go over very well. I'm surprised he touched it.

Wood: He read it. And then he put it down, and he said, “You know,” he said, “based on the content, I'd say it's clearly . . . It's a hoax.”

Corey: Ah.

Wood: But . . .

David: Based on the “content”.

Wood: Yeah. Based on the . . . However, he said, “If I look at the details of the font that was used in that area, furthermore,” he said, “the tail of the F and the G are specifically relevant to that. In addition,” he said, “I found that there are three raised Zs in this document.”

And I said, “Well, what's that about?”

And he said, “Well, what happens is when you have a hot lead printing press, it turns out that a rarely used letter, like the z, gets some crud underneath it and doesn't properly seat. And so you can read a document, once in a while, you find that those Zs are slightly raised off of the base.”

And he said, “I found three Zs in this document that were raised. Therefore, I know that it was printed on a hot lead printing press, and it would have had to have been in that era of 1954.”

So he said, “This was clearly printed on one of our printing presses, either in the basement of the Pentagon or right in this building here.”

Corey: Yeah, because he would be familiar enough to know the typeset, where things were placed on the page, how the dates are arranged, everything.

Wood: Right. So anyway, my son, who had met Stanton Friedman when he was 15 years old, got interested in this stuff, and he and I became partners.

So we gave a speech at one of the UFO meetings in Connecticut. And at that meeting, they responded by saying, “Wow! This is the first time we've seen anything that seems to be analytically evaluated and has an authenticity aspect that is pretty good.”

So I declared that I was going to become an . . . authenticating documents, but in the meantime, another person came out of the woodwork that Stan Friedman had heard from, Timothy Cooper, who lived in Big Bear Lake.

David: Oh, yeah.

Wood: And nobody had ever gone to see Timothy Cooper. So Stan asked me if I'd go see him because I lived closer than he did in Canada.

I said, “Sure”.

So I went to see Timothy Cooper, and Timothy . . . he said he was delighted to have somebody actually pay attention to the fact that he had some leaked classified documents. And he went over the background with them and all that.

Well, that's kind of a long story, but, in effect, it put me in . . . well-known in the business of being a document authenticator. So I've been able to establish that kind of as my expertise area.

And along the way, I got asked by Joe Firmage to make a . . . well, actually, to authenticate his documents, and to . . .

David: Really?

Wood: Yeah.

David: So for those who don't know, Joe Firmage is this guy who had a very large amount of money who popped up for a while in the late 1990s and wanted to finance UFO investigations.

Wood: That's correct.

David: Right. So you actually worked for him?

Wood: Well, I don't want to say anything on this show that would be inappropriate, but I think that what actually happened is perfectly okay. What happened was that Joe Firmage had heard the word that I had some of these documents that I was trying to authenticate.

So he called me up out of the blue, and he said, “Hi. I'm Joe Firmage.” He said, “I've got a yacht in Newport Beach. You live in Newport Beach.” He said, “Could I . . . if I could authenticate those documents, would you be interested in lending them to me?”

And I said, “Well, let me think about that.” And I called up . . . And he said, “Well,” he said, “if you want to check me out, you can check Harold Puthoff. He knows me.” So I hung up with Joe and then called up Hal, and said, “Who is this guy?”

And he said, “Well, he's a good guy.”

David: Yeah.

Wood: And . . .

Corey: He's not going to steal the documents, right?

Wood: That's right.

Corey: That's what happens a lot.

Wood: So in the meantime, in this conversation, Joe had asked me, “Well, what do you think they're worth?”

And I said, “I don't know. They might be worth millions.”

So anyway, I went, had the meeting. My wife, in the meantime, had wondered why I'd been wasting all my time since I retired studying UFOs. So I went down to this meeting, and Joe looked the documents over.

He said, “This is exactly what I want, Dr. Wood. What I'd like to do is I'd like to

borrow these, have them authenticated, and if they're authentic, I'll print 2,000 copies of them for you under your specifications, and you can have them all back."

And so I said, "Well, Joe, is that . . . that's your proposition?"

He said, "Oh, no. I forgot something." He opened up his briefcase and took out a check for $500,000 already made out to me.

David: Oh, my gosh.

Wood: So I got on the phone with my son, and we couldn't figure out any reason to not accept the offer.

Corey: Yeah, that's kind of a hard thing to turn down. Yeah, no strings attached.

David: Ha, ha, ha.

Wood: I ran home and showed my wife this check. She said, "How'd the meeting go?"

I said, "Well, here is the answer."

And she said, "How do you know it's any good?"

So . . .

Corey: She didn't mind you looking at UFOs after that.

Wood: That's right. Exactly right, yeah.

David: Ha, ha.

Wood: So we checked it out. Turns out, it was in the same bank I banked with. And then Monday morning, I went. It was good. Called up Joe and said, "Joe, do you want to go ahead with this deal?"

And he said, "Yes." He said, "I want you to do that. Cash the check."

David: Wow!

Wood: So that turned out to be very effective. Joe did everything he said he would do. He got it all printed, helped . . . assigned his company to help work with my son and me for that.

And then he liked the whole idea so much - of the secrecy, of the country, and so forth - that he wanted to do a television documentary called “The Secret”, where we took the essential ingredients of our authenticity procedures and tried to share them on this television documentary.

David: Just to be clear, this is not the movie, “The Secret” that says that you can ask the universe for as much money as you want, and the universe gives you the money?

Wood: It's a different movie. It's called . . .

Corey: And a different secret. Ha, ha.

David: Ha, ha.

Wood: The full title of the movie is “The Secret: Evidence We Are Not Alone.”

David: Okay. So how are you familiar with Corey Goode's work? Let's just divert a little bit into that. Have you heard about it online, or how did you find out about what he was saying?

Wood: Well, actually, I hadn't heard of Corey Goode until a year ago.

David: Okay.

Corey: Yeah.

Wood: And the reason for that was because I . . . and this relates, actually, to Bill Tompkins. I met Bill Tompkins in 2009. He said he'd been trying to write his autobiography for nearly a decade.

He'd tried with several various editors and writers, and they were never able to squeeze anything out that was like a book. And he was wondering whether I'd be willing to try it.

So we began to become acquainted, and I went through the process of actually taking the words that Bill started with and turning them into a book.

David: Hmm.

Wood: And that's not a trivial process. Ha, ha.

David: Sure!

Wood: But as the book, “Selected by Extraterrestrials”, got published, it turned out that Michael Salla, who is a well-known researcher and author, had just published a book about the Secret Space Program. And he said he wanted to interview Bill Tompkins, would I help him do that?

So I decided that I want to know something about Salla before I did that. Even though I'd known him some years before, I hadn't read his recent work. So I bought his book, “The Secret Space Program”.

And that's where your name, I think, first . . . I first saw . . .

Corey: It first popped up for you.

Wood: Yeah. So I read this book. I said, “Wow! There's more to this than I thought.” I never imagined there might have been a Secret Space Program.

And then as I started to think about what Bill had been showing me, namely images that he had drawn in 1954 of one kilometer long spacecraft that it might have been the beginnings of a Navy program that could have become something like Solar Warden, which is presumably one of potentially several space programs that may indeed be in existence.

So it's just in the last year that my mind has suddenly been able to grasp the idea that we might really have had these Secret Space Programs.

If fact, if there's any one thing I've learned now that I didn't know five years ago, it's the incredible level of secrecy in this government for this and other subjects.

It's absolutely incredible that people would . . . I mean, if you tried to tell somebody that the Nazis had a space base on the far side of the Moon in '45, they'll look at you as if you're from some other world.

David: Ha, ha, ha.

Wood: So I have tried this technique. If I can convince you that the Nazis had a space base on the Moon in 1945, would you believe everything else I'm going to tell you? Ha, ha, ha.

David: Ha, ha, ha. So Corey, Bob walked in today with a piece of paper printed out, high resolution, of a diagram that Tompkins made of one of these craft that he was working on.

Corey: One of the cigar-shaped ones.

David: Cigar-shaped, modular. Lots of little blocks that all are built to be able to fit together and build one of these. What was your feeling when you saw that?

Corey: Well, actually, I had . . . before I had seen it, I had worked with an artist to depict one of these craft, and they were very similar.

Wood: Really?

Corey: Very similar. And they were, indeed, very modular. Everything was . . . The whole middle of the craft was . . . The walls could come in real close or it could be pushed way back, and they could build modular rooms to do research in them.

So a lot of what he designed came about.

Wood: Well, one of the things that excites me is the fact that the things that he . . . everything he says he did, what I've been able to confirm, it was exactly correct. All the people that he said he knew, I knew those same people.

Corey: And his documentation is just unbelievable.

Wood: Right.

Corey: It's crazy. I wouldn't say 'unbelievable', I mean, it's completely believable. I mean, it's . . . and you verified it.

Wood: But the fact that he was, for example, working in this think tank – that's what he called it, a think tank, instead of a 'vault' – and in this think tank with Lemperer and Wheaton, every so often, they would get a phone call from the Navy.

Well, one of the people who he said occasionally called him was Bobby Ray Inman.

David: Wow!

Wood: And I checked to find out how old he would have been, and he would have been just starting up in his career, maybe as a lieutenant or something like that. And he was the guy who was telling Tompkins' group what to do next.

So you put that together with the fact that this kilometer-long craft kind of resembles what the Navy might have build later, would seem to be consistent with the Navy having been involved in that process.

The wide variety of things that Tompkins worked on at TRW is pretty exciting to me. And he said that they had a green light to look on anything that was interesting in the

whole world.

You know, how were the pyramids really built? How do you keep somebody living forever or as long as the pharaohs used to live? How do you do that?

And there was nothing that was off limits. How do UFOs work?

And, of course, one of the things that most people are surprised at is that Bill's . . . his direct testimony, the fact that the RAND Corporation was specifically formed by Douglas in order to study the alien problem.

David: Oh, wow!

Corey: Yeah, that's pretty big.

Wood: Yeah. But . . . well, my comments on RAND would be that I think they have modified a great deal from their original purpose. I think when they started, they hired two groups. They decided to have a group of people who were given the real data that the Navy had presumably recovered from the 19-- . . . the Battle of LA crash.

And then they had another group of people who were skeptical scientists, who would be willing to ask the question of what would it take to have intelligent life? Is it . . . How would you do that?

And it turned out that my uncle, that is from my first wife, was an employee of RAND in the second category. And he and I had many firsthand conversations, and he was the classic skeptical physicist. He tried to prove to me that you can't travel faster than the speed of light. Nothing will happen.

But now, Bill Tompkins is saying that there was another part of RAND that was studying the real data. And he didn't know anything more about what RAND was doing though. All he knew is what he was doing in the vault. And what he was doing in the vault was based on what he was being told.

I don't think he ever claims to have seen any recovered parts.

David: I'm curious about the timing of Tompkins coming forward. I mean, yes, you say he was working on his book for 10 years. But we have Corey, who was given briefings, saying that multiple insiders were going to come forward who would be able to corroborate what he said.

And I'm really curious about your thoughts on . . . I mean, you say that there was no direct involvement in the writing of Tompkins' book with intelligence services or

anything like that. But as far as you know, you're authorized to say whatever you want to say? You're cleared to come forward like this?

Wood: Me? Yeah. Yeah, I'm cleared to say anything I want to say.

David: Okay.

Wood: And the only risk I worry about is I don't want to say anything that would cause a libel suit or anything like that.

David: Sure.

Wood: But other than that, we're perfectly . . .

Corey: And I'm sure there's other classified things you worked on that are . . . don't pertain to this that you can't talk about.

Wood: Well, actually, the only classified thing that I worked on was really not very exciting. You know, since we were experts in ballistic missile defense, this group I managed was experts in the Soviet ballistic missile defense, and that's what I studied, is how did the Soviets defend against our missiles.

Well, it's no big deal. You'd expect there to be . . . them to have a program like that. I mean, it would be classified with the details of how they did it and the fact that actually, some of their ideas were better than ours. That would be classified. Ha, ha, ha.

David: Well, we also had a conversation, and I might be throwing you in a little bit by saying this, but . . . where Tompkins told me that he's still on the inside.

Wood: I'm a little mystified about why Bill won't tell me 100% of everything. He does show that he is still . . . appears to be invited to the annual West Conference that the Navy has, with the clearances that get him into rooms he shouldn't be into.

And, in fact, that happened just this year. Someone has determined that even at his age, he's perfectly willing to be told about things that nobody knows about. He went through . . . into one room where he saw information on Solar Warden.

David: Really?

Wood: Yeah.

David: At one of these classified meetings?

Wood: The last one.

David: Really?

Wood: Yeah.

David: Wow!

Wood: There was nobody there but contractors. So . . .

David: Are you aware that Corey worked in Solar Warden?

Wood: Well, yeah. I assumed that.

Corey: Right.

Wood: Yeah.

Corey: That was the '80s project.

Wood: But did you, Corey, go to deal with contractors in the program?

Corey: No. There were civilians. There were civilian . . . what they called 'eggheads', scientists and engineers and that type of thing.

Wood: Yeah.

Corey: But there was never discussion of who they worked for corporation-wise, if they did work for a corporation, or if they were just recruited.

Wood: I see.

Corey: So I don't know if any of those people worked at any of these defense . . .

Wood: But the assignment you had would not have given you, normally, much information about the management structure.

Corey: Right. Right. You really didn't learn a whole lot about anything a tier ahead – above you. And you would learn a little bit about some of the people you were working with, but information didn't flow real freely when it . . . on command structure.

Wood: Yeah.

David: If Tompkins is still having these meetings, and he still has his clearance, and you seem to believe that's true . . .

Wood: Yeah, I don't think he's being told anything very specific on a regular basis. He claims that he was told by Webster to tell it all. I think that's on the back cover of the book.

David: Ah. And who's Webster, now?

Wood: He's an admiral that he knew personally, I think, when he lived in Oregon, perhaps.

David: Okay.

Wood: A retired admiral.

David: Okay.

Wood: And he said, "Tell it all!" And so that's why Bill feels comfortable in telling it all.

David: I want to ask you just a really brief opinion question, and that is what was it like for you to encounter Corey's testimony and see so many astonishing crossovers to what you had been gathering from Tompkins in the preceding seven years? What was that like for you?

Wood: I've concluded that your involvement could conceivably have been the ultimate result of what Tompkins might have started. But my feeling is that Tompkins didn't have any way of following that in detail.

I really don't think that he . . . and I talked to him today, actually. I didn't ask him this question. But I don't think that he had any knowledge of a Navy space program while it was being developed at all.

David: All right. Well, this is all the time we have for in this episode of "Cosmic Disclosure". I hope you've enjoyed it. This is a really valuable window into the history of UFOlogy.

And here we have somebody who was right on the front lines of this fight for Full Disclosure, which I do believe we are going to get, and this show is part of that process.

I'm David Wilcock, here with Dr. Bob Wood and Corey Goode, and I thank you for

watching.

Validating the History Secret Space Program Season 5 Episod 17

Cosmic Disclosure; Validating the History of the Secret Space Program Season 5, Episode 17

31 Aug 2016

David Wilcock: All right, welcome to “Cosmic Disclosure”. I'm your host, David Wilcock. And I am here with Corey Goode, our Secret Space Program insider, and we have our special guest Dr. Bob Wood, who is giving us some very, very interesting information about his background in the history of UFOlogy in some very interesting historical periods, as well as his direct contact beginning in 2009 with William Tompkins who has validated an incredible amount of Corey's testimony.

And just the correlation between Corey Goode and William Tompkins alone is something that could potentially start a wildfire all over the planet in terms of Full Disclosure and understanding that the things that we're going to be talking about in this episode are absolutely true as far out in sci-fi as they may seem to the uninitiated.

So Corey, welcome back to the program.

Corey Goode: Thank you.

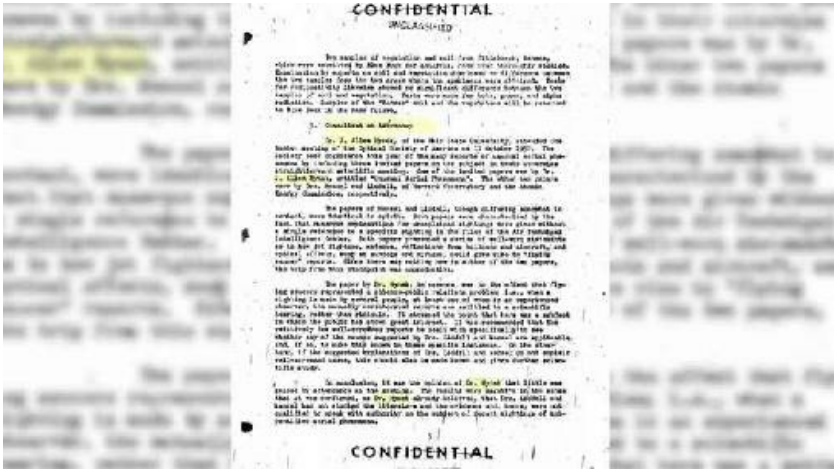
David: And Dr. Bob, it's good to see you again.

Dr. Bob Wood: Yes, thank you.

David: So let's just go back really briefly, and I want to bring up J. Allen Hynek.

Bob: Yes.

Now, here's the guy who actually coined the term “swamp gas” as a part of the Project Blue Book.



CONFIDENTIAL

UNCLASSIFIED

CONFIDENTIAL

Now, what you may not know, or maybe you do, is that I've been working with Jim Hart, who wrote the movie “Contact”, coauthored the screenplay. It was eight years of development total in that project, and he was working with Carl Sagan. And as a result of these high-level contacts, he had exposure to J. Allen Hynek.

Bob: Yes.

David: And what a lot of people don't know is that J. Allen Hynek realized that he had been duped by the U.S. government, and that he turned around.

Do you find that these people who are specializing in disinformation eventually do come around after they do more homework? Do they realize that they've been lied to, that they were used as pawns in this greater chess game?

Bob: Well, J. Allen Hynek actually swam in my swimming pool during that time, . . .

David: Really?

Bob: . .. between '68 and '70 when I was doing this research.

David: No kidding.

Bob: And so I knew both J. Allen Hynek and Jim McDonald, even though they didn't really talk to each other very much, very often.

David: Wow!

Bob: The first involvement I had with people who were disinformation guys was Bill Moore. And Bill Moore, as many people know, was given some information that was apparently controlled, and he leaked it knowing that it was not correct.

And I wound up buying all of his material from him. Actually, I made him an offer. I said, how much do you want to sell everything you got? And he said, “$1,000”. And so I said, “Okay”.

David: Wow!

Bob: I wrote the check and went down to his place in Hollywood and got it from him. I said, “Is this all?” And he said, “Yes.”

Well, I cataloged it. And it turns out there was nothing really revolutionary in anything that I got from him.

Other people say that the documents that I have have been craftily architected in order to – by a group of CIA guys, for example, who you could imagine a room full of 20 people who are all experts in creating false documents.

So that scenario is hard to wave off, but there are so many little subtleties in the documents – the stamps, the timing – that, in my judgment, the vast majority of the documents that I have are really authentic.

And so I'm willing to accept there's an occasional one that might have been partly phony. And that happens.

David: Well, and Bob, isn't it true that these are exactly the types of proofs that the

hardcore scientific types are asking for? And you have that. You have documents that have been verified.

Bob: That's right.

David: We know when they were done, and we know what they say.

Bob: That's right. The skeptics, however, come back with the usual response that, "Well, you can't really do much with copies. You got to have the originals."

So I say, "Well, I have originals. Two cases, I have originals. Let's look at only those, and then go through one of these originals which deals very deeply with the assassination of JFK and the relationship to UFOs."

And then they really don't have responses to that. But, I mean, the authenticity issues then become harder for the skeptics to do that.

David: Bob, you dropped the bomb. You cannot race over that. What did it say about JFK and UFOs? What does the document say?

Bob: It's an eight-page document, and it had tabs. Actually, there were eight tabs. And each tab was designed to deal with a different aspect of the secrecy problem.

It was written through MJ1 through MJ12.

David: Oh!

Bob: Yeah, it was a Majestic. In effect, it said, if, in fact, it becomes clear that he's really going to leak everything, then he ought to be taken out.

David: Wow!

Bob: It's different words.

David: Everything about the UFO cover-up.

Bob: They didn't mention his name . . .

David: Oh.

Bob: . . . but they used the Secret Service

Corey: POTUS.

Bob: POTUS.

Corey: Oh, yeah, they used to have code names for him.

Bob: Yeah. Yeah.

Corey: Were you involved in authenticating the MJ12 documents?

Bob: Yes, nearly all the documents that I had were MJ12 or Majestic or Magic.

Corey: Okay, so when the people received it, you were one of the people that looked at the documents to . . .

Bob: All the documents I had were leaked from various sources. There are three or four different sources.

David: Now, when you say 'leaked', this doesn't mean that people filed a Freedom of Information Act request . . .

Bob: No, no.

David: . . . and they got it legally through the government.

Bob: There was one . . .

David: Those were squirreled away.

Bob: . . . one document that then Cooper got legally that says “MJ12” at the bottom.

Corey: Oh, really?

Bob: Yeah.

David: Wow!

Corey: Okay.

David: But the others were pulled out?

Bob: The others were just given by . . . you can speculate exactly how, but I . . . There's one case . . . One guy showed up to Tim Cooper's door and gave him a box full of stuff. And it was clear that he was cleaning out his files just to get rid of them. Ha, ha, ha.

David: Ha, ha, ha.

Bob: And another document, which was an encyclopedia of flying saucers written by Charles Bowen, was a document that had been created as a history of the subject as of 1950s, I think, something like that, and was sent to the Air Force to make sure there was nothing in there that was classified.

In 1994, it was mailed to Timothy Cooper from Fort Meade.

David: Hm.

Bob: And actually it was original, and it was stamped “Top Secret”. But it had on it notations like “what is DM doing?” Where they were saying “Don Menzo was telling his classes that there were aliens.”

David: Hm.

Bob: So this is the kind of wide set of experiences I've had in authenticating documents, and all of them can be attacked by skeptics. That never ends. There's no way you can ever get rid of it completely.

Even the latest thing that I thought has real potential is forensic linguistics, where you can take a large number of words that a person has written and then compare it, . . . say, make up two or three different people and then compare the question documents' words against those.

And then, depending on the phraseology and the use of verbs, commas, and stuff like that, you could say the probability that this person wrote it is much higher than that one or the other one.

Corey: And you can tell what era they wrote it in by the phrasing and everything.

Bob: Yeah. Yeah. So that's one technique I used just once.

David: Well, Bob, let me ask you this. Documents and validation, obviously, would represent one of the two critical aspects of investigative UFOlogy. I mean, maybe there's three. Okay?

So you have your documents. You have eyewitness sightings. You know, is there a pilot's report? Is there a ground sighting that correlates with the pilot's report? Are there landing tracings?

Let's just talk about that briefly. Did you go through your due diligence on some of

these documents in terms of trying to find out if there were . . . Were any of them involving sightings that you could then validate that the sightings happened? Or did you study people that had sightings and try to correlate pilot sightings, ground-based sightings, landing traces, that kind of stuff?

Bob: That's a good question because it makes me think about the fact that most of the documents I'm trying to authenticate don't deal with sightings at all.

David: Oh, okay.

Bob: They really deal with the covert programs.

David: Okay.

Bob: But the fact that I became involved after I retired and did this movie "The Secret" and continued to give papers, my son started a crash retrieval series, and he did seven years' worth of crash retrievals in October. It had a wide audience.

And so for these crash retrieval meetings, I wound up giving a paper each time on something or other and established myself as a person who was willing to dig as deep as necessary to understand the subject, one of which, of course, was the alien viruses.

One was Stringfield. What does Stringfield really say? What was he trying to say?

And so I established myself as a person of some integrity, I think. And that's why Bill Tompkins called me up.

David: Oh, okay.

Bob: He said, "I hear you like to look at UFO stories." And I say, "Yeah." I said, "Who are you?"

So he explained to me who he was, and he said he'd been trying to write a book for 10 years, and he'd given it to various people to write and gave me the names of some of them.

Corey: I'm sure that description he gave you of what he did . . . your eyebrows probably raised about that high.

Bob: Well, he didn't really tell me that much at the beginning of the conversation, but he did say that he was . . . I think one of the reasons . . . he knew where I had worked. And he'd figured out that I worked there at the same time he did.

David: Wow!

Bob: So soon as I found out that he was there from the time I was there, then I got very interested. And I started to ask him, “Well, did you know this guy, that guy, and so forth.” And every time I asked him a specific question . . . I asked him to describe the room or the orientation of the building, stuff like that. And he had it all.

Corey: Wow!

David: That's amazing.

Bob: So then I got really interested. And I said, “Well, tell me more of your story.” And he said, “Well, okay.”

So he . . . To get it, since he didn't do email, I had to go visit him. So I went to visit him. It turned out at that time, he lived in Oceanside, California, which is where my daughter lives. So it was just a quick stop when I was seeing my daughter to go over and meet Bill Tompkins and his wife Mary.

And they made me feel very welcome. And that's when I got the first stack of the manuscript, when I read the overall scope of what he wanted to say.

David: I want to run two things by you real quick. First of all, you've said to me, based on your discussions with Bill, that “Selected by Extraterrestrials” is only the first of what he plans to be a trilogy of books because there's so much data that he has to disclose.

Bob: When I first met Bill, he had in his mind six books planned.

David: Wow!

Bob: And I subconsciously concluded that six books from a guy who hadn't published one was probably too many to think about.

David: Right.

Bob: So I just said, “Let's think about the first book, Bill, and how we're going to limit it.” He was talking about things that went on over a long time, from '70 to now. And I said, “We got to limit it, so let's pick a time.”

So he wanted to go beyond when he left Douglas up to when he went to TRW, because he says, “The TRW story, that's going to be the second book – what REALLY went on at TRW.”

I said, “Well, that sounds good. Yeah. Let's make that the second book, but let's limit ourselves to one up to that point in time.”

So we took material that was in that time zone, time frame, and, actually, I worked with a guy from the University of Michigan who had started on this, and he gave up. So he gave it back to me. And so I just started to attack it.

David: The degree to which Bill has validated his involvement in technical programs is staggering in this book.

Bob: Well, Dave, when I first got the manuscript, I asked myself the question of should I try to tell Bill what he ought to write for his autobiography? Or should I just let him write what he wants to write? And I concluded that the latter was the right way to go, at least on the first book.

So he included a lot of technical material having to do with the design of the Apollo and the S4B spacecraft that I was familiar with at Douglas, and his interaction with NASA, and the fact that he was interacting with DuBose and von Braun, of course, are relevant.

David: I want to ask you a really direct question, and this is kind of a wild card. In the book, there's some very, very strange stuff about the early period of NASA, the early beginnings of it, in which Bill is involved. And they're having sex parties at these people's houses where everybody's naked.

And then he goes into this very strange room with very strange curtains. And it seems like it's black magic or something that's being done in there.

Could you tell us a little bit about that part of the book and what do you think was going on there?

Bob: Well, my recollection is what you're probably referring to are the parties at Douglas Aircraft Company, not NASA.

David: Right. Oh, okay. Right.

Bob: And he claims that the executives at Douglas would try to have these parties in order to get control of their employees so they would, in effect, be able to be blackmailed or do what they wanted to do.

Corey: That's an old, old, old tactic.

Bob: Yeah, right. Now, I knew all the people he's talking to. When he gave me the names in the book, I asked him, I said, “Well, who are these guys?”

So he gave me a list of names, and names for the book, the real names. So I have that list. And I knew some of them very well. A couple of them were my bosses at a later time.

However, it turned out that I was fortunate that my wife at that time – I've only had two wives – but my wife and I decided that we would never become involved in company social activities.

Corey: Imagine that.

David: Oh, wow!

Bob: So it turned out it was a lucky break. Ha, ha, ha.

David: Ha, ha, ha.

Bob: What can you say?

Corey: You probably would have turned around and left anyway.

Bob: Yeah.

David: That was actually why I was asking. I was really curious because he describes wandering into . . . I mean, you didn't say it, so I'll say it. He describes people having sex in these big mansions, wandering into rooms where it's all like blood red and black decor, black curtains.

Bob: Yeah.

David: And it looks very much like a satanic type of ritual room.

Bob: That's an association I had not yet made – the satanic aspect – but that might well be the case.

David: Yeah.

Bob: I just kind of went over those areas and decided, well, I was lucky I avoided all that stuff.

David: Right.

Bob: And I was lucky that Bill avoided it, too. Now, I asked him . . . well, that question . . . "Well, were they successful in seducing you or not?"

He said, "No, they did not."

Corey: But with the Germans in the space program, they used black magic along with science.

Bob: Yeah, that's a good point. Yeah.

David: Well, let's go into for a minute, because he does jump around a lot in the timeline in the book.

Bob: Right.

David: It's a little frustrating to try to read it and figure out what he's talking about.

Bob: Right.

David: He's referring to, for example, some very . . . He's referring to physics discoveries that were apparently classified that I'd never heard of before regarding antigravity and faster-than-light speed propulsion. But then that just shows up, and he doesn't really set up who invented this stuff or anything.

Bob: Yeah, the discussion of the book that relates to MTM 222, 622, is interesting to me because, in my judgment, Wolfgang Klemperer, who was the scientist he worked for, whom I knew personally, was my boss, actually, my boss's boss . . .

David: Wow!

Bob: . . . he came from Germany in the mid '30s, and he was not a Nazi. He was a good guy.

David: Okay.

Bob: But in my judgment, he was able to bring with him some classified stuff about how antigravity works. And he had . . . it was in three volumes, three or four volumes, I think, according to Bill.

And I said, "Well, can I see that?" And he said, "Sure." So he gave me the unclassified version, which I read cover to cover. And it doesn't say anything.

Corey: Being a physicist, I'm sure you did. Yeah.

Bob: It doesn't say anything about how you could do it. But I've concluded that the think tank that they were in, that Klemperer was using the classified versions of the German technology in order to help the Navy figure out how they worked.

And when the Douglas management, which is what Bill says, would not support the vault [think tank] that was under Elmer Wheaton's control to do unusual stuff because, like he says, the manufacturing part of the company was very powerful in influencing the decisions by the CEO.

That's when Wheaton decided he'd go to Lockheed, where Lockheed was getting money from the Navy anyway.

David: Hm. I guess what I'm trying to drive at is sometimes reading this book, I feel like I'm reading other people's mail, like I'm barging in on something, and I want to know more. Was he restricted from saying certain things? Did he have to get this book vetted out through authorities?

Bob: No. The book that we wrote?

David: Yeah.

Bob: Oh, no.

David: Okay.

Bob: There was no approval by anybody as far as I know. And in my own case, I've never been threatened by anybody to stop talking about what I talk about.

David: Okay.

Bob: And the reason for that, in my opinion, is because they figure that people like myself talking publicly is just harmless. They've already planned for that. They know it's going to happen. They've got a way to counter it.

They can keep the public in the dark and let a few people say what they think.

David: Sure.

Bob: Yeah.

Corey: Yeah, through mass media.

Bob: Yeah, right, through mass media control.

David: So let's, in the time we have left . . .

Bob: Excuse me . . . So I really think that they were using some technology that came from the Germans that they were brought there by Wolfgang Klemperer in that vault.

David: Okay. So as far as the book represents . . . Let's just get clear on this. They already had this elaborate body of physics that suggested that they could build a large craft. They could basically build it in a base here on Earth, turn on these anti-gravity systems, just let it rise up into space.

And then they would have the ability with the technology that they've already developed in these physics breakthroughs to be able to fly it around in our solar system and beyond. But this is something that . . .

Bob: I think that's a fair summary of what the management of the program had in mind.

David: Okay.

Bob: But I don't think Bill ever grasped that at that time . . .

David: Oh.

Bob: . . . at that level. You have to emphasize that Bill, fully respectfully I say, is not a technical person. He was a super marketing guy, and he knew exactly what technical people should be told to do. He was an excellent manager of technical people. But as far as being aware of equations, no, he wouldn't be able to deal with that or have any interest in it. But he was very sensitive to who saw what.

Corey: Right. And I'm sure he had an overall grasp of what people were talking about even though he didn't understand the fine details.

Bob: Right. Right. And he had a . . . In my opinion, he was definitely a very good system engineer. He would understand how these had to be integrated together, even though he knew he didn't need equations to make them talk to each other.

David: Okay. I want to ask you another thing that . . . It's just something that people who read this book might kind of stumble over, is why do you think these guys, these high-level executives who you personally knew at Douglas Aircraft – you knew these people – why do they go up to Bill Tompkins and throw him these seemingly impossible puzzles to solve and say, “We need you to design a ship that's going to be two kilometers long, that flies through our solar system, and we need it by the end of the week?”

Why are they doing this to him? Was there some kind of intuitive thing that they felt he had because of the way he built ships when he was a kid?

Bob: Well, he certainly had a remarkable memory . . .

David: Right.

Bob: . . . as evidence by the fact that he built the ships with great accuracy. Basically, he was a draftsman. And he admits and claims that he was . . . started out as a draftsman, but he was a very creative draftsman.

He could see how people would think something here, think something there, and he knew that they could use equations to make it happen. But they would ask him to do . . . In my opinion, they would ask him to draw pictures of the answer. So he was really a picture guy.

Corey: And then they would go in and figure out how to put components in and make it work.

Bob: Yeah. Yeah.

Corey: Do the environmental and propulsion.

David: Okay.

Bob: Now, there's one sketch of the book where it was the front of a DC-8, or something like that, where it's a beautiful example of how his drawing can go into exquisite detail, capture every little element that's critical and make it just right for the engineers who needed it.

In fact, I knew the guy who he's talking about.

David: Let's go talk now about this really over-the-top information that he was getting through these 29 spies from America embedded in the German space program when he was getting those 1,200 briefings from 1942 to 1946.

Could you just summarize for us? I know there's a lot of data, but summarize for us. What was the big picture that he started to put together during that time based on what these embedded spies were telling us here in America?

Bob: Well, Dave, I'll give you my best impression of what was going on in my words as I'm learning it, actually. I talked with him just this morning and learned something I didn't know that would be relevant to your question.

David: Sure, great.

Bob: I didn't know there were 29 until this morning.

David: Oh, okay.

Bob: Ha, ha, ha. Apparently, you guys have known that for a while.

David: Yeah.

Bob: But my impression is that this process was highly structured, that the Germans

would say what they learned, it would be transcribed, it would be typed up, it would be reviewed, it would be understood by Bill, and then he would be asked to take this information either in the form of a request for proposal from a contractor or in the form of information to give to a Navy base for them to cogitate over, or in some cases to be given to a university.

He said in some cases, for instance, Caltech had people up at China Lake who were assigned there. He'd deliver something to Caltech via China Lake.

David: Wow!

Bob: I thought that was very interesting that the university linkage at the top-secret level was something that most universities have no concept could have been going on.

Oh, one thing I just learned this morning was he emphasized that none of them were stamped “Top Secret”. None of them were classified. None of them were stamped with any classification marks, which was apparently the way Forrestal wanted it run.

Corey: It also allows them to disseminate it to more people if it's not marked.

Bob: Right. Yeah, and so they weren't stuck with the normal, formal Navy procedures of controlling classified information.

David: What's the story? What's the big picture? What was going on in Germany? Did they have a secret space program? Were they in contact with extraterrestrials? What were these people telling us? What was the story?

Bob: Those superior questions are exactly the questions I'd like to get the answers to.

David: Oh.

Bob: Instead of giving you answers, I'm afraid I still have to ask the questions. Because as far as I could tell, from what Bill is saying, it was quite a variety of different kind of information. Sometimes they were talking about communications.

Sometimes they were talking about physics. Sometimes they talk about UFO designs. Sometimes they were talking about time travel. I mean, things that would all blow your mind, but there was such a wide variety of things that he said that Rico Botta would write a little note on some of these packages in his own handwriting to the officer in charge of the base saying, “I know you're not going to believe what's inside, but it's really true.” That was significant.

That's one of the things that Bill just told me in the last week or so.

Corey: And each of the 29 spies had different specialties and brought information based on their specialties?

Bob: Apparently. I don't know.

Corey: Yeah, that would make sense if they had such different information.

Bob: Yeah, actually, the book “Selected by Extraterrestrials” dealt with the idea that he was involved in as a courier to these packages was a very, very tiny part of one chapter, I think.

David: Right.

Bob: Whereas the interest today is very strong on what were the details of what he did for those four years and what information was being transmitted and learned.

David: Yeah.

Bob: And that will be the content of the next book.

David: Okay.

Bob: That will be in there. And I think the next book will have the answers to your questions, hopefully.

David: I just want to drop it out there because we have Salla, who's already disclosed this in video interviews. And we also now here at Gaia have interviewed him, and he has spoken about a big picture, which is that the Germans had apparently developed contact with reptilian extraterrestrials, that those reptilian extraterrestrials had large facilities under the ice in Antarctica, . . .

Bob: Right.

David: . . . that there was a secret space program involving the engineering of disks that could fly with antigravity, and that these reptilians were interested in creating an interstellar invasion force with the Nazis to essentially conquer and colonize other worlds as well as the Earth.

Bob: I agree with the first four things you said, but I've never had any exposure to the last thought . . .

David: Okay.

Bob: . . . until just now.

David: Well, since I just dropped that on you, how do you feel about this story, this idea that there could be reptilian extraterrestrials, that they could have helped us build the space program?

Bob: Oh, yeah. Oh, yeah. I think that's all straightforward, and I think Bill is right that the reptilians did help the Nazis and that they do have an underground base in Antarctica. I think it's there today.

I haven't figured out exactly how the Nazis and the New World Order work together, if they do, but somebody's in charge of something. But I don't think they coordinated it very well.

David: And I've got to tell you, Bob, the thing that blows my mind is that everything that I just summarized is exactly what he [pointing to Corey Goode] told me starting in October 2014.

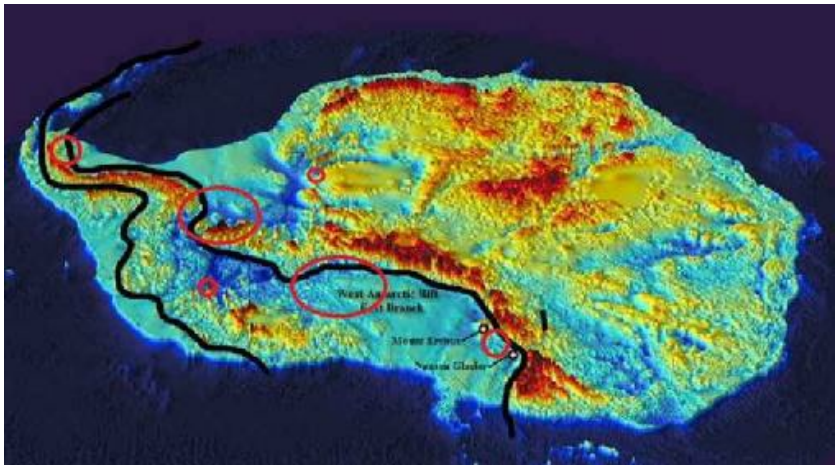
Bob: Yeah.

David: And now we got a guy independently who's saying exactly the same stuff – bases under the ice in Antarctica.

Corey: I've seen them.

Bob: You've seen them? So these are not just under the ice, they're under the land, too?

Corey: These were under the ice that I saw. It was in Northwest Antarctica where all of the thermal activity is.



And underneath the ice, there's thermal heat from the Earth, and it made, basically, like a giant igloo.

Bob: Uh-huh.

Corey: And parts of it, they cleared out with some sort of explosions and other engineering to make it fit what they needed. But the ceiling was in areas 300~600 feet high above the surface. And the mountains would go up and disappear into the ice, the top of the ice.

And on the surface of Antarctica, the actual ground is where they had a bunch of those round-top iron buildings like you see at an Air Force base. There were a bunch of those. It was an industrial-type city.

And their light reflected off the ceiling of the ice cavern.

Bob: Did they know you were there?

Corey: No. No, we were flown through. It was a reconnaissance flight.

Bob: Okay. So you were not an invited guest?

Corey: No.

Bob: Ha, ha. So how many Nazis do you think are there now?

Corey: Well, most of what they had was also under the ground. There were entrances to the underground.

Bob: Right.

Corey: So there was quite a bit going on down there.

Bob: Right.

Corey: This seemed to be more of an industrial area where they had giant black ships that are electromagnetically propulsed that would come up. And they were the size of container ships.

Bob: Wow!

Corey: They were huge. And they were off-loading supplies. So that might have been . . . It could be like an industrial and like a port.

David: So I think it's really cool that you're here because Tompkins and you both have such a valuable part of this puzzle.

Bob: Well, I think it's cool that I am here, too, because in the last month I decided that if there's one thing I wanted to do before I no longer can do it is to write a book titled "The Secret History of the United States" where we cover not only the UFO story, but what really went on in 9/11, who really did kill JFK, and all those other things that are alleged conspiracies, where every skeptic has tried to tear them down.

Corey: Sounds like a good book.

Bob: And the thing that worries me is that it's hard for me to imagine that UFOs would be just one chapter in a chapter of 10.

Corey: It's a very small part of the equation.

Bob: That's right. But the challenge is really important because what you're saying is that there are some guys, including some aliens, who are really trying to make the world better and to give benefits to people so that things like a slave trade, whether it's galactic or local, it would go away.

Corey: Correct.

Bob: And I'm excited about that.

Corey: I am too. It's past time.

Bob: Yeah, so whatever I can do that would help, that's what my goal is. Actually, that's what the goal of MUFON is too. I mean, I don't know that those phrases, “world a better place”, is right in there, but I think it is. You want to . . .

David: We've had so many people, Bob, on the Internet who have flamed us. And they don't really take the time. They haven't watched the show. We got a year worth of episodes of me interviewing him [Corey Goode] for half an hour a week.

Bob: Wow!

David: And he never repeats himself. There's so much data.

Bob: Well, you're [looking at Corey] obviously a very intelligent guy.

David: But this was his life for 20 years.

Bob: Yeah, right.

David: And it was just boring everyday stuff he was doing, the things that he encountered, the information he learned. It was just as ordinary as a child growing up in American educational system, except it's very different information.

Corey: It becomes the new normal for you.

Bob: Yeah.

David: And I think that's where we're heading. I think the things that he knows are going to become things that everyone knows. And you here as an independent, with your own background, you very much bolster Tompkins' testimony. You've seen the same people

Bob: Yeah.

David: And you're bolstering Corey's testimony.

Bob: Right.

David: So that helps people jump that gap of saying, “My God! Maybe this is true. Maybe these guys are actually not blowing smoke, but there's a big fire where that smoke is.”

There's something here that's going to change the world for the positive, and I believe that's what's happening.

And I want to thank you for being brave enough to step forward, and to put your name out there and put your reputation on the line talking about these very contentious subjects. I think you're a hero, and I'm very glad that you decided to be on our show today.

So I honor you, sir, for coming out and doing this with us. It's been truly remarkable.

Bob: Thank you. And it's been fun, too.

David: Thank you.

Bob: Thank you.

Corey: It's great meeting you.

David: All right.

Bob: Yeah, really, it's true.

David: And I want to thank you out there for watching. You're a very big part of this. Your support of this network and of this program is vital to the disclosure effort. So tell your friends. Let them know about this. If this is getting you excited, help spread the word.

This is “Cosmic Disclosure”. I'm your host, David Wilcock, with special guest Dr. Bob Wood, and, of course, Corey Goode. And I want to thank you for watching.

Cosmic Disclosure Season 6

Corey Goode, David Wilcock, et al

The Earth Alliance Strikes Back Season 6 Episode 1

Cosmic Disclosure; The Earth Alliance Strikes Back Season 6, Episode 1

08 Sep 2016

David Wilcock: All right, welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with Corey Goode, and we're going to get into some of the episodes that you consistently have told us you love the most - updates about the latest and greatest, and weirdest things that are happening to Corey.

So Corey, welcome back to the show.

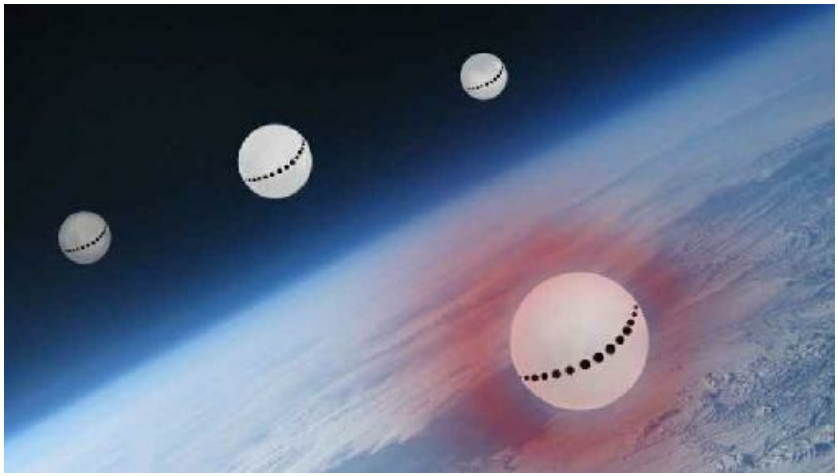
Corey Goode: Thank you.

David: So you and I have actually gotten in a lot of trouble because we had gotten information about a war that was taking place over Antarctica, and we had not disclosed that. So could you start out by telling us what was the nature of this war? What happened? And what were the consequences for you for not reporting on it?

Corey: Well, it had to do with the war and what was found under the ice shelf of Antarctica.

David: Okay.

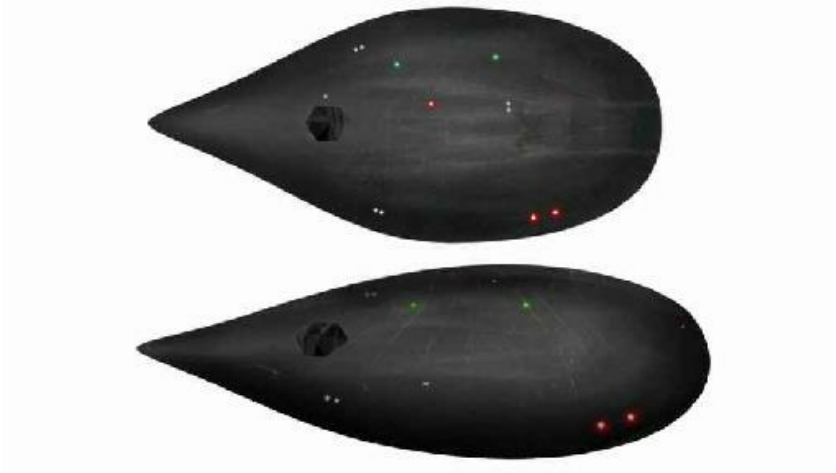
Corey: It had been reported to me that, for some time, they had seen these strange spheres that were about 90 feet in diameter that were . . . that had little port holes around it that were being seen over Antarctica.



I had gotten several reports of it, but it wasn't confirmed until I talked to members of the SSP Alliance.

David: Hmm.

Corey: These appeared to be just reconnaissance. They were just watching what was going on down in Antarctica. Well, what led to the battle was that six of these Dark Fleet cruisers [The Dark Fleet is the military branch of the Secret Space Program, the SSP] that were teardrop shaped, very large, had left the water off the coast of Antarctica and were headed towards outer orbit as if they were leaving.



David: Now, is there a barrier around the Earth at this time? Could they theoretically have left?

Corey: Yes.

David: But the outer barrier around the solar system is still there?

Corey: Correct.

David: So for some reason they might feel that Antarctica isn't a good place for them to be anymore.

Corey: Right. They were trying to leave to go to one of their other bases in the solar system.

David: And I remember one of the really fascinating correlations with Pete Peterson was that, when I mentioned to him these spheres with the port holes around them, he actually saw one of those inside a hangar at some point in his career and said that the port holes were glass, that you could see inside the ship through the port holes.

And when we discussed it, he was fairly confident that they might be these cosmospheres that Peter David Beter reported on that the Russians have.

Corey: That's what was reported to me, that they were most likely Russian.

David: Oh! Okay.

Corey: Yeah.

David: So that was one of the things that fascinated me, because we got two independent points of correlation on this whole . . . what the spheres are.

And so this would be, apparently, part of what we're calling the Earth Alliance that . . .

Corey: Right.

David: . . . was taking action against these Dracos.

Corey: Well, and it continued, because as the two lead craft were getting in the upper atmosphere, all of a sudden dozens of what were described as Chevron-shaped craft about the size of a normal jet fighter, began to attack these vessels.

And there were flashes of light, explosions. and then these cruisers that were trying to escape, went right back down, went into the water where they had left from, where they had come out.

David: So what we have here is you have the spheres, which may be Russian. You have Draco, teardrop shaped craft that are attempting to leave the Earth from Antarctica. And then you have these very new and unexpected Chevron craft that

arrive.

Corey: Right. And the teardrop shaped cruisers were Dark Fleet.

David: Oh, they were Dark Fleet, not Draco.

Corey: Right.

David: Okay. So I remember you telling me that there was something really unexpected about the arrival of these triangular craft, which they're calling Chevron craft even though they were basically triangular in shape. So what was it that was so surprising about that?

Corey: Well, they had very powerful weaponry, and no one knew who they were. It turns out that these were craft that the secret Earth Alliance had obtained. And they were using them to prevent these Cabal groups from leaving the surface of the Earth.

David: This is essentially something that changes the game, right?

Corey: Absolutely.

David: This is a very big game changer. Why was it such a game changer?

Corey: Well, now some of these Alliance groups on the Earth have advanced technology. They basically have their own secret space program now.

And these assets are the ones like you would get from the ICC. They were very advanced, very new technology. And these craft were built by defense contractors.

David: But those defense contractors in the ICC are not necessarily working with the ones that built these craft on Earth.

Corey: Right. And it's unknown how they obtained them, but there were dozens of them that attacked these craft.

David: So what was the effect of these ships being shot down? That's obviously some kind of a tipping point in a war.

Corey: Well, it sent shock waves through the Cabal. It also sent shock waves through the SSP Alliance. They're not used to things popping up on the radar that they don't have a full understanding of.

David: Right. What do you think is the greater socio-political struggle that's going on? Why would the Dark Fleet be trying to leave the Earth now?

Corey: The same reason why so many of these syndicate groups have been heading down to Brazil and Argentina to go into these underground bases that are sending them below ground through fissures that are filled full of water. They travel all the way to Antarctica.

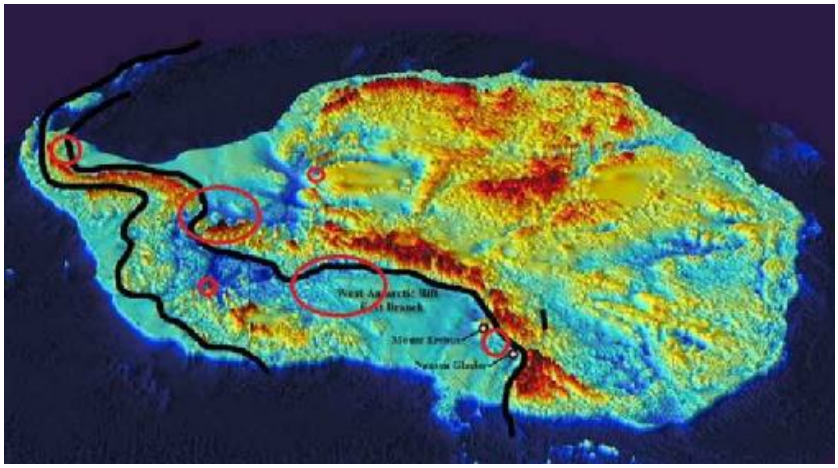
They're looking to escape from something. So they're expecting some sort of an event to occur, and they're trying to escape from it. And apparently they decided that it was better to get off of Earth and out into the furtherest part of the solar system.

David: Do you think that there are changes going on that could lead to some sort of data dump or some sort of big epic shift in all this geopolitical struggle that's going on?

Corey: That's been the rumor or the threat for some time, but the Cabal groups have taken steps to minimize the impact of any massive data dumps.

David: So this was a curious situation, because you and I both got in trouble – big trouble – for not revealing this battle intel to the public, but yet most people would say, “Well, what does it matter?”

Corey: Well, it wasn't the battle intel that was so important that we deliver. It was everything that I had reported on my tour under the ice: the location of these bases, what was under there.



Because at the time, obviously, we had Alliance assets in the theater operating.

David: Oh.

Corey: So that was a perfect time for them to take further action.

David: So are you saying that, because we didn't leak the intel fast enough, that the Alliance could not make moves, because they didn't know where these things were

that you had seen?

Corey: Right. Correct.

David: What was the Alliance's opinion of you and me as a result of that not getting out?

Corey: Well, shortly after that is when they sent in The Wrangler, who, as you said, tries to convince underperforming assets to perform.

David: So one of the things that the viewers have said is that in some way this network was suppressing our release of this information. And could you just address that for a moment as to whether that's what happened?

Corey: No, Gaia had no idea of the details of the information yet because we hadn't reported them in a release or an update. So it would have been some days or weeks after that Gaia would have had us, you know, do an episode on it.

David: And I was equally as guilty as you because I was very preoccupied with finishing my book, and I had shoved everything else off to the side. I was working sometimes until 5:00, 6:00 a.m. in the morning. I just didn't have any time to write these updates either. So there was no written form of them, and we also . . . the way that the taping worked, it just didn't work out.

Corey: Correct. Yeah.

David: So very shortly after The Wrangler was turned down, we had the Contact in the Desert event. And this was the first time that you had actually gone to a conference where people knew who you were other than Conscious Life Expo.

Corey: Right.

David: This was only the second time that you'd been out there in front of a live audience.

Corey: Correct. Yeah.

David: So, could you walk through for us some of the strange things that happened once you got to Contact in the Desert?

Corey: One of the nights – evenings – I was sitting at my desk and, out of the skylight, I saw a blue light. And I looked at it, and I thought maybe it was a star that the curvature of the glass was refracting and making it look blue.

And I stood up, and I looked, and I decided to go outside and take a look. And I went outside, and I saw the blue light. I came back in, got my phone, went back out, and then it was moving and blinking, heading across the sky.

David: And it hadn't been blinking before?

Corey: No, it was solid blue.

David: Really? Okay.

Corey: Right. So I went . . . I think I texted you or called you.

David: Yeah, you texted me. and you were very, almost ridiculously pressuring me to go outside.

Corey: Yeah. “Go outside now!” kind of thing.

David: And I'm like . . . and you didn't say what it was.

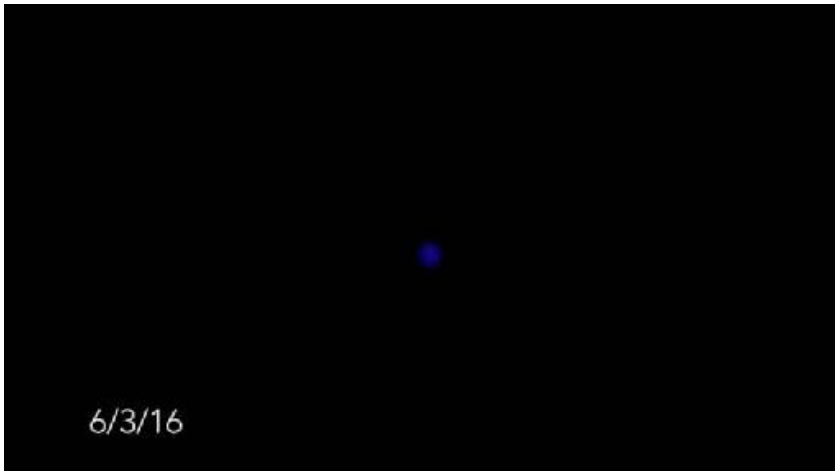
Corey: Right.

David: And then I went outside not knowing what to expect. Let's start with you. What was your observation of it from there?

Corey: Well, I mean, I had seen blue spheres many times – you know, blue orbs.

David: Right.

Corey: But this one was obviously going to be a . . . I thought it was going to be a mass sighting event, so I was pretty excited. So I recorded what I could, with my iPhone, of it. And it shows it a little bit.



It was exciting, because it was occurring when there were like 5,000 people down below.

David: This is something that I also saw, and what was interesting was that I had someone staying with me as an assistant, and she saw a cloud of blue energy over my head, more like a spiritual sighting, right before you had sent me that text.

Corey: Yeah, that's pretty weird.

David: And I ended up going outside, and I observed this object for over an hour. And had you heard that a lot of other people saw it, because I certainly . . . ?

Corey: Yeah. The next day we had a lot of people report seeing a blue sphere or orb in the air.

David: Right.

Corey: Some people saw it blinking. Some people saw it solid.

David: What do you think was actually going on with this blue orb?

Corey: At the time, I really didn't know, because it didn't seem really that interested in me.

David: Was there something that came out later on that made it more obvious?

Corey: Yes. Later on I was told that during that time period, that certain people, including yourself, had gotten some sort of a download from it when it was blinking.

David: Suggesting that, maybe when the person I was with saw this blue energy over my head, that that could have been when it was happening perhaps.

Corey: Yeah, it was a weird correlation.

David: So what was the next thing that happened to you after you saw the blue blinker?

Corey: Actually, it was the next morning. I was laying in bed, and I started to hear a chorus of voices of all ages, all genders – both genders. And I think it was four times that it repeated this. I heard, “We are the messengers and facilitators of the One Infinite Creator”, over and over, like four times.

I got up, and I was wondering, “What the heck is going on?”

I went outside, looked around, looked up in the sky, looked all around the terrain, didn't see anything.

David: Well, and that sounds exactly like a line you'd hear in “The Law of One”.

Corey: On that topic, I went and laid back in bed. And I'd been carrying around “The Law of One” for a while and hadn't been able to read it. When I'd try to read it, the words would hover above the page. I couldn't retain anything. It was very discouraging.

Well, I picked the book up this time, and I started reading it, and I was able to retain everything. And even stranger than that, in my communications with Tear-Eir after that, he started communicating with me in terminology very similar and some identical from the book.

David: Well, let's go back to that original meeting that you had in front of the SSP Alliance. What was one of the first questions that the Alliance asked the Blue Avians when you were there?

Corey: “Are you the Ra from 'The Law of One'?”

David: And what was their answer?

Corey: He just had me repeat,”I am Raw-Tear-Eir.”

David: And Raw is like Ra, basically.

Corey: Right.

David: So this seems to be a much more advanced presentation of the connection between “The Law of One” and what's happening to you. It seems like we've reached that point where it needs to be more solidified that this really is the same group. Would you agree with that?

Corey: I would agree with that now. In the past, you know, I'd always been a little leery of drawing that connection when I hadn't had the indication myself.

David: What was the next thing that happens to you in terms of new contacts?

Corey: Well, new contacts that I haven't reported . . .

David: Right.

Corey: Kaaree contacted me and gave me a little bit of an update on what was going on with this Wrangler character, that they were extremely triggered and had some sort of vendetta out towards me for some reason. They were reaching out to their different proxies, people that they knew, seeing what kind of access these individuals could give him to me.

David: And when you say 'they', you mean The Wrangler.

Corey: The Wrangler was reaching out to contacts, and he was asking these contacts what kind of access he could get through them to me.

David: So even though, ostensibly, the Blue Avians were blocking him from being able to access you, he was trying to pull strings and figure out how he could still work around that somehow.

Corey: Right. And that had been noticed, and they said that they were keeping a close eye on him.

David: Let me just ask you this. If we had published that intel in a timely fashion regarding Antarctica – if we hadn't have both been preoccupied with personal issues and writing books – what might they have been able to do that didn't get done?

Corey: Well, pull off a operation on these facilities under the ice.

David: What kind of an operation?

Corey: Well, either go in and take things away from them, or go in and destroy or attack them.

David: Wow!

Corey: Yeah. They knew that there was something going on under the ice, but they didn't know the locations of these installations.

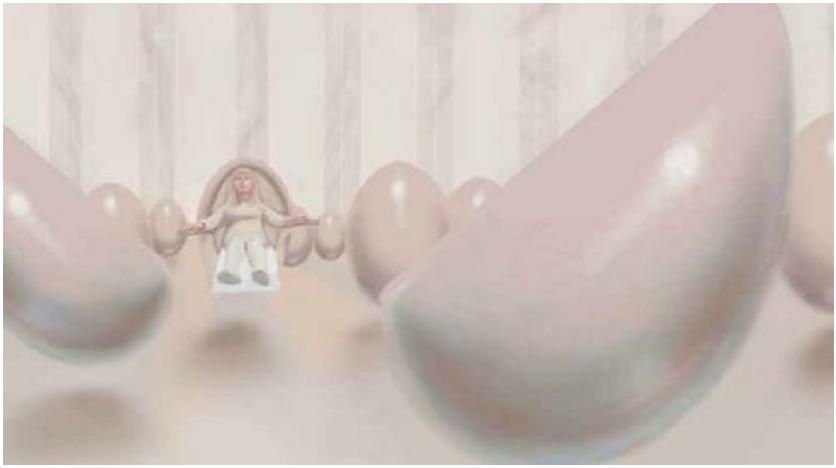
David: Right. So Kaaree is now talking to you, and what was the method? Did the light flash in your room, and you get brought into the Inner Earth like before?

Corey: This is one of those etheric conference calls.

David: Like what we've been calling “The Construct”.

Corey: Right.

David: So you're in kind of a white space?



Corey: Yes. Everything around you is white, except for . . . well, the chair is white too, but, yeah, it's white.

David: So she said that The Wrangler was trying to access you but was unable to.

Corey: Right. And she also informed me that the security groups that kept these facilities safe were extremely freaked out that they were not able to detect the Anshar

bus during the reconnaissance and the fact that these certain locations were given out about what was under the ice.

David: Yeah, I would imagine that, if they had always thought that they could see any craft that come in, and then that craft is invisible, that would be very scary to them.

Corey: And they realize that if the Alliance, that had operations ongoing above them, had known all of this information, they would have had a very bad time of it from the Alliance coming in, especially in the advanced craft they have now.

David: Now, you also mentioned that Kaaree shared personal information with you. And, of course, everybody's going to want to know if there's any specific tidbits at all that you could give us about that.

You had mentioned that you were very depressed about The Wrangler. I saw that in you. You were in a very dark place at that point.

This guy had basically tortured you. So was she trying to give you some moral support, cheer you up?

Corey: There was some counseling going on there, but there was also a lot of talk about people that were operating in my sphere, things that were going on with them, and some very personal things.

David: Right. So did anything else happen in this meeting with Kaaree?

Corey: She did inform me that Gonzales was indeed away with the Mayan breakaway group going through their “healing” that I'd heard so much about.

David: And how did you feel about the idea that he was going through something like this?

Corey: I was happy for him, but I didn't think I would probably ever see him again, because he told me that, if he got a chance, that someday he may disappear abruptly and go off for healing. And he may never get the opportunity to say “Goodbye” to me.

David: So after this initial meeting with Kaaree, did you have any other meetings with Kaaree?

Corey: Yes. Over the weeks, there were small meetings here and there, but really nothing significant. It was more personal type of meetings.

David: Well, and you describe in the write-up on your website that you were in a very

depressed place and didn't feel like you were of any value at that time.

Corey: Right. I was asking her why she was still coming to visit me so often to speak when I really didn't have anything to offer. I didn't have any intelligence. There was nothing going on to where I needed to be there as a liaison.

And she just . . . that big smile she gets on her face said to me that I would be useful again in the future.

David: You also said something about that she would be working with you.

Corey: She had told me that the nature of the mind meld that we had created in a connection between us that would have her looking in on me for the rest of my life, since she was going to live a much longer life.

David: So in your update, that brings us up to July 10 [2016], 3:40 a.m., as the next big event.

Corey: Yes.

David: So let's walk through that now. What happens at 3:40 a.m. on July 10?

Corey: Well, I hadn't been informed, I believe, on this one that there was going to be a meeting.

David: How would you have normally been informed before? What would have happened?

Corey: Well, Kaaree had been telling me to expect a meeting.

David: I see.

Corey: And then I was also receiving information in dreams to prepare for a meeting.

David: Oh, in dreams.

Corey: Yes.

David: Interesting.

Corey: Yes. Yeah, I was laying in bed. I had my eyes closed, and this pale blue light was coming through my eyes. I opened my eyes, and there's the Blue Sphere zig-zagging around.

David: Hmm. And you had no idea that this was about to happen.

Corey: No. Not this one. Yeah. I get up, and I get prepared for transport, and I indicate that I'm ready. And it took me to one of the big spheres out in space that I've described before.

And the moment I was deposited there, I could see the silhouette of Tear-Eir, and it looked like a human standing next to him, much shorter.

I looked up. My attention was drawn. I looked up, and I saw . . . The outside of the sphere acts kind of like a filter. It allows you . . . You can . . . Like if I was outside of the sphere, I wouldn't be able to see the other spheres in the solar system.

But while inside the sphere, through the walls, or the energetic walls, I could see other spheres. I could also see this crackling energy that is occurring in our solar system.

David: Was it coming from the sun?

Corey: Yes, it was crackling from the sun. And also the spheres were shimmering and heading away from the sun slowly. And they were headed towards Venus and Earth – the direction of Venus and Earth – but they were headed out in other directions too. But those are the ones that I could . . .

David: As an intuitive empath, did you get any psychic hit off of what you were seeing or what this represented?

Corey: I surmise, I believe, that, because of the increase in the energy coming out of the sun, that they were repositioning to help buffer these energies.

David: Hm. You see the spheres moving away, and you must have been curious about who is this silhouette next to Tear-Eir.

Corey: I really didn't have a chance to be curious yet. I saw them. They were a little bit of a ways away.

David: Okay.

Corey: And as I was looking up, peripherally I could see that they were moving towards me. So I looked back, and I looked at Tear-Eir, who greeted me, and then I looked at this other individual, and I had not seen their species before. They looked almost human.

So this individual introduces himself to me as Ambassador Mica.

David: And what did he look like exactly?

Corey: He was about 5'5" [165cm]. He was wearing a kind of a shimmering green robe and light-brown sandals. His head . . . You know how ours is kind of oval if you're looking at it from the top? His looked almost round.

David: Really?

Corey: His forehead and his head – it was much rounder. And his features were . . . It looked like kind of a mixture, but African. His nose was very African looking.

David: Okay.

Corey: And his cheekbones were almost Native American looking. His skin color was about the color that you would see in like Libya or Egypt today, except there was a very slight orange, orangeish hue or tint, to the skin.

David: Okay.

Corey: Yeah. And he had salt and pepper hair, mostly black. His eyes were brown and he . . . very compassionate look on his face and his eyes.

And he had wrinkles around mostly right here [Corey touches the side of his face near his ear], just these almost like chicken skin wrinkles right here. And he looked like an older individual.

David: Well, let me just ask you this. If this guy was walking down the street in Manhattan, would anybody notice him? Or would he be able to just walk around?

Corey: You would notice. You would notice.

David: Okay.

Corey: Yeah.

David: So he didn't quite look human, but he was close.

Corey: Right. And he told me that his people were in a star system that is within our local star cluster, that they are our cosmic cousins basically.

David: So just the closest neighboring stars.

Corey: Right.

David: And what else did he have to say? He's in our local star cluster, and what?

Corey: He stated that his people were very enamored with the people of Earth. They

loved our cultures, our art, music, entertainment.

They had similar things on their planet, that they had been following our radio, television, Internet, since their inception.

David: Ha, ha. I don't know if that's good or bad.

Corey: Yeah. Not a good impression, but he spoke perfect English . . .

David: Really?

Corey: . . . with no discernible accent, which blew my mind. But apparently they have been studying us very closely for some time.

David: So they can watch television and watch movies from us, and they're interested in those?

Corey: Yes, very much so. He mentioned that, like I said, that they were cosmic cousins, and that they shared about 94% of the same genetics that we do, which was very interesting.

David: Is he analyzing electromagnetic waves, so you're getting like television shows and movies that have been broadcast over TV? Or do they also have access to the Internet and can watch a YouTube video or something like that?

Corey: Oh, he said that they'd been combing through our Internet, radio and television since their inceptions.

David: Hm. They obviously would have to have advanced capability to do that, because we don't have the ability to go to another planet. We don't know about other planets officially and see them.

Corey: Yeah, they're an advanced race. He's been in our solar system for some time as an ambassador.

David: Hm.

Corey: So I don't know where his embassy is.

David: Did you hear anything about his own culture? Like what are their people like? What's their history?

Corey: The only thing that he really touched on that was similar to that was that his

people had been oppressed by the same beings that were oppressing us here on Earth, and that it has only been three generations that they had gotten out from under them - that they had won their freedom.

David: Wow!

Corey: And he indicated that their life span is a little over 300 revolutions around their star, which, I guess, if we would consider that a year, it hadn't been that long since they had gotten out from under whoever was controlling them.

David: Given the scope of what you've disclosed before, and some of the things that we've also heard from other insiders about the Draco having mind control that's exerted over the human population here, wouldn't it stand to reason that, if his people had overthrown the Draco, that they would have gone through some kind of massive quantum evolutionary leap after that, and that maybe he was just very fresh out of that?

Corey: That is a very, very good possibility. That didn't come up, but he did say that his people were very interested in coming here after we've broken through this control system, this, you know, reptilian, and through the elites and other species that are controlling us.

They were very interested in coming and helping us make the transition. He said that their problems were not as complicated as ours, but they were similar enough to where they would be a major help to us if we accepted their help.

But a lot of these different groups do expect us, after what happened with the reptilians and other groups – if we get our freedom, they don't expect us to be reaching out immediately.

David: Did you get a sense of how they were able to defeat the Draco? Was it through some kind of a war? Was it a consciousness shift? Was it an ascension? Exactly what happened to them?

Corey: I don't know, but he did indicate that, during the end of their conflict, that he had been in contact with Tear-Eir in almost the exact same manner that I am.

David: Really?

Corey: Yeah. He also indicated that his people had been on Earth as refugees during their . . . when they were under control of this group. Different groups had escaped and had come to Earth and had lived here for extended periods of time.

David: Did you get a sense of the time frame for this?

Corey: No. But he stated that that was pretty common, that there were many different refugees coming here at that time.

David: In your write-up, you also said that he told you that his people have very recently gone through a process similar to what we are undergoing.

Corey: Right.

David: And what we are undergoing, in "Law of One" terms, very much appears to be what they call "harvest", or what I have been calling Ascension. So does it appear that that could be what he was referring to, that his people actually had ascended but that it had happened just very recently?

Corey: Yes. It could very well have meant that. He didn't specify, but he was also talking in context about . . . his people had recently been liberated. So it wasn't clear whether he was discussing the liberation of his planet, then an ascension, or both.

David: Was there any evidence of him actually having ascended abilities?

Corey: Not in that short meeting that we had. This was a very short greeting.

David: Did he have the ability to communicate telepathically?

Corey: Yes, as a matter of fact. I asked him why he was speaking to me in English and not communicating non-verbally, since communicating non-verbally is seen as more efficient, a more efficient way to communicate.

And he said that he was perfectly capable of communicating telepathically, but that he preferred to communicate with me in my own tongue. And I think maybe he wanted to practice his English or something.

David: Do you think that, with his surveying, and his people's surveying of our media, that they actually like us?

Corey: Well, he did indicate that we've got quite a lot to overcome, that his people were enamored with a lot of our culture, but they did not like our propensity for violence. And it's understood that a lot of the violence and the way that we're acting right now is controlled.

David: What do you mean controlled?

Corey: Well, mind control, propaganda, all the things that are going on Earth right now that's causing us not to be together, but at each other's throats.

David: Do you think that, if we were to talk to these people, that they would seem different than an average person on Earth in some way in their personality?

Corey: Yes. He was very matter of fact, but very calm and compassionate. He was introducing himself to me basically as a contemporary, that he had fulfilled a similar role with Tear-Eir on his planet.

He was wanting to meet me, and he wanted us to know – humanity to know – that we have family out there, that when all of this local control, and all the stuff that we're going through right now, once we're done with it, there is a wider community, a family out there that are looking forward to meeting us and helping us through this.

David: What do you feel, or what did he say, that they would have to offer us where this alliance would be beneficial to us?

Corey: Experience. Helping us overcome a lot of the emotional . . . just everything. You know, his people, once they got out from under the tyranny, they had to heal, and then grow, and then become a galactic species.

They were quarantined to their planet as well.

David: So they actually have a very similar story to us.

Corey: Very similar. Apparently, because of the wide range of races, ethnicities on our planet, and the different religions, that we've got quite a bit of a more complicated situation than they had.

David: You mentioned in the update that this meeting ended very abruptly.

Corey: It did.

David: So could you tell us exactly how that goes down?

Corey: He had just finished a comment when a Blue Sphere appeared behind Tear-Eir and Mica. It shot almost over the head of Mica, but close to the shoulder of Tear-Eir, right between them, came and stopped before me. And it was obviously time to go.

David: And you said you were a little shocked and somewhat disappointed because you were thinking you were going to get to talk to Tear-Eir more, but in this particular meeting, what happened?

Corey: Right. I was expecting to talk with Tear-Eir more. I wanted to talk about the cosmic scene I'd viewed as well. And I was taken back to my room.

David: What did it feel like to finally get brought up there again after such a long absence?

Corey: It was exciting. It was nice to know that things were going to continue. I was feeling very . . . I was feeling withdrawals, I guess you could say.

I wasn't getting the normal intel from the SSP. I wasn't getting as many face to faces with Tear-Eir. So it was encouraging.

David: How did you feel about the idea that this man had been contacted by the same being, Tear-Eir, the same way as you apparently, and that he had become an ambassador to an entirely different solar system? Did you think about yourself in those terms as well?

Corey: No, I didn't.

David: Okay.

Corey: I did think that it was very interesting that he had served in a similar role on his planet as I was doing right now.

David: Sure. All right, well that's all the time we have for in this episode. And there's a lot more to the story here on “Cosmic Disclosure”. I'm your host, David Wilcock, and I thank you for watching.

The Return of Gonzales Season 6, Episode 2

Cosmic Disclosure; The Return of Gonzales Season 6, Episode 2

14 Sep 2016

David Wilcock: All right, welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. I've got Corey Goode here, and we are further going into the updates that he has to share with us. This is some of the most amazing stuff. So Corey, welcome back to the program.

Corey Goode: Thank you.

David: Let's go through now what happens next.

Corey: I was brought up into a Blue Sphere in one of these meetings, and Gonzales was there. And he'd been away for healing with the Mayan breakaway group, and he was a completely different person.

David: So let's walk through that a little bit. What happened to you when that contact started?

Corey: When the contact started, I had, as I had mentioned, seen Tear-Eir and a silhouette next to him. And it turns out that that person standing next to him was Gonzales, who I hadn't seen in some time.

David: Well, that must have been a concern, because he was pretty antagonistic towards you before.

Corey: Yeah. And to be honest, I felt a little anxiety when I saw him at first, but the look on his face was completely different. He didn't have the scowl. He didn't have the wrinkled forehead, the tensing tendons in his jaws.

And the look in his eyes was totally different. He looked pleasant.

David: Hm. What was it like to see Gonzales in this newly transformed state? Did he have anything to say about the way that he had been before?

Corey: Yes. In the conversation when he was talking to me, he got a serious look on his face, and he apologized for his previous behavior.

He stated that he was triggered. He was in a really bad place. And I could tell – he was indicating that he really wanted to hear from me that I had forgiven him.

So I told him that, just like guys talk to each other, don't worry about it. It's in the past. Let's move forward. And he was visibly pleased that I wasn't going to hold on to any animosity towards him.

David: Good. What were some of the other things that he had to say at that point?

Corey: Well, he said that when he was going through the process with the Mayan group, that they had asked him if he wanted to know who he was, who he is, and who he would be. And he answered, “Yes"” to the question, and he received information that allowed him to view everything with different eyes. He didn't see things the same

anymore.

David: Did you get the sense that this had to do with past lives, reincarnation, things like that – soul destiny, soul mission?

Corey: Yes, I think it had to do with all that.

David: Okay. Did he also seem to have a vision of like his future – what would happen in the future?

Corey: Well, he did indicate that, talking about his past a little bit, that he had always been mission-oriented, was always wanting to work for the greater good. And he had joined the military to do that.

And he figured by being in the military and completing the mission in any way possible, he was being of service-to-others. And he stated that because of the rank he had and the way he was working up through the military, he ended up falling into a lower-density trap of ego.

David: Hm. So this question of identity is one that you've said before was presented to you.

Corey: Yes.

David: So did Gonzales have anything to say to you about that?

Corey: Yes. He told me . . . I had been presented two times . . . Tear-Eir asked me and Kaaree asked me, and I said, “No”, to both of them. And at the time, Kaaree kind of shook her head and said that stubbornness follows me through all of my incarnations.

David: Ha, ha, ha.

Corey: And after telling me that he had said, “Yes”, to that same question, he encouraged me to do the same in the future. And he went on a little bit talking about how he was going to remain with the Mayan group, that he was not going to be able to slide back into an old role, nor would he want to.

He was going to reside with them and be sort of like a delegate with them with other groups in the solar system.

David: Do you think that he went through some kind of Ascension experience? Or was this more of just like an emotional detox?

Corey: An emotional, psychological healing.

David: You mentioned in your update that there was something he said about the battle over Antarctica at this point. Did he just review what you already knew, or . . . ?

Corey: Yes, he gave me kind of a summary review of the information that I pretty much already knew.

David: Okay.

Corey: He did state that there might be another opportunity to have an operation that they had wanted to begin with when they wanted us to provide the intel.

David: Hm.

Corey: So, you know, a lot of the same information with a few new caveats.

David: You then mentioned in the update that he started to go into a lot of information regarding this idea of what William Tompkins has called “the solar sneeze” and what different Cabal groups and other groups think is going to happen.

Corey: Yes. Yeah. This conversation made me tighten up a little bit, get a little anxious. He started off by telling me that all of these groups that are going down to Antarctica are all looking to hide from this solar event.

David: Hm.

Corey: But of the occupants down there under the ice in Antarctica, they all had a different idea about what would happen when this “solar sneeze” occurred.

They all pretty much expected a coronal mass ejection that was the entire sun's corona mass ejecting.

David: Wow!

Corey: And they stated that most of the more scientific, pragmatic people, they expected a major blast wave to come from the sun that would knock out our electronics, electricity, and then behind that would come the mass ejection that would then hit the Earth.

Now, he said that there was quite a bit of a difference in what the different groups thought was going to occur when this blast hit the Earth.

Some of them expected us to lose all of our electricity grids, all of our electronics would be destroyed, and it would take a few decades to overcome it.

He also interjected that that event was expected to clear any artificial intelligence from our solar system and provide us an opportunity to disseminate all these new technologies to all of humanity at the same time.

David: Were there any other types of opinions about this solar event that were different than that?

Corey: Yes. Some of them expected it to come in, burn up the atmosphere, cause all kinds of earthquakes, volcanoes to go off, cause sort of like a nuclear winter situation. They also expected the sun to go dark for a number of days after this explosion.

David: As if all the light-generating surface is gone now and it has to rebuild or something?

Corey: If you just look at the dark spots in the sun, imagine the whole sun being a dark spot.

David: Wow! All across the board, it seems like we're hearing about something that the Greeks called “ekpyrosis”.The word means “giant fire”, and it's a giant fire from the sun. And all these ancient Greek and Roman philosophers all believed the sun was going to do this. It was considered common knowledge in the pre-Christian era that this was going to happen to us.

Corey: Right. And that's probably the . . . He said the most esoteric groups in these

syndicates believe much like our community does, that this is going to be a kind of a spiritual or an Ascension type of event. And this is an event that those in our community look forward to, but one that these syndicates want to hide from or try to hide from.

David: If you go into the Zoroastrian tradition, the word they use for this is "Frashokereti", which actually translates as "making wonderful". And they say that the wicked are burned by this but that the just experience some sort of an Ascension. So that's a very interesting correlation there.

Corey: Right.

David: What happens next?

Corey: We were in the middle of a conversation, and I see a Blue Sphere come into the . . . well, basically it's not really a room, but come in to where we were.

David: And where were you? Where was this happening?

Corey: I was standing . . . When I had arrived, I had seen Tear-Eir and Gonzales standing next to each other. And when I was looking up at that cosmic scene, they had moved closer. And when they did, I noticed behind them were the two other Blue Avians and the Golden Triangle-Head being.

David: So you were inside one of the Spheres, and so you have that crisscrossing floor of geometric lines, and you're seeing the canopy of stars, etc.

Corey: Right.

David: So Gonzales gets picked up by a blue orb at this point or something?

Corey: Yes. Just . . . Right in the middle of the conversation, a blue orb comes in, and right before he indicates he's ready to go, he looks at Tear-Eir, and he said, "I think Tear-Eir wants to bend your ear until I get back."

And then 'fst', he was gone.

David: And you and him have just had a very poignant conversation that, as far as I'm concerned, it's really the core of the whole reason why I'm on this network. If this kind of an event that he was just describing is about to happen, there could be nothing more important than for us to know about this, to prepare for this, and to understand what it means for us and how we can harmonize with this change.

So what did Tear-Eir have to say to you after you've just had this big, heavy discussion?

Corey: Quite a lot, actually – quite a lot. He greeted me, and we started to discuss a little bit about what Gonzales and I had discussed about the solar event.

The sun he showed me pulsing, and then these huge blast waves coming off of it – energetic blast waves.

David: The sun was pulsing? Does that mean that the surface actually changed in size?

Corey: It was pulsing with energy. Energy was pulsing out away from it.

David: So maybe more just the energy comes out, not so much the size or the diameter of the sun changes.

Corey: Right. And the corona . . . There was like a second corona around the sun of electricity bolts all going out.

David: Oh, really? What color was that?

Corey: It was white.

David: Okay. And what were the pulses' colors?

Corey: White.

David: Interesting.

Corey: Yeah. And I also saw an image . . . He showed me an image of one of these waves hitting the Earth, and it wasn't what I expected. I expected a wave just to go 'phoof' through the Earth.

This wave came, and it hits the magnetic field of the Earth, and then it wraps around, and then it comes back on itself in the North and South Pole and then entered to the core of the Earth.

And then the energy emanated from the core of the Earth outward.

David: Outward in all directions?

Corey: In all directions through the surface.

David: Wow! What did this actually look like? Was it like white colors, white energy?

Corey: Yeah. The energy was white, but there was an interaction around the magnetic field that looked like aurora borealis but all the way around the Earth.

David: Oh, so that would be where the Hindus say that it's a rainbow-colored energy that comes off the sun, because they very clearly describe what they call "Samavartaka fire", and they say that when this happens that there are rainbow colors in the sky.

So that would be the aurora borealis you're describing.

Corey: Could be. And I was thinking . . .

David: It was all over the Earth, you said?

Corey: Yeah, the whole Earth.

David: Wow!

Corey: And I was thinking to myself, “How could these syndicate groups possibly believe that they could hide underground?”

David: Yeah, it sounds like the whole Earth is like a light sponge. It's just been soaked up and squeezed out with this whole new energy. So it doesn't matter where you are.

Corey: Right.

David: So this vision must have been very surprising to you. I mean, you're seeing something that probably would cause some people to just burst into tears because it's so profound. And it's our future. What was your experience as you're seeing all this?

Corey: My heart is beating fast. I'm breathing fast.

David: Wow!

Corey: Yeah.

David: So what happens next after you watch the energy go through the Earth?

Corey: Tear-Eir tells me that right now is a very pivotal time for our co-creative consciousness, that everyone on Earth, our co-creative consciousness, was deciding what type of an experience this would be, what type of temporal reality we would go into from this event.

And I wasn't really surprised that the mass consciousness was going to work in tandem with this event. I was surprised at how much it was, how incredibly important the mass consciousness is.

And he further stated that every single person on this planet is just as important as the other. There is no one that is any more special in this process, that we are all partaking in it.

And even some of the non-terrestrial groups that are trapped here are having an influence on it. Their mass consciousness . . . Their consciousness is having an influence on what is happening.

David: In the Law of One, they talk about a three-way split. They explain that there is a positive outcome for certain folks, there is a negative outcome for the negative path, and then a lot of people who are not able to ascend will recycle essentially – be brought to another planet where they continue.

So do you think this optimal temporal reality thing means that different people

actually will experience one of those timelines depending on the choices they've made and what they've done?

Corey: That seems to be what was indicated.

David: Okay.

Corey: And all of this made me kind of think about the “Mandela Effect” that I'd been hearing so much about. And last time we were out here . . .

David: Could you define it again for those who don't know what it is?

Corey: It has to do with people experiencing different timelines, having different memories from the past. Some people having a memory that Mandela died in prison. Some people not having that memory. And then when he was let out of prison, there was a lot of confusion among people that had different memories.

David: Okay. And there's a variety of specific things, like “Interview with a Vampire”, “Interview with the Vampire”, “Berenstein Bears” or “Berenstain Bears”, this kind of stuff.

Corey: Right.

David: Okay. So you asked him about the Mandela Effect?

Corey: Well, I didn't have to. I was thinking about it, and he told me that this was a very real experience and that it would increase, . . .

David: Really?

Corey: . . . that we're experiencing a merging of temporal realities right now.

David: So it sounds like this . . . I can't imagine what it must have been like to be in this room, if you want to call it that, this Sphere, because I've never been able to experience any of the things that have happened to you.

I'm basically just like the audience. I'm having to try to interpret what you're seeing, have pictures in my mind without having been there.

I would have probably been in tears. This image of the sun giving off flashes of light, going into the Earth, transforming the Earth. This IS the Ascension. This is something that we have been expecting. It's a magnificent event. What was your feeling as you're seeing all this?

Corey: Anxiety.

David: Really? Why?

Corey: Well, it's quite a sight to behold. My heart was beating faster. I was breathing faster. And it didn't help my anxiety - the next thing that Tear-Eir communicated.

He communicated that if at this moment this event occurred, less than 300,000 people from the planet would be harvested or ascend.

David: And the word 'harvested' is a Law of One term.

Corey: Yes.

David: And was he using that term?

Corey: Yes, he was using that term.

David: Really? So that's very, very small. And tell us again what the criteria is for Ascension in the Law of One? It's very simple, right?

Corey: Right, to be 51% service-to-others.

David: And most people would naturally assume that they are.

Corey: Well, of course. Everyone thinks that they're at least close.

David: So where is the big stumbling block taking place? How could so many people not be ready when it would appear that all you have to do is just be nice?

Corey: Well, a lot of it goes back to the control system going on on the Earth, the mind control, the behavioral control.

David: But that's not our fault.

Corey: No.

David: Okay. But it's there, and it's affecting us.

Corey: Correct.

David: What is this control grid doing exactly that's making it so bad?

Corey: It's affecting our vibration to where we don't reach our full potential and we're easier to control. We're more apathetic.

And it was communicated that this control grid was being affected by these solar changes to a point to where either the non-terrestrials or the Cabal-type groups had to turn it to its maximum setting to have the desired effect.

But this also causes symptoms from the technology.

David: So wait a minute. You're saying that right now, this Draco mind control grid that we've already been discussing, that they've had to jack it up as high as it possibly can go in order to not lose control of the "slaves".

Corey: Correct.

David: So there's no higher that it can go than where it is right now.

Corey: That's what was communicated to me.

David: And what again is the spillover as they do this? What happens as a result of them jacking it up to 10 out of 10?

Corey: There are symptoms from this technology - people acting very erratically and bizarre and being totally apathetic, ineffective.

David: So you're saying that this is actually an energetic effect caused by this technology.

Corey: By the technology, and it's a cumulative effect with the energy coming from the sun, and it interfering with this technology being used against us.

David: So this seems really hard to believe. I mean, I remember, obviously, when they talk in Law of One about the second phase of our cycle on Earth that only 150 people on Earth were ready to ascend. So I guess in that sense, about 300,000 is better, but still, this is a big, big surprise to me. I did not expect the number would be that low.

What is this "optimum temporal reality" that he's talking about exactly?

Corey: The best-case scenario . . .

David: Okay.

Corey: . . . of, I guess, us going through . . . everyone on the planet or the majority of

people on the planet that are service-to-others, going through, I guess, this Ascension-type event.

David: So there is a possibility that that number could still go way, way up.

Corey: Right, because right now, the temporal realities are not set. We are the deciding factor. How we respond to what's going on right now, our mass consciousness is a major factor in which temporal reality we end up on.

David: So how do we know which temporal reality we are going to be on as this goes forward?

Corey: I asked Tear-Eir that. I said, how will we know if we have chosen the optimal temporal reality? And he replied that David and myself . . . if the world was shaken around us, that we would know that we had chosen an other-than-optimal reality.

And I thought to myself, “Well, what are the chances of David in California, me in Texas, feeling the same earthquake? Because I assumed it was an earthquake.

So I wasn't quite sure what that referred to.

David: A pole shift would be a worldwide earthquake and worldwide volcanic activity and tsunamis and super storms all happening at once. So that's apparently one reality. But he's saying that if this happens to you and me, that in that moment we would know that . . . that what?

Corey: We had chosen an other-than-optimal temporal reality.

David: Humanity as a whole?

Corey: Right.

David: But then you and I would actually be experiencing a cataclysm.

Corey: It's hard to know fully what he was saying. He was just saying the world would be shaken around us, and then we would understand what had occurred, that we were not going to be happy about it.

David: Let's just be clear for people watching this because this is very serious stuff we're talking about now, and we don't want people having nightmares, and we don't want them writing in saying they've lost their faith in us and all this stuff.

It's been said, to me at least, that even if that timeline took place that we get pulled out

and you're not going to experience a physical death unless your karma invited that. Would you agree with that?

Corey: Yes. Overall, I think that this was some sort of a cosmic wake-up call for the planet . . .

David: Right.

Corey: . . . that we need to be working right now on working through our karma, and we need to put as much effort as we can into being service-to-others.

David: Whew! If the numbers are that low, then let's hope that there are things that can be done that would change that.

Corey: Oh, obviously there are.

David: Okay.

Corey: He was saying if it were to occur right now, that's the way it would turn out. But we are still making a choice as a mass consciousness being on which of these temporal realities that we're going to choose to experience.

David: Well, when I think of Gaia, I think of it as the Disclosure Network. If Disclosure is the purpose of this network and what we're doing here, why we're doing this network is to get the word out, does that have an effect on the outcome?

Corey: Absolutely. A Disclosure that's a worldwide Disclosure is going to change the consciousness of everyone on the planet. And that's going to boost us in the right direction.

David: Do you think that maybe many of the people who are so distraught right now, that are always writing negative comments on the Internet, and the economy is so bad, and they have a sense of hopelessness about the future, do you think that if there was this sort of "if you throw up you'll feel better" kind of thing, that those people's opinions might start to change? They might not be so angry anymore? Is that kind of what we're talking about?

Corey: Yeah. If everyone receives the truth, then they can move on and start working on these self-improvement aspects.

David: So did you get the sense that you and I were steered into this network and being part of this disclosure initiative here for a reason, that this is part of what could turn the tide?

Corey: Obviously, yeah.

David: Okay. So in some way as people learn the truth, their attitude and their consciousness shifts, and that in turn affects the whole planet.

Corey: Indeed. And I had several more questions along those lines when I saw the Blue Sphere come back in, and it deposited Gonzales next to the three beings that I mentioned before – the two Avians and the Golden Triangle-Head being.

David: Okay.

Corey: That occurred as we were finishing up our communication, Tear-Eir and I. And then they glided closer.

David: So what happens at that point when they glide back to you?

Corey: Gonzales walks over, and he makes a smart remark like he normally does. And he says, "I hope you didn't miss me too much."

David: Ha, ha, ha.

Corey: And it was nice to see that he still had his, you know, same sense of humor.

David: Right. So the Mayans had not taken away his personality.

Corey: Correct. And he put his hand on my shoulder and guided me away from the group and started to finish our discussion.

David: And what did he tell you at this point?

Corey: He wanted to finish talking about what had occurred down in Antarctica. And he repeated the same stuff. It was nothing new.

David: Okay.

Corey: But then something popped out that he had never said before. He said, "In that area where you did the reconnaissance and saw all of the ancient structures just strewn about, . . ." not far from there they had found an ancient burial ground.

And in this ancient burial ground, they were finding the remains of beings with elongated skulls . . .

David: Oh, man!

Corey: . . . and wide hips, smaller rib cages. And that was obviously something I had heard before.

Furthermore, he told me that . . .

David: That's crazy.

Corey: Yeah. He told me that they had found preserved remains of these beings that looks like they were flash frozen in the ice.

David: Now, some of these folks appear to be giants with elongated skulls. Did these people have a normal human height?

Corey: They're normal human height.

David: And what was the data range again of how old they were?

Corey: 18 to 60,000 years. That was in the graves.

David: Wow!

Corey: Now, they found remains of prehistoric animals and some of these beings that were flash frozen under the ice . . .

David: In Antarctica.

Corey: In Antarctica. And some of the big blocks were lifted many feet in the air off the ground and were flash frozen. It was like there was a giant tsunami that somehow turned turned to ice in the middle of . . .

David: The blocks were from pyramids or megalithic structures?

Corey: From megalithic structures.

David: And it froze so fast that they were literally levitated in the ice?

Corey: Well, it sounds to me like some water hit them, or something hit them, and destroyed them, and while they were in the middle of the air, somehow they got frozen in the ice there. Whatever happened, happened very quickly,

David: How many of these bodies were found in this excavation?

Corey: I was not told.

David: But it was sizable enough that they were seeing this as a major new find?

Corey: Yes. This was a civilization that had some sort of catastrophic event occur very quickly, and they had no time to react.

David: So what else did Gonzales have to tell you when you had this second meeting with him?

Corey: He also mentioned that during his time with the Anshar, he had seen some peculiar things. It was before he had worn out his welcome there. They were kind of complaining because he was always going around doing recon of everything down there.

David: Right.

Corey: And during one of these recon missions of his, or a couple of times, he saw two priests walking down a corridor and then walking through like a cave wall. And he followed, and he couldn't go through the wall.

And it was the third time that he saw them that he . . . Each time he was looking for a way to see in. And after he looked around quite a bit, there was some crack or fissure in the wall that he could look through. And he saw these two priests, Anshar priests, talking to a number of giants of different heights.

David: Giant humans?

Corey: Giant humans. And one of them was sitting on a big boulder, had his forehead in his hand, and was groaning while communicating with them. And I didn't get any further information other than that.

It was shortly after that he was asked to leave.

David: The giant appeared distressed. Do you have any speculation as to why the giant was distressed?

Corey: He said that he thought that either they were prisoners or that they were refugees and they just were very unhappy. He really didn't know. And I don't know.

David: All right, so was there anything else of significance that Gonzales told you at this point?

Corey: Yeah. After this, he mentioned a few things just in passing. He mentioned a few things about what was going on on the surface of the Earth.

He said that the syndicate groups and the Earth Alliance groups were getting nowhere in their negotiations. He stated that these syndicate groups were insisting that either everyone of them be pardoned or none of them be pardoned.

They didn't want any of the lower people, or people that worked for them unwittingly, to be pardoned unless they were pardoned, too.

David: Yeah, but if one person steps on a bug and somebody else is a mass murderer, how can you try to hold everybody equally accountable?

Corey: Well, that's where they are in the negotiations.

David: Wow!

Corey: He also discussed a few small things, like the military intelligence groups had been tracking DH – Department of Homeland Security - assets that were quietly deploying throughout the United States, getting prepared for social unrest.

Military intelligence had heard that the DHS was willing to put down any public rising [uprising] with violence – any uprising with violence.

David: So are you saying that these assets are in place because of an anticipated Alliance move against the Cabal in America or something like that?

Corey: It wasn't specific. They were preparing for some sort of public uprising, and the military intelligence groups had begun putting military assets, like special forces operators, in position to shadow these groups, having them get jobs in a certain area and try to blend in while observing what was going on and prevent them from carrying out whatever they were going to do.

David: Hm.

Corey: He also mentioned that it was a concern that they didn't . . . He didn't think that the syndicates were going to allow Trump to become president even if “they had to stab him on Inauguration Day,” is what he said.

David: Really? Well, a lot of people who are at least in left-leaning media, they think that Trump is a racist and a misogynist and this and that and the other. But are you saying that they continue to believe that he is actually not a Cabal member and that he's actually going to do something positive for us if he were to be elected?

Corey: Well, they believe that he is not a Cabal stooge, and that he's not very

controllable.

David: Ah.

Corey: And that if he has that position, if he gets that position, it's going to be very bad for these syndicates.

David: Because they like a president that's basically a marionette for them.

Corey: It's their last bastion of control. Gonzales also stated that during these negotiations, they had insisted that there be no Full Disclosure, that they wanted a controlled disclosure over a 100-year period, that as I told you in the past, they think it's irresponsible, that it was going to cause socioeconomic collapse, that countries victimized by the Cabal were going to want to strike back, that it was not going to be good for humanity when it's not going to be good for the Cabal.

David: So they're still pushing for this partial disclosure.

Corey: Yes. And a lot of the Alliance agrees with it.

David: But I thought you had told me earlier this year in talking with Gonzales that they had concluded that partial disclosure was impossible.

Corey: Well, the SSP Alliance has.

David: Oh. But maybe the Earth Alliance group still think that they could pull it off.

Corey: Correct. They also are opposed to any document dumps. They think that would be irresponsible as well. It's already been figured out that any type of data dumps are going to be done in spurts, because the Cabal has . . . They're ready for it.

They're ready to flip the kill switch on the Internet and do whatever else it takes to mitigate the damage of the information being released. So they're going to have to release it a little bit at a time.

David: So is there anything else at this point that Gonzales has to say to you in this meeting?

Corey: Well, he was also mentioning that these syndicate groups were happy with the fact that they were able to cause racial disharmony and riots in certain areas. They expected them to use that as a further wedge with our society in the future.

David: That makes sense.

Corey: And then they went over some of the old threats that we've covered before about the super volcanoes under the ocean, that they're threatening to blow up and cause an extinction-level event.

They're threatening to, as I said, shut down the Internet. There are a lot of threats, a lot of brinksmanship that the syndicate groups are making.

David: Well, but as we've discussed, it definitely appears that they're not going to be authorized to do that stuff because humanity's free will collectively is not activating that to happen. Would you agree with that?

Corey: Yes. All of the attempts of the syndicate groups to start World War III or to cause big problems like this have been unsuccessful.

David: Well, this is the first time that you've really had access to the SSP Alliance since this whole stuff with the Wrangler happened. Even though Gonzales isn't really in it anymore, he said he was in contact with them. So did the Alliance have anything to say to you through Gonzales?

Corey: Well, they were wanting to offer me some sort of a olive branch and also were saying that they were going to have this Wrangler character apologize to me publicly.

David: Publicly where?

Corey: In front of all of his peers.

David: Oh, wow!

Corey: I wasn't really interested in seeing that guy again, so that one really didn't pique my interest at all. But I did want to know more about the olive branch, which Gonzales gave me the information. And it was basically the same offer they had made me before through the Wrangler, but in a negative way.

David: Well, you've mentioned before that they have some pretty advanced healing technology up there. Did you ever ask them if they would help you with any of that stuff?

Corey: Well, yeah. That had been dangled in front of my eyes a couple of times. And he stated that if they still had access to the LOC [Lunar Operation Command] before the outing of their people, they would make that available to me, but they would make available to me what they had, which was some healing technologies.

David: Now, the Wrangler had offered you some kind of intelligence job working for

the Alliance, where it seems that you would no longer be able to talk to me or anybody on this show about much of what was going on, but that you would have taken over what Gonzales was doing, which sounds like he's not too happy about that now that he's actually been healed.

Corey: It was the exact same offer that the Wrangler gave me.

David: They brought it back again.

Corey: They brought it back again but put a positive spin on it. It was the exact same setup. And I politely declined.

David: Well, it seems as if your role is to share information. And obviously, if you did that, then all that information would be cut off.

Corey: I don't want to be under the control of a group of sociopaths, either.

David: So how did this particular meeting with Gonzales end?

Corey: It ended somewhat abruptly again. This time, Spheres came in for both of us. And we were both taken away. And I ended up at home. And shortly after that, Kaaree contacted me and told me to prepare for a trip to Venus - the one that I was turned away from the last time.

David: Oh, wow!

Corey: So I started meditating and making sure that I had the right energy when I went in so I didn't get turned away like Gonzales did.

David: Right. And that's what we're going to be getting into in the next episode here on “Cosmic Disclosure”. This is a really amazing journey, and we'll see you next time. Thanks for watching.

Encounters with Ancient Sentinels Season 6 Episode 3

[Cosmic Disclosure; Encounters with Ancient Sentinels](#) Season 6, Episode 3

21 Sep 2016

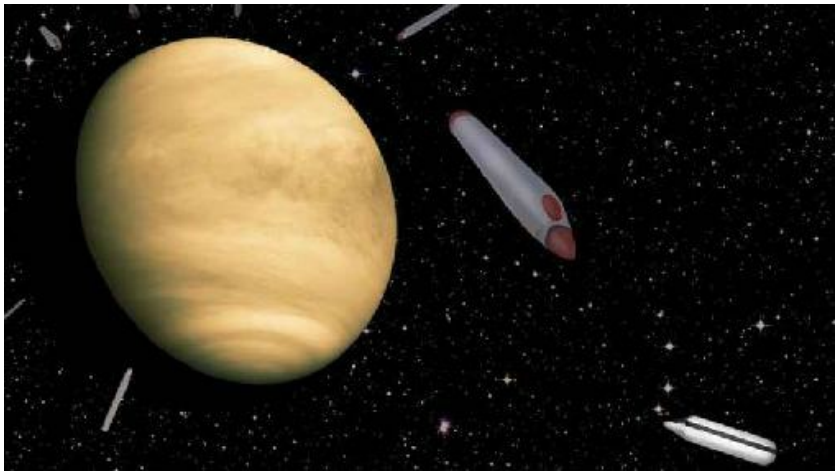
David Wilcock: All right, welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. We're here with Corey Goode. Corey, welcome back to the show.

Corey Goode: Thank you.

David: What happens next in our big story here?

Corey: Well, next I finally get to repeat my trip to Venus, the one that I'd went on before, but we were unable to complete the trip because there was some sort of scheduling conflict with another group that was visiting Venus.

David: Well, you also seem to have kind of like a confrontation, right? There's these ships that are kind of orbiting around Venus, and I had the sense that they did not want you getting any closer, and it was almost like a military standoff or something.



Corey: Well, there was one that was blocking us, but the communication was going on between Kaaree and them, I presume.

She sat there silently and then told me that we would need to return.

David: So you mentioned in your update [Corey Goode Intel Update Part 2] that August 3 [2016] you were told to prepare for this, but this was just sort of to get you ready for it.

Corey: Right.

David: So how did you get prepared for this?

Corey: I was doing my best to meditate and get in the right frame of mind, because Gonzales had been turned away.

David: So did Kaaree give you any specific instruction as to how to prepare for this trip?

Corey: No, she just told me to prepare myself, that it was about to occur.

David: And you knew that Gonzales had been taken away, and what did the Sentinel tell Gonzales at the time about why he couldn't go in?

Corey: That he lacked humility.

David: Lacked humility?

Corey: [Nods.]

David: When did you actually get the opportunity to visit Venus? When did that happen?

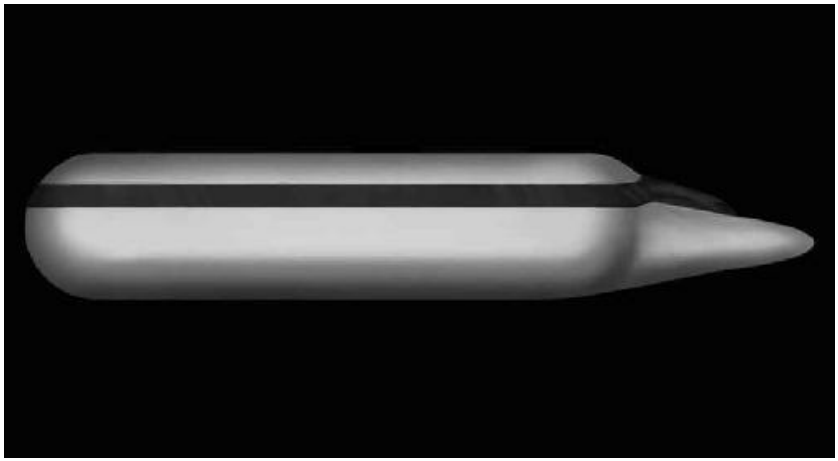
Corey: About a week later. I was laying in bed, and bright flash, just like the first time I was transported down to the Anshar domain. And after the flash, after my eyes had cleared, I was standing next to Kaaree and two other Anshar in kind of like a foyer that went into the area where they housed their craft, into their hangar.

David: So this is still in the Inner Earth at this point.

Corey: Yes.

David: Okay.

Corey: So they guided me inside. We went inside one of the Anshar buses, the one that had the blue seats, and a blue, swirling light opened above us longways like this. We went straight up through it. And as we came up through it, we were now above the ocean and another blue, swirling light below us.



David: Interesting.

Corey: The craft didn't go longways. [Corey show the nose pointing upwards.] It was

still sideways, flat, like I mean parallel to the ground. It shot straight up in the air and out into space through this one little area that they are cleared to punch in and out of the atmosphere through.

David: Huh.

Corey: So once we had left, it was uneventful. We didn't have any problems coming or going like we did the one time.

David: Nobody was shooting at you, in other words. Ha, ha, ha.

Corey: Right. But that was in the middle of whatever conflict was going on at the South Pole.

David: Right.

Corey: And this time, she took us to Venus. They took us to Venus. And this time the trip was like 10 minutes. It was much quicker than the last one.

David: Huh.

Corey: And we stopped at just about the same position we did before, and we paused there for a little bit, and she was sitting there like she was doing something in her mind. And then she said, “Okay, we're cleared. Are you ready?”

And I said, “Yeah, about as ready as I'm going to be.”

David: Were there any craft in the atmosphere at that time?

Corey: No. The only thing that was showing up on the Anshar technology, it looked like an asteroid and debris with it that was far out in Venus' atmosphere, caught in its gravitational field.

David: Interesting. Okay.

Corey: So once I indicated that I was ready, we headed towards Venus at a super high rate of speed, punching through the thick clouds. I barely could perceive yellowish color, we went through them so fast.

And then we stopped about 1,000 feet [305 meters] above the ground, and I was looking around, and I saw this terrain that looked like it had been eroded by lots of wind and rain, sort of like you would see in Earth. They looked like they used to be mountains going up that had eroded away, and they looked almost like people. It

looked almost carved by an intelligent hand.

So I was noticing that, when all of a sudden the ceiling and the floor went transparent, just as it had done in our Antarctic reconnaissance flight.

David: Right.

Corey: And I looked down, and I could see the big, giant, H-shaped building sitting inside this crater.

David: Hmm.

Corey: And we were close enough to it where I could see there was a line that went across . . . Like here was the H, a line went all the way across it that divided it into basically two buildings.

David: Hm.

Corey: And we were sitting there, and I saw down at the bottom a flash that we could see through the technology. Once that occurred, we went down at a very high rate of speed.

David: Are you feeling acceleration?

Corey: No. I couldn't feel any inertia, but my mind was, I guess, playing tricks on me, and I felt that falling feeling you get in your stomach.

David: Hm.

Corey: But I wasn't feeling any inertia. And we stopped at the bottom, and the sheer size of these two buildings that were . . . They weren't connected. There's nothing I could compare them to.

David: So these buildings you're saying are colossal in size.

Corey: Yeah, bigger than anything . . . There's nothing I could compare them to, man-made-wise.

David: Would you say they were miles in height?

Corey: Miles.

David: Really?

Corey: It was HUGE!

David: Did they have a sculpted appearance? Did they look like they were made out of something . . .

Corey: Flat.

David: So it was a flat, kind of sharp-edged structure.

Corey: Right. Right.

David: How neat and finished did it look? Did it look broken down and degraded?

Corey: Yeah, it looked ancient.

David: Okay. Wow!

Corey: And weathered. We shot down to the bottom where we saw the flash, and when I was looking up, I could barely see the top of the building.

David: Wow!

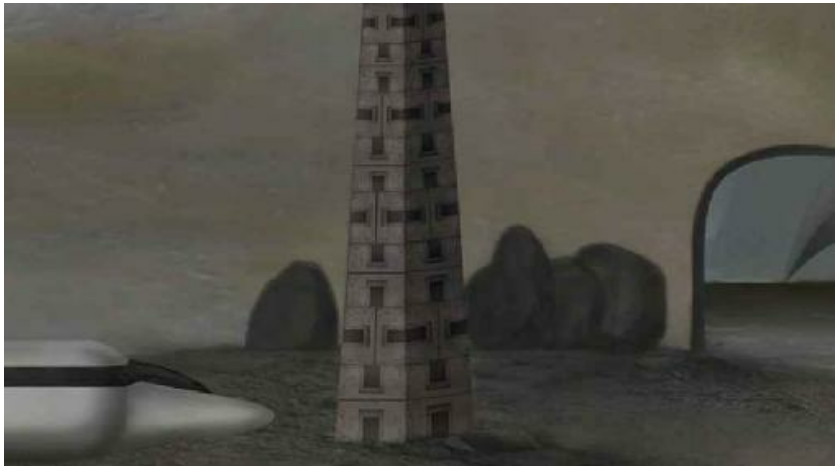
Corey: It was huge. We flew inside this cavern down at the bottom, and we landed in the area where Gonzales had gone before. It was kind of like a grotto area that wasn't extremely large. The walls were glistening as if there was, I don't know, some sort of crystalline nature to 'em.

David: Hm.

Corey: And there were two things similar to obelisks on either side of . . . Okay, there was a door here, a huge door going into the larger part of the cavern. The Anshar craft

was here, and then there was an obelisk thing on each side of the entrance to the door, but not exactly by the entrance.

And they had Hs on them, kind of like a totem pole manner going up. And it got smaller and smaller.



David: Okay, got it.

Corey: So once I looked around and I noticed that, and I was looking through the opening, and I could see one little piece of the structure that we were going to go to. And it looked like tinted glass.

David: Were the obelisks that you saw also glass-looking?

Corey: Stone.

David: Stone. Okay.

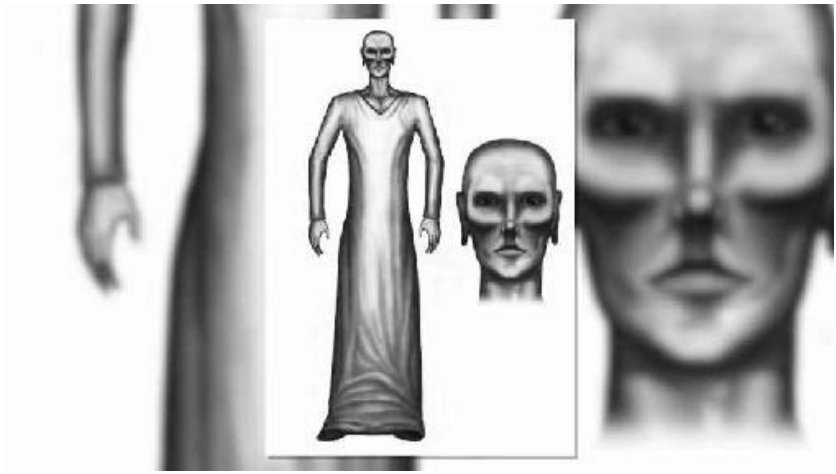
Corey: And they looked newer. They didn't look real old, but maybe it's because they were protected.

David: Was the H like carved inside the stone, like carved in? Or was it embossed and it came out?

Corey: It was carved in.

David: Okay.

Corey: And then – boom! - with no warning, this 14-foot-tall white being appears.



And it's wearing clothing that looks like shiny, white plastic.

David: Wow!

Corey: Yeah. And the most interesting thing was that they had black eyes, but they had this nose . . . The bridge of their nose went down, and then it looked like it kind of turned up. Like part of the nose was shooting down, and then this part right here [the tip of the nose] was going up.

It is very odd looking.

David: When you see black eyes, you mean did they have whites of their eyes, or was it totally black? The iris was black?

Corey: The iris.

David: Black.

Corey: Right.

David: So they have a very unusual nose.

Corey: Right. Chiseled bone structure, real straight lines in the cheeks, and white hair, or what would pass for hair.

And I was a little shocked when it appeared, but it didn't communicate. It just looked at us and then did its head like this [Corey moves his head as if motioning for the group to follow him to the left] and turned and went through the passageway.

David: Did you get the sense that this was a living being or some sort of bio-hologram or something?

Corey: It seemed to be some sort of intelligent hologram.

David: Okay. So it turns it's head and leads you into where?

Corey: Into the larger cavern where this structure was that I only saw a piece of.

David: So when you see the structure now, what are you actually seeing?

Corey: Well, as I walk through and the structures seem to grow as I'm walking in, I look in, and it's similar to a pyramid, except the base was probably . . . you know, it wasn't square. The corners curved into each other.

David: So they were concave.

Corey: Right. And on each point, each corner, there was an area that was open that went up really high and then went back down as it curved around. And it went up about 300 feet. It was really tall.

David: And you said it was like a pyramid?

Corey: Yes. Except it was like a pyramid and a tower. It was like the Eiffel Tower, but it was shaped like a pyramid.

David: More like a steeper slope angle like this, like the Russian pyramids were.

Corey: Yes. And it was over 1,000 feet tall.

David: Wow!

Corey: And it went almost to the top of the cavern.

David: How was its level of preservation? Did it look very ancient and damaged?

Corey: It was brand new. Brand new.

David: Brand new.

Corey: Yeah.

David: And the room that it was in, did it have stone walls?

Corey: Yes. It was a giant cavern.

David: Wow! Okay. So this must have been just a stunning thing to see. I mean,

you've obviously never seen anything like that before.

Corey: You almost fall over backwards. You walk in and you're just, I mean, you're looking up, and you almost fall over backwards.

David: Wow!

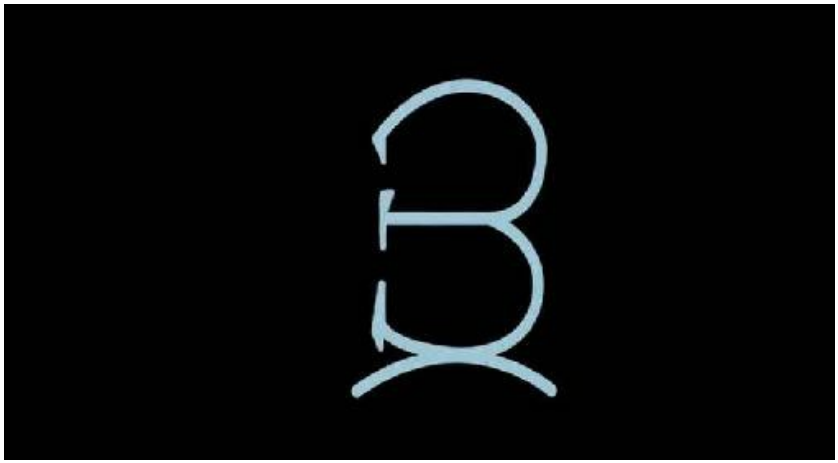
Corey: So we followed this being that the Anshar call the Sentinel into one of the corners where it arches.

David: Okay.

Corey: We walk in a ways, and then we all turn and look at the wall of one of the corner areas.

David: Okay.

Corey: And there is a big symbol that Gonzales had described. It looked like a backwards E that was like a G at the bottom that was flattened at the bottom.



And there are other symbols on the other three corners that I couldn't really make out.

And all of a sudden, the tinted glass went clear, and all of these other different types of symbols started appearing, and then they started moving. They were moving this way [to the left], they were moving that way [to the right], catty corner in every direction. It was just moving all around.

And they were like pulsing all the different colors of the spectrum.

David: Wow!

Corey: And I was hearing tones as well – a full range of tones along the octave scale.

I was like, okay. And I looked over at Kaaree, and she put her skinny little finger up and said, “Watch”.

David: It's like you're reading other people's mail. Ha, ha.

Corey: Oh, I didn't know what was going on.

David: Ha, ha, ha, yeah.

Corey: So I looked, and I'm watching, and all of this is occurring, and I start asking her questions, and she was like, “Just watch. Pay attention!”

David: Hm.

Corey: So I paid attention and was watching, but this Sentinel communicated with me, and it was more powerful than the incident with the White Draco, where it reached in violently and just took over.

I could feel the communication in all of my body at the same time.

David: Wow!

Corey: And it simply asked me, “Would you like to know who you were, who you are, and who you will be?” The question I've been asked before.

David: Ha, ha, ha. Same question that you said Gonzales had been asked, and he said,

“Yes.”

Corey: Right. Well, I felt compelled . . . I said, “No.” And I saw a movement out of the corner of my eye, and Kaaree went like this [Corey wraps his hands around himself] and looked down and had a big ol' smile on her face. She wasn't surprised.

David: Why do you feel so emphatically that you shouldn't answer “Yes” to this question?

Corey: The feeling I got when it was explained to me that it would change the nature of all my personal relationships. I just . . . I think of my children and my family.

David: So if you get this kind of download, if you get this recall, why would that be a bad thing for your family or your kids?

Corey: I don't know. It's just a feeling I got.

David: So you just maybe have some sort of anxiety about something that might change who you are in such a fundamental way.

Corey: Or maybe deep down I know something that I don't know consciously.

David: Okay. So let's walk through what happens after you say, “No”.

Corey: The being disappears, all of the symbols had stopped. And the only symbols that remained were the ones I described before.

David: Which was the E with the G on the bottom, the backwards E?

Corey: Right. And while the symbols were flying all over the place, one of the questions I asked Kaaree was, “Is this math?”

And before she told me to turn and look again, she was like, “This is a mathematical language of the ancients.”

David: Hm.

Corey: And it was over. The being disappeared without saying a word. And the structure went tinted again.

And so we started to walk out and I started asking Kaaree, “What just happened?” You know, I was thinking to myself, “Is that it?”

I was expecting some big tour of Ancient Builder Race ruins, . . .

David: Sure.

Corey: . . . and I was disappointed. Let down. And she told me that information had been imparted to me and received from me.

David: So maybe what you saw was almost like picking up the phone on an old dial-up modem, 'eeeee', that kind of stuff. And somehow you could descramble that data, but what you were seeing maybe was not the solution. It was just the code or something like that.

Corey: Well, whatever was imparted to me, I felt like some giant zip file had been put on my hard drive, and I could feel it taking up space, but I didn't have the password. I didn't have access to the information.

And I was telling her, “This doesn't make sense. Why would I have information like this and not have access to it?”

And she said, “It will make sense in the near future.”

David: Do you think that maybe some of the answers to that question are in there as well, possibly, about who you were, who you are, who you will be?

Corey: The feeling I got is that if I would have answered “Yes” to that question, I probably would have had access to it then.

David: Okay.

Corey: So we walked back to the Anshar craft. The two pilots were back inside the craft. They had come out with us and were standing at the door of the cavern.

When we came back, they were already in the craft ready to go.

David: Were they all wearing the same ceremonial robes that they had the first time?

Corey: No. They were wearing the blue jumpsuits.

David: Okay.

Corey: She indicated that we were now going to go to the Saturn station.

David: Right.

Corey: So we got in the Anshar vessel and took off at a high rate of speed out the way we came. And within moments, we stopped, and I saw Saturn, about the size of a silver dollar.

And I could see like some white dots around it. I couldn't make out what they were. They were probably the moons or something.

David: Okay.

Corey: So we're sitting there, and we pause for a moment, and then we head into one of those temporal anomaly spaces just like was by Jupiter that we would travel in to go to the Super Federation meetings . . .

David: Okay.

Corey: . . . where you had to go in and come out the same way. So we go into this temporal bubble, and again, all the stars, everything disappears. It's pitch black. And all we see is the station, looks about this big. [Corey hold fingers about six inches (15cm) apart.] It's rounded on this side, and it's out long and has something like this at the end and in the long areas where all the vessels of the Super Federation would dock. And then they would walk in and go into the larger, round area where you hold the meetings.

Well, there were no craft at all. It looked desolate.

David: But how similar was this to the Super Federation meeting space?

Corey: Exact copy.

David: Really?

Corey: It was an exact copy.

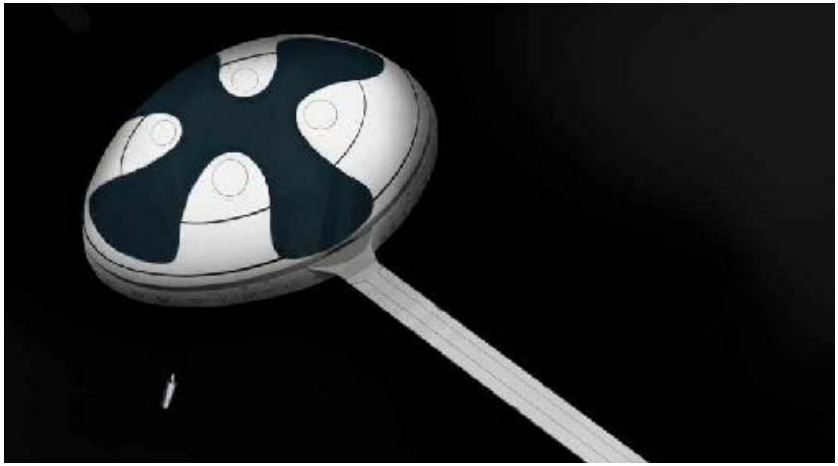
David: But nobody's there.

Corey: Nobody's there.

David: Could your ship check for life signs or anything?

Corey: Yes. There was nothing.

David: Okay.



Corey: So we docked and got out, walked along the corridors. Real tall ceilings, somewhat narrow walls, but tall ceilings, because a lot of the beings are different sizes than us that would use these facilities.

David: Right.

Corey: So we walked down the long corridor. We came out in the foyer, exactly like the big decorative foyer at the other station, the Jupiter station. And there was no one

there.

I've never seen one of these places completely desolate.

David: Interesting.

Corey: We walked into the main hallway, and it didn't have all the seats in it, the horseshoe-shaped areas where people sat. It was just open floor.

David: Hm.

Corey: So we walk inside there, and there appears a Sentinel again.

David: The same guy as before?

Corey: It looked exactly the same.

David: Wow!

Corey: So without saying a word, it reached into my mind and immediately started showing me all these scenes. I would see kind of like . . . It would be sort of like seeing movie clips. But some of them were just like maybe less than a second. Some of them lasted like four or five seconds.

But they were just "phfffffffff- phffffff-phffffff" flying around like crazy.

David: Scenes of what exactly?

Corey: Well, I saw my life, and I started seeing my memories going all the way back to the earliest point in my childhood.

David: So did it start from where you are now and then count backwards?

Corey: Yes. Yeah. And I was seeing just little, I mean, I saw my dad in this old blue rocking chair that we had when I was a kid. That's one of the ones that stuck in my head. But it was just going by so fast.

David: Did these events seem to have emotional significance or poignancy for you? Were they like significant in any way?

Corey: No.

David: It's just a big flash.

Corey: Yeah. And I was just kind of, you know, they were strobing. I was kind of picking one and two out here and there.

And then we started going through memories that were not mine – scenes of past times. It was just very undescript kind of things, but they were familiar.

David: Did you notice what would appear to be like medieval buildings or something?

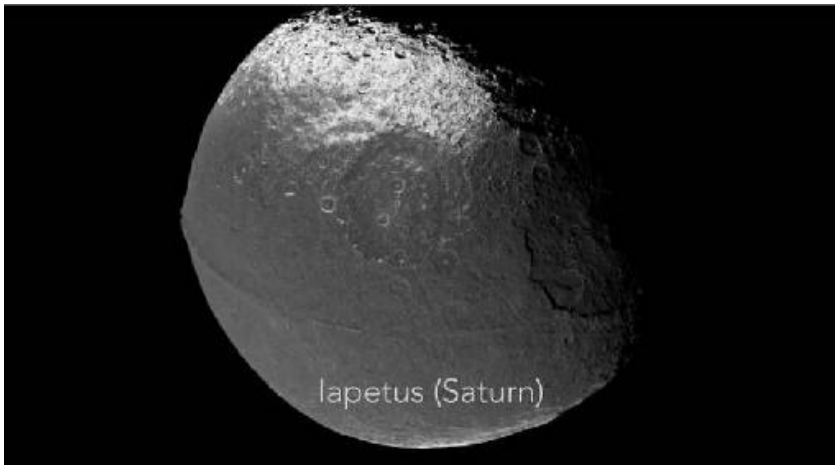
Corey: No. Inside buildings. Like inside dwellings, like seeing people and real quick flashes. It wasn't something that you could grab and look at and look at all the detail – all of the picture.

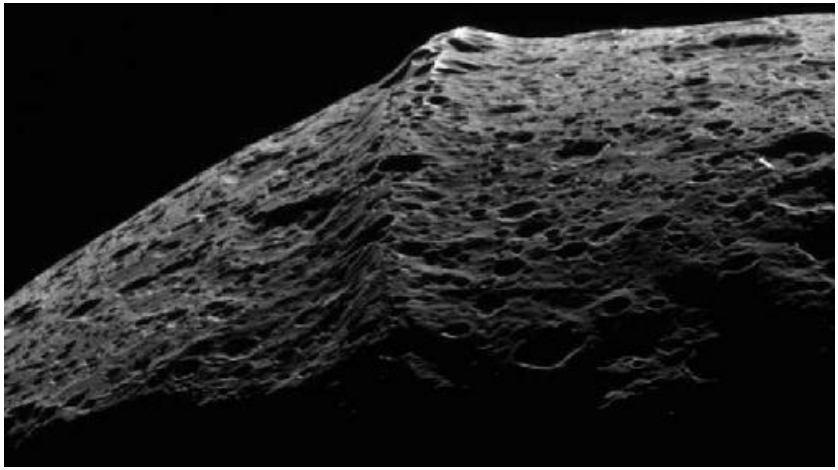
David: Hm.

Corey: Once we got through that I started seeing these wild cosmic scenes of out in space of these giant physical, tangible spheres that looked extremely large like the size of a moon that were discharging these huge bolts of electricity and destroying large vessels that were coming into the solar system, destroying other giant, large spheres that were coming in that looked technological.

There were like hundreds of these different scenes playing through.

David: Okay. Let's just stop for a second. In the second episode of "Deep Space" here on Gaia, it talks about mysteries of the solar system and it goes into Iapetus [moon of Saturn], and the idea that the moon Iapetus has this very large ridge. It has weird geometric features, and the idea that somebody maybe built that as some kind of a weapons platform.





Is that the kind of thing that you were seeing here?

Corey: Yes, but it was happening so quickly, I wasn't able to hone in on all the fine details.

David: So they were moons that were weapons?

Corey: Right.

David: Wow!

Corey: And then . . .

David: And you just saw, you said, many, many different scenes of like attempted invasions and . . .

Corey: Yeah! Right.

David: Were the moons firing at things that also looked like moons?

Corey: No, they were giant spheres that looked technological, like spaceships.

David: Oh! Okay. Wow!

Corey: But they were really big.

David: That's really impressive.

Corey: Yes, but it was very upsetting to see them function. I was feeling anxiety.

David: Ah.

Corey: My heart was beating real fast. I was getting . . . breathing faster and faster as all this was occurring.

David: But let's just stop for one second. I think this is a really important point, which was that long ago you said to me that the Ancient Builder Race apparently constructed these to form a unified protective grid around our entire local star cluster so that nobody could get in and invade us, right?

Corey: Right.

David: And you also said there's a huge portal right nearby that you could get through to go to other galaxies, which could also make it an invasion route. So we're actually very vulnerable to invasion because we're right at the front door of the drawbridge for the castle.

Corey: Right. And that appears to be what was happening.

David: So this was all these invasions being repelled . . .

Corey: Right.

David: . . . by these intelligent technologies in these moons.

Corey: Right.

David: Wow! That's amazing.

Corey: The next two scenes that occurred were . . . I was extremely upset by them. I could see Mars, and it had clouds, it had oceans, it had large, I guess, island-like continents here and there at the top. You could see green.

David: How did you know it was Mars if it looked like the Earth?

Corey: I just did.

David: Okay.

Corey: Yeah.

David: Okay, fair enough.

Corey: And then you see Mars, and then you see one of these spheres going by like this, [Corey shows Mars in a fixed location and the sphere moving past.] and as it's going by, it's shooting electricity at it and ripping a big old gap across the planet as it's going by.

David: Oh, wow!

Corey: And all the water was turning to vapor, and there was all of this debris that was blowing out of the surface of Mars, blowing out of the atmosphere, and blowing away from the planet.

And other parts of the debris was turning red hot and falling back to the planet.

David: So you're seeing probably billions of people dying as this happens, right?

Corey: Yeah. It was a very upsetting feeling.

David: Gosh.

Corey: And there was one area . . . I think it was the area where the bolts had entered the atmosphere. All of this vapor was coming out of the atmosphere and freezing in space, like ice dust in space. And it was just pouring out from it.

David: Now, you've previously speculated on this show and in private discussions with me that there was a Super Earth, or we know there was a Super Earth because of Brilliant Pebbles, right?

There was a Super Earth that got blown up, and it apparently was, according to what Gonzales has told you, that their best guess was that it was done by one of these weaponized moons.

Was there any evidence of the Super Earth's involvement in this particular disaster that you saw?

Corey: The Super Earth for some reason, none of that was in any of the scenes that

they showed me. I did not see the Super Earth. I did not see a destruction of a planet.

It seemed to be focused around Mars, because after I had seen that scene, I saw Mars again, but it looked more like . . . closer to like it does now. And I saw these flashes on the surface and then these real tall, skinning mushroom clouds . . .

David: Oh, boy!

Corey: . . . that had a tiny little mushroom bulb at the top and had these big rings around them.

David: Rings of smoke, you mean?

Corey: Rings that looked like . . . yeah, like smoke . . .

David: Okay.

Corey: . . . going out from them . . .

David: Wow!

Corey: . . . and these large oval, like a squished oval-shape, vessels were leaving in all directions. Some of them were headed towards Earth. Some of them were headed towards the outer solar system.

At this point, my heart was beating very heavily. I was starting to hyperventilate, so the scene stopped [Corey snaps his fingers] immediately. And the Sentinel disappeared.

And I looked over at Kaaree, and she was looking at me with a little bit of concern. And she asked me if I needed a moment – if I was okay.

David: Was she able to perceive what you perceived?

Corey: I don't know.

David: Okay.

Corey: I don't' know.

David: Previously we had speculated on how the Super Earth was destroyed, and it seemed that when you asked Gonzales, that his best guess was that it was hit by one of these weaponized moons.

Do you think that the Super Earth and Mars were both hit by a weaponized moon during the same war, that those two events happened simultaneously? Because in the past, it seemed like your intel was that it did happen at the same time.

Corey: That was the intel that I received, but as I stated, the Super Earth was not in the scenario at all. It seemed to be centered around Mars.

David: So it's possible that the Super Earth had been destroyed, but that Mars did not get destroyed in that catastrophe like we thought.

Corey: Right.

David: Okay. We don't really have enough information to tell from what happened there.

Corey: There was no real context or linear incidence occurring. It was just these flashes.

David: Okay.

Corey: So I wasn't able to really place it.

David: Okay.

Corey: So I was pretty upset.

David: Okay. Right. That makes sense.

Corey: And I don't have a whole lot of emotion attached to Mars. So for some reason, I was very emotional about what was occurring.

David: Right.

Corey: It was very upsetting. You know, after Kaaree basically was like asking if I was okay, we got back in the Anshar vessel to leave. And I don't remember . . . I barely remember walking back to the vessel. I really don't remember the trip back, because I was just sitting there thinking and visualizing what I had seen.

And I asked her again, I said, “What was all this? What was the purpose for it?”

And she said, “Well, this was a repository of the Ancient Builders that was imparted to you.”

And I said, “Well, I can't retain any of the knowledge. I can't pull any memories from whatever this repository is. What good is it if I can't remember it and report it?”

And she did her big smile and told me that it would make more sense in the future, in the near future.

David: Well, if we kind of connect some of the dots of the things that have happened in these updates, it seems like it's centering around the idea that if we don't pull it together as a planet that we're going to destroy ourselves again.

And you saw beings with elongated skulls, you heard from Gonzales the flash freezing, the blocks above the ground. Now you're seeing this catastrophe over here. You're seeing that the sun might do something that could really damage life on Earth unless we're on the optimum timeline.

So why do you think all these different previous catastrophes are being shown to you now?

Corey: I wish I could tell you. I don't have any context. I mean, it's like you're receiving a bunch of information, but you don't know exactly how to apply it.

David: Do you think it could be like a warning sign for us now? Do you think that these visions were given to you to advise us that these things have happened and that we need to work harder?

Corey: It could be, but it would help me warn people if I had more details. Ha, ha.

David: Ha, ha. Well, these beings oftentimes work with mystery. You don't get all the answers. But it sure looks like there's some warnings here, to me.

Corey: Yeah. But on our journey home, I really don't remember it. I don't remember going back through the blue swirl to get back down to the big hangar. I was just . . . I was there, and the door opened, and we were getting ready to get out.

And I was . . . I felt very drained of energy, exhausted emotionally and physically. It was hard to walk. And I was walking behind Kaaree.

And shortly after that, they sent me back to my room – the same method of flash. And I was still in my clothes. I was exhausted. I climbed into bed, and I laid down, and I slept.

And then when I woke up, before I went in to interact with my family, before I could,

I sat there and thought about it for a long time, thought about everything that had happened . . .

David: Yeah.

Corey: . . . and was trying to access this information that I could . . . If you can feel information here and you can't access it, you feel like you've got some sort of neurological issue, you know. It was a weird feeling.

David: And yet you were given this dizzying snapshot tour of your past lives, apparently.

Corey: Right.

David: So that is like maybe some kind of fast forward or fast backward through that data file.

Corey: Right.

David: Okay.

Corey: So, you know, that's how it ended. And since then, I've had more meetings with Kaaree in “The Construct”. And it's been mostly of a personal nature or a nature of how I should interact with those around me in a way that would work out the best.

David: Basically be nice?

Corey: Yeah.

David: Ha, ha, ha. Okay. Well, this has been a really fascinating, dizzying journey. And I just have to offer the personal remark here of how the cross-over between these things blows my mind.

There's obviously somebody wanting us to really put this history together and understand it.

Corey: I agree.

David: So I want to thank you for continuing to do this work. I know it's been very hard on you and your family.

And I want to thank you for watching. This is “Cosmic Disclosure”. I'm your host, David Wilcock, here with Corey Goode. And we appreciate all your help in getting

the word out with Full Disclosure.

Validating the 20 & Back Program Season 6 Episode 4

[Cosmic Disclosure; Validating the 20 & Back Program with William Tompkins] Season 6, Episode 4

28 Sep 2016

David Wilcock: All right. Welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with Corey Goode. And in this episode, you are going to get some of the most shocking, amazing confirmation of the reality of things that Corey has been telling us on this program for over a year now.

We have, for you to see, filmed discussions with William Tompkins, the aerospace engineer, who confirms some of the most incredible aspects, and the most unbelievable aspects, of what Corey has had to say.

And he gets very specific. The level of specificity in what you're about to see is so extreme that the idea of this being a coincidence does not make any sense.

Tompkins does not have Internet access. He does not have an email address. He was completely unaware of who Corey Goode was at the time that this was taped. And when we showed him a photograph of a Draco, he said, “What the hell are you guys doing here?”

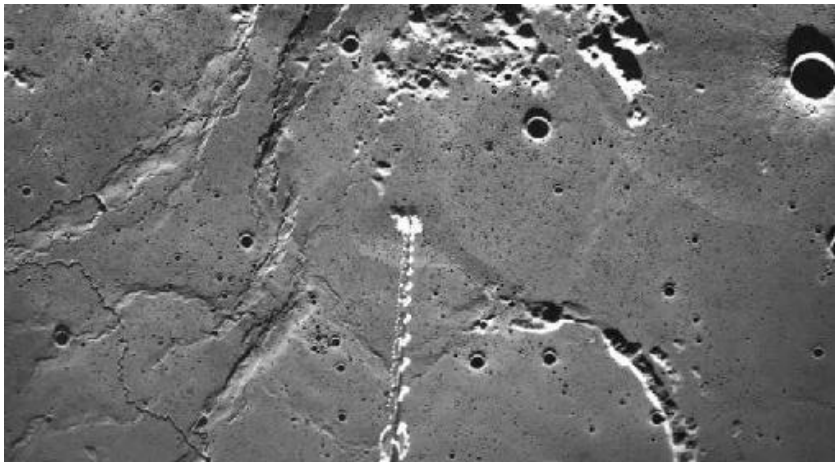
He was shocked. And this is information that he came in to on his own. So without further ado, check it out.

20 AND BACK

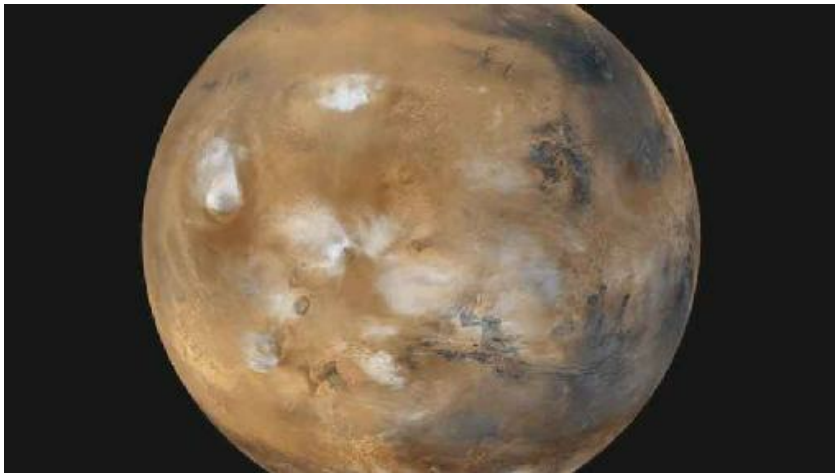
William Tompkins: Thousands, thousands, not just a few, thousands of people have joined the Navy here in the United States. They joined the Space Navy. They signed up for a 20-year tour.

So these folks, men and women, were given a lot of examinations and a lot of information on what they were going to need.

Many of them went to the Moon, our Moon, and facilities there and got checked out and organized and established where is the best place they're going to go, what their criteria is going to be, what major area they're going to develop, like what class in the university.



And then they get sent to a Mars facility for a short time.



And some of them get to Jupiter's moons, where we have a large facility on the moon.

And then they get assigned to a specific base. And they work for a short time in the base before they're assigned a naval cruiser, or a naval attack vehicle, or even a naval spacecraft carrier, which are one, two, and four kilometer long class.

And we have eight of those battle groups out there. So there's plenty of room for new people to come aboard.

And so they do their tour then, most of it on the spacecraft carriers, or the supporting ships. And some of them are supply ships – not as much fun, but they needed to be . . . We need people on them, too.

So at the end of the 20 years, they have an option for another 20 years. They could go for another 20 years. Or they have the option to come back to Earth where they were born and where they entered the Navy.

And then they make this decision they want to come back. So they age regress. They're now 20 years older than when they joined the Space Navy, okay? And so they take several weeks or several months, and they reverse their age back to 21 when they joined the Navy.

They finished their Navy 20-year tour and they make the selection to go back to the United States.

Now remember, during that 20 years, they had no contact with their family or with anybody back on Earth. That's a prerequisite. Okay? So . . . But they remember their family. They remember their friends and the people they used to go to and some of the girlfriends they used to have.

And so they come back, but they were 20 years older when they left the planet. So the girlfriends are going to be a whole lot older.

And so the Navy has allowed them, in the Solar Warden System Program, to go back to the age that they were when they signed up. Okay?

Well, you said that they were 20 years old when they signed up, and they went a 20-year Navy tour. They came back. And now they're 20 years old, and they are in a situation where life is this 20-year-old life that they had going when they left.

And now, during that several weeks returning, their minds, not painfully, but their minds are played with to where 90.99 [percent] of their memory for the last 20 years out in space is removed.

So they're sitting there now, the girlfriend is the same age as she was. Wait a minute. She wasn't 20 years older, like we said. She's still the same age.

If he was married, his wife, the kids, were the same age. They didn't spend 20 years more life. So he comes . . . That's kind of a cool system. Okay?

Yes, that system is operating and has been operating since 1980.

* * * * *

David: All right. So as you've just seen there, what the heck is going on here? The only way somebody is going to be able to debunk something like this is to try to say that Tompkins and Corey were speaking to each other, but we know that that never happened.

So Corey, welcome back to the program.

Corey Goode: Thank you.

David: How did you feel when you saw this? Let's just start simple. Ha, ha, ha.

Corey: Well, I was always under the impression that under a certain level people did not know this information. So it's very . . . It's exciting and a little shocking, but the details that he gave were right on.

David: Well, he started out by saying that thousands of people are recruited into some kind of a Space Navy. How do you feel about that number? Do you think he's right when he says thousands?

Corey: It's definitely in the thousands.

David: Okay.

Corey: Yeah.

David: Thousands per year or thousands overall?

Corey: Over . . . I mean, it's definitely going to be in the thousands, several thousand that's going to be . . . that have been in the program – 20 and Back Program – overall.

David: Okay.

Corey: So it's a fairly large number.

David: Now, one of the other things that he said that's a little bit different than what you've said was first of all, he said people get trained in the various areas of specialty that they want to go to. And then he said that they go to Mars. Whereas you seem to have said that the LOC [Lunar Operations Command] is the first kind of stopover point.

Corey: It usually is, yes.

David: What do you think could be going on with Mars where it would become a contact point for people that are joining the Space Navy?

Corey: Well, depending on what your duty is going to be, you're going to be taken and trained at a different facility. Let's say that they had deep space telemetry – just pulling off the top of my head – if a person was going to do that, then just like if you were serving in the Navy here on Earth, they're going to send you to different bases where you're going to get the best training before you rejoin the vessel you're assigned to.

David: Is there any one sort of main reception area on Mars, similar to what there would be with LOC?

Corey: Not that I know of.

David: Okay.

Corey: Right. But it's a little bit different for people that go in as career Navy. They go through a little bit different process than civilian assets that are pulled in, such as the MILAB people, and there are others that are pulled in, too, - scientists.

David: When I was speaking with Henry Deacon, he was the first insider I had access to who said that he had worked on a facility on Mars. And he had told me that there were 200,000 personnel at the time he was there, that it was rapidly expanding.

And the funny part to me was when he said that only 10,000 of those personnel were actually Earth-born humans. I'm wondering if that correlates with anything you've heard. I mean, we can't get him on camera like we did with Tompkins. He doesn't want to talk, but . . .

Corey: Yes. Yeah. The population from like . . . They brought a lot of people in during the Brain Drain era, and then those people . . . you know, there's been two or three generations at least of people that have been assigned to these . . . or have been living on these bases.

David: So could Deacon be right that there could be a base with 200,000 personnel in one spot?

Corey: Oh, absolutely. Yes.

David: So they're that large?

Corey: Yes. Some . . . Yes, some of them are very large.

David: Okay. Another thing that Tompkins said, which I found provocative, was that he said there were eight battle groups. When you start hearing specific numbers like that, he's either going to be right or he's wrong. And he seemed very confident when he said that.

So I'm curious as to your reactions to that.

Corey: Yes. There were eight different battle groups.

David: There were?

Corey: Yes.

David: Wow!

Corey: Yes. And that was during the Solar Warden era. These craft are still . . . Most of them are still in service, but you have different fleets with carriers, destroyers, supply ships, all kinds of support craft.

And during the time I was in, there were eight different battle groups.

David: How could you classify them? Why would there be eight? What were they doing? Where were they going? Were they different?

Corey: They were made up of the same range of vessels.

David: Okay.

Corey: You know, like you have several different types of destroyers and carriers in the Navy that most people are aware of, and you'll have several battle groups or actual fleets out there going off doing different missions. And it's very much the same. They're off doing different missions and aren't really in each other's business that much unless they're called to support each other.

David: So it's not like we would have three of the eight battle groups hanging out in our solar system, necessarily?

Corey: It just depends. A lot of time they'll be behind the Moon or further out in the solar system, closer to other bases, in an area where they're going to be behind a planet, not just hanging out, because they have to do that because you have astronomers here that are tasking satellites to look around.

And they always make sure they know where every asset is in space. And they know

where astronomers are going to be looking. So they're able to hide the fleet.

David: Can you remember the names of any of these battle groups or what were their designations?

Corey: I can't. I remember that they had a . . . There was a 01, 02, 03, but I did not . . . We really didn't interact with the other fleets. And I didn't really interact with other vessels in our fleet.

David: Approximately, how many vessels are in a battle group altogether? Does it vary, or is it . . .

Corey: Yeah, it's going to vary. But sometimes they'll take some out of one group and assign it to another group depending on the mission.

But there's well over a dozen in each. And we're talking larger vessels. And then they have many, many more support vessels.

David: Did any of these battle groups ever get into a war that was significant enough that they lost a major amount of their assets?

Corey: There have been conflicts. They've had vessels that have been damaged so badly that they've lost them. And they've had vessels, also, that they've had to send to be repaired for extended periods of time.

David: Is there any conflict that kind of gained a legendary or historic significance? Was there ever a conflict with the group that they really were not prepared to handle? Something like that?

Corey: In the beginning, there were several incidents of them going into areas around Jupiter or Saturn that were off limits, and having their rears handed to them.

David: 'Rears handed to them' translates as what?

Corey: Well, they would be attacked by sophisticated weaponry from non-terrestrials.

David: Okay.

Corey: There were certain areas around certain planets and planetoids that are off limits, and if they accidentally, or purposely, go into those areas, they are warned and then they're attacked.

David: I'm curious if they ever . . . I mean, I'm thinking a lot about “Star Trek” right

now, and I'm curious if they ever came across a truly outrageous extraterrestrial menace that was a lot more significant than most of the other negative extraterrestrials might be – if something like that ever happened to them?

Corey: There were incidents where vessels traveled into different non-terrestrial areas, and they were hit with very advanced weapons, like the torsion weapons, that the inside of the craft would be twisted and pushed in.

David: Oh, wow!

Corey: And when they had that significant of damage, the vessels had to be, basically, taken apart in certain areas and repaired.

David: You know, when we start looking at the fact that the space program, as he said here – and we'll get into that part in a minute – but 1980 Solar Warden, he's giving the same dates that you've always been giving us.

And then we have “Star Trek: The Next Generation” come out in the late '80s that has so many crossovers. Do you think that there was any communication from the space program to producers of “Star Trek” in any way to help seed this stuff into our consciousness?

Corey: Yeah, most likely from defense contractors' companies. A lot of times, maybe even associated with the Interplanetary Corporate Conglomerate.

David: Right. So if we're getting into this much specific detail from Tompkins, do you think there's any way that Tompkins could be lying at this point? I mean, it doesn't seem possible to me.

Corey: No, not with his credentials and the detail of the information that he has. And the fact that, as you said, he doesn't have Internet access. He doesn't even have an email address. I don't think so.

David: It is very clear that he worked for defense contractors. And here, we're seeing the most astonishing part of this thing, he talks about people going out for 20 years and then being brought back and age regressed.

Corey: Yeah.

David: What was your idea of when the 20 and Back actually started?

Corey: The 20 and Back, I was told, started just a . . . They had been planning it and working on it and had plans to implement it for a while, but it wasn't actually

implemented until the . . . right after Solar Warden was implemented around 1980.

David: Wow! So this is an exact correlation that you were hearing.

Corey: Yes.

David: Now, he mentioned that the technology to remove memories, he said 90.99, but I think he meant 99.99 . . .

Corey: Probably. Yeah.

David: Would you say that for the people who are not among that 3% or 4% that it is actually 99.99%? Correct?

Corey: Yes. The only types of memories they might have would surface in dreams. And they wouldn't have any context for it, so they wouldn't really pay any attention to it.

David: So if you go out there and you do this 20 and Back, and you're recruited in from the Navy – as he said the Space Navy . . . thousands of soldiers are doing this, if they're going to mind wipe you and leave you 99.9% blanked out, does that mean that you then are going to have to do a normal military service afterwards once you come back?

Corey: A lot of the times how they did it was they would give . . . Like someone would sign up for four years or eight years, and they would be assigned to a project that would then take them off planet.

And then, after they were regressed, they would come back and serve out the rest of their 4~8 years.

David: That's what I would expect, because otherwise if you sign up for the military and they splice you back in, and then you don't have any military service, what happened?

Corey: Right. And there were people that I ran into that had said that they had served multiple 20 and Backs.

David: Multiple?

Corey: Yes. And they looked around the same age as I was.

David: Do they have the opportunity to remember the ones that they did before when

they're on another one? Or does it all get blanked out?

Corey: It depends on what they were doing. If they were doing something that . . . If they were working for one of the different space programs being lent out and they witnessed or worked on things that they were not allowed to disseminate back to their Solar Warden group or on their craft, they would wipe a certain amount of information.

But you weren't completely blank slated until the end of your service.

David: If this technology to age regress people is out there, and we have the Cabal who does not want people to live longer, do you think that that's one of many reasons why they don't want disclosure because of the life extension tools they have?

Corey: Absolutely. Yeah, they want the Earth to be pretty much . . . You know, a lot of the . . . Not all of the people, but the Cabal people would like the Earth to be cold. We've all seen the different scenarios they'd like to see play out.

David: So this technology, if it were to be a Full Disclosure, you could assume that there'd be people who all start wanting age regression and start demanding it. Like, "Well, wait a minute, I'm 74 years old and my body is failing and this is my last chance." And then all the people are going to say, "Save my grandfather," and all this stuff. And it could get to be really crazy.

Corey: Yeah. And not to mention all the healing technology to where they can go in, look through your body, find a frequency of cancer, and then nullify it.

David: Tompkins also mentioned that these people were not allowed to have any contact with their families or Earth for those 20 years.

Corey: It's absolutely correct. And not only that, they're not allowed to have access to radio, television or Internet coming from the planet.

David: Was there any form of suitable entertainment that would keep them occupied while they were out there for 20 years?

Corey: Yeah. Strangely, and this will sound kind of weird, there was a lot of ping pong played.

David: Ha, ha, ha.

Corey: But . . .

David: Yeah, that's the same thing that Henry Deacon always said, that when he was at Mars base that he mostly spent his time playing ping pong.

Corey: Yeah, they had recreation areas built. And they had movie nights that I really didn't go to very often. But . . .

David: What were the movies?

Corey: They were all old movies that were before the time you would've gone in. So there were a lot of old cowboy movies and old war movies - World War II movies.

David: But nothing was allowed from the time after they left because it would screw up the future.

Corey: Right. And also, if someone does come back and they do have recall, and you've been watching the Internet and television, it would give you a big advantage in the stock market and other ways, too.

David: I know we've talked about this before, but I'm curious as to how many people you think there are on Earth now who have been blank slated and don't remember anything, but actually did this?

Corey: It's . . . That is in the tens of thousands. People that were involved on one level or another that were pulled in for . . . Some people . . . Not everyone puts in 20 years. They'll have engineers or egghead scientists of different fields that they will pull in for shorter periods of time. I heard them say 8~10 years. And then they will either be reassigned or they return.

David: I know that for a while you worked in what you call the Intercept and Interrogate Program, and I'm wondering if there was ever a time where somebody from the space program starts to remember things and they have to be contacted and given a briefing or given a mind wipe or something like that?

Corey: Yes. They monitor people, as well, afterwards. So kind of like the NSA, you know, the haystack kind of thing, they pull all of your information in and they have behavioral scientists that will look for any signs that the programming is breaking down. And if so, they'll pick you up, bring you back in, debrief you to see exactly what you do know, and then will blank slate them.

David: Now, I notice in this episode that you're a lot more articulate than you used to be and there's been some scuttlebutt on the chat room that you've been replaced by a clone.

Corey: Yes.

David: Could you explain to the audience so that we can stop this rumor why is it that you've become so much more articulate lately?

Corey: Well, when I first started shooting “Cosmic Disclosure” with you, I, as you know, I was going through a lot of surgeries. I had rotator cuff and bicep reconstructive surgery, and I was on pain pills and Xanax and things that definitely slowed me down.

When I watch old episodes, it's difficult for me to even watch.

David: Right. So it is really you, it's . . .

Corey: It's me.

David: - just less drugs.

Corey: Yes. Yes.

David: Okay.

Corey: No pharmaceuticals in my body.

David: Ha, ha, ha. All right. So now what we're going to do is we're going to see another discussion with William Tompkins. This time, some amazing material regarding the split that took place between the existing Solar Warden program and what came to be know as the ICC [Interplanetary Corporate Conglomerate]. Let's take a look.

INTERPLANETARY CORPORATE CONGLOMERATE

William Tompkins: Because of lack of understanding and a lack of acceptance of the subject matter of extraterrestrials . . . This is staggering, because it's not just many of the extremely well-educated people in the country working on this not wanting to accept the reality of what we were in to, but they even participated in trying to nullify the program – throw wrenches into the gears.

And even at Douglas, over at TRW, and all of these other companies, General Dynamics included, there were the top-level people who were throwing negatives on everything that we were attempting to do.

So you have to ask the question, “Why do we have so much of this at such a high

level in technology in the country, in the whole military?"

And who is telling them to try to stop everything, try to cut it down when we're trying to help ourselves? And supposedly that's what the military is for.

But the corporations, at the same time they were doing the military mission programs, they were doing other programs which could possibly allow them to nullify the space programs of the military, like Solar Warden.

And these people, then, utilizing all the advances in space systems, military wise, developed the capability to move off the planet and mine materials on other planets in the solar system and/or continue on out into the galaxy through the 12 closest stars, Alpha Centauri being the first, and mining or extracting materials, or whatever, and making money.

This same group of top corporate people of all these companies that are doing the jobs, that they are getting paid for, were paralleling the space missions for industrialization – making money.

It just seems really strange that this is where we would be finding ourselves because they're using all of the best capabilities. It's already been done for them.

We've got corporate operations operating parallel to missions to solar system planets and other stars' planets, doing the same thing.

The word is greed. Whatever helps them financially, this is where they're going to put the money. This is where they're going to do all the development.

* * * * * *

David: So, Corey, what are your initial thoughts after seeing this particular discussion with Tompkins?

Corey: Wow! He's obviously talking about the Interplanetary Corporate Conglomerate, which we've done an episode on. And it's all of these different technical corporations and companies that support the military-industrial complex that have formed their own breakaway Secret Space Program.

And, as he said, they mine. They actually are the ones that build most of the facilities out in space.

And what he said matches perfectly with this corporate group.

David: There was an interesting line of inquiry in here that I haven't really gotten from the way you and I have talked before, and that was that he mentioned that there was a lot of intellectual difficulty, resistance, that people had to this concept within the contractors and the companies that were actually working on this stuff.

It's almost like they didn't want all of this to be true. And he seems to be saying that from that rivalry was born the defense contractors not wanting to be part of some peaceful space exploration think like “Star Trek” or a protective system for the solar system. They want to go off and do their own thing.

Corey: And they didn't want their hands tied. If they work through Solar Warden, they have to abide by the rules of whoever's in command of a certain project.

David: Ah!

Corey: So if they do it through their corporate means, they have no oversight or no accountability.

David: So they did this without any other approval but their own, I assume.

Corey: Right. They already . . . They had the most advanced toys, weaponry, vessels. They had . . . It was far superior to what they were handing over to the military groups. So there wasn't a whole lot that the military groups could say because the military groups also relied on them so much.

David: Wow! I guess I'd never really understood how much of a rivalry this thing was all the way back then.

Corey: It's a rivalry, but it's not an open tit-for-tat situation between the two groups, . . .

David: Right.

Corey: . . . because they worked together. They lend each other resources, as well.

David: Now, he mentioned that there were 12 neighboring stars in which there were missions and, apparently, construction going on in those areas, as well. That seems a little bit different than some of the things that you've said, but again, we're dealing with fine tuning some minor things. So what's your reaction to that?

Corey: Well, I know that there were plans to do that, but the only problem was these other solar systems have inhabitants, and these inhabitants have space programs. So, you know, they can't just go into a star system, say, “We're going to take the last

planet in your system; we won't bother you," and set up a base, unless they have a diplomatic relationship.

And at the time I was in, I was not aware of diplomatic relationships that allowed us to build all of these different bases in their star systems.

However, I was brought to the Galactic League of Nations base that was on a moon going around a gas giant that most likely was built by ICC assets.

David: Now, do you think that the ICC command structure has now gone completely off planet, or because they are essentially defense contractors, is there still a merger between what's up in the solar system and what's down here on Earth?

Corey: Well, some of them are out in the solar system. Many of them are down here. They are usually like at the head. Let's say . . . I'm just using an example.

TRW has an executive that's been with the company for 20 years, has all the background to be an asset to the ICC. They will say, "Listen, why don't you retire and then we'll move you over to our Super Board?" They call it a Super Board. And this is a board that has members from all of these different corporations that are a part of it and they make decisions.

David: You had mentioned before, and I want to get a little more clarity on this, that some of the products that the ICC uses actually are made on Earth and then they're just shipped up there.

Corey: Yes, some. Yeah. And sometimes it's . . . parts are made here and there. It's shipped up, and then mixed and matched with parts that they've made off planet.

David: What percentage of the people in this defense contractor community . . . How many of them do you think know about what's being done up in space?

Corey: That's unknown to me, but I would say very, very, very few, because the people that ended up serving on the super boards were not given a lot of information, or were not privy to a lot of information, until they became a part of the Super Board and then they were briefed.

David: So if, for example, something benign like seats could be designed on Earth and nobody knows that this is a seat that's going to end up in a hyper-advanced craft, they're so compartmentalized that that seat would only . . . They'd just build it, but they don't know where it's going.

Corey: Right. Right. Or they'd just build part of it, and then it's put together, either

off-world or somewhere here, by assets that they know that they can trust, and then shipped out.

David: So people could be building technology that's actually used in very elaborate ways and never have any idea what they're doing.

Corey: Absolutely. They can do it their full career, retire and spend the rest of their life being unaware.

David: How do you think somebody like Tompkins was able to find out all this information? What was his most likely source?

Corey: The level of information that he's reporting had to have trickled down from pretty high. And it sounds like a lot of his information is coming through the Navy. And right now, the Navy is in kind of a contest with some of the other groups to have this disclosed.

And it's not all of the Navy. It's groups within the Navy that want the Secret Space Program disclosed.

David: Do you think that this ICC has participated at all in what we're calling the SSP Alliance?

Corey: The SSP Alliance is made up of people that broke away from all the different space programs. So there are former ICC assets that have joined the Secret Space Program Alliance.

David: What do you think the ICC alliance members' goal is? If they were part of this thing and he's saying in this discussion that it was mostly greed-based and making money, do those people that are participating in that system, are they benefiting from that greed and that money?

Corey: Yes. It's cosmic capitalism. Some of the things . . . They're trading, as well. They're trading biological and technical assets to non-terrestrials for technology. So the Interplanetary Corporate Conglomerate were one of the groups that were most involved in like the galactic slave trade and trading different assets here in our solar system for assets from another solar system.

So when they receive them, then they go through R&D. They back engineer it. And then they use either the concepts or actually reproduce the technology to use in their ICC group, or it's taken to Earth and then disseminated somehow and put into our technology and released.

And they receive money that way through the corporations. They have this Super Board. The Super Board wants to grow the corporations and make them profitable. It's all about profit.

David: Well, I understand the profit part. And he is mentioning greed here. However, in some of our earlier episodes when you mentioned actually going to ICC facilities, it did not appear that those people were making money or having a luxurious life at all. In fact, it seemed quite the opposite.

Corey: Well, let's look at corporations here that use child labor in other countries. You see the product come. It's in a real shiny box. Everything looks American, but you don't know the history behind the product. It was put together by almost slaves.

David: Right.

Corey: So these people are not reaping the benefits that the ICC is gaining.

David: So do you think that the upper levels of the ICC, where profits are able to be shared, that they have facilities that are a lot nicer than what you saw?

Corey: Yeah. I'm sure they do. The ICC, they always had the best of everything. The newest toys they tested and disseminated some of it back out to the military groups and other space programs.

David: When you have had briefings from the Blue Avians about the future after Full Disclosure, they told you that various facilities would be handed over to the people. Would that include ICC facilities?

Corey: Absolutely. Some of the ICC facilities were what the SSP Alliance was attacking and trying to take out, and the Blue Avians told them to basically stop – knock it off. All of this infrastructure, once there's a Full Disclosure event, this whole infrastructure is going to be handed over to the people of Earth.

David: Well, that's a pretty exciting future.

Corey: It is.

David: Do you think that there is some kind of Draco involvement with the ICC? I know that the Dark Fleet, apparently, has a real strong Draco component to it, but what about the ICC?

Corey: They work with, literally, thousands of different groups. So I am sure there's a crossover there.

David: Do you know if the Draco have control over them to some degree or is it really just the defense contractors that hold the power?

Corey: I'm sure that there are non-terrestrials that exert some sort of influence over them, but they're pretty much a Earth-based group that are interested in pushing forward their own agenda.

David: All right. Well, you saw it here first. This is “Cosmic Disclosure”. I'm your host, David Wilcock, here with Corey Goode. And we're reviewing footage from William Tompkins – absolutely mind-blowing stuff. Thank you for watching, and we will see you next time.

Arrival of the Spheres Season 6, Episode 5

Cosmic Disclosure; Arrival of the Spheres with William Tompkins
Season 6, Episode 5

05 Oct 2016

David Wilcock: All right, welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with Corey Goode. And in this episode, we have another round of incredible disclosures from William Tompkins, our 94-year-old aerospace engineer.

This man does not have Internet access. He does not have an email address. He was completely unaware of who Corey Goode was or what he had said at the time that these tapings were done.

But yet, what he is about to tell us in this episode is, again, going to be one of the most significant things we have ever done with this show, because the amount of correlation that you are about to see here is utterly mind-blowing.

So without further ado, let's check out what Tompkins has to say. It is going to rock you. Take a look.

* * * * * *

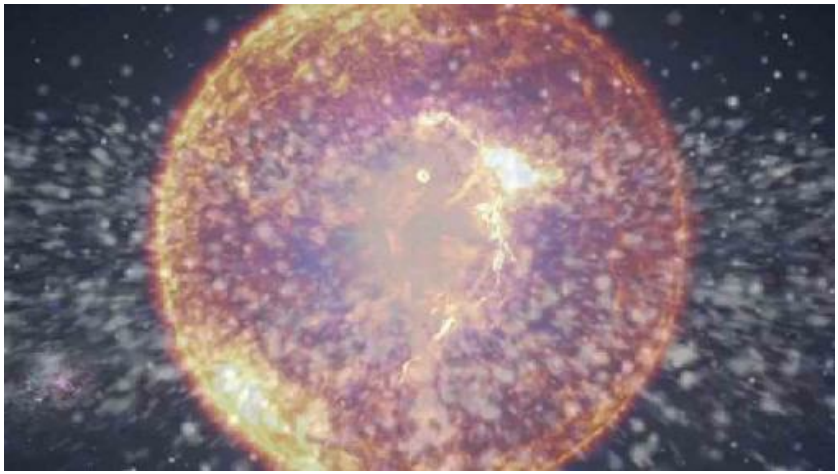
SOLAR SYSTEM LOCKDOWN

William Tompkins: As far as our situation now today, It's been accepted that we have a number of different vehicles, which are actually planets that are hollow, that move through the galaxy to monitor good guys and bad guys, wars and no wars, people taking advantage of other people on different stars' planets, and that, as of about a year and a half ago, one of these parked just outside of the solar system.

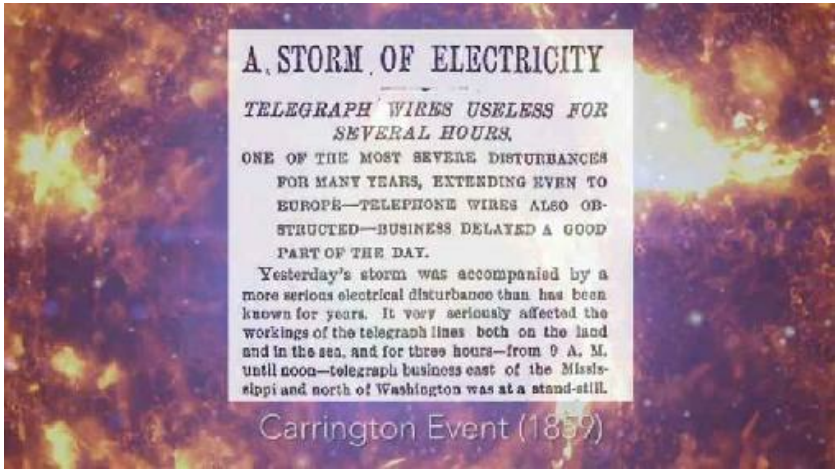
And it has been there for the past year and a half. And this vehicle is quite large, and

it has over 2,000 different extraterrestrial civilization people on board as observers and as monitors.
And it's parked out there, monitoring what's been going on here since the Romans, since way before the Romans.
They have blocked the extraterrestrials who are here, are underground in the caverns, from leaving, and they're not allowing their buddies to come in.
I understand that there's two goals. One of them is to nullify the problem with the Sun. The Sun is alive. Okay? Stars are alive. I think it's a hard time accepting this. And they have moods. And essentially, we have to go back to the . . . I'm not making this complicated, but we have to go back to the center of the galaxy.
What's going on there?

And there's not too many stars in our galaxy compared to a lot of really big ones, but all of the stars are affected in some way by the Sun.



If the Sun sneezes, all of our communication – radio, electronics, everything – is affected.



So there's this group of people, whatever you want to call them, who are attempting to primarily nullify the effects to a region, which is not just like the solar system or our star's system, but do this as a business so that the levels of catastrophes, things that cause dangers to the people and to the planet, are less.

So we can be easily affected. Our attitudes, our daily attitudes, can be changed. We can end up being a really good Republican, and for some reason we're going to change over and be the other guy.

The beings that are in that sphere, they're not agreeing with the Sun. That's just one thing they're not agreeing with.
They're very concerned about Reptilians implementing situations which are not tolerable in their way of life, and that this needs to be corrected.
They must have been doing their homework long enough to where they feel that little planet Earth has had it for a long enough time, and that that needs to be corrected.
* * * * *
David: All right. Well, that was very, very interesting stuff here – just so many correlations popping out all over the place. I don't even know where to begin.
Corey Goode: Packed full of information.
David: He starts out by talking about planet-sized objects, that it's now considered a common fact on the inside track there that there are various extraterrestrial species going around and, he said, monitoring other solar systems with these planet-sized objects.
What do you think exactly they're monitoring for?
Corey: Apparently, there are groups that go from star to star, or star cluster to a star cluster even throughout the galaxy, that are monitoring the progress of different worlds, and they also monitor to see if there's any intervention occurring from outside groups, which . . . it would kind of be breaking like the “Star Trek” nonintervention . . .
David: The Prime Directive.
Corey: The Prime Directive.
David: So he mentioned that these planet-sized objects are also looking to see if there's a war, if something unfair is taking place. So in certain cases, they might also take proactive steps to preserve that Prime Directive?
Corey: Yes, but in a way that would not interfere openly with the inhabitants of a

certain planet that they're wanting to progress on its own.
David: So then he seems to be saying that he believes that that's happening here, that one of these spheres is taking proactive steps here.
Corey: There's been intelligence. And I think you reported on one, I think in the '80s. One of your whistleblowers told you that one of these types of objects, a tangible sphere that was very large, came in and was cruising around the different planets.
David: Yeah, they called it The Seeker, and it had portholes on it that were 800 miles wide when they opened up . . .
Corey: Wow!
David: . . . and all kinds of ships coming out. And it was dark. You couldn't really see too well inside when it opened, but it opened up like a circle.
Corey: Right. So my intel has not told me that there are these type of spherical craft outside of our solar system that are preventing people from coming and going.
The intelligence I had was that the spheres that came in were these energetic spheres. So this could be different intel, or it could be intel that's been passed down after going through several different sources, and then it's kind of like the telephone game.
David: Right.
Corey: It slightly changes as it goes. And if people have different agendas, they can curtail it a little bit.
David: Now, I want to address this, because I don't want people in the comment section to think that, "Oh, well, they debunked William Tompkins."
There is a slight mishap in his wording that we need to talk about here, and that is that he mentions, first of all, a year and a half ago that one sphere showed up outside our solar system. But then he said that it's been here since Roman times.
Corey: I think that he probably meant that these have been coming and going since that period.
David: Okay. So do you think that for him to have said this, that he must have heard it from someone else, that this was intel that he had received?
Corey: Absolutely. Yeah.
David: Okay.
Corey: It was intel that had trickled down from the higher Secret Space Programs.
David: Could you just briefly, before we discuss the timelines here, briefly review for us how did the outer barrier get started? What was the inciting incident that led to that happening, and when?
Corey: So these energetic spheres had been entering the solar system for a number of years, through both the Sun and from outside the solar system. So they knew that these spheres were around and that these spheres were monitoring them.
David: The Cabal knew?
Corey: The Cabal knew. And the inhabitants . . . They thought that these spheres were full of aliens. And they were trying to hail them to communicate, and they were getting no communication back whatsoever.
So at first, they thought that it was the return of the Sumerian gods, and a lot of them got really excited. But soon, they discovered that this was not a group coming in to

help them.
So eventually, they decided to use an experimental new weapon. The actual weapon was in Australia, and I found out that the targeting happened from somewhere in Africa, in Southern Africa.
David: Mm. Okay.
Corey: They locked onto one of the moon-sized spheres that was actually out past the Moon just a little ways, and they fired on it. And when they did, the energy was just redirected back at the location it was fired from and it destroyed a portion of that base and killed a lot of people.
David: And as I've reported, the ISS caught a video of this.

There's a red laser with a little red glow around what appears to be something, and, in fact, NASA had to come out and make a public statement in which they said, “Oh, this was just a test to try to create an artificial star using laser technology.”

So they actually had to make an official denial. That's how big this was.
Corey: Yeah. It's kind of a ridiculous one.
David: So what was the ramifications of this attack on a sphere? How did that change the game?
Corey: When that attack occurred, immediately what they call the Outer Barrier was established, which was basically one of these exact same giant spheres that was now larger than our entire solar system and contained our solar system.
David: The sphere expanded?
Corey: Yes. On the level that these beings are, that is really of no consequence. Size . . . It doesn't really matter.
David: Right.
Corey: So they established this outer barrier to prevent anyone from leaving to escape or calling in reinforcements.
David: Now, given the fact that Tompkins was interviewed in the early summer of 2016, that's this footage that we're seeing, that's a year and a half ago from the time that he was talking that this happened, December 2014.
Corey: Yes, and that's what leads me to believe that there was some crossover of some other intelligence above him as it was trickling down, because there were reports of these physical giant spheres that were coming and going, but during this time period, it was one giant energetic sphere that encapsulated our solar system to prevent people from coming and going.
David: So perhaps that's why he thought there was only one sphere?
Corey: Correct.
David: Wow! My role in this show is to ask you questions, but I just have to make a personal statement, which is it absolutely blows my mind that he has the date exactly the same of what you've been telling us, and he doesn't have any access to you.

Corey: Right.
David: How did you feel when you saw that?
Corey: Well, I think you saw the look on my face . . .
David: Yeah.
Corey: . . . during the video. It's really nice that someone's validating it. And like I said before, I've been very shocked that this much of detailed information is coming through Tompkins.
David: I think it might be hard for people watching this show to really understand how real all of this is. This is not entertainment. It's not science fiction. And the things that have happened to you are percolating through the entire space program infrastructure.
Corey: Correct.
David: So when he said that stars are alive, how do you respond to that?
Corey: When I looked at the smart glass pad, there were different groups that had more esoteric ideas about things, and other groups that had more scientific pragmatic ideas about the star and the nature of the star.
And I did see reports that stars and planets, they believed they were alive. But I didn't see any information about the scientific part that was at the top of the briefing in the smart glass pad about stars being alive.
David: Well, you've read enough of The Law of One to see that there's a lot of crossover between The Law of One and what you experienced in the space program, correct?
Corey: Right. Right.
David: And The Law of One says that stars are alive.
Corey: Right.
David: So that's a nice point of correlation we have there.
Corey: It is.
David: When he's getting into this idea of the Sun sneezing, he seems to think that the beings in the sphere are working against the Sun, that they don't like what the Sun is going to do. I'm not sure I agree with him on that particular point. What's your thoughts?
Corey: Well, what was interesting is that in the briefings, “solar sneeze” is the terminology that was used. So that got my attention.
David: It was?
Corey: Yes.
David: Really?
Corey: Yeah. That was one of the descriptions. They expected the Sun “to sneeze”. So that got my attention.
David: Now, I would imagine that if people were looking at this from a physical level, they may see it only as a catastrophe if they're not understanding dimensional shift. What are your thoughts on that?
Corey: Right. And within the space programs, you have different ideas about what is going to occur when a solar event happens. Some of them are expecting what is

referred to as a “spiritual harvest”.
Some of them just expect maybe a decade or two of having to rebuild our infrastructure that we will lose, and some of them expect it to be like an extinction-level event. So not everyone agrees on what's going to happen, but they all agree that there is going to be some sort of a “solar sneeze”.
David: Well, it, again, is just so remarkable that what he's describing about what these spheres are doing is exactly what you've been telling us on this show.
Corey: Right. And he was saying that there was some sort of an adversarial relationship between the sphere and the Sun, when the information I received was that these spheres are here to, I guess, baffle the energy until we are ready to have a full hit.
David: So they're actually helping the Sun do what it's doing, but do it maybe more precisely or at the right time.
Corey: Right. They're helping the Sun go through a transition.
David: When he said that there are 2,000 extraterrestrials inside this sphere and that there's different civilizations in there, how do you feel about that part of his statement?
Corey: Well, some of the intel on these different spheres was that they were sort of like confederations from hundreds of different planets.
David: Oh!
Corey: I didn't hear that there were 2,000. I didn't hear that precise information.
David: But he said it, so he must have gotten it from somewhere.
Corey: Right. He may have been briefed on one of those crafts like you saw come in, or you were told that came in, in the '80s.
David: Right.
Corey: And that might have been one of them that was full of hundreds or thousands of different species.
David: From what you've described before, it didn't sound like these guys would be able to get that much specific information about who's inside the sphere, since the spheres wouldn't even talk to the SSP.
Corey: Right. And like I said, when they first came in, they thought it was the return of the Sumerian gods. A lot of them were real excited. And since then, during the time period when they didn't know who was in the spheres or what the spheres were for, they were probably speculating quite a bit.
David: So another interesting thing that he said here was that these spheres had two purposes, that one of the purposes was to monitor the activity of the Sun, and this sneeze that's going to happen, and that the other had to do with Reptilians, and making sure that they didn't take too much advantage of us.
So once again, I mean, how did you react when he said that?
Corey: It is very satisfying to hear someone who is credentialed and has had a background like Tompkins has had come out and validate what I've been saying.
David: It would appear that he and his people are well aware of the Draco problem. He talked about it with Nazi Germany.

Corey: Yeah.
David: So he's now saying a direct link between the spheres and the defeat of the Draco.
Corey: Right.
David: So, again, it's as if somebody is either watching our show and passing this to him, or this is real. It's like you only really have two choices.
Corey: Right. Right. And what you've said is exactly what I've been saying. The spheres have come here not to defeat the Reptilians, but to create an environment to where we can clean up our own mess.
David: Right.
Corey: And they're here to mitigate the explosive energies that are now and in the future will be coming from the Sun. So that's right on the money.
David: Next, we're going to see Tompkins in a discussion about a think tank that he worked in, and a very humorous event involving an extraterrestrial craft. So let's watch.
* * * * * *

UNCONVENTIONAL PROPULSION SCHEMES

William Tompkins: What was the main mission, and what did people do in this Douglas think tank? And one of the areas that was most important was a thing that they came out with and that's "Unconventional Propulsion Schemes". Oh, my gosh. And so everybody got to work on that, and everybody tries to come up with a different method of propulsion. And so that's this one. [Tompkins holds up a thick set of documents bound by a large clasp.]
And it does get into updating things that we thought were futuristic, but what it really comes down to is a knowledge of different missions that need to be implemented. And so along with information to put into this, the Vice President of Engineering also made me Disseminator of Space Research, whatever that is. Okay?
So then I get stuck with all of the incoming mail that's coming from the different associate organizations to Douglas. And some of the interesting things that come in is a group of people down at the beach, which is only a few blocks away, were out on Sunday afternoon, and one of the managers at Douglas, engineering managers, was there with his family.
And so over at Northrop, Jack Northrop had been building his new flying wings. And he keeps getting them bigger and bigger. And he threw out the old piston engine things and put the new jet engines in.
And so there's a guy by the name of Max Stanley, who's the chief test pilot for Northrop.
And they're late on their flight schedules on the B-49 Flying Wing bomber.
So it's like 11:00, a beautiful day, and Max gets there, and he fires the thing up and he takes off, and the runway's half what it should be because he pulls the fence down almost every time at the end of the runway. They lay the fence down now.
Anyway, he flies south, turns out over the ocean, and now flies north like he's going

to go out to Edwards Air Force Base out in the desert.
So, of course, that means he's got to go up the beach, past the beach, at Santa Monica. And a lot of people have seen the test flight flights going and coming.
And so inside of the cockpit at that time, with Max and his flight test engineer, just the two of them, the flight test says, “Hey, Max, what's that?”
And so this little UFO comes in, flies right next to them – right off the wing – okay? 10-foot off the wing.
And he's giving Max the finger. So he proceeds, in front of all these people - all the beach is full of people – he moves over in front of Max, so now Max has got him right . . . 10 feet from his windshield, okay?
And he flips over backwards and goes around, comes out underneath, comes up, and twists over, gives him another finger, and goes back again.
Then he flies out off the wing and makes a turn and goes around the wing. He did this for about 10 minutes.
By now, everybody on the beach can see this going on because they're only at 6,000 feet.
And so the Douglas manager that was on the beach at the time and saw this, of course, he knew what was going on. And anyway, he wrote me a letter and described this as one of the inputs about local stuff on UFOs.
So I got two or three of these every week from different areas, and some of them were from the airbase test areas.
And so we got a lot of data, and our data then became part of the information that goes into this document.
And so then different people in the 200-man secret tank have different assignments from what's in here. [Holding up the thick collection of documents] And that's sort of the way that this thing operated.
* * * * *
David: All right. So there he is describing this document on unconventional flying objects and unconventional propulsion.
In his book, he goes into a lot of detail about that, a lot more than we saw here, and said that it was this focal point that the birth of the space program came out of.
Did you ever see any of those old documents in the smart glass pads?
Corey: There were a lot that were just so mundane to go through that I just did not look at them. But there were . . . A lot of the time when you would pull up something on the smart glass pad, it would be documents from the '40s, '50s, '60s, and it was just presented as . . . it looked like a document.
David: So he mentions that the PM 624 document was investigating different types of propulsion systems for different needs that would evolve into the space program. It's really amazing to get this kind of history. So what do you think those needs were that they were looking at?
Corey: Well, it would depend. If there was a craft that was a resupply vessel, it's not going to need to necessarily, unless it's traveling with a carrier group, it's not going to need to keep up with a lot of these vessels that travel interstellarly if they're just going

to work here in the solar system.
You know, they have different types of propulsion. They have temporal drives, torsion drives, electromagnetic just propulsion. And these come from different non-terrestrial groups.
Some of them are so advanced that they use temporal drives that will, no matter where they are in time and space, [Corey snaps his fingers] they can be here and now.
So if they get their hands on some of those, yeah, they're going to want to use that to maybe put that into their ICC program [Interplanetary Corporate Conglomerate] to where they have the newest, most advanced technology, and then disseminate some of that information to the other programs, or provide the technology to upgrade vessels that are already out there.
David: Whereas if you have a guy who's like a truck driver and he's doing a shuttle bus or something, you don't want him to have any extraordinary capability.
Corey: Right.
David: If he tried to break away or something, you don't want him to be able to escape.
Corey: Right. Yeah. And usually, in most of these craft, they have a return-to-home feature, that if someone tries to go rogue, they can push a button and the vessel just comes back to where it left . . . from where it left.
David: So it was kind of humorous to hear this idea of a UFO circling around a plane and giving him the finger. Now, I guess you and I . . . Neither of us are really clear about was there an occupant who actually extended his middle finger?
Corey: That's what it sounded like to me.
David: Or appropriate appendage.
Corey: Yeah.
David: It did sound like that.
Corey: Yeah. Normally, I would say that this was one of the Secret Space Program pilots. They are a breed of their own. If you remember the “Top Gun” movies, how cocky and arrogant and self-assured these people are, multiply that times 100 because they're the best of the best. They're flying in space. They're flying things that no one's even allowed to know about.
David: The time frame that he mentions of 1955 and working at Douglas Aircraft – how far along was the American side of this as of that year?
Corey: In 1955, I don't think that they were that developed. This sounds like it could also possibly be one of the German breakaway vessels, because that's during the time period when these German breakaway vessels were showing their selves.
David: Are there any German craft that would have clear glass enough that the pilot could be seen inside like that?
Corey: I'm sure there were. Most of the craft that I was privy to that the Germans had, they were using imaging systems that . . . the outside was totally solid and they could see 360 degrees and up and down from the inside through the imaging systems that they had on the outside of the craft.
David: Hm. All right. Well, now we have more of Tompkins' amazing testimony

regarding the legendary father of NASA, the German expatriate scientist, Wernher von Braun. Let's take a look.
* * * * * *

WERNHER VON BRAUN

William Tompkins: I have to say, Douglas Engineering were the best guys I ever worked with. They were the princes.
Douglas was known for the surfers. So when von Braun came out to Douglas to find out why he lost the contract for the IRBM's and wanted to know who the hell did it and who's the guy Tompkins . . .
Anyway, he comes out. And so at that time we had like 900, 800 drafting boards on one floor and about 600 down below. And we were up on the second floor.
So when they brought . . . The Vice President of Engineering brought von Braun up to the second floor. I knew he was coming so I went running over to a drafting board on a stool. And so I pretended to be drawing, but everybody knew I wasn't.
And so he had to walk all through all of these 800 drafting boards to get over to Tompkins out in the middle here. And I did it on purpose. And because he continued to get feedbacks from different subcontractors when he's down at his facility about that damn surfer from California, and he wanted to meet that surfer.
But we then had probably 40 of these [He holds up several of the documents] in a package, and so he wanted to know all how we did everything.
And there was one of these which was a really nice one, sort of derogatory, and it was about the German V-2.
And so the secretary brought that over and handed it to me while he's there and wanted me to tell her how I should handle it. And it pretty well broke up engineering. But the point was that he did come out because he really wanted to find out how this group of guys that were really just plain surfers – doing grabs and whatever . . . And he went away with a tail between his legs. It worked good.
* * * * * *
David: So is it common for there to be this kind of joking around inside a facility like this, where even somebody as high-ranking as von Braun comes in and then is shown an insulting illustration or something about his own work?
Corey: A lot of these engineers are characters, but that was pretty brazen if you ask me.
David: Yeah. I mean, I would imagine in some of the stuff you described that the climate is so oppressive that the idea of trying to thumb a nose at your superiors is just not ever going to be advisable.
Corey: Yeah, it's not advisable in any situation. Ha, ha.
David: Ha, ha, ha. All right. Well, that's all the time we have for in this episode. I hope you've had fun seeing this all unfold. It's really amazing to go back and look at the amount of confirmation that we're getting on giant spheres, solar system lockdown, what's really going on here with the agenda of the spheres, the solar sneeze, the Draco.

A lot of stuff has been covered here. This is “Cosmic Disclosure”. I'm your host, David Wilcock, and I think you for watching.

Exploitation of ET Technology Season 6, Episode 6

Cosmic Disclosure; Exploitation of E.T. Technology with Clifford Stone Season 6, Episode 6

11 Oct 2016

David Wilcock: All right. Welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with Corey Goode. And in this episode, we are doing a special investigation into Sergeant Clifford Stone.

I was fortunate enough to meet him at the Disclosure Project event in May 2001 when he first came forward as a member of a UFO crash retrieval team and someone who has gotten his hands dirty in terms of actually releasing documents through the Freedom of Information Act that had never before seen the light of day.

So what we're going to do now is show you some footage of our interview with Stone. And then we're going to have some comments on it.

In this first round you're going to hear him describing two of the classified programs with the code names that he was involved with involving crash retrieval and his work in getting those documents out. Let's take a look.

* * * * * *

GETTING CONFIRMATION

Clifford Stone: I had to go on a search for the documentation to kind of sort of validate me to my family. They were there. My wife knows more about it than my kids do. But, you know, I'll be criticized by my kids because I wasn't there for that game. I wasn't there for this social event – things of this sort.

And see, I was a clerk. I wasn't supposed to do all this stuff. I wasn't supposed to go to the field all the time. They did not know what went on.

Now, my wife did, because, like I said before, she was there from the beginning. But I initially wanted to go ahead and validate myself. I wanted to validate myself to my family.

But also towards the end of the time that I was getting out, I saw all the horrible things that were happening to people who were witnesses of UFOs. I saw the people who were ridiculed. I saw the people who lost their families because they just happened to be a witness to an event of high strangeness.

I have known people who have killed themselves. I know people who have lost their jobs. I know people who have become recluses because society in which they live rejected them because they happened to be involved in an event of high strangeness, and they made the big mistake of talking about it.

And since at least 1973, Operation Ridicule – and that's what I call it, because it really is a directed effort by our government and other governments of the world to ridicule ANYONE who comes out and talks about having ANYTHING to do with UFOs.

And you're even encouraged in the military if you have an event, or if you're an airline pilot, DON'T TALK. It will destroy your career. It will ultimately destroy your life.

So the whole situation is, I had to try to get some confirmation that it's okay to have these incidents, these events to occur in your life. And if I could get that confirmation officially from the record, it'd go a long way to help people.

I think the most amazing documents that I have unearthed, and I have to put them together, is the confirmation of Moon Dust and Blue Fly as they pertain to objects of unknown origin.

Moon Dust is the overall field exploitation program for only two items – objects of non-US origin that survive re-entry into the Earth's atmosphere. And, of course, these would have an intelligence value to the intelligence community to determine what the state of technology is that went in to that particular craft from a potentially hostile

government to the U.S.

The other item is objects of unknown origin. Within unknown origins, UFOs fall into play there. Okay.

These documents went ahead and show where we recovered various objects of unknown origin. And we brought them back to the states, and we were looking at them.

As a matter of fact, the NSA even had what was called a fractology lab where they would look at fragments.

Now there was a great debate between the intelligence community and NASA, because NASA felt that they should have total control.

The CIA made it quite clear that while NASA sometimes works hand in hand with the CIA, NASA is primarily a scientific endeavor.

Covert operations of an intelligence nature lies within the intelligence community.

So initially all these objects would go to the intelligence side of the house. If NASA was to get an object of unknown origin, they were without question to turn it over to various agencies within the intelligence community.

Then after the intelligence community did what they could with it, they would turn it back over to NASA for NASA to turn it over to the launching authority of the country that put the spacecraft up there to begin with.

But here again, if it was an object of unknown origin and it turned out not to be of this world, NASA would not get anything back on it. But NASA did have debris of unknown origin that was within their fractology lab.

1985, the name Moon Dust and Blue Fly – and Blue Fly was the actual field teams that went out to the field to do the covert extraction and also be there in case there was a need for a cover story, or what have you, and get it back to a safe haven area in a rear echelon area and ultimately back to facilities in the United States.

Thank you for forwarding the undated response (inclosure 1) the U.S. Air Force sent you concerning my letter of January 4, 1993. However, I still find their answers to be evasive of the issues I raise and once again untruthful. Please permit me to illustrate.

1. "The unit with responsibility for maintaining these teams was located at Fort Belvoir, Virginia. As the occasion never arose to use these air defense teams, the mission was assigned to Headquarters, United States Air Force in 1957 and expanded to include the following peace-time functions: a) Unidentified Flying Objects (UFOs), to investigaate reliably reported UFOs within the United States; b) Project MOON DUST, to recover objects and debris from space vehicles that survived re-entry from space to earth; c) Operation BLUE FLY, to expeditiously retrieve downed Soviet Bloc equipment."

REBUTTAL: "This unit" was created as a result of Air Defense Regulation 24-4, dated January 3, 1953 and was known as the 4602d Air Intelligence Service Squadron. "This unit" was given the responsibility, "to investigate reliably reported UFOs within the United States" under Air Force Regulation 200-2 dated August 26, 1953. Therefore, this requirement existed long before 1957. It existed as of August 26, 1953.

So I went ahead and I did a 178 page report entitled “Operation Blue Fly Research Project Report to Congress”.

Clifford E. Stone
Director
Operation Blue Fly Research Project
1421 East Tilden
Roswell, New Mexico 88201-7955

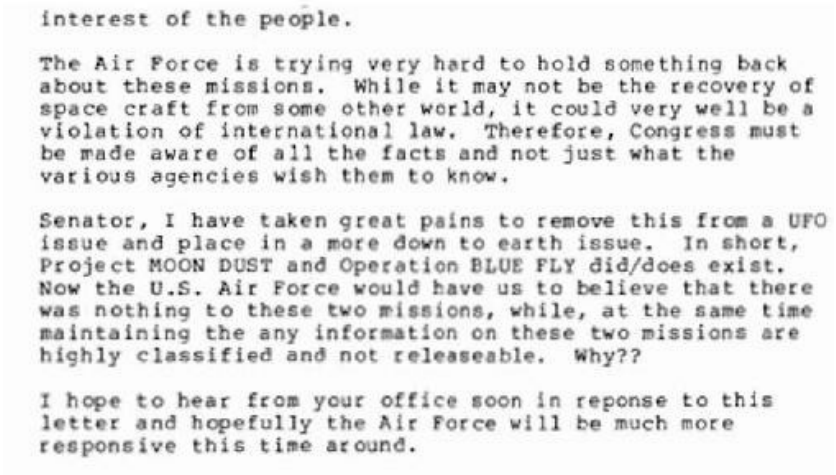
Phone: (505) 625-0920

December 27, 1992

Senator Bingaman,

k you for your most recent letter of December 14, 1992.

And I went ahead and I sent it to 27 various members of Congress – the Senate and the House.



interest of the people.

The Air Force is trying very hard to hold something back about these missions. While it may not be the recovery of space craft from some other world, it could very well be a violation of international law. Therefore, Congress must be made aware of all the facts and not just what the various agencies wish them to know.

Senator, I have taken great pains to remove this from a UFO issue and place in a more down to earth issue. In short, Project MOON DUST and Operation BLUE FLY did/does exist. Now the U.S. Air Force would have us to believe that there was nothing to these two missions, while, at the same time maintaining the any information on these two missions are highly classified and not releaseable. Why??

I hope to hear from your office soon in reponse to this letter and hopefully the Air Force will be much more responsive this time around.

And our senator here, he took it to several other senators that were involved in the Armed Services Committee that was holding hearings actually on some – and remember, this is '94. This is when the big questions about what really happened here at Roswell came into play.

Some of the people, behind closed doors - because UFOs is not a good subject to get messed up with if you're an elected official – asked some people about, “Whoa, wait a minute. They did recoveries. This document shows that. We need to know what really is going on.”

In short, I know for a fact that report that I did in '94 caused them to expose the National Reconnaissance Organization.

And the reason they had to expose it was real simple. They wanted Congress to understand that, “Well, you know, we have highly classified reconnaissance activities that involve highly sophisticated and highly classified manned, – I'm going to say it – unmanned – manned and unmanned satellites.

And there aren't supposed to be any manned satellites, but there are.

And the situation is, with this being the case, if they fall back to Earth, it is imperative

that we get them before any potential enemy of the United States get them or any potential future enemy of the United States gets them. And we must get them and get them back here to the States or to a safe haven area.

So they started talking about the nice activities on a very low key, but at least it got the exposure that it needed.

Then, of course, little demons like me went in and started to ask, “What more do you have on the NRO?”

* * * * * *

David Wilcock: All right. So this is a little bit more of a down-to-earth-type of UFOlogy than some of the stuff we talk about up in space, but still a very important part of what's being done in order to keep the UFO coverup going.

In the clip he described Moon Dust as the umbrella program that is essentially looking at threats to the United States. Blue Fly is the actual team.

What's the amount of prevalence that you think is happening with these types of programs? How many retrievals are being done in, let's say, a given year?

Corey Goode: And I haven't seen information for some time on . . . so I don't know currently, but back before the time of about 1986, they were occurring on a semi-regular basis. I don't know . . . You know, there'd be like maybe 4 to 12 in a year.

David: Hmm. When we're looking at a guy like Stone involved in something like this, first of all, do you feel that there are a large number of people that were doing the kind of thing that he was doing and they're deployed at different times?

Corey: Yeah. They try to deploy the same groups. Sometimes there will be . . . They'll send other military assets out to secure the location, but they'll form a perimeter far away so they can't see what they're securing. And then they'll bring in one of these other teams that specialize in retrievals.

David: And we know that Stone's work is intuitively interfacing with the beings, if they're still alive in the crash. And in some of the other footage that we've seen, he gets very upset about that.

Is it normal that the extraterrestrials operating in our airspace are going to have a telepathic ability like that?

Corey: Yes, that's actually quite common, and it's a lot easier to communicate that

way than verbally. If you have a species that's from another star system, they come here, even if . . . You know, they'd have to study us and then know all the nuances of our language to really communicate.

It's really hard to misunderstand when you're interfacing.

David: He described the awesome amount of effort that was put in place to ridicule anyone who talks about UFOs in any way at all. And as far as you know, is this a program that was designed from the very, very beginning of the UFO phenomenon?

Corey: Yes, and it's a documentation going back from . . . to the very beginning of when we see that the government was investigating UFOs. It's very clear that from the beginning they wanted to ridicule anyone, no matter how professional they were, that had reported seeing a UFO or their occupants.

David: How do you think that something like this could have been successful, given the awesome level of interest in being visited by people from another world?

Corey: Well, in the '50s, if you look at the news footage of them interviewing contactees or people that saw UFOs, it was . . . the way they shot it, the way . . . they made the people look ridiculous. So the mainstream doesn't have as large of an interest in this.

So if the subject comes up, they'll listen and then move on with their day, because they're not taking it seriously because the media is not.

David: Well, I think that may be changing a lot more now as media becomes increasingly decentralized. It would certainly appear that the media is an opinion maker. And people have a very serious fear of ridicule.

So do you think that this fear of ridicule was effective enough to stop many people who did see things from coming forward at all?

Corey: Well, people that had something to lose. You know, like he mentioned pilots – people that worked in various professional fields where they had put a lot of time and effort into getting an education or certifications – those people . . . They have a lot to lose, so they'll talk quietly amongst themselves, but they're not going to talk openly.

David: Do you think that the US government always saw UFOs as a threat, or do you think that they were aware that some of this was completely benign, but they chose to have a military type of reaction to it anyway?

Corey: Well, whether it was a positive or a negative group visiting, it didn't matter.

Both of them threatened the status quo, which allowed them to control the Earth.

So no matter which polarity these beings are, they have us programmed to believe a certain way. That's going to change the paradigm, and they're going to lose their grip.

David: Do you feel to some degree that there's a generational gap going on here in which people who grew up in the era of media ridicule and indoctrination still have this fear of being ostracized from the group if they get into this whereas younger people are not seeing that anymore and therefore they're far more open-minded?

Corey: Well, younger people are spending most of their time on social media where you don't have the mainstream media delivering news that's approved from the government.

David: Right.

Corey: So they're getting a much wider spectrum of information than people used to, so . . . and you see the consciousness expanding of the younger people.

David: Well, I don't know about where you are in Dallas, Texas, but, Corey, I have never met someone who was not interested in UFOs when I brought it up. Never. And it could be just any random person.

They ask me what I do – the dreaded for words, "What do you do?" Have you ever experienced people actually having problems with it? I mean, it seems very rare to me.

Corey: Yeah, it depends, I guess, on your location, but in the Dallas area, if you talk about aliens and UFOs, people will humor you, kind of watch, look at you. But you can see on their face that they're just like ready for the conversation to end so they can walk away.

David: Really?

Corey: Yeah.

David: When these programs eventually collapse, what do you think those types of people are going to have happen to them?

Corey: First, they'll probably go into denial, and then acceptance just like the steps of grieving. They've got to change their paradigm. All of their belief systems now they've got to hold up and compare to the new information. That's not comfortable for anyone.

David: All right. Well, what we're going to go to now is an interview with Stone – part of our interview with him – where he describes a very, very intriguing event that took place during the Vietnam War. This is high strangeness, highly interesting.

And then after we have this footage, we will be discussing the implications of this very strange story. So without further ado, let's check it out.

* * * * * *

ET TUNNELS IN VIETNAM

Clifford Stone: Now with being assigned to Vietnam, I wind up getting assigned to Tay Ninh. And when I get there, once again, I'm back in communications, NBC, all that good stuff.

I was notorious for a lot of times I'd go outside of the perimeter. You wasn't supposed to do that.

I went ahead and I went out one night, and when I went out, there was a helicopter there. And the guy I always called the Colonel, he's there, and he says, "Why are you late? We've been waiting for you."

And I said, "Late? How the heck did you even know I was coming out? I didn't even know it."

Anyhow, we get on the helicopter, and we take off. And we're flying towards Nui Ba Den. And we're getting, you know, maybe 2/3rds of the way up.

Now, the problem is the old adage has always been we had the top of Nui Ba Den, and we have the base. The NVA and VC have the center. And we know that they had tunnels and all that other good stuff there.

So when we landed, there was already other military personnel there, and they were heading up on a tunnel.

We were told that the enemy was working . . . Well, I can even tell you what it was – bubonic plague. They were working on a biological military-type weapon, bubonic plague, that they were going to try to use against US forces there. And we had to go ahead and destroy the facility.

So there's this tunnel. And no one questioned . . . I mean, it was a tunnel. No one questioned the fact that it was V-shaped. It wasn't like a jagged hole in the wall of the mountain, but it was V-shaped.

Now, you had the rocks on the top and all that. The ground on the bottom was totally smooth.

Once again, we didn't question it. And I don't know whether we thought, “Well, maybe the VC could have done something with it or . . . “, it just didn't come into play. No one questioned it at all.

We start to go back into the tunnel. We get several hundred feet in the tunnel, and we can still radio back and talk to the people that's on the outside.

Now, we get to one point, and it's like a line in the sand, so to speak, because on this side you can talk, you can hear, clearly on the radio. You step across that, now you can't.

So we went ahead and left a radio there, and we set up a field telephone, 312, and we left a radio telephone operator right there. And he was to communicate with the folks on the outside.

And we went on into the cave. I don't know how many hundreds of feet we went on into the cave, but at some point, it got to the point where we couldn't talk on that 312 calling him back. It just wouldn't work. Nothing was wrong with the batteries or nothing, but we just couldn't carry on a conversation.

We go ahead. We go further into the cave. Now, as we closer, we start to see it's starting to get lighter, and we can't identify the light source.

Then we stepped into this big, open area inside the cave. When we stop in there, we go ahead and see what appears to be a huge laboratory.

And on the other side, there's this huge . . . I call it a window. And we could see some of our troops outside that window that appeared like they were just walking on air, because there's no ground there.

You could see the night sky perfect – everything, no problem. And you're wondering, okay, what's going on?

Now, it's hard to explain, but you're not seeing them silhouetted or, I mean, you're seeing it. It's dark, but you're seeing them.

After we couldn't call back, we had a person that became the runner, and he went back to tell the radio telephone operator. So there was a little delay in that, getting back to say, “Hey, tell these people to do that.”

But we could see them, and we went ahead and asked, are these people out there? And they had them do certain things so we could tell that these were the people.

And we asked them, “Can you see anything out of the ordinary?”

And, “No, but everyone is looking towards the sky.”

And we went, “No, no, don't look towards the sky. Look towards the ground. Is there anything out of the ordinary on the ground?”

No one saw anything out of the ordinary. And, of course, we see them when we look to the ground. We tell them to do specific things so we can tell that they're our troops. We went ahead and watched that, and we knew, “Hey, this is happening in real time.”

This isn't a screen and they're heading up on pictures, and it's just unusual to us because it's a technology that we're not familiar with.

Now, to us, it was inside the cave. We were witnessing all this.

The ones on the outside of the cave, nothing was unusual. But we told the ones on the outside of the cave, “Take your trenching tools and dig a couple scoops of earth. Let's see what happens.”

We could see inside the cave where they'd go ahead, put their trenching tools into the ground, but it was like they were going into clear air. But when they picked up the trenching tool and tossed the earth that was on the trenching tool, we could see it go through the air, but when it hit the ground, it would just be like it would just totally disappear again.

I guess I can say I found it fascinating. But at the same time, . . . [there was] no explanation on why it's going on. I mean, we were trying to think of a plausible explanation. Is there cameras on the outside?

This wasn't like a screen. This was like a window, and it covered the whole side. And it was not like a screen at all, like a projection screen or what today we have with our TVs, flat-screen TV. It was nothing like that at all.

All of a sudden, we start seeing once again, a typical Grey. Someone asked me to try to describe them, because I really can't, because I only know what you'd call 'typical' Greys by the large heads, small, spindly bodies and the large eyes. They didn't say anything.

But they came up, and people started to shoot. And I was trying to tell people to "cease fire, cease fire." Because by this time, I already knew we wasn't alone there.

And when I was telling them to cease fire, it didn't happen. So what I did, I went ahead and I asked them, or I was still asking them, and all of a sudden it got white, like there was a glow to it.

But it was like you were in the middle of a glass of milk. And it wasn't fluid or anything. You could breathe easily, all that good stuff, but you can hold your hand up like this in front of your face, and you couldn't see it, because it was just a, shall I say, fluorescent white that surrounded everyone.

And I could still hear the shooting going around, and all of a sudden, I got something . . . My eye was very painful. And I remember trying to grab a hold of my eye, and I went down.

And I remember it was agonizing pain. And after I went down, that was the last thing I remembered.

I remember hearing a voice saying that they needed to let my people take care of me, and another voice saying, "No, there's no way that they can fix this. We need to take care of this person or he will lose his left eye."

Later on, I woke up. I was outside of the cave. And I looked up at the captain, or the guy I always called the Major, or the Colonel, and I said, "How did I get out here? How did I get out here?"

And he told me, "Well, we don't know. One moment you wasn't there, then all of a sudden you're there."

Then he even asked me, "What happened to your eye?"

I says, "I don't know."

And they only had . . . and the medic said it had been worked on, but it was our people that put the patch on it. And for over a week, I wore that.

Official story was that there was a bug that sprayed a spray into my eye and sprayed it and hit the corona of the eye and cut it all the way across.

And I'm going to tell you right now, I know no bug that can do that, even in the tropics or any place. And I have talked and asked other people, "What type of bug could do that?"

And I've had experts tell me there is no bug that can do that.

But I had no problem. I wear reading glasses, but I have no problem with my sight.

* * * * * *

David: All right. So in a case like Stone's, it appears that here's a guy who is actually getting extraterrestrial contact all throughout his life. Do you think that there are certain people who are receiving weird events like this throughout their lives for some greater reason of some kind?

Corey: Absolutely. And military intelligence knows who are having these experiences. They monitor them.

David: How do they know?

Corey: Well, they're tracking all of these different craft flying around. If a craft is visiting a certain area, they will go and usually re-abduct the people to find out what occurred for gathering intelligence.

So yes, there are a large number of people that have experiences. Many don't remember them, but they are watched.

David: So what do you think is the endgame of a group like the Greys having this large laboratory inside a strange cave in Vietnam? What might they be doing in there?

Corey: Well, they're obviously doing some sort of either examinations on the locals or some sort of science that they want to keep hidden. So a perfect way to hide it is to put it in that cave.

But it's in the middle of a war zone. It would be very nice to know what type of a lab it was, what was going on in the area to be able to determine what this group of extraterrestrials were doing with this lab.

David: Do you think that it's possible that they would have an interest in wars and want to monitor wars for some specific purpose?

Corey: Well, sure. There's a number of different non-terrestrials that monitor our wars. But a lot of the times, they have assets, human assets, people that they have abducted or have had contact with, and they will keep those assets safe. They'll track them and monitor them during a conflict.

David: Do you think it's common for there to be bases that extraterrestrials have, where you actually could just walk into maybe a slightly unusually perfect-looking cave or something?

Corey: Well, most likely, the mouth of the cave had a hologram or something across it that hid it. It would be very unusual for them to have just a big, open, strangely-shaped entrance that's going to attract attention, unless it's some sort of honey trap.

David: Right. So that could have been something where they knew Stone was going to be there, and maybe they turned the hologram off so that he would go into that cave or something.

Corey: Possibly, yeah.

David: What kind of technology could allow them to be able to look through soil as if it wasn't even there, like it's just a pane of glass?

Corey: They have different imaging technologies. They could most likely even look through that window and see their own planet if they wanted to. To us, it's magic.

David: Well, it appears that the dirt was under some control, because he said that when they dug the dirt out, it was visible. And then when it was thrown, it was visible. But as soon as it hit the ground, it became invisible again.

Corey: Right.

David: Is there something they could do to the matter state of the soil maybe to make it so it's not visible while it's on the ground?

Corey: Well, they're not affecting the matter. What they're doing is . . . the technology is just like a filter. It's filtering out the information being delivered to the technology about the soil and all of that.

David: And when he said that he saw a huge lab, he didn't get into detail about what the lab looked like. But if this was a lab that was run by Grey-type extraterrestrials, would he have been seeing something that would look pretty different than any normal lab on Earth?

Corey: You would know immediately that this was not a terrestrial lab run by human beings. And also, remember that after they got a certain distance inside the cave, they hit a dampening field of sorts to where their radios and field phones didn't work, you know, with cables run even.

David: Right. So that's some sort of electromagnetic scramble effect maybe?

Corey: Yeah. I've just heard them called 'dampening fields' that prevent any type of radio waves and that kind of thing from penetrating.

David: Okay. So what do you think was happening when he and his fellow soldiers got surrounded by this marshmallow-type fluorescent energy that they couldn't see one foot (30cm) through? What do you think was going on there?

Corey: It was a defensive technology. I've heard of similar things to where people will go into a craft or somewhere where they're not supposed to be, and then there's a big flash of light that lasts . . . it lasts longer than a flash. It's like . . . it stays. It comes on and stays.

And it sounds like he was teleported out of there.

David: Is this something that these Greys could do with their own consciousness? Or do they have a technology that would require it to be used that way?

Corey: Well, I read reports that they could defend theirselves without carrying weapons. So this was either something that was implanted in them technology-wise, or it's through their consciousness.

David: There does seem to be some benevolence in these beings. They cared about his eye. So what kind of technology do you think they might have had to heal his eye? It seems like he got hit by a bullet or something maybe? We're not really sure.

Corey: Yeah. From what I've read in the smart glass pads, the human body is very easy to manipulate and repair. So they have to have some sort of tissue regeneration, nerve regeneration, technology.

David: Is a story as ridiculous as an insect hitting his eye . . . Is that a common thing for the military to do when they're faced with this stuff?

Corey: Oh, yeah. They have twisted ankles, any type of injury, there are all kinds of explanations, 'official explanations', they'll put out.

David: So with a guy like Stone having experience of this nature, and we talked a little earlier about the idea of people having these experiences throughout their life and being monitored, do the extraterrestrials have the ability to control who would be able to find a facility like this?

In other words, was he allowed to see this, and was it because he was a certain

person? Or are there cases of just ordinary people that could randomly find something like this and stumble in on?

Corey: I think it's very rare for someone to stumble across something like this. And when he arrived, it had already been found. So he was coming up to a situation to where they'd already found something, and they were sending him in later.

David: Right.

Corey: And as I stated before, most likely before it was found, either there was something covering the entrance . . . there was most likely something covering the entrance, and either that technology failed or was turned off for a purpose.

David: Do you think that the Greys already knew that they were in there when the Greys showed themselves?

Corey: Yes. They probably came because some sort of an alarm was set off.

David: Do you think that the Greys are confident enough in their ability to thwart human machine-gun type of artillery that they could just walk right up even though these guys are fully armed and might be shocked by what they're seeing?

Corey: Yes. They will walk right through gunfire or towards people firing at them.

David: So it really poses no threat to them at all.

Corey: No threat whatsoever when they have the proper technology. There have been plenty of instances of non-terrestrials, including Greys, being shot by military.

David: Oh, there are?

Corey: Yeah.

David: Okay. So it's some kind of technology that they're using?

Corey: Most likely a technology, consciousness, or a mixture of both.

David: One of the things that's very strange that this reminds me of was a guy I knew who had been in touch with one of the top 90 people in the Cabal, so he said.

And he was given briefings on various extraterrestrial technology that had been found. And he described a particular river – I believe it's the Potomac River around Washington, DC – and that there was an egg that was found inside that was very

metallic. It was deep inside the sand.

And they couldn't open it for a long time, but it looked very exotic.

And eventually, they realized a dog whistle would open it when they blew the dog whistle. And this thing goes, “Psst”, like this, and it popped open.

And what it had inside of it was a whole series of actual Polaroid-type photographs of major events that had taken place in that river, apparently including a military blockade where a chain had been pulled across the river to stop ships from getting in.

So this was just like a little drone device that again seems to suggest that certain extraterrestrials are very keen on observing our wars and our history and seeing what takes place and when it took place.

Corey: Yes, and there are small drones that go around and observe people in situations that you cannot see with the naked eye, just like in the movie “They Live”. You know, when he looks up and sees a drone flying around, that type of technology is in use by the non-terrestrials.

David: All right, well, this has been a really fascinating investigation. Stone is obviously one of the most impressive whistleblowers because he's coming at us from the perspective of the crash retrievals like Roswell, being there and doing it multiple times.

This is a fascinating investigation. This is “Cosmic Disclosure”. I'm David Wilcock here with Corey Goode and our special guest Sergeant Clifford Stone, and I thank you for watching.

Your Guide to ETs with Clifford Stone Season 6 Episode 7

Cosmic Disclosure; Your Guide to ETs with Clifford Stone Season 6, Episode 7

19 Oct 2016

David Wilcock: All right, welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock and I'm here with Corey Goode. And we are now into our final section of material from the UFO crash retrieval expert, the legendary Sergeant Clifford Stone.

What we're about to see here is a very intriguing piece of the interview in which Stone is describing his work with the medical field manual for a total of 57 different varieties of extraterrestrial that he may encounter, which they lovingly called “the Heinz 57”. Let's check it out.

FIRST AID FOR ETs

Clifford Stone: There were several books, but this one book, the intent of it was, when we went out to a site, one person had control of that book. And that one person had a medical background. I can't say a doctor or anything like that.

But the intent of that was to have that book so we would have an understanding of first aid to render any of the entities that we might come up on. That was the whole purpose of that.

I was never supposed to see that book, but because of some other people, intuitive people – I'll put it that way because they knew that there was more of a reason for me being there than just being a member of the team.

And, you know, I didn't go out and tell people, “Oh, yeah, I'm an interface. I've had experiences since I was a child. That's why I'm here.”

And I, actually, at the time, I really didn't know that was the situation. I just knew for some odd reason I got selected on it, and I was involved with it.

But the one guy says, “You know, we can't go ahead and treat injuries to the different entities that we come up on. We have to know specifically what type of first aid procedures, until the medical team gets here.”

And there was a medical team. I think they called it a triage team. And the triage team, they had to come in. They had doctors, but they had the experts that knew how to deal with them on a much higher level. But in the interim, we had to be able to render first aid.

So this person went ahead and showed me. I mean, I'm going to be talking kind of crazy here, I'm sure, but some of the things . . .

Okay. For example, for a Band-Aid, some of our entities you couldn't use a Band-Aid. The simple little thing of putting a Band-Aid on what might be like a cut, that could kill them.

You actually used something that looked like plaster of Paris to put on there. And, you know, you had a medical kit solely for extraterrestrial.

If you looked in there and that book was absent, you'd just think, “Who put this crazy stuff together?”

But you had certain types of compounds that was made, just from specific dirt. That's the best way I can put it. Yet, this was first aid for them.

Iodine, for example, we could go ahead and put iodine on things that we have. That can kill some of them.

The book, or catalog, that I saw of the different 57 species was broken down by sections. And it would go ahead, it would have a picture of the entity. It would have certain statistics of the entity, and it would give a brief bio of the entity.

Then it would go ahead and list various types of possible injuries that could occur and

the first aid for that.

Now, you know, I got to go over it maybe about four times. A lot of people think I was given the book; I took it home and I read it and I kept going. No, no, no, it didn't work that way.

Some are so human looking that it would be very difficult for you to tell them any difference from us. They might not catch a punchline of a joke. They're very – how can I put – very serious.
